The Senators, from whom RICHARD RUSSELL, of Georgia acted as chairman, saw organization and action—military, naval, and air. They observed at first hand what they agree to be the most cohesive inter-allied combat machine of history—the Anglo-American. They discussed with commanders problems of strategy and supply, and with private soldiers their human problems. Colleagues who have listened to them thus far in public and in private have been much impressed with the value the tour will have for all other legislators, for the Executive, and for the American public. This seems to be the beginning of a new American tradition.

Among the important subjects which the Senators brought back for discussion and action, and on which they have contributed and will contribute information, are these:

The merger of all combat activities—military, naval, and air—into one service, under control of one department and one high commander and staff.

A resurvey of supply, particularly with respect to petroleum, to determine whether it is longer necessary or desirable that the United States, which produces only 25 percent of the world supply, shall furnish 60 percent of that used by the United Nations. The President has announced that he has asked for a complete report as to this situation.

PRODUCTION OF SUPPLIES

The present petroleum and rubber production schedules of the British in contrast with what could be produced of these essential supplies.

The propaganda of O. W. I. in friendly countries, posing a question whether this is well done, valuable, or even worth while in the war effort.

The welfare of our troops, "involving (as Senator LODGE stated it) not only their food, clothing, equipment, medical care, and dependency allotments, but also the leadership which they are receiving and, if possible, the fighting qualities which they displayed in combat and the obstacles they had to overcome."

The general and specific problems of strategy, with their bearing on the post-war problems they will raise. The work of the American Military Government of Occupied Territories, as exemplified by the present operations in Sicily of former Lt. Gov. Charles Poletti of New York.

The censorship policy of the Government, concerning which the Senators found much complaint among the troops for being—again in the words of Mr. LODGE—too "favorable and laudatory" and "completely out of tune with the realistic attitude which our young men have toward this war. * * * Comments which I heard range all the way from criticism of the cigarette advertisements, which always portray field soldiers as clean-shaven and neatly pressed, to disagreement with the practice of portraying all our allies as being perfect."

The disposition after the war of the great airfields which have been built and paid for by Americans and American capital all around the world.

Increase of reverse lend-lease, an example of which would be afforded if the British were to divide with the United States their control over great areas in which the cable systems are now all in their control.

PROBLEM OF BASES

The military value of Russia's Siberian bases, from which we are now barred by reason of the fact that Russia is not at war with Japan.

A more liberal policy of relieving troops after they have served a certain length of time in arduous and perilous duty with our forces overseas.

These are important matters, fit for responsible legislative inquiry and suggestion for improvement. They lie properly within the province of Congress, which appropriates the funds for the war, and they are of the deepest interest to the American public, which is supplying the manpower and materials of combat They belong in the realm of constructive discussion, and that is the spirit in which the Senators thus far have dealt with them.

The four who have reported publicly up to this time have also carefully refrained from including views and information they assembled on the journey which, if projected before making a complete check and formulating remedies, would have an adverse effect on Allied cooperation and the most effective conduct of the war, and at the same time would bring about no improvements in conditions.

They have preferred to seek solutions in private, if possible, with the responsible military and civilian executive authorities in Washington. In sum, what the Senators have said and done up to this writing is the reverse of what was feared and has been very often predicted.

AN EXAMPLE SET

The episode is an excellent illustration of what can be done by Congress by the use of an effective and responsible committee system. The five Senators acted informally as a committee for their colleagues, and if they returned with flaws to point out and corrections to suggest, they returned also with proof satisfactory to Congress that many tales it has heard about our affairs abroad are not to be accepted as true.

The tone and content of Mr. Lodge's first statement to the Senate were especially constructive and clear. He spoke as a good reporter writes, in the light of high journalistic standards, having had his pre-Senatorial training in that field.

[From the Baltimore Sun of October 4, 1943]

MEN WHO JUSTIFY THE EXISTENCE OF AMERICA

Few people think of turning to the pages of the CONGRESSIONAL RECORD to find romance, the poetry of great deeds, and singing chronicles of the high heart. But in that part of the RECORD devoted to the proceedings of the Senate on September 30 is the transcript of certain paragraphs of Senator LODGE's speech in which he referred to the men he had met in his recent tour of the battle fronts. The Senator was not trying to be eloquent. His words were plain, his sentences undecorated. He simply told what he saw; but what he said, not how he said it, makes it a glowing page.

He told of terribly wounded men in the hospitals, utterly serene except for the one fear that they may never be allowed to fight again. He told of Lieutenant Miller, of the Navy, left on a Pacific beach so certain he was dying that he gave his shoes and equipment to his comrades, but who later revived, took grenades from a dead Japanese, with them destroyed an enemy patrol, and held his position for 42 days, coming back loaded with weapons and captured Japanese documents. He told of Colonel Flickinger, Army doctor, who parachuted alone down to the spot where a plane had crashed in the jungle and took care of the injured.

He told of Bernt Balchen, who, flying a seaplane, found another plane forced down on the Greenland ice cap, and realized that its crew must be rescued at once or die. There was a place where the ice had melted, hardly more than a large puddle, but Balchen set his seaplane down there. He knew that if he stopped his plane would freeze to the

slush ice a few inches under the water, so he taxied around and around, and every time he passed the group, too weak to help themselves, with his giant's strength he snatched one of them into the plane, and so finally brought them all away.

After reciting these and other stories like them, the speaker commented:

"We can see the justification of the United States in the men it sends into battle. Their conduct is a peremptory command to us to leave no stone unturned in order to be worthy of their sacrifice."

The word "justification" is well chosen. These men are saving the country, but they are doing more—they are, in fact, justifying its existence before mankind and in the eyes of generations to come.

America Must Not Be Shackled

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the gentleman from Massachusetts, Hon. JOSEPH W. MARTIN, Jr., Republican leader of the House of Representatives, at the public meeting held in connection with the fifteenth annual scientific assembly of the Medical Society of the District of Columbia at the Mayflower Hotel, Washington, D. C., on October 1, 1943:

Mr. Toastmaster and fellow citizens, it is a pleasure and a privilege to address a group of individuals whose lives are devoted to efforts for easing and curing the ills of mankind, and advancing the science of medicine.

No one can come to this splendid gathering of physicians without sensing in full appreciation the contribution men and women of your profession have made to humanity. It can be truly said no profession has made a greater contribution to the progress of humanity.

The war has made terrific demands upon you. A great number of your associates have given up profitable private practice to minister to the medical needs of the men and women in our armed services. It is a source of great hope and comfort to the American people that such advances in medicine and surgery have been made since the last war, that fewer casualties are expected to be permanently incapacitated. Many who in earlier wars would have died will live because of the triumphs achieved by medical science.

Those of you whose lot it has been to remain at home are carrying an immense burden in caring for the health of the civilian population. No class of our people has labored under a greater strain of urgency or performed a more valuable service than the medical groups.

Through centuries of effort you have progressed from the humble herb-and-folk practice until today, through the application of modern science, you heal diseases which heretofore would have been fatal. Through your efforts it is possible for the blind, the stricken, and the crippled to be able to live useful lives. You have been able to increase materially the life span of the average man and woman.

This you have been able to accomplish because your profession has been free. It has been free to dare. It has been free to progress. You have had the assurance of great personal satisfaction in rendering indispensable services to your fellow men. You could expect some measure of material reward for your investment in years of education and hard study and devotion to your profession.

Under the harsh necessity of war, your law-making body, the Congress, has delegated enormous powers to the several branches of the executive department of this Government. There was no escape from this procedure. The details of war activity must be administered by the executive machinery. But having yielded these powers, the Congress has a covenant with the people of America carefully to watch the exercise of these vast powers and be ready to curb and correct any abuses. Congress must be ready to amend, restrict or even to recall any authority it has granted if new conditions, or the abuse of power make it essential to the public interest to do so. Above all, it is the solemn responsibility of Congress, if we are to keep faith with the people, to revoke these enormous powers when the war is over. It would be a futile victory if we were to win a war over dictatorship abroad only to have a permanent dictatorship fastened upon America at home.

For some years, a small but powerful group in this country has endeavored to undermine American institutions, American ideals, and our American way of life. These people are as clever as they are determined. They have promoted their cause in the public press, over the airwaves, on the platform, and in books and pamphlets. I do not believe it is an exaggeration to say they are represented in every department of our Government. They have tried to destroy the confidence of the people in their own special instrumentality of control over their Government, the Congress. They have gone so far as to hint that the Congress has become a sort of fifth wheel, an outmoded, cumbersome branch of Government, which has outlived its usefulness.

In their subtle campaign to undermine the American system, they have ridiculed the founding fathers as mercenary and selfish individuals. They have declared the pioneers who helped to make this country the greatest industrial empire in the world were actuated by nothing but greed and personal aggrandizement. Men who have made great contributions to the building of America have been pictured as pirates and exploiters of humanity.

The purpose, of course, of these plotters in attempting to tear down American institutions and our form of government is to substitute some brand of state socialism in this country.

Are we going to let them succeed? The answer is an emphatic "No!" They cannot succeed if the American people are aroused to their schemes. We are willing to fight to save the American way of life.

Let me remind you that if we should lose our American form of government, it will not be by accident; it will be by deliberate design of groups who have set out to socialize this country for their own purposes of becoming an entrenched bureaucracy, and to achieve permanent personal power.

I do not need to remind you that one of these groups would radically change the status of your profession. Instead of leaving you free, they would regiment you under a rigid system of governmental controls. They would curb your opportunities. They would arrest your progress. They would deprive you of your freedom. And they would do all this under the specious plea of aiding the unfortunate and giving all people security.

These misguided individuals evidently forget that if you regiment men and women, if you eliminate the opportunity for individual progress, you kill individual initiative at the same time.

A ward of the state, with specific limitations and a fixed income, operating under the direction of a bureaucrat who may himself possess no scientific knowledge, would not, except in rare instances, put in the long hours of intensive study and experimentation necessary to blaze the way for progress. A physician on a fixed salary and in a treadmill practice would not have the same urge to watch zealously over those in his care as the physician whose patient is his personal, individual responsibility. By destroying initiative and progress, we might well be sentencing vast numbers of people to earlier death because we could not as intelligently cope with disease.

Every one of us has a definite interest in seeing that every child, every woman and every man secures adequate medical aid and care We can and we will, as a government, discharge out full obligations to the sick, the aged, and the unfortunate, unable to pay their own way. But we must do it in the American way—in a way which will preserve the spirit and the initiative of the men and women of your profession. They must be encouraged to go ahead with studies and experiments; to make new and greater scientific discoveries for the benefit of mankind. And we must care for our ailing ones in such a way that every patient will not be a ward and pawn of an all-powerful state.

We must not shackle your great profession and restrict the service it can give to the world. If we give to some bureaucrat the power to regulate the practice and fix the fees of a physician and to govern the hospitals, we will shackle the science of medicine. We must make sure every man and every woman retains the right to select the doctor of his or her own choice. That has been a great American right and the people of this country want to keep it.

To place the practice of medicine under bureaucratic control would not affect medicine alone; it would constitute a long forward step in putting the other professions and all American labor, industry, and agriculture permanently under the direction of a Washington bureaucracy. By whatever name we might call it, it would be a form of state socialism.

You plainly see the threat hovering over your own profession, and you are not alone in your anxiety. Other classes in our national life face a similar perfl.

All professions and all business, big and small alike, face the menace of a new era in which private enterprise will no longer have a free opportunity to flourish.

Only through an aroused people, determined to preserve our free way of life and the private enterprise system which has given so much to every American, regardless of race, color, religion, or social status, can we save our heritage.

Let us constantly remind ourselves that while it may have faults, the American system has provided its people with more happiness and more of the comforts of life than have ever been enjoyed by the people of any other land.

Let us review briefly the situation which faces the small businessman. Small enterprise, which is the backbone of the American system, has, for the most part, had a difficult time during the war. Small business has found it hard, in many instances, to get war contracts; it has been harassed by inability to secure priorities for materials; it has come off second best in the competition with big industry for labor supply. If the small businessman has been able to make any money, heavy taxation has taken away much of his profit. He has had great expense and worry because of the flood of questionnaires and reports thought up and

demanded by the Washington bureaucrats, many of whom might be more usefully employed elsewhere.

The small businessman faces a desperate battle for survival; yet, on the whole, he has borne up under huge burdens like a good soldier. He realizes we are in an all-out war and that heavy sacrifices are demanded of us all.

He is, however, very properly concerned about the future. He is faced with renegotiation of contracts; cancelation of orders at the end of the war; the problem of reconversion from war production to the making of civilian goods when the fighting ceases. The way in which we meet these three vital problems of our industrial life will in a large measure determine what kind of an America we are to live in after the war.

If the handling of these problems is wise and judicious and is carried out with the sympathetic objective of preserving private enterprise, we may well rejoice. We could enter into a period of great prosperity; we would be able to solve the post-war employment problem; and with full confidence in the ability of our great Nation to advance to a new era of progress and prosperity; we could cope with the shocks of an enormous debt load, taxation, and the dislocation incident to transition from war to peace.

These momentous decisions must not be left to those hostile to the American way. They must not be based on class hostility. We must defeat any efforts to curb private enterprise and to put all business and the professions under the domination and direction of an all-powerful bureaucracy. To fail to preserve our American way will mean we shall have lost the war, regardless of how complete may be our victories over our enemies abroad.

The bureaucratic encroachment in the business field has vastly expanded. It is estimated the Federal Government owns 75 percent of the 1,500 plants which have been built in the last 3 years to gear war production to its highest speed. This has cost over $20,000,000,000.

The magnitude of Government holdings is clearly revealed in the simple statement that the Government will control more than 50 percent of the aluminum capacity of the country, 92 percent of the magnesium, 10 percent of the steel, 100 percent of the synthetic rubber and high-octane gasoline, 50 percent of the machine tools, and 90 percent of the aircraft-construction capacity.

The Government's ownership extends further into almost every phase of our industrial life through Government loans. It is clear, therefore, that if the Government's policy is to be one of hostility to private ownership, it could, through the application of pressure, establishment of prices and regulation, bankrupt any business in the country. It could create any kind of economic life it might desire.

Sensing this danger, those of us who believe in a free and strong America must be on guard to prevent any misuse of the power which has been achieved over industry in the war effort.

Put the farmer, industry, and the professions in a strait jacket of regimentation and bureaucratic control, and the only possible result would be we should lose the way of life which has given the people of this Nation more of the worth-while things than have been attained by the people of any other land.

What are we to do about it? We cannot sit idly by and watch this system disappear before our eyes. We cannot permit the inefficient and the incompetent, the crystal gazers and the experimenters, to ruin this America of opportunity for all of us.

The people look for protection to their Congress. I believe they have, in their lawmaking body, a confidence that has been vastly increased of late because the rubber stamp has been scrapped. Congress must not betray that confidence. We must not, as direct spokesmen for a great people, permit bureaucrats, lustful for power and possessing no direct responsibility to the people, to overstep their constitutional authority and, through administrative regulations and directives, write the laws of this land.

In a republic all men and all women must be granted equal rights. If we do not adhere to this great fundamental principle of Americanism, we are not worthy of the proud privilege of being American citizens.

There should be equality in the administration of the law; there must be justice in the distribution of the tax burdens. A square deal to all must be the cornerstone upon which we build a continuously progressing America.

Congress must be more definite in laying down the rules for the renegotiation of contracts. We should be prepared to supply the blueprints for the cancelation of contracts at the end of the war. The Congress must also outline the policies which will govern reconversion of industry from war to peace.

I believe Congress will accept the great American challenge of our generation. We shall not permit the bureaucrats, as someone has said, to be the "masters of the people from the cradle to the grave."

I do not believe the people, or their Representatives in Congress, will permit business, agriculture, and the professions to be permanently controlled by the bureaucrats through regimentation.

We can and we must preserve the full freedom of private endeavor. We can and we will give aid to the socially handicapped without destroying the rights of the States and their responsibilities, and without building up an ever-expanding Federal domain. We must provide adequately for the aged and the unemployed.

We can meet these demands and at the same time retain our American framework of Government. Let us insist it be done this way.

Let us look briefly at some of the accomplishments of a free America. Here the airplane was born. The sewing machine had its development in this country. The steamboat was developed here. The railroad was brought to its highest state of efficiency. The contribution of one American, Thomas A. Edison, to the progress of humanity was the phonograph, the incandescent lamp, the motion picture camera. Alexander Graham Bell gave the world the telephone, while Morse perfected the telegraph. The automobile reached its flower under the free enterprise system of America.

No one can possibly deny that it is in the fertile soil of free government, with the benign impulse of free enterprise to fertilize it, and with a free society ever ready to reap and use, that the greatest contributions in the last 150 years have been made to the spiritual, the cultural, and the material progress of the whole race.

Is it not incredible that any sane man or woman should want to change a system which could produce so much in less than a century and a half for the progress of mankind? We can improve our American way, but there is no adequate substitute for it.

Fervently we pray that the day may be hastened when millions of American men and women will be trooping back from the battle fronts to their homes. Other millions will be pouring out of the shipyards and the arsenals of war.

These men and women will want jobs; they will want opportunity. They will want the American kind of opportunity, not Government hand-outs. They will demand the freedom and the security for which they have endured the ravages of war, sacrifice, and privation. The only sure way to provide this is through the development and expansion of our peacetime productive capacity. This must be done through an expanding private enterprise.

Let us prepare now to make certain that the policy which we follow at the end of this war shall be an American policy, one which has been demonstrated through years of fruitful experience to have brought the best results.

The vast majority of our people are essentially sound thinking. I feel sure I know what their decision will be.

Millions of men and women are engaged today in the world's most gigantic struggle for security and freedom. They fight a cruel, aggressive, and resourceful foe. But thank God the dictators are on the run. At the beginning of this war we passed through some black days. But never for a moment did we doubt our ability to win—and winning we are. It is now no longer a question of whether we shall win, but how long will the enemy be able to resist our valiant Army and Navy and those of our allies.

We are proving once more in the field of battle that free men and women, fighting for the preservation of freedom, cannot and will not be defeated.

And in the years to come we will once more demonstrate to all the world that it is through freedom of enterprise and freedom of opportunity people can make their greatest progress.

Our free American system has, through its wonderful capacity for expansion, turned out the planes, the guns, the ships, the ammunition, and all the materials which will make victory possible.

This same American system in the field of plastics, aviation, transportation, agriculture, manufacturing, commerce, and science will secure for the people of America the opportunity of a new golden era.

Let us go forward with courage and confidence. We will win the war; we will make an enduring peace; we will rebuild a battered and war-torn world; we will give to humanity more happiness and more of the good things of life.

The world looks expectantly to us—the people of America. We must not, we dare not, we will not fail to meet this great challenge.

A strong, solvent America, true to the American way of life, will be able to lead the world to a better and a finer civilization.

Termination of War Contracts

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, October 4 (legislative day of Wednesday, September 15), 1943

Mr. LUCAS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD a letter addressed to the Honorable Edward J. Kelly, mayor of Chicago, by James S. Knowlson, chairman of the Post-War Economic Advisory Council of Chicago. The letter deals primarily with the treatment of cancelation of war contracts in the post-war era and is exceedingly interesting.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POST-WAR ECONOMIC ADVISORY
COUNCIL OF CHICAGO,
September 22, 1943.

The Honorable EDWARD J. KELLY, *Mayor,*
City Hall, Chicago, Ill.

DEAR MAYOR KELLY: Initial studies by your post-war economic advisory council of the problems attending stabilization of employment after the war indicate conclusively that one of the most important, and certainly one of the first, problems that must receive adequate consideration centers about the procedure to be followed and the treatment to be accorded industrial concerns in the cancelation of war contracts.

Few persons realize what total war such as we are fighting at present actually means in terms of manufacturers and their products. The manufacture of most civilian goods has ceased entirely so that with the cessation of war work, industries and manufacturers must start from scratch to rebuild their civilian markets. And in order that there may be the least possible dislocation in the reemployment situation the orderly adjustment of contract cancelations is more than ever important.

At a recent hearing of the council there appeared representatives of the Illinois Manufacturers' Association and the Chicago Association of Commerce who made a full presentation of work being done by those organizations along this line. In addition, the council conducted an independent study to discover what plans and procedures have been or are being formulated by various governmental agencies having to do with the termination of war contracts. A copy of the council's report on this subject is herewith enclosed.

According to available figures there are at the present time more than 300,000 war contracts outstanding, with money involved totaling more than $75,000,000,000. Of these many thousands have been placed and are now on the books of industrial concerns in Chicago. The tremendous amount of capital involved in these contracts, even ignoring other factors, is in itself a situation that demands the most careful handling. There are countless cases, for instance, where the present war material inventories of manufacturing plants have mounted to many times the total of working capital of those concerns—and this does not take into consideration contract commitments on orders on the books but not yet started.

Obviously the cancelation of these contracts must include some plan of immediate reimbursement for war material both finished and in process, as otherwise many of the manufacturers thus involved will automatically be thrown into bankruptcy or forced to close down entirely, thus bringing about inevitable widespread unemployment.

It is apparent from a close study of the plans and procedures for contract cancelations so far contemplated by Government agencies that the safeguards which they offer are entirely inadequate.

Under the procedure laid down recently in Army Ordnance Procurement Regulation No. 15, payment would be made on canceled contracts through a negotiation process. While this is pending manufacturers would have recourse to a form of V loan, the amount of which, still to be definitely determined, would be anywhere from 75 percent to 90 percent of the total due manufacturers on work completed or in process.

Time is a most important consideration, and it is apparent that successful and speedy termination of such negotiation would depend almost entirely upon the individual personalities and cooperation—or lack of it—of those entrusted with such negotiation. In this connection it is significant to note that in negotiation on contracts in the last war some of these negotiations were finally completed 20 years later.

In the opinion of the members of your council delays from such procedure are potentially disastrous, not only endangering the life of manufacturers in the Chicago area but threatening the entire economic structure of the Nation.

It is the considered opinion of the members of your council that:

1. It would not only be unfair to all manufacturers to require them to borrow money through their banks to finance Government obligations; but it is feared that the smaller companies at least might have almost as much difficulty in this procedure as they experienced in their initial efforts to get into war production. Such procedure would force them to enter the post-war period under an unnecessary handicap that would also indirectly affect labor and employment unsatisfactorily.

2. Any settlement dependent on negotiation procedure with its attendant delays would be unsatisfactory and would entail possible serious financial losses to manufacturers operating under the war contracts, unless it provided for immediate payment by the Government of the highest possible percentage of amounts due on work completed and in process on such contracts.

3. It is therefore essential that the Government establish a standard practice, which will apply to all war contracts, with a program of immediate reimbursement.

4. Such practice or procedure, which would protect the best interests of manufacturers holding war contracts, should be provided by congressional action rather than by independent determination by separate governmental war agencies.

5. It is strongly urged that such procedure provide for the retention of able, key men with an intimate knowledge of the war contract and general economic situation, in order to avoid the possibility that these settlements so important to post-war progress be entrusted to individuals who would be untrained and inexperienced in this field.

6. As a substitute for negotiation procedures it is suggested as a logical solution that a procedure be set up similar to that employed by the Internal Revenue Department in the filing of income-tax returns. Realizing, that the Government, however must be accorded protection as to accuracy and honesty on the part of manufacturers petitioning for payment on cancelled contracts, the procedure formulated by Congress could very well set up penalties for falsification, sufficiently stringent to ensure adequate safeguards to the public interest.

Determination of this problem so vital to the continued successful operation of our national economy is looked upon by your Postwar Economic Advisory Council as of paramount importance; in fact should it not be satisfactorily resolved the result would be to render futile any comprehensive program for post-war progress seeking to stabilize employment.

Immediate consideration of this matter is therefore urgently recommended, with the view to such action as you may think proper or advisable.

Respectfully submitted.

J. S. KNOWLSON,
Chairman.

Not a One-Way Street

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. HOFFMAN. Mr. Speaker, those who advocate that we enter an international alliance to police and maintain the peace of the world by force, if necessary, should tell us how far we are going, what, in the way of money, material, and men, we are to contribute. They should also have in mind what other nations are doing looking toward the same end.

The Senators who just returned from a more than 40,000-mile journey to the war front are opening the eyes of Americans as to what some of our partners in the international, superworld state are doing.

The following is an editorial from the Chicago Tribune commenting on one of Senator LODGE'S statements. While we may not agree with all of it, it certainly should cause those who want us to go the limit in establishing a United States of the World to give some thought to what Britain and Churchill, Russia and Stalin intend to do when this particular war is over.

The editorial is as follows:

Senator LODGE'S reports to the American people on what he saw on his worldwide inspection of the war fronts provide proof of what most of the American people have long suspected. Our country is giving its allies unstinted support and is getting only insignificant support in return.

Mr. LODGE'S comment on the war against Japan was particularly timely. It came only a few days after Earl Browder, the Communist leader in this country, had declared exultantly that the Russians were going to do nothing which might save American lives across the Pacific. For lack of bases on Russia's Pacific coast, Senator LODGE said, our war against Japan is being fought under a cruel handicap. Many thousands of our sons and brothers, in effect, have been sentenced to death by Stalin's refusal to treat us as an ally. The Senator was too tactful to say so bluntly, but the fact is that Russia, instead of serving as our partner, is actually conducting herself as the warm friend of Japan. We are forbidden use of bases in Kamchatka and the maritime provinces, from which Japan could be attacked; and at the same time Russia has renewed a treaty of friendship with the enemy that gives the Japanese important food supplies and spares her the necessity of spreading her forces thinner.

Russia has nothing to lose from giving us the use of her bases. We aren't going to keep them. If the Japanese should retaliate by attacking Russia in Asia, the Russians would have no reason to doubt that any territory lost would be restored once the victory was achieved. Russia, as Japan's near neighbor, has every reason to fear her aggression. Russia, as the beneficiary of enormous gifts of arms and food from this country, ought to feel some sense of obligation to us. None of these considerations has counted with Stalin. He wants to make America bleed and mourn her dead.

The worst of it is that our administration has allowed him to get away with it. Our diplomacy is all put and no take, in relation not only to Russia but to all our allies. As the Senator said, we are taking no steps to assure us the use of the airfields overseas we are building with our men and money. We are exhausting our own oil resources while encouraging the British to conserve theirs in Persia. We are fighting the war in the Pacific not as an American war, but as a war for the restoration of the British and Dutch Empires.

The anger of the American people is rising at this official indifference to the honor and welfare of our country. The American people did not have to be reminded by Mr. LODGE of what the Japanese have done to us. Americans remember not only the slaughter

and ignominy of Pearl Harbor, but also the beheading of our flyers, the slaughter of our wounded, the horrible crimes against the prisoners of Bataan, the bestial treatment of our women. These things and many more like them have burned into American minds the sacred duty to rescue our prisoners from the Japanese hell; to pour vengeance for our dead upon the heads of Tojo, Hirohito, and all the other men who bear responsibility for Japanese aggression and brutality; to restore the Philippines.

Americans have cleared the Mediterranean for the British and have lavished upon Russia the supplies without which she long ago would have been brought to her knees. We have saved Australia and New Zealand from conquest. It is time that we got something substantial in return. Certainly it is time that American strength in full measure be put forth in the American war against Japan.

The States Take Hold of the Missouri River

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. MUNDT. Mr. Speaker, the Missouri River, the longest river in the United States, remains today as the one great undeveloped river potentiality in this Republic.

Under the able leadership of Gov. M. Q. Sharpe, of South Dakota, a determined and enlightened program has been developed for the harnessing of the Missouri River so that its mighty force may be used for constructive purposes rather than continuing as in the past to be a great destructive factor contributing heavily to the flood hazards not only of the lower end of the Missouri River Valley but also to all reaches of the Mississippi River Valley below St. Louis, Mo.

The following article was written by Governor Sharpe and appeared in the September issue of the South Dakota Hiway Magazine which is edited by Aileen Tolles in Sioux Falls, S. Dak. It gives an interesting and informative bird's-eye view of the plans for Missouri River development and improvement.

THE STATES TAKE HOLD OF THE MISSOURI RIVER

(By M. Q. Sharpe, Governor of South Dakota and chairman, Missouri River States Committee)

The development of the Missouri River has lagged far behind that of other great river valleys of the country because of lack of unified action by the States to secure it. This condition will now be changed. The eight Missouri River States—Missouri, Kansas, Iowa, Nebraska, South Dakota, North Dakota, Montana, and Wyoming—have now organized a Missouri River States Committee for the express purpose of securing a valley-wide development of the entire Missouri River system for the multiple purposes of power development, irrigation, flood control, navigation, and related improvements. The general purpose of the committee is to secure unified State action toward accomplishment of this plan of development. It means that the Missouri River States are going to act from a State cooperation standpoint instead of each State trying to get some individual State projects constructed along the river valley.

For more than a hundred years the National Government has been spending money on Missouri River development. Most of it has been spent on local projects such as flood-control dikes or levees and occasionally some channel aid for navigation in different stretches of the river. One of the larger projects was the construction of the great Fort Peck Dam in Montana. The successful construction and operation of this latter project has demonstrated the practicability of a plan of development involving the entire Missouri River system so as to extract from it the utmost possible benefits from a scientific correlated plan of construction and improvement of the entire system. Such a plan is being prepared by the United States Army engineers in collaboration with the Bureau of Reclamation, Federal Power Commission, and other interested agencies.

They have calculated the area involved; they have conducted the stream gaging operations; they have made numerous soundings up and down the river for footings and sites; they have done this work accurately and skillfully, and vast sums of money have been expended on it. They now have the data from which successful plans and designs can be made. When they tell us that this river can be taken under complete control and its floods at any time of the year can be converted into stores of still water which will be dealt out in whatever quantities and at whatever times desired, they are telling us things that they know are not only accurate but entirely practicable. We know that they can go still further than this. They can now calculate with reasonable accuracy just how much the whole plan will cost and just how much actual financial benefit it will repay each year. We know further that this will show a financial statement on which any banker would loan money and on which the Reconstruction Finance Corporation or any other Government agency or on which any committee of Congress can with perfect safety advance or appropriate public funds, knowing with reasonable certainty that the project will rapidly and surely liquidate its own cost from the actual cash revenues it will produce. We also know that engineering science and proper accounting practices can establish accurately the interests of each State in the watershed in all the cash revenues produced by any structure or installation in any part of the watershed so that each one of the Missouri River States will participate in the actual cash benefits of all structures or installations in the valley whether located within the boundaries of the State or not.

This activity has resulted from a valley-wide interest and demand throughout the Missouri Valley for something similar to the Tennessee Valley, Colorado River, Columbia River, and other great river-valley developments of the country. The general idea is that a series of multiple-purpose dams below Fort Peck, plus dams on the tributaries, and a series of levees in the lower reaches of the river, would provide an effective plan of flood control and at the same time furnish aids for navigation, irrigation, and power development. It is also probable that the project would be self-sustaining and would pay its own construction costs from power, irrigation, flood control, and navigation benefits.

The Missouri River States Committee is the general steering and liaison committee for the eight States. It consists of two members from each State appointed by the Governor of the State. It was organized in December 1941, and has been active ever since. Gov. M. Q. Sharpe, of South Dakota, is chairman of the committee and George S. Knapp, of Topeka, Kans., is secretary-treasurer. The various States have contributed to its expenses. The committee has just completed eight district meetings, one in each of the States, held during the latter part of August 1943, as follows: Pierre, S. Dak.; Bismarck, N. Dak.; Miles City, Mont.; Sheridan, Wyo.; Sioux City, Iowa; Nebraska City, Nebr.; St. Joseph, Mo.; Topeka, Kans. In each State the Governor of the State presided over the meeting, and the objectives and proposed plans of possible development and the methods of securing it were discussed in a preliminary way. Col. Lewis A. Pick, of the United States Army Engineer Corps, Mr. W. G. Sloan, representing the Bureau of Reclamation, and Gov. M. Q. Sharpe, chairman of the committee, attended all of the meetings and assisted by explaining the general preliminary objectives and procedure and by assisting in the discussions. Congressman KARL MUNDT, of South Dakota, and Halvor Halvorson, of North Dakota, attended all of the meetings and assisted with conduct of the same. As a result of these meetings a valley-wide common understanding of the objectives, procedure, and possibilities has been secured.

The plan would aid greatly in a post-war adjustment program because of furnishing a large number of positions for skilled and technical workers, tradesmen of all kinds, and a great amount of common labor. It would also be able to utilize much National Government machinery which may become idle after the war. None of the money spent would be lost to the country. It would be spent in the country and at the same time pay for building a valuable internal improvement which the country would still have and which apparently would have the financial ability to pay its own construction costs and then to contribute toward payment of the national debt.

The Missouri River States seem to be united in support of the project. A general meeting of the Governors of the States and their members on the committee is now being planned for some central location in the valley yet this fall so as to make further plans for securing congressional designation of the project and consideration of the reports of the Army Engineers and the Bureau of Reclamation, Federal Power Commission, and other agencies interested, which reports are expected to be ready for public consideration later in the year. This meeting is expected to promote further active State cooperation and action toward getting the development started toward actual construction. The Missouri River States have taken hold of their project in a methodical, intelligent way and as a result the prospects for final success appear to be good.

The Senate Judiciary Committee

EXTENSION OF REMARKS
OF
HON. FREDERICK VAN NUYS
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Monday, October 4 (legislative day of Wednesday, September 15), 1943

Mr. VAN NUYS. Mr. President, in the June issue of the American Political Science Review, David G. Farrelly, of Princeton University, published a most interesting and valuable historical review of the Senate Judiciary Committee. It is well worth preserving. I ask unanimous consent that it may be reproduced in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SENATE JUDICIARY COMMITTEE: QUALIFICATIONS OF MEMBERS

(David G. Farrelly, Princeton University)

In many of our modern industries, aptitude tests are given to new employees in order to determine the type of position for which each worker is best fitted. Unfortunately, in legislative bodies committee assignments are dependent upon several factors, only one of which is specialized ability.[1] To serve the public best, however, no one can truthfully deny that individual competence ought to be the basic reason for placing a legislator on the committee which can make the most advantageous use of his particular training and experience. Putting an international lawyer on an agriculture and forestry committee would be a sheer waste of talent. With these thoughts in mind, the Senate Judiciary Committee has been studied for the purpose of determining the qualifications of the 219 men who have been members of this body since it was established in 1816.

The Committee on the Judiciary is one of the most important committees in the United States Senate. The type of bills and resolutions coming within its province makes it a strong and responsible guardian of the Nation's laws. Indeed, the powerful position of this committee leads one to suggest that it could well be termed a "congressional supreme court."[2]

Thus we have a Senate committee which possesses weighty jurisdiction. Membership on this committee is limited by considerations of party harmony, seniority of service, geography, personal preference, and individual experience. There emerges this question: Has the Judiciary Committee been characterized by competent personnel despite the fact that ability is not the only determinant in gaining an appointment?

In order to answer this question, several indexes of ability have been set up. Each of these hypotheses represents a qualification which, if possessed, should make an individual better suited to serve on this committee than, for example, the Finance or Foreign Relations Committee. In terms of these criteria, the committee's personnel has been analyzed.[3]

I. PROFESSIONAL-TECHNICAL QUALIFICATIONS

What are the qualifications which a prospective member of the Judiciary Committee should have? At the outset, the very name of the committee indicates that persons with training in law would be valuable as members. Equally significant would be judicial experience and/or knowledge gained as prosecuting attorneys and in legal administration. Other qualities will be considered, but the above-mentioned seem of primary importance.

Lawyers: It is a commonplace that Congressmen are lawyers. Thus it has been shown that slightly over 60 percent of the Senators elected to the Seventy-seventh Congress were lawyers by profession.[4] Indeed, lawmaking by its very nature attracts those trained in this field; and it is a remarkable fact that throughout the history of the Senate Judiciary Committee there has never been a member who was not a lawyer. Not all of these 219 men actually practiced their chosen profession. Many were early attracted to politics and spent their lives in this calling. Still it is quite safe to estimate that the vast majority engaged in handling lawsuits at some time prior to their becoming United States Senators. We can conclude that an essential prerequisite to service on this committee is knowledge of the law as evidenced by admission to the bar.

Where did the various committee members learn their law? This question is an interesting one, as the answer to it reflects the increasing importance of institutional education in this country. The earliest method of getting a legal education was to attach one's self to a man already a practicing lawyer. By working in a law office or by studying alone from lawbooks, the earnest young man gathered his knowledge of the intricacies of the law. Of the first 70 members of the Judiciary Committee, 63 received their legal education by following such a procedure. In other words, only 1 in 10 of the members of this committee down to the Civil War went to school to learn law. The famous Litchfield Law School produced 4 graduates who became members of the Judiciary Committee during this early period.

Fifty-eight different Senators became members of the committee during the period from 1861 to 1900. Eleven of these had been graduated from a law school. Thus approximately one out of five new faces on the committee represented a person who had derived his knowledge of the law from attendance at college. No one school had a monopoly of alumni. Harvard had three graduates who sat on the committee during this period. The University of Virginia supplied two, while six other schools had one representative apiece.

Since 1900, the names of some 91 individuals have graced the roster of the Judiciary Committee. Forty-four of these persons attended law school, with Harvard, Michigan, and Virginia contributing one-third of the number. Almost 30 other schools were represented by at least 1 alumnus.

Taking the membership of the committee as a whole, 28 percent have been lawyers who first saw the "legal light of day" via the law school; although this percentage becomes of less importance when cognizance is taken of the increasing place of the law school in preparation for the bar. Prior to the Civil War, 1 out of 10 Judiciary Committee members was a law-school graduate; during the last 12 years, 6 out of 10.

Judicial experience: Throughout the history of the committee, there has been a steady flow of Senators with judicial background. Approximately 1 out of every 3 members of the Judiciary Committee has possessed this advantage. The positions held have run the gamut of State and Federal court hierarchies. Many occupied posts on more than 1 court before being elected to the Senate; 38 out of 70 members with judicial experience had been on the bench of their highest State court.[5] Our hypothesis that judicial experience should be one of the qualifications for appointment to the committee has been amply sustained by experience.

Participation in constitutional conventions: Participation in the proceedings of a State constitutional convention should be some indication of an individual's capacity to perform the functions of a Judiciary Committee member. Between 1814 and 1900, no fewer than 27 constitutional conventions were held for the purpose of framing a basic law preliminary to admission of a State, and many more conventions were held to revise State constitutions. After the turn of the century, there were relatively few State constitutional conventions. Hence a Senator today will usually have had but little chance to attend one.[6] While 16 percent of all Judiciary Committee members have attended such meetings, a more significant showing is made if only those Senators who became members of the committee during its first century are taken into account. One hundred and twenty-eight individuals were selected to positions on the committee between 1816 and 1900. Of this number, 31 had been members of State constitutional conventions. While the fact of having served at a constitutional convention was, during the nineteenth century, a good indication that a person would be of value on the committee, such experience can hardly be expected of current and future Judiciary Committee members. Hence this test of eligibility is no longer significant. Because so many of the earlier committeemen had this background, it is included for historical reasons.

Prosecuting attorneys and legal administrators: As a fourth index of competence, the experience a man has had as prosecuting attorney or as a legal administrator ought to be given some notice when places on the Judiciary Committee are allotted. Although there is a wide range of difference in the experience one would get as a city solicitor and as a State attorney general, both posts have this in common: Political and/or administrative ability is needed in addition to legal knowledge.

Upon examining the record of all persons who have served on the Judiciary Committee, it was discovered that slightly over 50 percent of them had occupied such positions of trust. To state it in other terms, one of every two members had held at least one of the following offices: City solicitor, county attorney, State's attorney, State assistant attorney general, State attorney general, assistant or regular United States district attorney, Attorney General of the United States. About one in four was a county prosecuting attorney at some time early in his career. Sixteen had been attorneys general for their respective States. William Pinckney, Reverdy Johnson, William Evarts, and Philander C. Knox had each been Attorney General of the United States. The vast majority of those with this legal administrative experience had performed their service within some State; only about a dozen had been connected with the United States Department of Justice in any official capacity.

The House Judiciary Committee: Another index of a Senator's competence to serve on the Committee on the Judiciary rests upon whether or not he had been a Member of the House of Representatives prior to becoming a Member of the Senate. If he had served in the House, had he been appointed to its Judiciary Committee? This is our fifth test.

Sixty-two of the men studied had been in the House before entering the Senate. Eighteen of these had served on the House Judiciary Committee. Without an immense amount of research, it would be impossible to

---

[1] For methods and considerations used in the Senate to fill committee vacancies, see G. H. Haynes, The Senate of the United States, I, pp. 292–293, and E. Dennison, The Senate Foreign Relations Committee, pp. 4–10.

[2] Among the main duties of the Judiciary Committee are: (1) General original control over practically all proposed amendments to the Constitution; (2) approval or disapproval of Presidential nominees for positions on United States courts; (3) consideration of changes in the Federal court structure; (4) advising the Senate on matters relating to trusts, extradition, bankruptcy, Federal prisons, etc.

[3] Biographical material was compiled from several sources, but mainly from the Biographical Directory of the American Congress, 1774–1927, and the Congressional Directory (editions from 1850 to 1942).

[4] M. McKinney, The Personnel of the Seventy-seventh Congress, in this Review, February 1942.

[5] David Davis, indeed, had been an Associate Justice of the United States Supreme Court.

[6] According to The Book of the States, 1941–1942, p. 45, only 21 out of a total of 189 State constitutional conventions have been held since 1900.

discover those members of the House Judiciary Committee who, upon entering the Senate, did not there become a member of the corresponding committee. It is easier to hazard a guess and point to the fact that Daniel Webster was on both committees. It still remains true, although not of great import, that 1 in 13 Senate Judiciary Committee members served on the corresponding committee in the House of Representatives.

Compendium of technical qualifications: So far, five factors have been emphasized as furnishing a guide to the selection of qualified personnel for service on the Judiciary Committee. If one unit is assigned to represent a single qualification, what picture emerges as to the competence of committee members? The following tables show the record:

TABLE I

Qualification:	*Number of members*
Lawyers	219
Judicial experience	70
Legal administrators	102
Members of constitutional conventions	35
House Judiciary Committee members	18

TABLE II

Members	Units	Percentage
0	5	0
6	4	3
47	3	21
113	2	52
219	1	100

Looking back over the 128 years that the Senate Judiciary Committee has been in existence, one summary observation is in order. This committee has been distinguished by competent personnel. Seventy-five percent of the members have possessed legal and practical experience other than mere training in the law.

II. ADDITIONAL INDEXES OF ABILITY

There are other qualifications which may make a legislator valuable to a committee in addition to the specialized, technical knowledge which he possesses. The members of the Senate Judiciary Committee have, on the whole, rated high on these other scores. Two such elements of worthiness are previous legislative experience and education.

Legislative experience: As to the first, well over one-half of the committeemen had been in their own State legislatures or in the United States House of Representatives before entering the Senate. Sixty-seven percent were, therefore, not novices in the ways and wiles of legislation. One hundred and twenty had served in State legislative bodies; 62 had been Congressmen; 45 had a background of experience at both State and national levels. A table shows the percentages:

TABLE III.—*Legislative experience*

	Either State legislature or U. S. House of Representatives	State legislature only	U. S. Congress only	Both State and National experience
Number of men	146	120	62	45
Percent of total committee membership	67	55	28	21

Education: College-trained men are not by any means the only educated individuals in the world, but attendance at some seat of higher learning does give a fairly certain indication that a person is above the average in intelligence and learning. Other qualifications being equal, it would be safe to assume that a committee of university graduates would possess more perspective and factual knowledge than a group of grammar-school graduates. A survey of the Senate Judiciary Committee membership shows that 146, or 67 percent, attended colleges or universities.[7]

An overwhelming majority were college graduates, but mere attendance was counted in computing the results. Almost 90 colleges were represented, and these were scattered throughout the country. The "Ivy League," for example, could claim only 20 percent. Further to illustrate the diversification, one need only note those institutions which had the largest number of alumni. Yale University was exceptional—15 of her sons appeared on the Judiciary Committee; Princeton had 6; Center and Brown had 5 each; Dartmouth, Williams, Michigan, William and Mary, and Bowdoin had 4 each; Union, North Carolina, Vermont, and Dickinson had 3 each; 13 institutions had 2 each, while about 60 had but 1.

Outstanding personalities: Thus far the committee's membership has been treated in terms of impersonal qualifications. Only by bringing to notice the names of some of the leading members can one really discover the wealth of talent which has been attracted to the committee. Three committeemen (Buchanan, Pierce, and Van Buren) were destined to be elected to the Presidency; two others, Hendricks and Fairbanks, later served as Vice President. For John McKinley, L. Q. C. Lamar, George Sutherland, Howell Jackson, and Hugo Black the committee was a stepping stone to a post on the United States Supreme Court. Two other committeemen, Roscoe Conkling and William Smith, of South Carolina, were offered positions on this Court which they declined to accept. George Badger was formally nominated, but not confirmed.

It is interesting to note that at least a dozen members were associated with the teaching of law. Nine taught law in one school or another before being elected to the Senate; others became professors of law after leaving the Senate.

William Pinckney and Daniel Webster were so well thought of that both were placed on the Judiciary Committee almost as soon as elected—in both cases before they had even journeyed to the National Capital.

With such a list of well-qualified committeemen, it is interesting to speculate on the best combination of members. Mr. O. O. Stealey, Washington correspondent of the Louisville Courier-Journal during the last two decades of the nineteenth century, has observed that in the period of the Fifty-fourth Congress the Senate was "intellectually stronger than it has ever been since."[8] As for the Judiciary Committee, Stealey asserts that the Fiftieth and Fifty-first Congresses deserve the honor of having the best qualified combination in the first 85 years of the committee's history.[9] From 1888 through 1891 the committee was composed of nine great lawyers: George Edmunds, of Vermont (chairman); J. J. Ingalls, of Kansas; George Hoar, of Massachusetts; James F. Wilson, of Iowa; William Evarts, of New York; James L. Pugh, of Alabama; Richard Coke, of Texas; George Vest, of Missouri; and James Z. George, of Mississippi. This list of names is truly impressive in terms of legal ability. As many of these men served for a number of years during the eighties and nineties, it is logical to conclude that this period was the flowering era in the long history of the committee.[10]

The Senate Judiciary Committee is a lawyer's committee; only men with legal training have been admitted to its membership. By far the majority of members have been well qualified to perform the tasks falling within the committee's jurisdiction. New members commonly have come with good education, with legislative experience, and with a background of judicial service and legal administration. The ability and talent of past members indicate that a place on the committee is a badge of honor; membership stamps a man as a lawyer's lawyer. On the whole, the committee has had, since its origin in 1816, a personnel record of which it may be proud.

[7] Attendance at business schools or seminaries has not been included in this tabulation. Those Senators who went to more than one college have been credited with attending a college. Members who received a law degree from a school, but whose record has given no indication that they studied other subjects, have not been included.

[8] O. O. Stealey, Twenty Years in the Press Gallery, p. 127.

[9] Ibid, p. 62.

[10] Important legislation passed by the Fiftieth and Fifty-first Congresses included (1) authorizing writs of error to the U. S. Supreme Court in capital cases; (2) authorizing a review by the Supreme Court of all judgments and decrees of inferior courts in respect to the question of jurisdiction of the trial court, and regardless of the amount in controversy; (3) passing the Sherman Antitrust Act; and (4) establishing the Circuit Court of Appeals and defining the jurisdiction of United States courts generally.

How We Can Avoid Federal Control of Education

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, under leave to extend my remarks, I include an article by Edgar L. Morphet, director, administration and finance, Florida State Department of Education. The article is as follows:

Practically all educators and laymen are agreed that we must avoid any system of Federal aid or support that is likely to result in Federal control of schools or of any part of the educational program.

For several years the question of Federal aid for schools has been considered a controversial issue. Yet there is no valid reason why it should be. Many persons have assumed that any system of direct Federal aid for schools is certain to bring Federal control. Because of this assumption there has been much confused thinking. Many who sincerely believe the wealth of the Nation ought to be used to assure an adequate education for all its children have opposed Federal aid because of the fear of Federal control.

The question of Federal financial support, if it could be divorced from the possibility of control, should be noncontroversial. The State with least wealth, almost without exception, have the largest percentage of children. Those States are now making a greater financial effort to support their schools, are taxing themselves higher in proportion, than the more wealthy States. Yet these poorer States are not providing and cannot provide adequate educational opportunities for their children. Statistics show, moreover, that when the children in these States have grown

into adults, many of them migrate into the more wealthy sections of the Nation because of the greater opportunities to be found there. Because of the differences in birth rate the States with least adequate schools are now supplying a substantial proportion of the citizenship found in other States. Thus the entire Nation is being handicapped by the extent to which the poorest State is unable to maintain satisfactory schools and to prepare citizens who are physically and mentally fit to carry their proper proportion of the Nation's military, economic, and political responsibilities. The only way in which this handicap can be overcome in any reasonable period of time is to use the wealth of the Nation to assure a proper education for its citizens regardless of the State in which they live. Federal support for schools is imperative.

But how can we have Federal support without Federal control? Surprisingly enough the answer is simple. The best way to avoid Federal control of education in this country is to establish a comprehensive system of direct Federal aid with adequate funds apportioned to the respective States on an objective basis to be administered under their respective constitutions, laws, and regulations.

So far we have refused to establish any such system of Federal aid, apparently largely because of the assumption on the part of many that by this failure to face the problem we are avoiding any danger of Federal control. An examination of recent trends and developments, however, proves the assumption to be wrong, dangerously wrong.

Comparatively few people realize that for the last several years we have been moving rapidly in the direction of Federal control of education largely because we do not have any comprehensive system of direct Federal aid. In fact, we already have a very large measure of Federal control of education in this country. Trends and developments indicate clearly that the only way to reverse this trend is to face the problem frankly—that is, to provide direct Federal aid for schools—rather than to ignore it.

It should be helpful to examine briefly some of these recent developments and trends toward Federal control of education and to determine some of their more obvious implications. While tendencies toward Federal control without Federal aid have existed for many years some of those which have occurred during the past decade should be of greatest interest:

1. During the depression schools in many States and particularly in the less wealthy rural areas ran into serious financial difficulties. Congress might have faced the problem frankly and established a system of Federal aid for schools at that time, but it did not. By 1934 the situation became so serious that the Federal Government felt impelled to do something to prevent a complete collapse in certain areas. The indirect method was used. Some of the funds set aside for relief were made available to the schools, but the Federal officials prescribed detailed conditions for using the funds. For example, where schools could only be continued with the use of Federal funds, teachers could be paid salaries only at the rates prescribed for persons on relief. The Federal Government thus took away from the participating States and communities during that period the control of a vital phase of school policies. It determined the salaries to be paid individual teachers and saw to it that those salaries in most cases were lower than established local standards. But even more significant controls were yet to come.

2. The need for nursery schools and kindergartens and for various types of adult education has existed for many years. Some communities have sufficient wealth to provide at least some of these services, but many others do not have. A few years ago Federal agencies began to sense this need. Relief funds were made available to establish these services on a limited scale. But again there was no direct appropriation for education. In fact, the funds that were used in many cases were not even made available to established State educational agencies. Instead a parallel, and to some extent, at least, a duplicating agency was established in each State. The Federal Government thus was controlling certain aspects of educational policy in each State by determining the functions for which funds could be spent, the communities in which they could be spent, by hiring personnel, and by spending the funds.

3. The poorest communities have always had the most difficulty in providing adequate school buildings. The Federal Government also became interested in this field—and is likely to become interested again. But the system of aid which was established through the P. W. A. tended to help the wealthy communities more than the most needy because of the matching requirement. Moreover, the funds were not made available to established State educational agencies, but the Federal officials dealt directly with the communities, sometimes even encouraging the construction of buildings at improper locations and contrary to State standards. Thus, for several years, we had a very real Federal control of school-building construction, often to the consternation of State and sometimes local educational authorities.

4. The recently abolished N. Y. A. was established several years ago to serve the very worthy purpose of helping needy but capable youth to continue in school. But what happened? The funds were not made available to the States to administer. The Federal Government set up its own elaborate organization to administer the program. But the matter did not end there. After a time the N. Y. A. began to establish federally operated schools of its own. Students were paid to attend these schools. In many cases the N. Y. A. schools competed directly with established vocational schools for students, teachers, and equipment, sometimes even buying up and storing for future use equipment seriously needed for war-training courses. The N. Y. A. thus sought to control education directly by establishing a duplicate, competing system of schools. Finally after much controversy and by a very close margin the N. Y. A. was abolished.

5. Within the past 2 years the Federal Government has had an excellent opportunity to face the problem directly instead of indirectly because of the urgent needs in numerous war-industry and training centers throughout the Nation. In many communities the population has been doubled, trebled, or even quadrupled while vast amounts of valuable property have been taken over by the Government. Clearly the resulting school financial problem was not of local origin. Once more, however, instead of facing the educational problem directly, Congress has chosen the method which results in greatest Federal control. Funds were made available through the so-called Lanham Act to assist in maintaining normal community facilities in those areas. From the beginning pressure groups have tended to dominate the situation, resulting in a mad scramble for funds. The F. W. A. has largely ignored the recommendations of established State and Federal educational agencies regarding educational phases of the program. Perhaps without intending to do so, they have established so many objectionable and arbitrary controls over the educational program that educators throughout the country have practically revolted. Yet F. W. A. blandly wonders what the objections are all about, assumes that the problem can be solved if it exercises even more direct administrative controls, and continues to promote projects involving substantial sums, with little regard for established State educational policies. While most of these projects are urgently needed, some of the F. W. A. activities seem designed to provide a more obvious basis for maintaining, and perhaps a more subtle basis for perpetuating, a large and aggressive staff. That is the situation today.

A detailed study of these and other developments resulting in noneducational Federal agencies tending to exert increasingly greater and more objectionable controls over various phases of the school program of the Nation leads to the following conclusions:

1. The Federal Government can never be expected in the future to ignore completely the educational needs of the Nation or to refrain entirely from any effort to supply funds to meet those needs. In fact it seems evident that existing and new needs will be increasingly recognized during coming years and an effort will be made to see that they are met in some manner.

2. As long as funds for schools or for any phase of the school program are made available indirectly through noneducational agencies we must continue to expect to have to face the problem of increasing Federal control of the school program. Some of the reasons are:

(a) The very fact that these agencies are noneducational in organization and nature means that they have other interests which are primary and which will receive major attention and consideration. Education thus will tend to be subordinated to these interests, which means that an effort, whether conscious or not, will be made to see that it is regulated accordingly.

(b) Many undesirable controls will be imposed through ignorance of the implications of these controls. Noneducational agencies cannot be expected to have a well-rounded or even a defensible philosophy of education. Many decisions will accordingly be based on expediency rather than on the needs of a properly organized program of education.

(c) As long as the funds are indirectly made available for some phase of education largely on a hobby or vested interest basis, the plans for apportionment and administration cannot readily be written into law. Most of the requirements will tend to be subjective, subject to change through pressure, and to result in many unfortunate, perhaps not intended, controls, as in the case of the F. W. A.

3. Recent tendencies to try to meet educational needs indirectly through noneducational agencies, if continued, are certain to result in increasing confusion and further misunderstanding of the real issues involved. More and more Federal agencies are finding educational needs which they think should be met through the schools. These agencies are not familiar with existing educational machinery and tend to ignore it. They establish their own administrative agencies in the States to deal directly with local schools, without regard to what the United States Office of Education or State departments of education can or might be doing. Thus, the existing educational structure may be further weakened instead of strengthened and the organization will become more complex instead of simpler. The confusion that has tended to develop during recent years is well illustrated by the fact that some of the large daily newspapers in certain sections of the country have used the situation created by the Lanham Act as an argument against any system of Federal aid for schools. Increasing

confusion would mean that it would be increasingly difficult to isolate and face fairly the basic problem of Federal aid for schools.

4. The only way to avoid further Federal control of schools and to eliminate some of the present control by noneducational agencies is to establish a definite plan of direct Federal aid. If we can establish a comprehensive direct system of Federal aid for schools administered through the various States as it should be administered, we can be prepared to face issues directly. If any tendency toward Federal control of education should develop, we can be in position to combat it, whereas with the indirect and piecemeal system of Federal support, we can seldom get the issues out in the open so that any one agency or group can be held fully responsible for the undesirable tendencies.

Any system of direct Federal aid for schools should meet the following requirements:

(a) The funds should be apportioned to the States on the basis of an objective formula written into law and not subject to interpretation or modification by any Federal agency or individual except the courts.

(b) The funds should be made available to the various States to be used by them in strengthening and improving their own educational systems in accordance with the provisions of their own laws.

(c) Each State should be held fully responsible and accountable for the proper expenditure of the funds in accordance with the objectives and standards written into the Federal law. The Federal Government should, of course, have the right to audit the State accounts to see that the funds are expended for the educational purposes for which they are authorized.

(d) The States should probably be expected and required to meet certain objective administrative standards that are incorporated in the law. These standards should tend to safeguard the interests of the children of the State and yet would not subject the schools to any type of undesirable control.

The people of America are definitely opposed to any Federal domination of the school program. That fact constitutes the greatest possible safeguard against undesirable Federal control of schools. As long as Federal funds continue to be made available on a piecemeal basis through non-educational channels and used for indirect and for specific phases of the school program, we are almost certain to continue to have a growing type of Federal control which cannot successfully and satisfactorily be resisted by the people because they have no basis for understanding what is happening. If, however, Congress will establish a comprehensive system of Federal aid for education involving grants to the States on an objective basis to be administered according to State law, with the States having to deal only with the United States Office of Education, the people can be on the alert for any untoward tendencies or evidences of Federal control and will quickly rally to the support of their ideals of education as a function of the State if those ideals are violated.

If all the millions of dollars which have been spent on various educational functions by the noneducational agencies of the Federal Government during the past decade could have been made available to the States through a satisfactory system of Federal aid for schools, our State systems of education would today have been far stronger; the educational program would have been far better; many objectionable controls would have been avoided; and the people would be in far better position to resist successfully any further tendencies toward undesirable controls by Federal agencies.

Navy Day: October 27, 1943

EXTENSION OF REMARKS

OF

HON. RICHARD M. KLEBERG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. KLEBERG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Roy Miller, vice president, Navy League of the United States, and State chairman for Navy Day:

Once again we are privileged as American citizens to observe Navy Day, which annually occurs October 27 on the birthday of that great American, the late Theodore Roosevelt, who deservedly is recognized as the father of the modern American Navy.

Organized over 20 years ago, the Navy League of the United States has justified its existence by its constant and persistent advocacy of a Navy large and strong enough to protect our country and to safeguard the traditions and principles which constitute the foundations of our national life. The part which our glorious Navy, with its rapidly increasing power and might, is playing in the global war for freedom needs neither comment nor elaboration. It is indeed our spearhead of victory and its certain contribution to final victory is recognized with gratitude by every American citizen.

Despite the diabolical treachery of Pearl Harbor, a spectacular and unprecedented building program has already created as our spearhead of victory the greatest and most powerful Navy that ever sailed the seven seas. Its thrilling exploits have already written the most brilliant chapter that yet adorns the pages of our proud history.

It is unnecessary, as it would be superfluous, to attempt to inventory our Navy's stupendous power. Suffice it to say that in ships that sail the seas, in those demons of destruction that operate beneath the waves, and in that powerful arm of aerial might, the composition and component parts of our vast Naval Establishment, still in process of building and expansion, stand unequalled and superlative in matchless supremacy.

There was a time when the warnings and pleadings of the Navy League of the United States received but scant attention and little consideration. Now every thoughtful American realizes that but for the unconquerable power of our Navy the whole issue of victory or defeat in the world-wide conflict, into which unwillingly we have been thrust, would be hanging in the balance. We shall, therefore, celebrate and observe Navy Day this year with gratitude and thanksgiving for what our Navy has done and is doing to insure our security and our freedom. We shall pledge to it anew and without stint our help and support, our loyalty and confidence, in any and every way in which we as grateful civilians can serve.

I am sure, therefore, that Navy Day this year will be observed by all of the people of Texas, and that commercial, civic and patriotic organizations and luncheon clubs, as they have in the past at their meetings nearest Navy Day, will observe the occasion with appropriate programs. I especially request that the mayors of our cities and towns, by appropriate proclamation, will call upon the people generally to make some observance of the day. I trust also that in our public schools and other educational institutions appropriate programs will be arranged so that our young people may be given some insight into the significance of the occasion.

When victory comes, as surely it will, we shall have a fuller knowledge of the part our great Navy has played in assuring it. One lesson at least we shall have learned, which is that regardless of other obligations we may assume America shall possess and maintain a navy large and powerful enough to guarantee our complete safety and the preservation of our democratic institutions against any enemy or aggressor or combination of enemies or aggressors that may or can be raised against us in any quarter, from any source, or for any cause.

This high resolve shall do no violence to our traditions or the eternal principles that made us a nation. Never in the future as in our proud past, will the might of America be used for aggression, exploitation, aggrandizement, or selfish purpose. We shall only demand, as we now seek to assure, world-wide recognition of our right to the full and unhampered enjoyment of those priceless blessings of freedom and peace which constitute the American way of life. We realize now as never before that a navy, the most powerful in the world, constitutes our surest guaranty for the preservation of our civilization, our democracy, and the freedoms which have made America the greatest, richest, and most powerful Nation of all time.

In this spirit and with this fixed determination we Texans, together with all other grateful Americans, shall observe and celebrate Navy Day on October 27.

Words Versus Deeds

EXTENSION OF REMARKS

OF

HON. FRED E. BUSBEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Daily Record of September 27, 1943:

WORDS VERSUS DEEDS

Last July President Roosevelt delivered a fireside chat, one portion of which was relayed to the men in uniform by the Army news service.

That portion was a six-point statement of what Mr. Roosevelt intends to do, or to have done, for the discharged servicemen and women when the time for demobilization shall have arrived.

It was quite a coincidence that this propaganda—for of course it was nothing else—went out at the very time when arrangements were being put under way to organize and garner in the absentee soldier and sailor vote, which may amount to some 10,000,000 prospective ballots in the forthcoming elections.

It was also noticeable that Mr. Roosevelt plausibly put pressure upon Congress by saying:

"May the Congress do its duty in this regard."

The obviously implied idea was that if the veterans of this world war should be discharged as penniless men and women "into an environment of inflation and unemployment, to a place on a breadline or on a corner

selling apples," that would be strictly the fault of their Senators and Representatives.

Mention was not made of the fact that the present Congress was already quietly at work on veterans' legislation. As for himself, Mr. Roosevelt unctuously said:

"I have assured our men in the armed forces that the American people would not let them down when the war is won."

It is therefore perfectly proper that two questions be plainly asked—and as plainly answered:

What has been the record of Mr. Roosevelt in regard to the veterans of the First World War?

Does that record of his give anybody any sound reason for having any confidence in what he promises now?

The fact is that every official action that was taken to help the veterans of the First World War to reestablish themselves in civil life, or to care for their disabled comrades—to set up insurance funds and pension systems for them, or to assist them financially in times of distress when thousands of them were jobless and their families were in want—every such action was taken ether by Republican administrations which preceded Mr. Roosevelt's or by the Democratic Congresses of Mr. Roosevelt's own administration in actual defiance of Mr. Roosevelt himself.

The fact is that when Mr. Roosevelt assumed the Presidency in 1933 he found the Nation willingly caring for its faithful First World War veterans, according to their needs, at a cost of approximately $1,000,000,000 a year, and that Mr. Roosevelt, in the guise of fulfilling a campaign pledge of economy in Government, coldly deprived the First World War veterans of nearly half of this.

The fact is that Mr. Roosevelt went even further back than the First World War in his opposition to veterans' benefits, and deprived American soldiers who had fought in the Spanish-American War of $125,000,000 a year which their country had been gratefully providing to them because of their services and their sufferings.

The fact is that Mr. Roosevelt went still further back than that, under arbitrary powers unwisely delegated to him by his first Congress, and cruelly reduced the scanty pensions being paid to aged men who had answered Lincoln's call in 1861.

The fact is that, when Congress in 1935 passed an adjusted-compensation (bonus) bill for the benefit of veterans of the First World War, President Roosevelt vetoed the bill and caused its final defeat in the Senate by 8 votes.

The fact is that, when Congress in 1936 passed another veterans' bonus bill, President Roosevelt again exercised his veto power, and the bill become a law only because Congress repassed it over the President's veto.

The fact is that, during his Presidency to date, President Roosevelt has vetoed no fewer than 18 bills passed by Congress for the benefit of veterans, and it has been Congress and not the President that has put any of these bills into effect.

All that would be a doleful record for a politician to recite in seeking soldiers' and sailors' votes for a fourth term.

So, naturally, Mr. Roosevelt ignored his own record in blithely saying he had "assured our men in the armed forces that the American people would not let them down when the war has been won."

Neither the American people nor the American Congress will fail their returning soldiers and sailors in this World War, and the soldiers and sailors may be confidently assured of that.

For the people and the Congress have made their record in the matter of veterans' legislation, exactly as Franklin D. Roosevelt has made his own.

Actions always speak louder than words.

The Low-Down on Washington

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Blair Moody, from the Detroit News of October 3, 1943:

THE LOW-DOWN ON WASHINGTON

(By Blair Moody)

WASHINGTON, October 2.—Bitter revolt is flaring in Congress against President Roosevelt's new $10,000,000,000-plus tax bill, even before it reaches Capital Hill.

Right-wing Senators protest that its stratospheric rates, as revealed privately in advance, are excessive, not justly balanced, and threatening to the entire economic base of the war effort.

Liberal Congressmen are asking sharp questions: First, Where can that much more money be raised without crippling effect? Second, Is another tax bill at this time really necessary at all?

The program goes to Congress, Monday. Its slogan is to soak everybody. It will be read before the House Ways and Means Committee by Henry Morgenthau, Jr., Secretary of the Treasury.

Morgenthau will ask fast action, so the higher rates can take effect January 1. He will call the proposal vital to combat inflation and soundly finance the war. He will leave the inference that since action is inevitable, Congressmen would serve their own interests by acting at once. The sooner the new rates become law, the more chance for voters to become numb to their pain by election day, 1944.

But this program will not become law by January 1, or any other time. Not a single Member of either the House or Senate tax committees could be found today who does not privately feel that the proposed surtax rates—up from 13 to 26 percent on the first $2,000 and other brackets higher in proportion—would be destructive.

No one thinks Congress will swallow them. Not even the Treasury really expects to get what it will ask.

But most Congressmen assume they will have to pass a new tax bill.

NEW BILL CUSTOM

For years Congress has been taking for granted that if the administration asked for more taxes, a bill had to be passed.

This was a strange mental process. For in no other respect has it shown the slightest confidence in downtown's tax recommendations.

When Morgenthau tried to use taxes as a means to economic reform, as in his spending-tax scheme in 1942, he was openly scoffed at. When Congress in the middle 1930's did agree to a novel revenue measure, the undistributed-profits tax, it was promptly repealed at the next session. Time after time, the Treasury has been told, in effect, to put on a dunce cap and stand in the corner—Congress would write its own tax law.

Yet when someone solemnly intones: "This is a new session; that means a new tax law," Congress falls in line like so many sheep. They kick and balk about the total money asked. They usually fall short of the revenue goal set up by Morgenthau. But they always come through with something.

They never seem to inquire into the basic question of whether higher taxes will be a good or bad thing for the country. They never seem to dare to vote white or black. It's always grey—a compromise.

Therefore, all the administration had to do at any time was ask for twice what it wanted.

REAL ISSUE IS CLEAR

It goes without saying that the American people are willing to pay whatever taxes are necessary to win the war. It also goes without saying that they do not want their incomes drained away needlessly to serve an erroneous obsession conceived in some obscure Washington cubbyhole, and adopted by default because no one in Congress has the imagination, insight, or courage to check into the facts.

The real issue before Congress next week will not be what means should be taken to raise how much money, but first, whether it is now necessary—whether it is even desirable—to raise any more money at all.

There are two reasons advanced by the administration for higher taxes. Neither one stands up.

The first is that they are needed to head off inflation and higher costs of living.

The American people are expected to earn $142,000,000,000 in 1943. Only about $91,000,000,000 worth of tangible consumers goods will be available because so much of our productive effort is going into weapons. The pressure of these extra dollars—theoretically—will bid up prices as competitive buyers rush for goods. The only solution, say the heavy-taxers, is to drain off as much as possible of the excess by taxation and compulsory savings.

That's the theory. In practice it is not working out that way. The people are saving their money without being clubbed into it. (If the White House or Treasury doubts this, let them consult the Government's own latest "economic box score"—O. W. I. release No. 2538, which they can obtain from Elmer Davis.)

Not only have all war loan drives boomed over the top but life-insurance premiums and personal savings have climbed to their highest points in history. Savings deposits in banks alone have reached $30,000,000,000. Consumer credit has been cut nearly 40 percent in a year. And much spending is going into football games, traveling, and other intangible goods, which helps to absorb the so-called inflationary gap.

For months now, national income has been careening along ahead of tangible goods available. But in the first 19 months of the war, from December 1941 to July 1943, the cost of living rose 12 percent. That compares with roughly 30 percent in the first 19 months of World War No. 1. And in the last 3 months prices have been moving not up but down.

There is but one answer to this. O. P. A. has done a swell job. All brickbats to the contrary, Prentiss Brown's organization has overcome the handicap of a farm bloc constantly harping for higher prices, and in an era of unprecedented national buying power has not only checked the inflationary price movement but reversed it.

Brown has had help from absorption of buying income by personal taxes, which will amount to sixteen billions in 1943. But now all he has to do is hold the line, and he is holding it. There is no need for higher taxes for that purpose.

HIGHER TAX ARGUMENT

The other argument for higher taxes now is to finance a greater proportion of the war currently to keep the national debt from going too high.

The maximum Morgenthau could squeeze into his request was $12,000,000,000. If Congress votes anything, it will be nearer six. Either of these figures is a mere drop in the bucket when compared to the cost of the war. It cannot conceivably have any effect on the Government's credit or anything else, either now or later.

What difference will it make whether, when the war ends, the debt is 270 billions or 280? What would be the odds whether it was 323 or 333?

The cold fact is this: If at the end of this war American industry and labor and Government have the foresight and common sense to cooperate on a program of private enterprise which will make our economy come up to its full potentiality or even close to it; if we have a high level of employment and heavy production of consumer goods and decent wage standards so that the people who make the goods can also buy them, then the national income will be ample not only to service the debt but pay it off at present tax levels or lower.

If, on the other hand, we fall apart into short-sighted, selfish, bickering factions—as we are wont to do—if we accept the defeatist philosophy that after the war we must resign ourselves to a period of drastic readjustment; if too many capitalists continue to play dog-in-the-manger, too many labor unions insist on restricting production and too many bureaucrats fight for personal power instead of for the Nation's interest—then our national income and buying power will drop with a crash that will make 1929 sound like the tinkle of a Christmas chime.

SUPERFICIAL VIEWPOINT

The declaration of need for higher taxes, then, is superficial and mistaken. But that is not all.

Chop too deeply with a dull ax into the living standards of millions of American families and the social and economic effects will be felt for many years.

Prevent millions of others, now for the first time attaining standards that decently may be termed American, from establishing a firm financial base at the higher level, and irreparable damage has been done, not only to those families but to the country.

Senator VANDENBERG, ranking Republican on the Senate Finance Committee, made this comment after hearing Morgenthau outline his measure:

"What difference does it make whether you are 87.2 percent broke or 87.7 percent broke?

"We have reached the point where the size of the debt ceases to be the primary concern. The most important thing is to maintain a healthy domestic economy.

"If there is money that should be taxed and is escaping, Congress will want to find it. But we must stop piling taxes on the same old targets or we may impair our whole structure."

A potent Democrat on the House Ways and Means Committee is Representative JOHN D. DINGELL, of Detroit. DINGELL has a consistent New Deal record. His comment:

"I am not convinced that any new taxes are needed. It's about time we called a halt on this business of jacking up taxes automatically every few months. Our structure can be wrecked by drastic deflation even more rapidly than by inflation."

A few months ago, the most vehement opponent of a severe compulsory program of draining off income from the public was Morgenthau. A phalanx of Presidential advisers bucked him, but he won out. His argument: We can do it voluntarily by selling War bonds. How can you expect people to use their extra cash for War bonds if you take it away from them?

Care of Disabled Veterans

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, an article by Bill Cunningham, appearing in the Boston Herald of yesterday, deals with the post-war problems that must be faced, particularly with what is to be done in the way of caring for the discharged veterans of this war who have been disabled. I am deeply concerned because, as I said last week, the backlog of World War No. 2 cases in the Veterans' Administration is large. Forty-three hundred cases in the Boston area alone tell the story. Claims have not been handled properly, and many claims have not been found, due to shortage of personnel. Also, the Veterans' Administration could do more in the rehabilitation of the veterans. These men should now, as they come out of the hospitals with disabilities, receive their training and employment from the Veterans' Administration. Certainly the employment of these veterans should start at home in the Veterans' Administration, where it belongs.

Mr. Speaker, the hospital construction program is not going fast enough and enough new construction has not been authorized by the Board of Hospitalization. The Congress has passed legislation for all necessary construction. All that is necessary is for the Board of Hospitalization to recommend the needed construction. Those of you who were following the care of the disabled remember the time it took to secure an adequate number of beds. Having that in mind, the Congress has passed legislation in order to have the hospitals for the men as soon as they return to America. The Congress has passed legislation for rehabilitation, for compensation, and for insurance, and for other benefits for the World War No. 2 veterans.

There is no possible excuse for laxity in carrying out these laws. The men and their families will suffer enough without the distress of waiting for beds and proper care. The wounded and shocked cases are returning at a rapid rate to the United States; more rapidly and in greater numbers than people realize generally. I have kept in constant touch with the Veterans' Administration to have the machinery for veterans' care set in motion, including an adequate staff of doctors and nurses and other personnel to run that machinery. The Veterans' Administration for some reason has failed to do this.

[From the Boston Herald of Sunday, October 3, 1943]

POST-WAR PROBLEM THAT MUST BE FACED—SERVICES' HONORABLY DISCHARGED RATE COMMUNITY HELP NOW

(By Bill Cunningham)

The honeymoon is just about over for us in this Nation.

Now we move in with the in-laws of war, or, more properly, they move in with us. They're the problems, the byproducts, the wreckage, the waste. It's a sobering thought but it has to be faced, and the sooner we start facing it the better.

The cold truth of the matter is that the war has been sugar-coated for most of us thus far. Millions among us haven't even been touched. Of course, we miss the boys. Being human, we sympathize with the people we know who have lost a son, a brother, a husband. But being human, even that sympathy slides swiftly behind us as we turn again to our own affairs.

Oh, we know there's a war, and we're deeply concerned. We talk it, we read it, and we feel strongly about it. We miss free use of the car, the beef, the butter, and things of that nature. That's war, and war's terrible.

REACTION TO PICTURES OF DEAD ONE OF PROTEST

But the point is that we don't know how terrible. We haven't as yet been given the optical evidence, nor even the stories in the raw and bloody original. A little of that was tried recently when the Third War bond drive began to drop speed. The O. W. I. decided that possibly a little shock might goad the public to the bond-sellers' windows, so it let some of it ride with the invasion stories from Salerno. It quoted the Germans as claiming they'd killed 10,000 Americans and brought to use the dread name Gallipoli in citing a comparison.

And to United States newspapers, for the first time they released official photographs of United States dead. One was a group of American paratroopers, apparently killed en masse as they descended on Sicily. Another showed American bodies lying face down on a beach at Buna, the feet of one awash in the tide, another half covered with sand.

Most papers didn't print them. Some did, and the reaction from readers was interesting. Whether typical or not is another question. But the reaction was one of violent protest. One letter a paper published accused the O. W. I. of deliberately faking the paratrooper picture. The letter writer didn't endeavor to claim that the men weren't dead, but he professed to see evidences in the photograph proving that the soldiers weren't slaughtered as claimed, but that the bodies had been gathered from over an area and deliberately arranged.

The Buna photograph brought a bitter protest from a reader who said it was "a sickening and a revolting picture" that had no place in a family newspaper. We all know war is terrible, he said, and we know men are killed, but why should anybody have to see such things in a newspaper? What good could it do but make everybody miserable? Was it even fair to the dead? he asked.

And possibly he was right—concerning pictures of the slain.

But we haven't, as a nation, even yet met the wounded. We have many of these, and many even now in this country, but the public hasn't seen them. They are brought back by ship, are transferred to hospital trains, and are run straight through to Devens or Walter Reed or wherever designated.

We haven't seen the empty sleeves, the pinned-up pants legs, the maimed, the blind on our streets as yet. Most of these haven't had time to get out among us yet. Thus most of us haven't yet met the war. And yet the war is already meeting us. Its major problems already have started to move in on us.

The first of these is scarcely recognized and almost wholly without any plans for handling. Yet it's here, and it's only a foretaste of what's coming.

That's what to do about the honorably discharged veterans of this war, principally, the so-called C. D. D.'s—those sent home with "certificates of disability discharge." The

President, and sundry Congressmen, some undoubtedly sincere, others with an eye to the service vote, have talked in generalities about what's to be done for the veteran. Communities and relief agencies have done some general considering.

All this, to date, has been in terms of the future. It seems to presume that there'll be some veterans some day, and that ways and means must be provided for their readjustment and rehabilitation.

Future be damned! They're already here, and the battle casualties of these initial skirmishes aren't even out of the hospitals. The casualties of the tremendous campaigns to come are a projection of the same mighty problem, the limits of which can't be even guessed from where we stand.

PICTURE IS BEAUTIFUL—ON PAPER

But many thousands we already have with us, some from wounds, disease, or injury incurred in line of duty, others discarded by the Army in training because they simply couldn't stand the gaff, the discipline, or make the necessary adjustments.

Take the case of the typical C. D. D. That carries with it an honorable discharge. The man has done his best, and he's either been injured beyond further use or he has proved incompetent, often mentally incompetent. Everything medicine and science can do for him has been tried before the Army gives up. There are 4 doctors for every 1,000 soldiers in the Army and such things as teeth, tonsils, nerves, eyes, and other points of trouble get much finer and more conscientious attention than they ever do in civilian life.

The Army does its best, but if it's no good, it's no good. The man is handed his C. D. D., a certificate of honor and his fare home is paid.

That's the end of it with his outfit. He's back in the home town's lap.

In many localities that may be the end of him altogether as far as the Army's concerned. In this locality it isn't, for the First Service Command staff, at the orders of Gen. Sherman Miles, has organized itself to lend the discharged veteran as much advice and assistance as it can.

It at least can consider his case and provide him with such information as applies to his case. For example, it can give him complete information about his Government insurance and the disposition of his War bonds. If he is entitled to compensation for disability, it shows him how to file his claim with the Veterans' Administration. It shows him how to call on the Red Cross, Army Emergency Relief, and, in Massachusetts, soldier's relief. From some of this he can receive temporary assistance, financial or otherwise.

It can send him on to other Federal agencies such as the United States Employment Service with its 35 branches in Massachusetts. It can remind him of the reemployment program of the Selective Service System. The Veterans' Administration is supposed to have a complete rehabilitation program.

The picture is beautiful and complete—on paper.

As a matter of fact it is shot full of holes, and the veteran who gets more than some expert advice about filing any claims he has and a little temporary financial assistance is the isolated exception rather than the general rule. Getting the thing that every veteran wants and is entitled to—a worth-while job—is, as matters stand now, an extremely difficult matter for a C. D. D. Unless, that is, he knows some employer willing to take him on through personal friendship in some private line of work, or in some little place.

In terms of customary employment, his chances are very, very slim.

Why?

CIVIL WAR PRODUCED PRIZE CROP

We might as well be frank about it. He runs smack into the insurance companies. They underwrite workmen's compensation insurance for the employer. Of course this is Federal legislation. The insurance companies' doctors won't ordinarily pass the man. if the Army has medically discharged him, that's prima facie evidence there's something the matter with him physically or mentally. At least that's the way the insurance doctor is bound to regard him. The doctor's job is to protect the insurance company. Each employee who breaks down and has to be paid is a mark against the doctor.

The C. D. D. walks up to that desk with at least two strikes and a half on him.

What does he do then?

Well, he can rustle for himself, as matters stand now, or become a professional veteran. We've always had plenty of the latter, the Civil War probably producing the prize crop of all. Everybody of any years can remember the veterans of that tragic struggle wearing their little caps to the ends of their usually lengthy years, and living on pensions and claims, many of them scandalously phony, to the end of their days.

One reason why nobody wearing the mantle of the Republican Party ever will carry the South is because the South considers Civil War pensions the core of the Republican Party, and considers that the South was ruined and kept ruined in order to pay them. Confederate veterans had none and could get none. They and their sons and grandsons have considered themselves in slavery ever since, a slavery of providing pensions for the victorious and merciless damyanks,

He can go in for some of this and he can hit a terrific lick, if he doesn't starve before the rest of his buddies get back, because there will be some 10,000,000 of them, at least, when the war is over. That's a powerful voting force and veterans' legislation is certain to be terrific—unless something is done now in the form of a system or a plan.

Those who've studied the matter, including the Army Emergency Relief officers who've already been at grips with the problem, think the job of rehabilitation properly reverts to the community. The community took the man from the job and sent him away. The community, they think, should, and most easily can, fit the man back into the same job, or one equally acceptable.

They think the local ex-servicemen's organizations, the rotary clubs, chambers of commerce, and similar groups should take the initiative in forming a local veterans' council, or bureau, and take the case of the returned boy as a straight civic project. They should let everybody in the community know where they are, what they have, what they're trying to do.

They should advise every local soldier and every local soldier's family that theirs is the place for him to come. They should have advice, help, and a placement system ready. Army Emergency Relief stands ready to extend the immediate help necessary, but the community should have the job, the permanent place, the process of reassimilation into the home neighborhood.

They claim this would be the greatest and most valuable war memorial any community could possibly erect, one better than monuments, bridges, or permanent rolls of honor.

SOMETHING THAT CAN'T BE DUCKED

What they could do about the insurance doctors, nobody at present seems to know. Maybe the Government eventually will handle that by a system of subsidies.

There are many thousands of these cases already, with the battle casualties yet to come, as heretofore stated, and one bad feature is that many of these are neurotic cases. Some of these are a result of action, or of service, but the vast majority are civilian neurotics the Army took a chance with and had to let out.

It's no secret that many defectives the Army ordinarily wouldn't have considered were taken when things looked a lot worse for us than they do now. Up to this past June, the military leaders were by no means certain that things weren't going to be pretty desperate for us, and in an effort to get men and more men the bars were lowered deliberately. Taking the chance that some might prove out, many known and suspected defectives were deliberately taken on trial.

Then the military and naval situation changed for the better considerably, the bars went back up and the defectives dropped. That's a byproduct of this war's unprecedented emergency, and it creates an unprecedented problem. These men are now veterans, entitled justly to full consideration. That they couldn't make soldiers is no fault of theirs. But trying to replace them after official medical discharge is a harder task than it would have been in the first place.

There is at present a bad gap between the day a veteran is discharged and the day when his compensation, if any, starts to come through from the Veterans' Administration. Army emergency relief bridges it if he knows how and where to apply. After that, as matters stand now, there is nothing.

Some communities are already alive to the situation and are doing something. Stoneham, Andover, and Natick are three. But real organization and service either along the lines sketched above, or by the State or Federal Governments should be begun now—not tomorrow.

For the C. D. D. is with us now. He can't be ignored and his problem is acute. If proper means are found for the handling of his personal problem, much trouble and probably much wild legislation will be cut out of the future. If nothing is done, tragic difficulty is certain to ensue.

And the time is now. The honeymoon is over. Post-war problems already are with us, in this particular, despite the fact the war really has yet to be fought. There'll be more and more of these men. And then, when it's over, the avalanche will start to pour. If something stout isn't ready, the entire structure will be buried.

Civic leaders and community organizations should move this subject to the tops of their agendas. It can't be ducked. It has to be met and it won't wait around for an answer.

Meat, Copper, and Sugar Beets

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. MANSFIELD of Montana. Mr. Speaker, the cowboy, the copper miner, and more recently the sugar-beet farmer have all contributed to the welfare of Montana and the Nation. They have developed a new and untamed land and through their efforts have brought into use some of the treasures which this Nation possesses. Because each of these groups are facing serious problems today I am bringing to the attention of the Congress the picture of the cowboy, the miner, and the farmer as I saw him in Montana this summer. Their problems are not only peculiar to Montana but to other areas as well and I am hoping that Members from other States will see fit to bring about some program which will rectify some of the difficulties I am about to discuss.

In 1940 our total production of beef, veal, lamb, mutton, and pork was 18,994,000,000 pounds; in 1941 we set a new

record with a production of 19,494,000,000 pounds; in 1942, again a new record of 21,680,000,000. It is estimated that the production this year will be 23,214,000,000 pounds; it is interesting to note that, whereas beef and veal increased from 7,182,000,000 pounds in 1940 to 8,095,000,000 in 1941 and to 8,835,000,000 in 1942, the estimate for this year is reduced to 8,674,000,000, despite the fact that there was an increase of some 3,000,000 cattle shown on hand January 1, 1943, as compared with the revised figures for a year earlier.

An average of 248 cattle, hogs, and sheep were slaughtered per minute last year in the United States and meat production averaged 58,800,000 pounds daily. These figures give some indication of the way the Nation's livestock growers and feeders have responded to the wartime demand for meat. The slaughter of meat animals during 1942 totaled 130,161,000 head—the greatest, by far, for any year in history. It included 17,652,000 cattle, 9,456,000 calves, 77,680,000 hogs, and 25,375,000 sheep and lambs. Meat production totaled 21,680,000,000 pounds—2,000,000,000 pounds more than in 1941, and represented an all-time high record. This was the third consecutive year in which an all-time high record was established. The per capita consumption of meat was 146.5 pounds per person, including the meat consumed by the men in the service. This was a gain of 2.6 pounds per person over 1941.

The number of livestock now on hand is at a record high. The probable movement of all classes of livestock to markets for the remainder of this year will set an all-time mark in numbers but possibly not in total tonnage. With the uncertainty facing livestock feeders and growers this large number of head to be shipped will place a great strain upon transportation, stockyards, market, and meat processors.

The feeding of cattle is going to be extremely difficult this year. War Food Administrator Marvin Jones recently stated that the present outlook on feed indicates that a substantial reduction in livestock numbers will be necessary during the next 12 months. He indicated that the total slaughter of meat during this period will average about 50 percent more than for the years 1936 through 1940. The number of cattle in the United States is now at an all-time peak of over 80,000,000 head. Pork output during the next 12 months, he said, is likely to be 65 percent above the 1936–40 level; beef and veal, 38 percent; and lamb and mutton, slightly higher than those years.

Despite the above figures which indicate a sound meat supply for the Nation there has been, and is, a serious shortage as far as the consumer is concerned. Ordinarily, the consumer reacts to such factors as supplies, prices, holidays, weather, whims of appetite, and so forth, in the amounts of meat which the processors can sell. It is the consumer, under ordinary or peacetime circumstances, who backs up to the feed lot, farm and ranch.

While in Montana this summer I had the opportunity to visit some of the State's range areas. I saw the fine animals we had in the Flathead, Broadwater, Deer Lodge, Flint Creek, Beaverhead, and Big Hole localities. I saw thousands of fat cattle and wondered what was going to happen to them and the ranchers because of the meat-rationing system now in operation. I talked with the ranchers and found out that hay was being sold for as high as $20 in the windrows and I wondered where the feed was going to come from if the cattle were not moved off the range by fall. I heard of the greatly increased cost in the price of feed concentrates. I was informed that the War Food Administration was contemplating no increase—and possibly a decrease—in our sugar-beet acreage and I was worried because of the difficulties facing not only the cattleman but also because of the troubles affecting the beet grower whose crop is important to the livestock industry and who has had a significant part in the development of the economy of Montana.

I thought of the miners in the Butte copper mines and I wondered why these men who worked in the toughest holes in the world, who went down into the earth over 5,000 feet, who endured the copper water, copper dust, and heat, who worked in extremely dangerous raises, drifts, crosscuts, stopes, and rills, and who were producing a metal more precious than gold and more necessary than steel in the furtherance of the war effort, should not be given the necessary amount of meat to carry on. Why should they be put on an iron ration when their work was so important and copper was so necessary? Why should miners in other parts of the State—and the United States—living under comparatively healthy conditions be given greater meat allowances? Why should the Butte miners not be given the consideration which is their due and why shouldn't the excess cattle in the Big Hole—right on their doorstep—and in other parts of the State be used to keep up their physical well being so that they could continue to produce? Had so much meat been needed for lend-lease and the armed forces that our soldiers of production had to go without? Let us see.

Lend-lease requirements last year had little to do with the food shortages that developed in this country. Lend-lease food exports in 1942, as a whole, represented a small percentage of our total food supply. Of our supply of beef we exported under lend-lease only one-tenth of 1 percent. We exported two-tenths of 1 percent of our veal, lamb, and mutton. Of the meats under rationing, pork was the only one of which we shipped considerable quantities and that amounted to about 10 percent of our total supply. The lend-lease meat figures for 1942 follow:

[In millions of pounds]

	Lend-lease exports	Supply	Exports in percent of supply
All meats	1,134	22,742	5.0
Beef	18	9,155	.1
Veal	0	1,110	0
Lamb and mutton	4	1,068	.4
Pork	1,112	11,409	9.8

For the first 7 months of 1943 we exported under lend-lease 1 percent of our beef and veal, 15.6 percent of our lamb and mutton, and 12.2 percent of our pork. The War Food Administration has tentatively allocated food produced from July 1, 1943, to June 30, 1944, in the following manner:

	Percent
To the civilian population	75
To the armed forces	13
To Lend-Lease Administration	10
To U. S. territories and special needs	2

I have been unable to find the exact figures on a percentage basis, for the amount of meat used by our armed forces. Members of the armed forces are eating more than they did as civilians. While the average American civilian eats about 3½ pounds of food per day, the average man in uniform eats about 5¼ pounds per day. The resulting increased consumption is equivalent to adding 4 or 5 million persons to our population. Many Americans not in uniform are also eating more and this is due in part to increased purchasing power and in part to the diversion of purchasing power to food from other articles which can no longer be purchased.

The demands upon our food supplies are going to increase even, perhaps, after hostilities cease. But, in the matter of meat, it appears to me that due to our enormous supplies we can and should lift some of our restrictions to balance the inequality existing on the basis of costs, season, and needs. I am happy to note that some steps have been taken in the right direction with the announcement on September 1 that the War Food Administration suspended all quota limitations on the slaughter of livestock for a 2-month period and on September 3 by lifting the restriction on inventories. This will enable packers to freeze and store beef for future civilian consumption thereby conserving feed and providing a market for livestock off pasture now flooding the market. I feel it would be in the best interests of all concerned if enough meat was frozen and stored to last well into next year so that it could be used to advantage in supplementing the inadequate supply of fresh meat which is due to confront us from time to time. In this way a balance would be struck between producer, processor, and consumer.

Earlier in my talk I mentioned the sugar-beet situation in Montana. I am sure the same situation applies to all our beet-sugar States. We know that beet sugar within the continental United States has contributed significantly to the success of our sugar-rationing program and has made possible the diversion of ocean-shipping facilities from commerce in overseas cane to the urgent tasks of war. We know that normal acreage of sugar beets will produce, through the use of byproducts as feed for livestock, 300,000,000 pounds of meat each year and that these products are vitally important to the preservation of dairy herds and the maintenance of cattle- and sheep-feeding operations. We know sugar is needed for canning and preserving other foods and we also know that sugar beets will produce more human food per acre than any other crop

grown extensively in the Temperate Zone. This important food crop will produce, it is estimated, one-third less in 1943 than in 1942. The State of Montana is one of the largest producers of sugar, ranking fourth with a normal production in excess of 80,000 acres of beets or about 3,000,000 100-pound bags of sugar. In addition to the sugar produced, the byproducts from each acre of beets will produce about 300 pounds of beef or mutton or a total potential production of about 24,000,000 pounds of meat.

It is the only large agricultural industry in the State that produces and refines its product entirely within the State, thereby furnishing employment to large numbers of skilled and nonskilled labor. The coal, coke, limerock, and other products necessary to the refining of sugar are all the products of domestic labor. The production of commercial fertilizer has, through the beet industry, become one of the large industries of the State.

The livestock industry of Montana is largely dependent upon the beet farmer for a market for his unfinished livestock, and in times of drought literally thousands of cattle and sheep would be forced upon glutted markets or left to starve on the range were it not for the great amount of feed produced by the sugar-beet farmers.

The recent announcement of the purchase of Cuba's 1944 sugar crop of 4,000,000 short tons by the Government exceeds that of last year by 1,000,000 tons. This, in effect, doubles her prewar share of the American market. During that period, sugar consumption in the United States amounted to 6.8 million tons a year. If we add to the Cuban crop the tonnage produced in Puerto Rico and Hawaii, we can see that these three areas could supply all our sugar needs and drive our beet-producing States out of business. This is something we cannot allow because of our duty to the American farmer and our belief that the American market is his first and all the time.

Because of its real need, it is imperative that sugar-beet acreage be increased for 1944 not only to satisfy our own civilian economy but also to supplement the needs of our armed forces and rehabilitated countries as well. A worthwhile industry such as this needs encouragement and not discouragement, and I hope the War Food Administration will see fit to raise substantially the acreage allotment of this vital productive industry.

So much for this discussion about meat, sugar beets, and copper. Perhaps to the layman these seem to be widely separated subjects. Such is not the case. As a matter of fact they are related to one another as I have endeavored to bring out, in the economy of Montana and to a lesser extent on a national scale. The copper miner needs meat, the sugar-beet farmer furnishes feed, the cattle and sheep ranchers furnish one commodity and use the other, and, consequently, the economy of all three are related to each other. The factors which I have tried to draw to your attention merit our most serious consideration, and, in line with what I have said, I should like to make the following recommendations:

For the meat producers:

First. More common sense in handling the prodigious supply on hand.

Second. Requesting the Commodity Credit Corporation to announce immediately a program for the equitable distribution of protein concentrates from the 1943–44 crop.

Third. Creation of a council representing producer, middleman, and consumer with power to advise and counsel with the meat division of O. P. A.

Fourth. Keep demand in balance with supply.

For the sugar beet producers:

First. Designation of sugar beets as a war crop.

Second. Urge the elimination of restriction on sugar beet acreage.

Third. Urge that a price be set to encourage planting of normal acreage.

For the copper miners:

First. A decided increase in the meat ration at the earliest possible moment.

These recommendations are made in a spirit of helpfulness. I am fully aware of the difficulties which face any program in wartime but I feel that after a program has been in existence for a reasonably long period of time the inequalities should be ironed out and changes made where necessary so that the common good of our people will be best served. This is my only reason for bringing this matter to the attention of the Congress at this time. These problems are serious and are deserving of our most serious consideration. The power to correct is in our hands. Let us use it wisely, judiciously, and carefully in behalf of our people.

Alaska—The Land of the Midnight Sun

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. ANGELL. Mr. Speaker, in the prosecution of the war the Territory of Alaska is making an outstanding contribution. As I heretofore reported to the House, during the recess of the Congress I had an opportunity to make an inspection trip in that strategic Territory as a member of the House Committee on Territories and also the Select Committee on Conservation of Wildlife Resources. Brig. Gen. James A. O'Connor, commanding Northwest Service Command, Col. K. B. Bush, chief of staff, and Capt. Richard L. Neuberger, aide-de-camp to General O'Connor, gave me every aid and assistance while I was on this inspection trip.

On September 27, 1943, at Vancouver, B. C., the Vancouver Board of Trade sponsored a luncheon for these Army officials on the occasion of the presentation to the city of Vancouver by Brigadier General O'Connor of a copy of the Buckley Telegraph Trail Journal. This original journal is in the possession of and treasured by the Portland Public Library. It is the record of the achievements of the heroic men who blazed the Telegraph Trail and explored British Columbia in 1865. It was indeed the forerunner of the Alaska Highway which follows this trail over a portion of the 1,600 miles it traverses from Fort St. John to Fairbanks.

As I have stated in the House before, this achievement of the United States Army engineers and their civilian aids will be recognized by historians as the greatest accomplishment in military road building in the shortest space of time under adverse conditions. Brigadier General O'Connor at the luncheon referred to made a noteworthy address which I include as a part of these observations. The address is as follows:

REMARKS OF BRIG. GEN. JAMES A. O'CONNOR, UNITED STATES ARMY, COMMANDING NORTHWEST SERVICE COMMAND, AT LUNCHEON SPONSORED BY VANCOUVER BOARD OF TRADE

Mayor Cornett, President McKeen, members of the Vancouver Board of Trade, my friends, the worn phrase "better late than never" may truly be applied to this visit of ours to your great city. For many months we have been promising ourselves the privilege of a trip to Vancouver. The warm hospitality of the Vancouver Board of Trade has now made that promise a reality. We are very glad to be here, indeed. To all of you, for your very generous invitation, I wish to extend my grateful appreciation.

You know, history is a difficult thing to keep pace with; it moves on as we sleep, as we eat, as we go about our daily lives.

I am reminded of a very famous anecdote in the annals of our American far West. There happened to be a professor in an eastern college who believed it was impossible to teach history convincingly unless you had lived through the historic experiences yourself. To paraphrase Abraham Lincoln, he felt that history taught vicariously was like "homeopathic soup made from the shadow of a pigeon that had starved to death."

So the professor set out to follow the trail of the great frontiersmen, Lewis and Clark, through the mountains of Idaho and Oregon. He dressed in buckskins like the stalwart argonauts and ate their meager fare of pemmican and cornmeal.

At last, late one afternoon, he staggered down Agency Creek in the Bitter Root Range, hungry, footsore, and exhausted. Before him loomed the cabin of a ranger station. Eagerly he knocked on the door. The pine boards swung back and the ranger stood there.

"Have you some bread and milk?" gasped the hungry pedagogue.

The ranger stared at the gaunt apparition before him. "What are you doin', stranger?" he inquired.

"I'm following Lewis and Clark," answered the professor.

The ranger scratched his head, then thought a moment, "Stranger," he said, "You're awfully late. They was through here about 115 years ago."

I am not one to telescope historic events as compactly as that forest ranger, yet I feel that in the past 18 months we have seen a great deal of history take place in the Canadian Northwest and in the Territory of Alaska. I came on duty at Fort St. John, British Columbia, early in May of 1942. Since that time I have been privileged to see many events occur. Outstanding among them has been the completion of the first land route ever constructed between the interior of North America and the Territory of Alaska.

Auxiliary to this development have been such other occurrences as the first telephone

line ever strung into the Yukon, and the construction of barracks, repair shops, and garages along the route of the Alaska Highway. We also have seen extended and improved a chain of military airports linking our Alaskan bases with the airplane manufacturing centers of both Canada and the United States.

There are those who question the wisdom of such undertakings. They wonder why any overland communication or transportation need be developed to Alaska. Such skeptics always remind me of the people who referred to the purchase of Alaska in 1867 as "Seward's Folly." There were men and women who lined the Hudson River to watch Robert Fulton's *Clermont* sink like a stone. "Fulton's Folly," they called it. Yet, somehow, it kept afloat and moved upstream, and so the course of history was changed.

I imagine there are men living here in Vancouver who remember when the building of Canada's transcontinental railroads was called foolish and wasteful. When Lewis and Clark returned from their notable exploration, certain leading citizens of New York City attacked Thomas Jefferson for authorizing the exploration and predicted that no one would ever trek to the Pacific coast again.

Yet I think history will record that the development of transportation routes has always encouraged settlement, migration, and prosperity. The path of empire has followed railways, roads, and highways to all the points of the compass. Every State in the American Union has been enriched and developed as a result of the transportation routes expanded within its borders.

One road or railway has invariably stimulated the construction of feeder roads and subsidiary routes. In the days to come, when peacetime reconstruction will develop the far North, perhaps it is not unreasonable to believe that the Alaska Highway will be only part of a network of roads extending to the Yukon, the Northwest Territories and Alaska.

In this connection, I want to tell you about a road which was first conceived late last year under a directive issued by the commanding general of the American Army Service Forces, Lt. Gen. Brehon B. Somervell. This road is the Haines Military Road, built from Haines, near the head of the Inside Passage, to a point on the Alaska Highway, 108 miles north of Whitehorse. The setting is historic, for the road commences within a few rods of Chilkoot Barracks, the first American Army military post ever built in Alaska. Many illustrious American soldiers have served their apprenticeship there.

From the junction of the Haines Military Road and the Alaska Highway, it is 520 miles to Fairbanks. Between Haines and the junction it is 160 miles. This means that the distance from Haines to the city which is the hub of Alaska, is 680 miles. The Haines Military Road cuts off the long open-sea haul across the Gulf of Alaska. It makes maximum use of the inside passage, that fabulous mountain-protected arm of the Pacific Ocean, which may be navigated by barges, tugs, and small inland steamers. This road is of great significance to you of Vancouver, for the bulk of shipping up the inside passage originates either here or at Seattle, with additional cargo hauled from another British Columbia seaport, Prince Rupert.

The Haines road follows the route of the Chilkat and Three Guardsmen Passes, ascending the Chilkat River from the ocean. This is the famous old Jack Dalton Trail, a celebrated path in Alaskan history. Along the road still stand the crumbling cabins where the Royal Mounties "checked in" the gold seekers as they rushed toward the Klondike. For many years people dwelling on the Pacific slope have visioned a transportation thoroughfare along this route. In 1913, three decades ago, the Alaska Railroad Commission recommended to William Howard Taft, then President of the United States, that a railway be built along substantially the same route now followed by the Haines Military Road.

Let me quote to you several statements which have been made about this route by Gov. Ernest Gruening of Alaska: "The Haines road will provide an alternative to the all-land route, will permit the use of the protected waters of the inside passage to barge supplies from Prince Rupert, Vancouver, and Seattle. The Haines cut-off will make close contact between the Alaska Highway and southeastern Alaska. It will permit supplies unloaded at Haines to travel by truck directly to their destination, provided that destination is on the Alaska Highway, or on one of its branches or extensions."

And, following a recent trip over the Haines road, Congressman HOMER D. ANGELL of the State of Oregon told the press that this highway will be "an important arterial route, utilizing the inside passage for transportation to Haines from the Pacific Northwest and then by a direct connection with the Alaska Highway, giving a quick through route to Fairbanks."

It is satisfying to be able to tell you today that the Haines Military Road is now in actual operation. Trucks have gone all the way from Haines to the junction with the Alaska Highway, 108 miles north of Whitehorse. In 14 hours trucks have traveled the 268 miles from Whitehorse to Haines. The road will be entirely completed some time in December, but already it is in use.

Hope of a land route to the far North goes back a long way, nearly beyond the time of any man now living. As early as the 1850's farsighted people talked of a telegraph line across the roof of the planet which might link the Western Hemisphere with Asia and Europe. In 1865 such an undertaking was actually attempted.

This was the Telegraph Trail, an expedition which was to string telegraph wires through British Columbia, through Alaska, and into Siberia and Europe. This was one of the first expeditions ever to explore the immense and scenic mountain wilderness of northwestern America.

President Lincoln authorized American participation in the undertaking. Queen Victoria granted a right-of-way through British Columbia. The Russians built a line 7,000 miles across Siberia to join our efforts.

Recently we have found the original journal kept by Col. Charles S. Bulkley of the United States Army Engineers when he led that historic adventure. It has been photostated by our War Department, and I am pleased to have a copy with me today to present to Mayor Cornett for the archives of the city of Vancouver.

The attempt made in 1865 to extend a telegraph line from the United States to Europe, via British Columbia, Alaska, and Siberia, presaged other events besides the present highway. It forecast, as Prime Minister Mackenzie King said last February, the mighty alliance of America, the Soviet Union, and the British Commonwealth of Nations. Just as the Telegraph Trail was a joint undertaking of the United States, Russia, and Great Britain, so is the conflict in which we are now engaged a common task that those unconquerable peoples will conclude victoriously.

The Telegraph Trail was an effort to bind the Eastern and Western Hemispheres across the Arctic roof of the world. And recently in Toronto, James A. MacKinnon, Canadian Minister of Trade, declared that the Alaska Military Highway will eventually lead into Asiatic Russia and the Orient itself. Nearly eight decades later, we are following Colonel Bulkley's trail-blazing march through the Northland.

Part of Colonel Bulkley's journal is the map he used. It is listed in the ledger as "Map of Russian America, or Alaska Territory, compiled from charts and surveys of Western Union Telegraph Expedition, Charles S. Bulkley, engineer in chief." On the map appear many places easily recognizable in Alaska today, even though the spelling has slightly changed: Fort Kodiak, Fort Sitka, Fort Wrangell, Fort Youkon, Bristol Bay, Mount Fairweather.

The Lewes River, on which is located Whitehorse, one of the main bases on the Alaska Highway, appears as the Lewis River on Colonel Bulkley's map. The Andreanof Islands appear as the Andreanoffski Islands. But most points are instantly familiar to us—for example, the St. Elias Mountains, Umnak Island, Norton Sound, Cook's Inlet, and the Taku River.

The Telegraph Trail did not accomplish its mission, because an easier route for wires to Europe had been found. Yet it played a vital role in America's acquisition of Alaska, a step of immeasurable historic significance, particularly in the light of contemporary events.

It is most appropriate that the Bulkley Journal should become a part of the archives of British Columbia's principal city. Colonel Bulkley and his gallant men left their imprint indelibly on this Province. The Bulkley River and Bulkley House were named for the colonel himself. When the Telegraph Trail Expedition laid its cable across the Fraser River near New Westminster, Gov. Frederick Seymour, of British Columbia, met the party in his launch and assisted actively in the task. The story of the Telegraph Trail is intimately associated with the development of British Columbia as Canada's open window on the Pacific.

And so we of the Northwest Service Command of the American Army are most happy to come here today to make this presentation. To you, President McKeen, I wish to give a mounted piece of the ribbon that was cut at the opening of the Alaska Highway last November. To you, Mayor Cornett, I present, on behalf of the officers and men of the Northwest Service Command a copy of the Journal kept by Colonel Bulkley when he led the Telegraph Trail Expedition eight decades ago. And to all of you and particularly Mr. M. E. Nichols of the Vancouver Daily Province, who took an early interest in this occasion, we wish to bring our most sincere appreciation of this generous welcome.

In the back of Colonel Bulkley's Journal is a copy of the map which was on Secretary of State William H. Seward's desk the historic day that he purchased Alaska from the Imperial Russian Government. Future generations of Vancouver's people will see this map and note the vast strides which have been made since it was drawn by one of Colonel Bulkley's cartographers. Let us hope that the future will witness progress as notable as that to which we have been heir.

I thank you again for your hospitality and kindness.

REPLY OF BRIGADIER GENERAL O'CONNOR TO PRESENTATION OF HISTORIC VOLUME BY CITY OF VANCOUVER, BRITISH COLUMBIA

Mr. Mayor, in appreciation of this generous gift, I want to tell you and your associates that it will become a very valued possession of the Northwest Service Command. We of the American Army are deeply conscious of the historic background of the Canadian Northwest—a background which Canadians and Americans alike have helped to enrich.

This book, with its facts and information on the deeds of British Columbia's early explorers, will serve to acquaint us more intimately with the difficulties and hardships overcome by our predecessors. The Telegraph Trail Expedition, I think, is a very real tie between the past and present in this part of our continent.

We shall take pride in knowing that the record of Colonel Bulkley's achievements is part not only of the archives of the Dominion, but also of the records of Vancouver and

British Columbia. And you may be sure that this book will be equally treasured by us of the United States Army. I think that the men who blazed the Telegraph Trail and explored British Columbia would consider this fitting indeed.

I should like to thank particularly Mr. Bruce McKelvie, the distinguished British Columbia author and historian, who, I understand, is responsible for discovering much of the data contained in this splendid volume. He is one of the outstanding authorities on the development of your great Province.

In conclusion, I wish to thank you all—you, Mr. Mayor; you, President Stanley S. McKeen—for your hospitality. We of the Northwest Service Command are delighted that we could be hosts to members of the Vancouver Board of Trade last month. And we feel that on such occasions as this, the eternal friendship between our two lands is given vitality and fuller meaning.

Address by Hon. Paul V. McNutt Before American Legion Convention

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 5 (legislative day of Wednesday, September 15), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Hon. Paul V. McNutt, Chairman of the War Manpower Commission, before the American Legion Convention at Omaha, Nebr., on September 21, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A year ago when we met in Kansas City, the tide of battle was still running strongly against us and our allies. The atmosphere was fairly tense.

We were not unduly pessimistic. We knew that eventually we would come through to a victorious finish.

But we knew that the military situation was not good.

At that time the push through the jungles at Guadalcanal had just begun. North Africa was still in the future. Sicily was still in the future.

And few of us would have dared predict that within a year the Italian Government would have surrendered unconditionally to a gentleman named Eisenhower, who is among other things a life member of his Legion post.

Now, however, the situation is materially changed. The tide of battle is running in our favor.

For this reason, a great many people are beginning to assume that the rest of the way is all downhill.

There could be no more dangerous error. The beachheads at Salerno are a grim warning of what is yet to come.

We are only just now beginning to face the real enemy. And that enemy is strong—with reserves of many heavily armed divisions—and the will to resist.

To fight our way up to and through the inner ring of the German defenses will tax us to the very limit of our fighting capacity.

And there is still Japan. We shall have plenty of rough going before we are able to close in for the final kill.

On both these fronts we must be prepared to throw in masses of men such as we have never had to use during the First World War.

We must be prepared to accept casualties such as we never had to take during the First World War.

I can say these things to you who yourselves have been through the sweat and grime of battle.

You men of the Argonne, of Belleau Wood, of Chateau-Thierry, know that war is a cruel and murderous business. And that unless you crush your enemy he will crush you.

Right now we are in the midst of a Nation-wide debate as to whether it is necessary to draft fathers into our armed forces.

I dare say that here in this convention there are some very honest differences of opinion on this subject.

I know that many people throughout the country believe we shall never have to use even the forces we have already mobilized in order to defeat Hitler and Japan. And that to add further to those forces is an entirely unnecessary procedure.

Those people should study our military situation with a little more care.

There are others, however, who believe it is basically wrong to draft men with dependent children. And particularly that it is unfair to take them while so many single men—or married men without children—are in war production jobs.

This latter argument has given rise to much heated discussion. Examine it quietly and dispassionately.

This is a total war—the first total war we have ever fought.

The old rule, the old beliefs, and, may I say, the old prejudices can no longer be sustained.

In total war the home front is every bit as important as the fighting front.

It is important to fly a bomber over Berlin. But we must first build that bomber—and keep building more bombers.

It is important to take a cargo ship through the paths of the submarines. But we must first build that cargo ship—and keep building more cargo ships.

It is important to face a critical counter-attack with your finger on the trigger of a machine gun. But we must first make that machine gun—and keep making more machine guns.

You may say that it takes less guts to build bombers than to fly them. It does. But that is no longer the point.

The point is we shall win this war, not merely because we are sending into action the largest and most efficient fighting force this country has ever seen—but because so far we have given those men everything they have needed in the shape of tools to fight with.

But if victory is to come within a reasonable period we must not only maintain this rate of war production, we must meet constantly increasing schedules.

And that today we are failing to do.

You know what is happening out on the west coast. We are not producing the full amount of planes and munitions needed to insure accomplishment of our military program.

The same thing is true in copper, lumber, zinc, aluminum, metal castings—and other industries vital to the war effort.

And the reason: In many areas where much of our essential war production is concentrated there are acute shortages of labor.

We have over 63,500,000 men and women actively engaged in industry or serving in the armed forces—the greatest number of persons at work we have ever had in this country. And we are reaching the end of our available manpower supply.

And we still have to find large numbers of men to fill the calls of our Army and Navy and to meet the increasing needs of war industry.

We can recruit more women for war jobs. Yes. We are doing that.

We can channel more men and women from less essential activities into war jobs. Yes. We are doing that.

We can make every effort to reduce turnover—and see that our present labor force is employed at the highest possible degree of effectiveness. Yes. We are doing that.

But none of these is the full answer.

By October 1 most single men and post-Pearl Harbor fathers will be in uniform. Those who have been deferred are chiefly skilled workers who are holding down jobs vitally important to war production or some essential civilian activity—and who cannot readily be replaced.

Suppose we take from his job and put into uniform one of these so-called key workers. True, by drafting him we are absolved from the necessity of drafting a man with children.

But because he is a keyman—and because he cannot readily be replaced—we strike the very heart of the production schedules of that industry in which he is engaged.

To a somewhat lesser extent—though still important—this holds true for many unskilled or partly skilled workers in areas where acute labor shortages exist. These men, for the present, are being deferred because of the difficulty of finding other workers to take their place.

Multiply any one case by the hundreds of thousands and we have dealt a paralyzing blow at the production of those airplanes, ships, and other munitions of war which our men overseas so desperately need.

And these munitions must be produced in increasing quantities if those men are to carry through to victory.

Here is a vivid picture of the tremendous rate at which our materials of war are being used up.

In the Sicilian campaign alone the record is as follows: 13 percent of all 155-millimeter howitzers landed by the Allies; 46 percent of all 57-millimeter guns put into action; 13 percent of all 37-millimeter guns employed; 8 percent of all medium tanks, and 7 percent of all light tanks; 54 percent of the carriages for the 37-millimeter guns; 36 percent of the motor carriages for the 75-millimeter guns; 22 percent of the carriages for the 105-millimeter howitzers.

And that, mind you, was Sicily, where we met only a fraction of the opposition which we are now getting from the Germans on the Italian Peninsula, or will get as we move against the inner ring of the Nazis' defense.

If that doesn't spell the importance of production schedules, I do not know what does. If that does not spell the importance of those men capable of carrying through those production schedules, I do not know what does.

In the light of this ask yourselves, in all sincerity, whether this Nation can afford to take off the job even one vitally essential worker in order to keep, let us say, a furniture-store salesman out of uniform merely because he has dependent children.

That is the nub of the situation. That is the crux of the problem.

Remember, no other country fighting this war has granted exemption to any of its citizens solely for the reason of dependency.

From the very opening of hostilities those fathers of draft age who were not engaged in some occupation vital to the war-production effort were held liable for induction into the armed services.

Again let me say we are fighting a total war, and I will repeat what I said once on a previous occasion.

No man is a slacker simply because he is not in uniform.

In this war every man of draft age must accept the assignment given to him—the spot where he can best serve the war effort. That spot may be in a copper mine, in agriculture, in an aircraft factory, or in the Army. We are all in the same boat.

And, also, we are still a long way from either Berlin or Tokyo.

It has been no easy matter to say to hundreds of thousands of fathers that they must now be prepared to serve in the armed forces of the Nation.

No one appreciates better than I the dislocation of families, the breaking up of homes, the individual hardships which this involves.

But a stern logic prevents any other determination.

This country is at war. And every man of draft age must help see the war through.

I had not intended to spend so much time on this matter, though I think you will understand how imperative it is that no opportunity be missed which may help clarify this issue.

But in the time remaining I want to touch upon a subject that is very close to my own heart and to the hearts of all of you.

That is the sort of deal we are going to give our returning soldiers.

It may seem that I am rather premature in bringing up this subject, particularly since I am insisting that we still have a long hard war to fight.

But it will do no harm to do a little advanced thinking on the matter.

First of all, I suspect you will all agree that it is up to our Government to make a better record than it did at the end of the last war.

We cannot solve this problem—as we then tried to solve it—by giving a demobilized soldier $60 and turning him loose to find a job as best he could.

This time we must make sure that the job is there.

This time government must take the responsibility for seeing that business and industry are ready and able to provide the job.

In other words, we must make certain that the transition from a war economy to a peacetime economy is accomplished without an intervening period of disruption.

We cannot afford to permit the old each-man-for-himself method—and each-business-for-itself method—to prevail. For if we do, we shall suffer the same uncertainties and hardships that we suffered in 1919, 1920, and 1921.

This country has done a magnificent job in converting its industrial resources from peacetime to wartime production. And it has done it through the voluntary cooperation of management and labor working with government.

I say this with all due recognition of the inevitable and increasing pressures concerning which I have just been talking. And with all due recognition that it may yet be necessary to exert some more stringent form of regulation—if only to bring into line certain noncooperators, both workers and employers.

But, even so, I believe this basis of voluntary cooperation will prove the answer to this question of post-war economy.

Certainly labor and management will have a golden opportunity to prove that even in peacetime they can work together for mutual advantage. And government, as a planning and directing force, will have a chance to offer a genuine sense of security not only to our returning soldiers but also to the millions of war workers who must be demobilized.

Most of us, at one time or another, have played football or baseball. And we know that in the last analysis it is the teamwork which counts.

MacArthur's men in New Guinea have learned this is true. Eisenhower's men in north Africa and Italy have learned this is true. And the men who are turning out our planes, our ships, and all our other munitions of war have learned this is true.

Let us all keep that in mind.

For teamwork is the one sure way by which we can avoid the mistakes of the last post-war period. It is the one certain way by which we can say to our returning soldiers: "Pick your job, fellow. You go on the pay roll tomorrow."

But even with the promise of all this, there will be plenty of work for Legion and other leaders of public opinion to do.

The return to civil life of so many ex-service men will still be a local problem.

Local opportunities for employment must be developed to the maximum—and those young men who have been so long out of touch with civilian developments should receive all the counsel and assistance which it is possible to give them.

Committees of local leaders should be prepared to work with the Veterans' Employment Division of the United States Employment Service to assure each veteran of the greatest help possible in locating a job.

I am proud of the development of the Veterans' Employment Division. We all know of its success in securing jobs when jobs were hard to find.

And no matter how carefully this time we plan to make jobs easier to find, there will still be plenty of tough days ahead for many of our ex-soldiers.

During these days they should be amply protected by insurance against the hazards of unemployment, old age, and death. They should have as sure a protection against these risks as we have provided for those who have remained in industry and been covered by the Social Security System.

We must see that every one of them gets a genuine break.

Let me go back to what I said a few moments ago. For I do not want any of you to think I am looking at recent developments on the fighting front entirely through smoked glasses.

Every American has the right to be proud of what we have accomplished during the last 18 months. No American need have any fear that we shall not win through to final victory.

But whether that victory comes within a reasonable period of time—or is unduly postponed—rests to a considerable extent upon decisions we are making today.

We must put behind the war effort every ounce of our fighting and production strength. We cannot permit sentiment or prejudice or undue optimism to vitiate that strength.

We shall get to Berlin and Tokyo.

But let us all make certain that we get there earlier rather than later.

For Whom Does Earl Browder Speak?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. MUNDT. Mr. Speaker, American gratitude for the gallant courage displayed by the Russian people in the defense of their homeland and for the gratifying series of defeats they are administering to Hitler's hordes must never permit us to put ourselves in position where the destiny of this Republic depends alone upon the hoped for goodwill and charity of the Russian Kremlin or its leader, Joe Stalin. In this connection there is important food for thought in the recent utterances of Earl Browder, who for years has faithfully preached and practiced the party line of the Third Internationale, both in this country and abroad.

The following editorial from the October 2 issue of the Washington Evening Star recognizes the importance of this country's developing a foreign policy and a peace program which will be American in nature and which will prevent this Republic from becoming the dependent post-war stepchild of any other great power, Russia included.

Every citizen who is still proud to call himself American should also read a copy of the alarmingly frank radio broadcast made by Upton Close over WOL and its associated radio stations of the Mutual network.

In our zeal to be helpful to others, this Nation must not so weaken itself that after victory has been won we shall have ceased to be the great power for peace and good-will which has for so long been the happy position of this Republic.

Unless some of our New Deal global star-gazers quickly change their pattern and their practices, however, there is grave danger that we shall find the wagon of American destiny hitched to the red star of Russia with the stars and stripes folded and hidden under the wagon and with no American even included as a welcome guest on the driver's seat. Let us hope that nobody anywhere in high authority has planned it that way.

Let us hope, too, that the focal point of communistic power will not be shifted from Russia to the United States under circumstances which will permit that aethestic doctrine to dominate government over here after the manner in which it has for so long controlled Russia. If it is true as we all hope and as some believe that Russia has gone capitalistic let us make sure that the United States does not go communistic as part of our lamentable habit of adopting in this country the totalitarian practices which have already proved themselves unworkable and unwanted in so much of Europe.

However, before accepting the high-pressure publicity that Russia has deserted communism we should look for more convincing proof than the fact that the Archbishop of York has visited Moscow and that officers of the Russian Army are permitted to wear the insignia of their rank upon their uniforms. National naïveté is a state of mind which America can not afford to manifest in these history-making times.

BROWDER'S LATEST

The ineffable Earl Browder, general secretary of the Communist Party of the United States, has surpassed himself in intemperate arrogance. That is something, as the saying goes; because for years he has been trumpeting the party line, always for the Communist interest and in complete disregard of other considerations.

That party line has been a devious one. Down to Hitler's rupture of his agreement with Stalin, the struggle in Europe was an imperialist war waged by Britain and France against Germany; so Browder proclaimed that "the Yanks aren't coming" this time. Then, literally overnight, the Nazi attack on the Soviet Union in June 1941 transformed the conflict into a sacred cause which America must enter forthwith. The nature of our actual entry through Japan's attack upon us at Pearl Harbor made no change in Mr. Browder's concept of our strategy, which called for disregard of the Japanese foe and

complete concentration on Europe in aid of the Soviet Union. So the Communist Party spokesman has ceaselessly demanded the opening of a second front in western Europe, regardless of cost.

A striking example of Mr. Browder's technique is the speech delivered by him at a Communist "second front" meeting held in New York City early in September, immediately after the Quebec conference. Asserting that such an attack was perfectly feasible, he stated that if the British and American general staffs did not so act "it can only be because as military experts they have been overruled by themselves in the capacity of politicians subject to reactionary influence." And he coupled this open accusation of bad fatih with a warning that, unless the second front was opened immediately, Anglo-American relations with Soviet Russia would "deteriorate sharply."

Neither Russian victories nor Allied successes in the Mediterranean have changed Mr. Browder's tune. His speech at Chicago last Monday evening sets a new high for his effrontery. Again he demanded an immediate second front as the prerequisite to consolidating good relations with the Soviet Union. And we had best do it, if we know what is good for us, because "the cold, hard truth is this, that unless we get down off our high horse * * * there is not the slightest prospect for us to emerge from this war with anything that can properly be called victory." Mr. Browder made another interesting comment when he called attention to the steady advance of the Russian armies and "the prospect that it opens up a decisive Soviet victory in which Anglo-Americans arms will have no major share."

However, Mr. Browder's most significant point was his ridicule of the idea that America or Britain might expect any Soviet aid in the Far East. It is sheer illusion, said he, for us to expect that the Soviet Union "will be able or willing also to undertake the burden of the military struggle against Japan. All chatter about the Soviets giving us bombing bases in Siberia is harmful nonsense with only one aim in mind—to try to give the Soviet Union similar tasks in the Far East which she has performed in Europe, namely, to win the war for us. Well, it is always salutary to know where one stands. And, so far as Mr. Browder is concerned, our relations with the Soviet Union are an emphatically jug-handled arrangement, with Moscow holding the handle, getting everything and giving nothing in return. Of course, Mr. Browder does not officially speak for Moscow. He is the head of the Communist Party in the United States, which is technically an independent organization. But neither Mr. Browder nor his party comrades ever say or do anything which they deem displeasing to the Soviet Union, and they strive faithfully to echo the Soviet viewpoint and serve Soviet interests. Hence, Mr. Browder's remarks deserve notice and careful consideration.

The Franking Privilege

REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. FISH. Mr. Speaker, for the benefit of Members of the House of Representatives, I am including in the RECORD the following extracts from the Postal Laws and Regulations, 1940:

CHAPTER IV—FREE MATTER IN THE MAILS—MATTER TO BE FRANKED

(P. 608)

609. The CONGRESSIONAL RECORD, or any part thereof, or speeches or reports therein contained, shall, under the frank of a Member of Congress, or Delegate, or Resident Commissioner from Puerto Rico or the Philippines, written by himself except as provided in section 185 of title 44[1] be carried in the mail free of postage, under such regulations as the Postmaster General may prescribe.

612 (3). All franked matter shall be forwarded like any other, but when once delivered to the addressee may not be remailed unless properly franked again. A bulk package of franked articles may be sent by a person entitled to the franking privilege, to one addressee, who, on receiving and opening the package, may, on behalf of such person, place addresses on the franked articles and remail them for carriage and delivery to the respective addresses. This section relates to matter entitled to free carriage under sections 608 and 609.

Mr. Speaker, it is perfectly clear that any Member of Congress may send out any speech he may make, or any extract from the CONGRESSIONAL RECORD under the franking privilege, and he may also send them in bulk to individuals, who then have the right to address and mail them. This has been the custom and practice for many years, and should continue to be so, as in many instances it is the only way of getting speeches distributed, as Members of Congress do not generally have mailing lists or staffs sufficient to address them.

For example, if some Member made a speech that would be of interest to bankers, there is no reason why he should not send them to be addressed by someone engaged in the banking business. Exactly the same procedure applies whether the speech is to be sent out to businessmen, farmers, railroad men, organized labor, or other groups.

I was taken to task recently by the American Legion for alleged abuse of the franking privilege because some individual whom I have never met or seen received and mailed some of my speeches. He had a perfect right to do so, just as I had to have my speeches sent out for addressing and mailing. It makes no difference whether the individual to whom they are sent is black or white; Protestant, Catholic, or Jew; indicted, arrested, convicted, or in jail or out of jail.

It is essential that there be no attempt to repeal or limit the franking privilege of Members of Congress, particularly in these days of totalitarian ideas and attempts to limit freedom of thought and expression, of speech and of the press. If the franking privilege of Members of Congress is limited or abridged, Congress might just as well adjourn, as it would no longer have the power to safeguard our free institutions, the Bill of Rights, and to uphold and defend the Constitution of the United States. In accordance with the preamble of the American Legion, the first of its fundamental purposes is "to uphold and defend the Constitution of the United States of America."

It so happens that the speech I sent out, to which the Legion objected, was on proposed amendments to the Alien and Sedition Act to make it conform to the Bill of Rights and the Constitution in time of peace. As long as I am in Congress, or out of Congress, I shall do everything in my power to preserve and protect and uphold our free institutions, and particularly free speech and a free press and our representative and constitutional form of government. Without our free institutions, free America ceases to exist. It seems to me that is exactly what we are fighting for all over the world, and we must preserve it at home, particularly in time of peace, even for people and groups with whom we do not approve and are in fact opposed in every way.

[1] Title 44, sec. 185, U. S. C. (p. 184)—CONGRESSIONAL RECORD; extracts for Congressmen; mailing envelopes:

"It shall be lawful for the Public Printer to print and deliver, upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof. The Public Printer may furnish without cost to Senators, Members, and Delegates, envelopes, ready for mailing the CONGRESSIONAL RECORD or any part thereof, or speeches, or reports therein contained. Envelopes so furnished shall contain in the upper left-hand corner thereof the following words, to wit: 'Senate, United States (or House of Representatives, United States). Part of CONGRESSIONAL RECORD. Free.', and in upper right-hand corner the letters 'U. S. S.' or 'M. C.', and the Public Printer may, at the request of any Senator, Representative, or Delegate in Congress, print in addition to the foregoing, the name of the Senator, Representative, or Delegate, and State, the date, and the topic or subject matter, not exceeding 12 words. But he shall not print any other words thereon, except at the personal expense of the Senator, Member, or Delegate ordering the same except to affix the official title of a document. All moneys accruing under this section shall be deposited by the Public Printer in the Treasury of the United States, etc."

Letter From Army Officer in North Africa

EXTENSION OF REMARKS
OF
HON. NAT PATTON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. PATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following personal letter I received from my friend and constituent, an Army officer in north Africa:

UNITED STATES ARMY,
North Africa, September 23, 1943.

MY DEAR COUSIN NAT: While I have a little breather I'll try to answer your most welcome letter of July 29 (written at good old Crockett) which came in due course and would have been answered sooner but for the

fact I'm kept pretty much on the move in connection with my duties of supply officer. You see things have to be done and there are any number of items which aren't available in your immediate theater but which, nonetheless, have to be had, so it's my duty to see that they are procured—and they are. I shall have to leave again later on in the week to get some other items which are now available which we haven't had heretofore.

I think events of the past few weeks speak rather well for themselves and we know you folks at home have little or no reason to be anything other than satisfied. Together with our fine allies, the British, we are now over in these toughies backyard doing our pitching at rather close quarters and they are now learning at first-hand just how this business is done. I recently had the rare privilege of talking to two young officers who were in the assault force which landed on the Italian mainland, and what those lads told me of the behavior of our boys would make you so damn proud that you're an American your chest—and head—would just naturally expand several inches, and stay in that condition. Yes, these boys were Texans, hence I was more than ordinarily proud of them. They've had their baptism and are now "going to town."

Among other things they told me was of hearing remarks from their boys such as, "Hell, I came over here looking for Germans, let's get going." And get going they did, as the Germans know to their sorrow now. We should always bear in mind that the valiant Eighth Army of the British rendered us noble and timely assistance. If no other worthwhile thing comes out of this, the mere fact that we have fought and died with such people as the British, with the common understanding and ideals it has brought out between the two largest branches of the English-speaking peoples of the earth, will be one of the most cherished. Make no mistake about it, the British are good, and they are reliable. I've had many dealings with British officers and have yet to find one who would not cooperate with you wholeheartedly and gladly. Their men show American officers the same deference and respect they show to their own officers and never seem able to do enough for us. We, of course, reciprocate.

NAT, now that things have turned in our favor, there are just a few thoughts I, as an American citizen, and not as an Army officer, would like to offer as suggestions to one of our chosen representatives in Washington. I am not overly expert at putting into readable English what is in my innermost mind, but will attempt it anyway. We want you men in Congress to bear a few facts in mind when Adolf and his gang of hoodlums begin to leave the sinking ship, which won't be long in coming now. One thing is that, when this fanatic was put in power in Germany, he had something over 78 percent of the votes cast. Therefore, the German people are, in cold, hard fact, just as much to blame for the present state of affairs as the Nazis are, and perhaps even more so, as they haven't made the slightest attempt whatever to rid themselves of his rule. We should never forget that when the German is top dog the world has never seen a more ruthless and arrogant tyrant. However, when the tables are turned on him, he cringes and knows only too well how to yell "Kamerad." To permit them the means to manufacture tools of war is only to assure yourself that you will be faced with another war within a generation.

There are thousands of us men over here and elsewhere who were in the other fracas with these people and, without wishing to appear conceited at all, we do know them, and when the time comes to even consider an armistice and subsequent peace that our Government should take such measures as will insure that we can return to our homes, loved ones, and our business with positive assurance that our sons will not have to undergo the same experience we've twice had within our generation. To us, Hitler, Mussolini, and Tojo are nothing more or less than Sam Bass and his gang on a much larger scale, and you are well acquainted with how our forebears dealt with his ilk. We are quite certain in our own minds that to do anything short of completely depriving them of the means of making war in the future is only to invite disaster.

You gentlemen will have any amount of pressure brought to bear on you to show mercy and compassion for the poor German people. Please, for God's sake, just remember one quite simple thing when that begins, i. e., no government in the world, without the solid backing of its people, could possibly have wrought the misery and destitution these gangsters have wrought the past 4 years. I've been in many large cities over here, NAT, and I've yet to see any sort of a store with anything like a stock of goods. You see lines of people on the sidewalks and streets waiting for some store to open which has somehow or other gotten hold of something to sell. I've seen people wearing clothes they've had for 4 years and can't get any more. When you enter a store and ask the reason for the empty shelves, the answer is invariably the same, "The Germans took it all." When you ask if they paid for it, you get a blank stare of astonishment—you know, that inquisitive expression which says plainer than words, "Can you possibly be that dumb?" Oh, yes; they paid for it all right—with money they printed themselves with the name of Bank of France on it—a bald-face counterfeit. It is the same everywhere they've been. It therefore boils down to simple banditry on a national scale.

To show such people any consideration whatever is but to convince them they were quite right in taking anything they wanted without the formality of paying for it, which, in turn, will lead them to do it again at the very first opportunity. We cannot, we must not, leave them in a condition which will lead to a repetition. We may later learn that Italy should probably be dealt with differently, as it is rather apparent to us that a vast majority of the Italian soldiers never did have any zest for conflict. Benito's association with Adolf has cost his country five armies now, as well as the total loss of their African empire, and they've shown a total lack of capacity for governing other peoples. I, for one, think that the hardships we've undergone—and will continue to undergo—entitle us to some expression of our thoughts as to what ought to be done, and we hope they'll have some weight in the decisions which will have to be made within the foreseeable future. I haven't seen my wife and children, now, for over 6 months, and don't expect to for another 18 months or 2 years, and if anyone imagines that's an easy experience to endure without affecting your work, they've certainly something to learn. You get so homesick and heartsick at times it is almost overwhelming, but, then, you have to remember at all times you are an officer and a leader and must not, ever, give the slightest indication of your real feelings. To do so would be to invite certain disastrous effect on the men with whose welfare you are charged. If we were not quite certain in our own minds that this time we'll put an end to this sort of business, you can well imagine the result. Please pardon the length of this letter, but those are the thoughts of one American, and they are a sample of what many over here and elsewhere are thinking. Write me as often as you can. Your letters are always appreciated and are most helpful, I assure you. Meantime we'll get on with the job and won't miss a stitch or trick.

Sincerely,

MACK.

Conscription of Labor

EXTENSION OF REMARKS
OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, October 5 (legislative day of Wednesday, September 15), 1943

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. Victor A. Olander, secretary-treasurer of the Illinois State Federation of Labor. Because the letter expresses the view of the Illinois State Federation of Labor on a vital subject, I believe that it will be of genuine interest to all Members of Congress as well as those who read the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ILLINOIS STATE FEDERATION OF LABOR,
Chicago, Ill., October 1, 1943.

Hon. C. WAYLAND BROOKS,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: The sixty-first annual convention of the Illinois State Federation of Labor, which adjourned its sessions on September 25, expressed the view that enforced labor as contemplated in proposed draft legislation is a form of slavery, definitely and clearly prohibited by the thirteenth amendment to the Constitution.

The issue involves the most basic of all liberties—that of the freedom of the person in the field of labor. That is the fundamental freedom from which all other liberties flow and without which they are of no avail. The moment we agree to accept the principle of enforced labor, we then consent to slavery.

The thirteenth amendment to the Constitution prohibits involuntary servitude. The historical aspects of that amendment, easily traceable through the history of the first half of our national life, show that it covers the whole field known to common law as that of master and servant.

Beginning with our colonial experiences in the holding and regulating of indentured servants, which penetrated far into our constitutional life, and the chattel slave system, which remained in full swing until the Civil War, we learned the true essence of slavery so well that we provided a sweeping constitutional provision forever outlawing the power of men to hold others in personal service or labor.

That this end was a part of the original plan is indicated by a series of events beginning with the political philosophy stated in the Declaration of Independence, followed by the adoption of the Ordinance of the Northwest Territory a few years later with its provision against involuntary servitude, in language that long afterwards became the thirteenth amendment.

Then decade after decade, whenever the issue of the admission of new States, or the formation of new territory arose in Congress, the prohibition of involuntary servitude and slavery was invariably presented in various motions and resolutions.

In 1865, the thirteenth amendment was adopted. The immediate automatic effect was that labor contracts became unenforceable in the sense of specific performance. In other words, men could not even voluntarily sign away their right to leave the service of another.

In 1900, Congress was confronted with the problem of applying the Constitution to the

newly acquired Territory of Hawaii, where great numbers of laborers were held to service by contracts. The problem was met by the insertion of a clause in the Territorial Act declaring all contracts for personal service or labor containing a time element as null and void and terminated. Another clause provided that there should be no remedy for the breach of a contract for personal service or labor other than a civil suit for damages.

In 1912, the Supreme Court of the United States rendered what I believe to be the most important labor decision in the history of that great tribunal. It was in the case of *Bailey* v. *Alabama*, and indicated quite clearly that no man could be held to labor against his will regardless of contract even by indirect action on the part of the State. The Court said that what the State cannot do directly it cannot do indirectly.

In 1913, Congress inserted a clause in the Clayton Act holding that labor is not a commodity or article of commerce. The meaning, of course, was that labor is not a thing subject to change of ownership.

In 1929, the United States declared its adherence to the International Slavery Treaty by including a reservation that because of its Constitution it did not agree to a clause which permitted forced labor even though limited to public purposes.

All of the events which I have cited tend to indicate quite clearly, I believe, that such legislation as is proposed in the labor draft bill is prohibited by the Constitution, as interpreted up to the present.

There are few who will insist that the Constitution may be set aside even in war, but what the advocates of the proposed labor draft now offer is a new interpretation of the Constitution. That interpretation, once accepted, cannot be limited to the duration of the present war emergency.

If that procedure is followed, we will then have accepted the theory that men may be held in service whenever in the opinion of the governing authorities there is public need for such action. The road will then be wide open to the gradual reestablishment of slavery in its worst forms.

It will be a shocking thing if in a war to establish the freedom of other nations we sacrifice the freedom of our own people.

In the discussion of this subject a great many very earnest citizens are troubled by arguments holding that it is no worse to conscript men to work than it is to draft them for fighting purposes.

Recently there has been broadcast a most insidious question on this point, namely: "If some men may be conscripted to fire the guns, why may not others be conscripted to load the shells?" That question overlooks the very pertinent fact that the auspices are not the same in both instances.

The question may be clarified by rephrasing it, as follows: "If it is right to conscript some men to obey the commands of a General MacArthur on the battlefields, why isn't it equally right to conscript others to work under the orders of a Simon Legree in the cottonfields?" The answer is obvious, of course.

Military conscription is permitted by article I of the Constitution. There has never been much agitation about it anywhere, for the very plain reason that the genius of man has never discovered any way to carry on war except by arbitrary action, cruel and ruthless, allowing no time for discussion and argument, but calling for instant obedience to orders. There is no other way.

On the other hand, it is a well-recognized fact that the historic struggle of the working people of every land through the ages has been upward from the depths of personal slavery. There never was a slave except for the control and use of his labor.

Labor is a continuous thing which never ceases, for, without it, whether at peace or war, civilized or savage, men cannot live. The rise has been one from the status where it was held that the masses were born to serve the classes, to that of contract under which it was found necessary to prohibit the individual from enslaving himself by so-called voluntary action, namely, by providing that he could not sign away his personal freedom.

Theoretically, the Army is always at war. That is to say, large or small, it must always be ready. Enlistments, therefore, even in the most peaceful times, are for definite periods with penalties for desertion. This is necessary, and those who serve are held in high honor and esteem. But if that same relationship were established in industry, as between employer and employee, who will deny that it constitutes slavery?

In conclusion, let me say that I believe it is the duty of every citizen to give the fullest measure of service in industry during the war. We have been outspoken on this subject.

It is axiomatic that the willing service of freemen is far more productive than the forced labor of others driven under compulsion.

A thoroughly popularized voluntary plan, designed to create a sense of personal responsibility in the mind of every American citizen and particularly among the workers, would bring far greater results than anything that can be achieved through the application of force and fear.

If what I have said herein has attracted your interest sufficiently to raise questions in your mind which you think must be answered, perhaps you will do me the honor of letting me know what they are.

Sincerely yours,

VICTOR A. OLANDER,
Secretary Treasurer.

Jobs for Soldiers After the War

EXTENSION OF REMARKS
OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 5 (legislative day of Wednesday, September 15), 1943

Mr. REYNOLDS. Mr. President, I have today listened with a great deal of interest to the very spirited debate which has taken place between two very able representatives of the people, the Senator from Montana [Mr. WHEELER] and the Senator from Alabama [Mr. HILL]. They spoke of millions of men in uniform. After the war millions of men will be discharged and returned to civil life. We are interested in those men on their return. Therefore I ask unanimous consent to have printed in the Appendix of the RECORD a fine editorial from the Shreveport (La.) Times, issue of October 1, 1943, dealing with employment for the men who will be returned to civil life in our country after the war.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHEN PEACE "ATTACKS" THIS NATION

Mrs. Eleanor Roosevelt returned from her 20,000-mile visit to Australia and other southwest Pacific areas to call a special press conference which was unusual in its make-up, because she specifically asked men reporters of Washington to be present, although her press conferences normally are limited by her to the feminine representatives of the press.

The purpose of the press conference, she said, was to make it known that everywhere she went in her many travels she found men in uniform concerned chiefly with one question—aside from winning the war. That question is, Mrs. Roosevelt said, "Will we have jobs when we get home?"

There can be no question that when they aren't thinking about killing or keeping from getting killed, men in uniform are wondering what they are coming back to in this country, what they have been fighting to preserve. We have seen, in confidence, too many letters from the front in which fighters expressed their thoughts privately to members of their families and we have talked privately with too many returning men—wounded and well—not to realize the truth of what Mrs. Roosevelt reported.

The question is What kind of jobs? That question also seems foremost in the minds of men at the front, but Mrs. Roosevelt did not mention it. It is natural to assume that Mrs. Roosevelt speaks of jobs for returning men in uniform in the philosophy and the background of the present Washington administration—a philosophy which turns to Government administration control over citizen enterprise, with a further background of constantly increasing Government "benefits" which actually are simply new and greater taxes in disguise with less and less of citizen responsibility, of enterprise, and of self-initiated progress.

We doubt very much if men in uniform at the front are thinking along those lines when they wonder about jobs when they get back home. We believe they are thinking—when they have time to think of such things—as much from the standpoint of what kind of jobs as well as merely getting on a pay roll—which might be or become merely a Government pay roll controlled politically for political purposes.

It was coincidence, that within a matter of minutes after reading what Mrs. Roosevelt had to say, the wife of a captain serving in the Army overseas came in with a letter from her husband. He had ideas of his own about jobs and he said that the question was discussed considerably by his fighting comrades in their spare moments when out of action. This, in effect, is what he had to say:

"We wonder sometimes whether this war is really worth fighting. It won't be if we go home and find that a lot of the plans being talked about are in effect—plans about jobs. We want jobs of our own, jobs we get ourselves to work for ourselves. We don't want some big shot sitting around telling us when and where we can work and what we get for it and what we must do with it."

It is an amazing thing that virtually everything that comes out of the Washington administration concerning post-war jobs deals openly or in its hidden recesses with what amount to New Deal doles often obviously vote catching, with further Government control of and socialization of the right of a free American to work for himself, and with gifts for people not needing or not deserving them; all of this to be paid for through constant passing of the tax collection hat among the people as a whole.

What about working jobs?

What about planning for the millions who are certain to become very suddenly unemployed when war ends—jobs for them rather than gifts to keep them idle instead of productive?

What about working jobs for the returning soldier at honest pay in honest employment, instead of guaranteed benefits which can only be character-destroying and nation-destroying pittances?

Government statistics show that in peacetime this Nation has not employed more than 11,000,000 men at one time on factory pay rolls. The Department of Labor states that there will be 18,000,000 on factory pay rolls by early next year. When war ends, at least 5,000,000 of these will be thrown out of work at once, the Government statisticians estimate. In addition, there will be about 7,500,000 rather quickly returning men in uniform, with some 2,500,000 left in uniform for an indefinite period.

That means 5,000,000 home factory workers and about 7,500,000 men in uniform simultaneously shifted from fighting forces and production forces to the army of the unemployed—a total of 12,500,000 suddenly unemployed. As testimony to the home estimate, the Government points out that sudden ending of war specifically would mean 2,000,000 persons dropped from explosives factory pay rolls, 2,000,000 more dropped quickly from aircraft factory pay rolls, another 1,000,000 from shipbuilding, and a second 1,000,000 from shipbuilding as quickly as vessels under construction could be completed.

What is the Washington administration doing about this problem? So far as the public knows it is talking about social security doles for men when it should be turning toward plans which will let men make jobs for and give jobs to their fellow men—and which will permit a man to work honestly as he sees fit at honest and fair toil without paying tribute to a boss, political or otherwise.

As an example of the fact that little is being done by the administration except along political lines and socialization lines, take the case of Packard Motor Co., typical of all of the huge auto industry which must convert from war to peace. George Christopher, its president, states that Packard could start reproduction on its 1942 models—few of which ever reached the public—within 4 weeks after the end of the war, but—

"Before we can go back to making cars somebody has got to tell us what to do with all the Government equipment now filling our plants," says Mr. Christopher. "If the war ended tomorrow we couldn't move a stick of our own property back into production from storage. The contracts section of the War Department put us into war work but no one in the Government seems to know who is to get us out when the time comes."

That's the story everywhere today in industry. It won't be able to move until the Government clears the way.

In other words, a sudden end of the war now or in the near future would find the Washington political controllers as unprepared, as confused, and as incapable of taking the first steps in peace as they were in taking the first steps in war when Pearl Harbor was bombed.

It is about time for Washington to think of this—to think of the day when peace will attack this Nation and to be prepared for it instead of being helplessly unprepared—as we were when war came.

Science and Technology

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, October 5 (legislative day of Wednesday, September 15), 1943

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the New Republic of September 20, entitled "Science and Technology."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SCIENCE AND TECHNOLOGY

Natives of India are not at present allowed to become citizens of the United States—a handicap which they share with the Chinese and other orientals. They are permitted to enter this country only under special conditions, with great difficulty and constant insecurity regarding their tenure. Apparently our Government believes that Indians are inferior to Albanians, Turks, Armenians, and many other races which are permitted free access and free citizenship.

This country does not, however, scorn to take advantage of the numerous and important inventions and discoveries of Indian scientists, whether resident in this country or in India. These inventions and discoveries are playing a valuable part in helping to win the war.

For example: Our troops have been greatly aided by the invention of unbreakable containers in which even liquids can be dropped from airplanes upon hard ground without being shattered. These containers are the work of Prof. Sir Shanti Swarup Bhatnagar, director of the recently established All India Board of Scientific and Industrial Research. Sir Shanti is also the inventor of a widely used stove hardly larger than a matchbox, which gives off intense heat for 12 hours from a single filling of solid fuel. He has produced fabrics and other materials resistant to poisonous gases, and cotton cloth with the insulating properties and warmth of wool.

In these days when food is scarce, there is great importance in a new process which preserves cantaloups almost perfectly while being stored or shipped. This is the work of Dr. Jagan Nath Sharma, an Indian chemist who lives in Los Angeles. Another of Dr. Sharma's processes artificially colors oranges without harm to the fruit and has increased the annual income of Florida growers, on good but dull-looking oranges, by $45,000,000. He has done important work on other vegetables and fruits as well.

The deadly new flame throwers that the American Army used against the Japanese before Munda have undoubtedly benefited from the work of another Indian in America, Dr. Alamjit D. Singh, of the University of Illinois. He has also made important contributions to camouflage. This subject has likewise received attention from an Indian chemist of Detroit, K. N. Kathju, who has collaborated with Hexter and Shepheard in developing green and other paints that cannot be told from surrounding vegetation even under infra-red photography.

American and British soldiers in the jungles of Burma are endangered by the very serious fever known as kala azar. For its treatment we are indebted to another Indian, Sir Upendranath Brahamachari.

The proportion of distinguished scientists among educated men in India is exceptionally high, probably because the situation of India under British rule makes other outstanding careers abnormally difficult. The proportion of scientists among Indians in the United States is still higher. In relation to their total numbers, Indian scientists outnumbered British ones here by 16 to 1; French, 26 to 1; Germans, 36 to 1; Spaniards, 70 to 1.

In a brief article such as this, one can mention only a few of the Indian scientists in America and their researches. Dr. V. R. Kokutnur is making important contributions to chemical warfare; Dr. Beram D. Saklatwall is working in metal technology; Dr. Sharat Kumar Roy, Dr. Yellapragada Subarrow, Prof. Subramanyam Chandrasekhar, and many more are all doing valuable work.

Some of the Indians in India who have engaged in scientific research have won world-wide renown. One thinks of Sir Jagdish Chandra Bose, Sir P. C. Ray, Sir C. V. Raman, S. Ramanujan, Prof. M. N. Saha, Prof. P. C. Mahalanobis, Sir Ramnath Chopra. The notion that men like these are unfit for American citizenship that is freely granted to the most backward and ignorant Balkan peasant is so absurd that it needs no comment.

Crisis in Lamb Market

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. CASE. Mr. Speaker, I am glad to report that attention of the War Food Administration is being given to the serious situation that has been developing in the lamb market. Officials of the Livestock Division, War Food Administration, will meet in Chicago, Thursday, with the industry's advisory committee to canvass the feed situation and to explain the market now available through the purchasing of carcasses for lend-lease without requiring boning.

Growers in the West and Northwest have been genuinely alarmed by the lack of buyers and the shortage of feed for fattening lambs. Ordinarily the demand for feeder lambs far exceeds the supply. Today no buyers are in the field. The shortage of feed is one cause. The year-around ceiling is another. Feeders cannot look forward to a seasonal advance.

Growers have been at the mercy of the buyers because it has not been generally known that Government procurement agencies were authorized during the summer to purchase lambs in the so-called half-fat or range-finished condition, lambs weighing from 60 to 75 pounds that would dress out from 30 to 45 pounds.

Officials of the National Wool Marketing Association and growers in my district have expressed the thought that if 10 to 20 percent of the lambs are sold this way, feed demands will be lightened and the pressure will be off the market.

Officials in the Livestock Division of the War Food Administration say that a heavy run of southwestern ewes and a shortage of labor in the packing plants have added to the crisis. With a shortage of help to bone lambs, the packers could point to heavy shipments in the yards unslaughtered and push prices down. The approval for shipping lambs in carcass without boning, obtained last week, is designed to help meet the labor problem.

Judge Marvin Jones, War Food Administrator and W. O. Fraser, Assistant Chief of the Livestock Division, have assured me that the situation will be watched carefully. Mr. Fraser and Harry Reed, the Chief of the Division,

will attend the meeting in Chicago, Thursday, where both the feeding and marketing situations will be canvassed.

I hope that this conference will produce results and make unnecessary any appeal for an investigation by the Packing and Stockyards Administration.

The Bayous of Louisiana

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. HÉBERT. Mr. Speaker, I am certain you will agree with me, that it is with justified pride that I today direct my remarks to you and my colleagues.

Tomorrow from the Nation's presses comes one of the most fascinating, understanding, and inspiring stories of a people close, not only to my heart, but close to the heart of everything that is America—the Acadians.

Most of you first came to know the Acadians during your school days when you were enthralled by the immortal Evangeline from the pen of Henry Wadsworth Longfellow. I am sure that even today there hums through your subconscious mind the beautiful rhythm of those opening lines:

> This is the forest primeval, bearded in moss and garments green.

In the tempo of modern times there has come another story of the Acadians. This time it is not in poetry but in the narrative language of the historian. This time the story is revealed through the eyes of the modern newspaper reporter.

Mr. Speaker, today Harnett T. Kane, himself a native Louisianian, gives to the world The Bayous of Louisiana, the story of that intriguing, fascinating, spirited history which is Louisiana.

I said I directed these remarks to you today with pride. I am proud for several reasons. I am proud that in my veins flows the blood of these noble, devoted, and loyal people. My forebears were among those driven to the warm, understanding, comforting bayous of Louisiana from the village of Grand Pre. From my paternal and maternal ancestry there is an unbroken line of names associated with the early settlers of the bayous of Louisiana. My father and mother and their fathers and mothers before them grew to manhood and womanhood on the dreamy bayous of Lafourche and Terrebonne Parishes in south Louisiana. I am proud that I am of this Acadian stock.

I am proud that tomorrow, October 6, my mother has lived to see the publication of this story of her people on the seventy-third anniversary of her birth along the banks of one of these bayous which Harnett Kane so vividly portrays in this never-to-be-forgotten book.

I am proud that The Bayous of Louisiana has not only come from the pen of a native Louisianian but I am further proud that I have worked alongside Harnett Kane as a fellow newspaperman, as a fellow reporter. I have seen Harnett Kane grow great in stature in his chosen field and today he stands alongside of such Louisiana historians as Grace King and Lyle Saxon. In two books he leaves no doubt that he will be accepted as one of Louisiana's outstanding narrators.

Harnett Kane's first book, Louisiana Hayride, is well known to you. In The Bayous of Louisiana he has taken another direction in the history of Louisiana but he has not changed his masterly presentation or his understanding of his subject.

For the first time, to my knowledge, a full-length volume offers a completely sympathetic and truthful interpretation of the fabulously rich scene of south Louisiana, and of the generous-spirited people who live along and about its distinctive waterways, the bayous. Mr. Kane refers to these people as "the Free French-Americans of Louisiana," and he has struck a happy note and offered a theme of some import in the present strife-torn world.

The inhabitants of many of the Louisiana waterways are descendants of the Acadians, who moved from France to Canada and lived in the latter area for many years. The Acadians' forefathers were victims, during the eighteenth century, of a cruel destiny such as has been suffered repeatedly by men and women of current years. They were gathered together and expelled overnight from the homes that had been theirs for generations. "Families were sometimes separated at the shore," Mr. Kane tells us, "children shrieking as their mothers pulled into boats without them; old women were held back as their sons were taken on other vessels. They were to understand that there was nothing left behind to which to return—from the water they could see the outlines of their homes in flames. The dikes that their fathers and grandfathers had raised were being broken." Does not this have a familiar ring to men and women of today?

The Acadians were to be scattered among the American Colonies on the Atlantic seaboard—to be dispersed as a people, their identity to be forever lost. But these victims fought back, quietly but surely. Many, of course, died of cold and of hunger, or of the weight of tragedy that hung upon them. But, as Mr. Kane puts it, they "held fast to their hopes and to their small possessions"; they never forgot and they held together. A scant band or two heard of far-away, friendly Louisiana, and they came to it and were welcomed. "And now," he declares, "the fertile acres of Louisiana near the Gulf of Mexico became the promised land of the Acadians."

Here the people set to work, day and night. At the back of their thoughts was a resolution—here, in Louisiana, there must grow up and remain a citadel of their own. The bayous of Louisiana became their places and their ways were fitted to their scene. It is a watery locale, this south Louisiana, a place of many water passages, of large bayous and small ones, lakes, lagoons, some of them tiny outlets; others, in the words of Mr. Kane, "celebrated in gallant song and gay anecdote." He describes graphically the bayous themselves:

> Prodigal in number and in combination, they make a kind of lacework out of land, curving, twisting, curling back, branching to meet others, splitting, resplitting.

They have thus set the design within which these Louisianians lived and enjoyed their lives. The waterways were the original highways; in many places they still remain the main routes of movement. The banks of the bayous were the main stretches of dry land—often the only such stretches for many miles—and on these ridges the men and women built their homes. They lived by the waterways, traded on them, visited along them, adapted their ways to their streams.

The result, Mr. Kane notes, is a "culture without parallel in the United States, warm and rich in values, fitting no mold but its own." Here, he says, there "ensued a near-miracle of growth and revolution, a demonstration of the power of the human will." It is fertile area, sometimes amazingly fertile. As the author puts it:

> From the bayou and its land comes rich produce of thick black soil, warm air, and the slow waters themselves—a varied life on stem, on paw, on wing, on gill, that may be overwhelming in range, in teeming numbers, and in lush variety.
>
> Nature is in a free-handed mood in this South Louisiana. From these places of concentrated fertilizing, the washings of many soils, come jumbo shrimp and Spanish moss and tabasco peppers imported originally from Mexico, soft-shell crabs, alligators and diamond-back terrapin, salt and other minerals in great buried pillars, the largest number of amphibious creatures of any part of the continent. And the soil produces three crops a year, while some localities boast of four.

Some may, however, have seen the prevailing wetness, felt the discomfits of isolation, or feared the hazards of the scene. The Acadian saw wealth before him and worked to achieve its promise. To quote further from The Bayous of Louisiana:

> He tugged at his strips of land and his water edges, changed them, improved them, and extended them, turning semiliquid wastes into flowering gardens. * * * Then he turned to marsh and water and air for the indications of wealth that each held. His became the economy of the little collector. He fished, trapped, hunted, picked moss, made a series of part livings through the years. The country remained one of small men at small occupations.

Separated from the rest of the world, the Louisiana Acadian lived a life that was little different, in many respects, from those of his forefathers. But these Acadians were Americans, even though many of them, isolated as they were, knew only the French tongue. They have fought in every war of the American Republic since Louisiana became part of the United States in the early

1800's. They have taken a large role in peacetime in the affairs of their State, contributing their sons to the ranks of Louisiana Governors and lawmakers and representatives in Washington. They have clung to many of the gallant traditions of France; and yet they have become true Americans.

Mr. Kane sums up the situation in apt phrases:

> The case of the Acadian may, in fact, be one of the answers to impatient and intolerant men who cry, in the name of Americanism, for quick and complete absorption of all differences into a common whole. Such partisans, desiring a leveling down to a flat monotony, forget that the ideal of the Nation's good life is the sum total of many contributing forces, of many origins.

Meanwhile the south Louisianian has enjoyed himself. His has been a philosophy of "joie de vivre," an appreciation of life's good things—an enjoyment of life's jokes and its pleasures. He has been no dour Puritan, but a man of tolerance and understanding. He has not sought to force others to conform to a narrow pattern of his own; he has made allowances for differences among men and their ways. Mr. Kane, in a series of striking chapters, tells of his observations as he lived among the good-humored folk of the bayous, enjoying their warm-natured sociability and their pleasant humors.

Yet the bayou people can be serious and earnest when the times call for it. As Mr. Kane tells it, these children of the Acadians are sending their sons across the sea today to fight another and worse tyranny than their ancestors suffered, and are working to liberate their people's former home, France, from the clutches of nazidom. The book is dedicated to these free French-Americans.

The volume is a richly packed panorama of a striking American scene—the salt marshes along the gulf, the "garden bayous" along which great lines of massive oaks grow in splendor; the expanses of the prairies; the meadows of the Evangeline country. Mr. Kane tells of present-day Acadians who are "share-croppers in fur, in a semitropical fur empire that is greater than that of the Frozen North," gathering more furs than the hunters of Canada or Alaska. Others sometimes spend lonely months in houses that are "only boxes on stilts above the water" and suffer the forces of hurricanes that "break men and houses to bits, crushing islands into ruins of sand." Others work as sea-going oil men in fields that stretch out into the water. On the small bayous, long lines of houses extend in single file, with a "life that has the flavor of another Venice—a Main Street on the water." The author describes shrimp-fleet blessings: long trips among men who work many hours, day in and day out, at the back-breaking work of oyster cultivation; of buggy weddings in the prairie sections, in which a file of 40 or 50 vehicles extends across the grasslands, and of pathetic funeral processions by water.

All in all, it is a sympathetic, deeply appreciative picture of a place and people, such as has seldom been offered. In advance of publication, incidentally, the book has been having a large sale, several times greater than that of Mr. Kane's earlier work, the widely acclaimed national best seller, Louisiana Hayride. This, together with warmly laudatory advance reviews, is indication of a wide public approval. It also means that my country and my people of South Louisiana will be better understood by other Americans of other States. Louisiana and the South as well will owe a debt of gratitude to Mr. Kane for this masterful work of interpretation. America, in these troubled times, as perhaps never before, needs such sympathetic interpretation of one group of Americans to another. The Bayous of Louisiana is the kind of book, based on intelligent observation and written in masterly style, that helps dispel un-American tolerance.

Mr. Speaker, I commend to you The Bayous of Louisiana by Harnett T. Kane.

Excerpts From Radio Address by Lisa Sergio

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from broadcast delivered by Lisa Sergio, September 28, 1943, over Station WEIL, New York City:

Roughly speaking, the major points at issue between United States and Great Britain on one side and the Soviet Union on the other are: One, the question of Russia's boundaries; two, the question of Russia's cooperation in fighting Japan; three, the question of the role that the populations of the world, as masses, are going to be allowed to play in rebuilding the world. The view held by the leaders on both sides differ considerably. Russia is seeking European boundaries which constituted an improvement on those she had in 1939. This would mean, no doubt, a portion of Poland, of Finland, of the Baltic States to be included within the Soviet Union.

Now, there do exist pledges on the part of the United States and Great Britain to the effect that all countries will have their boundaries restored. The pledges are not detailed. Both London and Washington have carefully steered very clear of detailed commitments on boundary lines, but even so on the Polish question, in particular, Poland's demands are known and so are Russia's intentions. And they do not tally. In fact, as Edgar Mowrer pointed out in his column in the New York Post this morning, the future of Poland will be one of the major points of discussion at Moscow no doubt. Poland is not going to be represented at those discussions. Let us remember that one of the events of recent history which made the Soviet Union very suspicious of the democratic sincerity of the western powers, was the famous Munich affair. It will be remembered that the one country whose fate hung in the balance, Czechoslovakia, was not represented at Munich.

It has always been the Kremlin's contention that France and Britain should have not only asked Russia to join that conference because she was pledged to defend Czechoslovakia, but should have refused to discuss with Hitler unless Czechoslovakia, too, was represented. The Kremlin said that the Munich Pact was the total betrayal of democracy. No one, I am sure, could differ with Moscow on this point. Now, Poland's fate is to be discussed, and Poland is not going to be represented, or at least there is no indication that she will. Would Russia not have greater respect for the British and American Powers if they refused to discuss Poland unless Poland were represented? If the Kremlin refused to have a Polish representative it would still pay the western allies to stick to their guns and insist further. Russia is a realist in her policy.

If the Anglo-American powers do not yield to her demands in spite of pledges they have made which conflict with Russian demands, Russian respect for the democracies will increase, rather than decrease. If the reverse occurs, that is our yielding to all Russian demands and thereby forfeiting our promises to other nations would indicate that the promises and pledges of Britain and the United States were not to be trusted, Russia would not trust them herself where such promises might concern her. And the whole of Russian policy would so far seem to indicate that they would be much more solid, much more reliable if they were embedded in the cement of the determination shown by both sides to uphold pledges made and ideals extolled. Russia could hardly intend to fight a war against Britain and America for the sake of the boundary of Poland. In fact one will respect us much more if we show a willingness even to fight for the sake of promises made to that country or to any other. Russia has been willing to forfeit good will in London and Washington to uphold General de Gaulle through thick and thin. There are millions of people all over the world who admire Russia for that as much as they do for her military might. So we have a chance in Moscow to redeem a record in this field which is not as good as it might be. Let us hope if the chance comes that we shall not pass it up.

Unskilled Workers, $214 a Month

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 30, 1943

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by me for and appearing in the September issue of the Reader's Digest:

UNSKILLED WORKERS: $214 A MONTH

(By ALBERT J. ENGEL,[1] Member of Congress from Michigan)

We are making war on inflation everywhere except at the spot where it starts. It starts at the point where the Government pours money into the cash drawer of the makers of war goods. If not checked there,

[1] Mr. ENGEL is donating the payment he received for this article to Army welfare purposes.

it will be extremely difficult to check elsewhere.

I am a member of the House committee which looks after War Department appropriations. I believe it to be my duty not merely to provide funds for this war but to see what is being done with them. To find out why a 30-ton tank costs $90,000 and a 105-mm. gun costs $21,000, I have visited 47 war plants, interviewing personnel and inspecting books.

What I saw has made it abundantly clear to me why our war is costing so much and why inflation is on the march. The story of inflation is to be found in the pay rolls of our war factories. The figures I use here are not figures I got from a fellow who got them from another fellow. I have certified copies of the actual pay rolls.

When you look at a pay roll you see names, wages, and occupations—welders, drillers, filers, assemblers, and so on. This looks like highly skilled labor. But when you go into the plant and see and talk with the people at the drills and machines, you find out that a lot of it is not skilled at all. Workers who are really skilled should get high wages; but in our war plants excessive wages are being paid to people with little or no skill.

Many plants have training courses where they turn a housewife or a youthful cornhusker into a welder or driller or even an electrician in a couple of weeks or a month. Here is an advertisement which has been put into many newspapers by the United States Employment Service—Government operated—and which tells its own story. It is topped by the picture of a beautiful girl. Then follows:

"This is Louise Blank, Badge No. —, who won beauty contests before the war. Now she is helping to win the war by welding on Liberty ships in the Richmond shipyards. Changing over from a housewife to a welder has left her smile intact."

Then comes the meat in the coconut:

"You can do what Louise is doing! We will train you to weld and pay you at the rate of $214 a month during the short training period. Soon you'll be equipped with knowledge that will win you pay up to $270 a month."

Is it hard work? Can a frail woman handle a heavy welding torch? Another Government ad shows a smiling girl in evening clothes, who says:

"I find my work no harder than a good day's housekeeping. My welding torch weighs only one pound. I earn $270 a month. There's a job like that waiting for you."

If she or he works on the swing or early night shift there is a 10 percent wage increase; on the graveyard or late night shift the addition is 15 percent. Translated into weekly earnings, this means that an 18-year-old girl just out of high school or a grocery clerk can get $49.28 a week while learning and then soon earn $62.30 regular weekly pay, $68.50 on the swing shift, or $71.69 on the graveyard shift. Wages suitable for highly skilled artisans who have spent years learning their trades are being paid to people for work which they can do after a few weeks' training on a one-purpose machine tool.

Machine-gun assembler. That sounds like a very skilled occupation. But a buck private in a machine-gun outfit must know how to knock down and reassemble a machine gun to the smallest part—and do it blindfolded. Pay: $50 a month, board and lodging. But here in a war plant a man gets from $4,700 to $8,741 a year for the same work—minus the risk. If Lt. Gen. Brehon Somervell, who heads the whole supply division of the Army, were to throw up his job and take to gun assembling, he could get a pay raise of $241. He gets only $8,500.

These rates, so far as I can learn, are not union rates. I found plants paying twice the union rates. I asked about this. I was told those rates were obsolete.

In one plant I took the names of 25 filers on machine guns. These men are now getting from $4,200 to $8,004 a year. I compared their earnings in 1941 and 1942. In 1941 they earned collectively $87,000. In 1942 they got $171,000—just about double. I found similiar conditions elsewhere.

Totally unskilled workers are also getting fat pay checks. One elderly gentleman told me, "I am 67 years old. I was a pensioner at 40 bucks a month. Now I am a sweeper in the factory at 40 bucks a week. Easy money, eh?" In one plant I found two elevator men getting more than $60 a week. A janitor in one plant was getting $61 a week—more than some of the lower-bracket engineers. Another advertisement of the United States Employment Service reads: "Dishwashers, waiters, and kitchen men. Wages $250 a month, board and lodging. Olympic Commissary."

There is no special skill required of a stock chaser. It is the kind of work for which industrial plants pay from $25 to $35 a week. Yet I found stock chasers getting $201 a month with $283 overtime. Total: $484 a month—$5,808 a year. I found another plant where the average pay of the whole plant is $5,100 a year with big Christmas bonuses in addition.

All this not only adds to the cost of the war, but it is bad for morale. The people who work in these war plants at these high wages live next door to people who still hold down jobs in civilian plants at very little above the old levels. What is going on in the minds of people who are getting the old wages, now frozen? In the mind, for instance, of a girl getting $13 or $25 in a store while one of her former fellow saleswomen gets $67 a week?

The mistake we made was to let wages get outrageously out of balance before we froze them. For instance, the 15 nonoperating railroad and steamship brotherhoods—clerks, station and express employees—say bitterly that they have gotten no raise at all since the war, that their wages are frozen at prewar levels and they have agreed not to strike. Our Government gets piously indignant at coal miners who must work hard at a highly skilled and dangerous occupation to earn $40 a week while that same Government offers $250 a month, board and lodging to dishwashers, and pays girls $55.80 a week to learn how to mend shoes at a Government arsenal. The Government cannot create these wide differences in wages and expect the people to like it.

The flood of excessive wages in our war plants is creating a vast excess of purchasing power, putting a pressure on prices which O. P. A. seems powerless to control. This results in inflation. At the same time, excessive costs force the Government to engage in excessive borrowing, which is also inflationary. This situation is extremely dangerous.

The administration and the leaders in business and in labor must rise to the heights of the highest courage, bring the whole menacing spiral to a halt, and then seek as quickly as possible to revise it.

Address by Archbishop Spellman at Holy Name Rally, New York City

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, October 5 (legislative day of Wednesday, September 15), 1943

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix a deeply moving and eloquent prayer delivered by Most Reverend Francis J. Spellman, Roman Catholic Archbishop of New York, at a great religious and patriotic Holy Name gathering of 75,000 people at the Polo Grounds in New York City, Sunday, October 3.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I ask you to continue to pray for our beloved country that she may be in the forefront of nations that under God stand for liberty and justice for all men, especially the persecuted, the oppressed, and the minorities. Every country and every race has contributed to the building of America; and America, grateful, has given of her heart, her head, and hands, has given of her body and her soul to help all men, to help all nations both small and great.

I beg you to pray for our President, for all our duly elected and appointed officers of government, that they may be guided aright in these perilous times, that they may be strong in the courageous doing of their superhuman tasks.

I ask you to pray—I need not ask you—for our boys in the armed services, the millions of them from all parts of the Nation, the hundreds of thousands of them from our city and State, the 126,584 from this archdiocese of New York. Particularly will you pray for those soldiers, sailors, and marines who are on foreign duty in the battle areas. From moment to moment they are facing death, bravely accepting dangers for America and for us. You will pray for the wounded in hospitals, who have so gallantly performed noble service for our country's life, our country's ideals, and our country's future. Nor need I ask you to remember and to pray for all our honored dead, whose crosses dot the hillside and vales around the world, 572 of them from our archdiocese.

POPE'S DANGER RECALLED

I ask you to pray for our Holy Father, Pope Pius XII, as he with sorrowful heart looks with appeal to his children in all the world; not that he be spared to life, for death to him in his agony of suffering would be a mercy, and a martyr's death for him would be the traditional following of the way of many who have sat in Peter's chair. Not for him therefore do I plead, but for his cause, the cause of Christ, the cause of right, the cause of civilization. I beg for prayers that Rome, the city of the soul, eternal Rome, be spared destruction; and above all that Rome be not destroyed by us by baiting us. And from our soul's deep depths we plead again for our beloved land.

AMERICA, REBORN

Lord, lift this mighty host that is America;
Reconsecrate us in devotion to Thee.
Too oft have we forgot our heritage of faith—
The mess of pottage to our eyes was dear,
The gold within our coffers deadened us.
We, who by nature are between the earth and sky,
Earthward have sunk, and drunk of miraged visions.
But now, reborn,
We lift again to Thee our nation's soul.
Behold, we are Thy wheat,
Nurtured beneath the sunshine of the plains;
We are Thy grapes from vineyards in the sun,
And timber from Thy forests;
Ours are the iron sinews torn from earth's deep breast,
And oil from her rich arteries.

O God, we build anew and dedicate again to Thee
The host and temple of America—
Many we are, in space wide worlds apart,
But we are one today,
Made one by this, our common will:
That righteousness again shall walk among the sons of men.

Now, welded of our pain,
We would again be what our forebears were,
Men who did worship Thee,
And mindful of Thy Fatherhood,
Could reach to brothers o'er the sea a brother's hand.
In every man we found Thy image then,
And, finding, wrote our nation's creed,
A pledge that made us the Samaritan
To the oppressed and lowly of the earth.
In those far days, our soul was young and clear
We opened arms to all who suffered wrong;
We bowed not, in our youth, however strong the foe,
For we were strong in loyalty to Thee,
And strong in faith that all men should be free
And worship Thee in liberty, as conscience should direct.

And now,
Amidst the ruins of a world that strove
To prosper and to live apart from what was bought
On Calvary by Christ, Thy Son—
Now we come back by that well-trodden way
That prodigals of every age have walked,
Back to our higher destiny—to Thee,
Our Father and our God,
And, kneeling in the valley of our grief,
Rededicate (both we who here must work
And those, our sons and brothers overseas,
Who still perhaps must die,)
Rededicate ourselves to the great task that still remains,
That on the altar of our common victory,
Not to a god of war,
But to the Lord of Peace,
We give ourselves anew within the wounds
Of Him in Whom all men are one—
For all may yet redeem their faulty past,
Held in these wounded Hands of Christ, our Great High Priest.

We are a single host of grateful love for Thee,
A single will for universal peace for men,
A single soul of righteousness to come!
Lord, lift this mighty host that is America,
Reconsecrate us now in Thy Son's Holy Name.
Amen.

The Phenomenal Growth of the Navy

EXTENSION OF REMARKS
OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, October 5 (legislative day of Wednesday, September 15), 1943

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "The Phenomenal Growth of the Navy," delivered by me at the John Barry celebration, Faneuil Hall, Boston, Mass., Sunday, September 19, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

So much has been written and spoken concerning the life, achievements, and services of John Barry that there is little new information available. His life story, however, will bear repetition, for it will serve to prompt our people to emulate the high ideals and fine courage of this naval hero—frequently referred to as the father of the American Navy.

The great patriot, whose memory we recall tonight, and who received from none other than President Washington himself the commission of captain, was born in Ireland, probably in 1745.

Though his native land had never been very conspicuous as a seafaring country, yet John Barry was possessed to a marked degree of the great versatility which is characteristic of the Celtic race, for he followed the sea from his childhood. Inspired by a burning spirit to fight for personal liberty and disheartened by the distressed condition in his native land, he came to America as a young man.

When the American Revolution broke out he was in command of a merchant vessel, *Black Prince*, owned by John Nixon, of Philadelphia.

Later, when the Continental Congress authorized in the early days of the Revolution the fitting out of two armed vessels of 10 and 14 guns, respectively, and Barry, upon offering his services to the Government, was promptly given command of the *Lexington*, one of the two purchased—the beginning of American-owned naval vessels.

After the *Lexington* sailed out of Philadelphia with Barry in command, on March 31, 1776, he encountered off the Capes of Virginia the *Edward*, an auxiliary vessel to the British man-of-war, *Liverpool*. Barry opened fire and after a desperate fight of an hour and twenty minutes he captured her and brought her into Philadelphia. This was the beginning of a glorious naval record which continued till his death, 25 years later. Continuing in command of the *Lexington* until October 18, 1776, he captured several privately armed vessels.

From the *Lexington* he was given command of the *Effingham*, to which command Congress appointed him while the vessel was being built.

For a brief time there was a lull in naval activities against the enemy so, accordingly, Barry recruited a group of volunteers for land service and took part in the important Trenton campaign under the command of General Washington. Barry, with the volunteers and marines under him, was assigned to assist in the defense of Philadelphia and all military operations in the upper Delaware.

In another year his strong love for naval combat service sent him back to naval activities. Early in 1778 he captured the armed vessel *Alert* and two other ships loaded with supplies for the British Army.

We next learn of him in command of the *Raleigh*, a man-of-war with 32 guns, which vessel sailed from Boston on September 25, 1778, and 2 days later was attacked by three large British naval vessels. After a 9-hour running fight with the enemy he was obliged to run the *Raleigh* ashore on an island near the mouth of Penobscot Bay. Fortunately and miraculously, he escaped to the mainland with his crew. Although he lost his ship, he was highly commended for gallantry.

It was not long before he was again on the seas, for in November 1780 we find Barry ordered to command the Continental frigate *Alliance*, also a vessel of 32 guns. Among his duties at this time was that of taking a high Special Commissioner to France through seas infested by the enemy men-of-war. On the way to France he captured the privateer *Alert*, and on his return voyage he captured the two British ships, *Mars*, with 26 guns, and *Minerva*, with 10 guns, both of which he promptly made international prizes and brought to port.

The following year, 1781, the naval records record the fact that Barry, after hours of desperate fighting, captured the British war vessel *Atlanta* and later the fighting craft *Trespassy*. During the engagement with the *Atlanta* he was wounded, but notwithstanding he continued in command of the *Alliance*, taking enemies' prizes during the years 1781 and 1782.

It was in March 1783 that the last naval battle of the Revolution was fought by Barry. He was in command of the *Alliance* and took as a prize the *Sybil*, but while en route to port he was set upon by an entire British squadron, and while able to escape himself with his vessel intact, he had to abandon his prize.

Barry's name, deservedly, has a high place in the history of the armed deeds of the American Navy. His is an outstanding record of boldness, gallantry, and achievement. His fearlessness is particularly notable, for he frequently attacked squadrons of vessels when he was greatly outnumbered. If he did not overpower or capture the enemy with whom he came in contact, he invariably put them to flight.

After the Revolutionary War Barry returned from the sea and took a special interest and formidable part in securing the ratification of the Constitution which by that time had been written and promulgated by the Federal Convention.

Later Congress appropriated the money to fit out six ships to form a new navy and Barry was appointed first on the list of American captains. His commission was signed by General Washington and marked "No. 1."

Subsequently he supervised the construction of the large frigate *United States*, equipped with 44 guns, and was placed in command of that vessel.

In the following year, acting under instructions sent him by the Navy Department, he captured four French vessels which had been threatening the shipping of our Nation.

During the subsequent years Barry was repeatedly honored by the Government by being designated to carry out special missions abroad. He landed envoys in France, awaited dispatches from Paris and returned them to America. He also commanded an American squadron in the West Indies.

In 1801 his health began to fail, but he did not cease even then to render conspicuous service to his country. Though his health was impaired, his indomitable American spirit continued to assert itself, for we find him at work proving guns for the Navy Department as well as for the Army.

His health from now on failed rapidly and on September 13, 1803, he died at his country home, Strawberry Hill, Philadelphia. He was buried with all the honors the American Government could confer in the hallowed churchyard of St. Mary's Church, in the city of Philadelphia. Thus ended the career of one of America's greatest naval heroes, so illustrious in its exploits that it has served in the years that have intervened since his time, as a model and example for the many great heroes of the American Navy down to our own time.

It is interesting to note the comparison in size between the meager fleet of Barry's time and the overpowering fleets our country now has in service, not only on the seas, but under the seas and in the air. The present Navy bears witness to the process of phenomenal growth which we have accelerated in the last few years to meet the desperate war emergency and this growth has occurred with regard to all categories—with regard to personnel as well as ships and planes.

It has, of course, been accompanied by vast expenditures which to us a few years ago would have actually been incredible. This year we will spend $42,000,000,000 in naval building.

While military secrecy forbids full disclosure of detailed information, this program embraces the construction of many hundreds of vessels of all types and kinds. A general summary will be interesting.

In September 1939, the Navy was engaged in a shipbuilding program which contemplated the construction of 17 combatant vessels and 38 auxiliary vessels and small craft in 21 shipyards, which included all our navy yards. Today the naval-shipbuilding program contemplates the construction of between 1,000 and 2,000 combatant ships and hundreds of auxiliary vessels, patrol and mining craft of various types in more than 300 shipyards.

In September 1939, approximately 50,000 workers were engaged in naval shipbuilding, whereas today, exclusive of ship-repair workers, there are over 600,000.

In the current year we will complete 5 times as many combatant vessels as during the full year preceding Pearl Harbor.

At the end of 1939 our Navy comprised 1,091 vessels of various types and sizes. At the end of 1944 it will comprise 41,179 vessels—an almost phenomenal figure.

Equally impressive also has been the increase in naval personnel which on June 30 this year was almost 14 times larger than on June 30, 1939.

At the current rate every 3 months we turn out as many men from our naval training schools as constituted the entire active strength of the Navy in 1939.

It is also a notable fact to illustrate the stupendous personnel growth—that during several months of 1942 we recruited the equivalent of the full normal peacetime Navy.

This huge expansion has also extended to the Marine Corps and to all other branches of the Navy, including the Coast Guard.

Naval aviation has been tremendously accelerated since the war in Europe began. The Navy at present is operating on a training program with an input of 30,000 pilots and 100,000 enlisted men in aviation schools a year. On August 1, 1943, the entire aeronautic organization of the Navy was 3 times larger than it was at the same time last year.

More than 9,000 planes—two and one-half times the Navy's 1941 production—were built for the Navy during the first half of 1943.

The course of instruction for naval aviation is now approximately 16 to 18 months. Only men of the highest caliber, physically perfect, mentally alert, and of excellent character, have been accepted in naval aviation. It is these men who have already won many decisive victories over the enemy in the Pacific and in months to come will be in the front ranks of any offensive action.

When the average American thinks of our Navy he thinks in terms of ships and men. He forgets the third and equally important component, naval bases. None of the three can function without the other two. Trained men, powerful ships of the ocean and the air and adequate bases from which to strike—these are our Navy. These bases extend all the way from where we gather here in Boston tonight to the shores of the seven seas.

Since the starting of the emergency on July 1, 1940, to June 30 this year, nearly $5,000,000,000 worth of shore installations have been completed as compared with only $189,000,000 spent for this purpose in all of World War No. 1.

It is interesting to note in connection with the naval public-works program that the Navy has completed, or initiated, construction for drydock facilities with a capacity greater than the entire world's drydock facilities in 1939, including our own.

Let me take this occasion to sound a note of warning and to appeal to the American people not to repeat at the end of this war the grave mistake which was made at the end of World War No. 1.

At that time we had the greatest Navy in the world but we unwisely entered into agreements with the great powers of the world to limit our naval armaments, with the result that when the present World War broke out our Navy was reduced greatly in size and was far below the strength we were entitled to have even under the treaties made with the great powers. These treaties turned out to be a fraud upon the American people in that they provided only for limitation in a few categories of naval vessels, all the nations being left free to build as many naval vessels in all other categories that they saw fit, for the treaties imposed no limitation upon building of destroyers, submarines, cruisers, and fighting aircraft. We were lulled into the belief that the other powers were sincere in their desire to maintain peace by limiting the naval strength of all nations. As to the folly of these agreements, we did not awaken until the beginning of the war in Europe, which found us greatly unprepared, and these treaties were one of the contributing reasons for the difficulties our Navy experienced in the early days of the war in combating the German submarine menace.

At the end of this war we must resolve to maintain a strong, powerful Navy—the greatest in the world. Our Navy is not only our first line of defense but an unmatched naval fleet, both on the sea and in the air, is our surest means of securing and maintaining peace for ourselves and peace for the world.

Countless men of Irish blood, together with Americans of every racial group are still emulating in this present World War conflict the bravery, gallantry, and devotion to duty that was exemplified by the immortal John Barry. So long as our Nation produces men in the armed service of our country of the caliber of Barry and who exhibit his daring, his fearlessness, his intrepid conduct, we need have no fear of our security and naval supremacy.

It is most fitting that tonight all Americans, and particularly men and women of foreign ancestry, reverently pause to commemorate the deeds of this great American hero and to acknowledge the everlasting debt this Nation owes to him. It is for us to revitalize his spirit of sacrifice and renew his stanch, noble, American idealism by repledging to our beloved country the same self-sacrificing service and loyalty that he gave so unselfishly. It is in this way that we can best assure the swift, efficient prosecution of the war and the earliest possible return, in triumph, of our youths to their homes.

In these troublous times, with problems at home and abroad of more momentous character than any our country has ever before been confronted with, let the sterling Americanism of John Barry be an example and our guide.

Our task, however, at this time is not only to overpower our enemies in Europe and in Asia, but we must crush the evil and subversive forces in our own midst who seek, consciously or unconsciously, to destroy the great fundamental principles of government which men like John Barry and the founders of our Republic bequeathed to us.

The Fight for Quality Production

EXTENSION OF REMARKS

OF

HON. MON C. WALLGREN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, October 5 (legislative day of Wednesday, September 15), 1943

Mr. WALLGREN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "The Fight for Quality Production," delivered by the junior Senator from Missouri [Mr. TRUMAN] at Shenandoah, Iowa, on October 4, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today we are engaged in total war. Victory or defeat depends upon our armed forces, but they, in turn, are dependent upon what we give them with which to fight. They are risking their lives. They are entitled to the best that we can give them.

Their needs are determined by the procurement officers of the Army and Navy. The Army and Navy specify what war materials they want, and ask business to produce them in accordance with the Army and Navy specifications.

Business contracts to supply materials that conform to these specifications. Common honesty requires that business should not foist off upon the Government materials that do not conform to contract. But more than honesty is involved here. Our soldiers and sailors are dependent upon those materials for their lives, and our Nation is dependent upon them for its liberty, and even for its continued existence.

For these reasons, the committee of the Senate, of which I have the honor to be the chairman, has considered itself obligated to check charges that come to it from Government inspectors that certain corporations are delivering war material that does not meet specifications. These Government inspectors are patriotic men. They are honest and conscientious. They make no profit from the sale of the war materials. They gain nothing by making unfounded charges, and by complaining at all, they risk their jobs.

The committee has investigated a number of such charges. Unfortunately, it has found several outstanding examples in which they were true. In all such cases, the committee has insisted that the corporation involved should correct the situation, and that it should either produce material according to specifications, or obtain the approval of the armed service using the material for the delivery of substandard items to be paid for as substandard material and used only where it can safely be used.

The committee will continue this policy. It will not accept excuses from management, except where it is convinced that management is acting promptly, and in good faith, to remedy the situation and to discharge those responsible for the fraud upon the Government. By the latter, the committee does not mean the little fellows at the plant who pass the materials, but the plant superintendents who, through carelessness and incapacity, are responsible for the existence of the situation.

Such a policy seemed to the committee to be so clearly right and necessary that it expected that the press and radio would join it in requiring management to conform to Government specifications, and in telling defense workers that they would receive support in their efforts to make good war material.

This is not asking too much. Practically all of industry is producing good, high-grade material. The great mass of companies are giving our Government what it pays for. Only a very few of our large corporations have strayed from the path. And honest business and industry have been unanimous in condemning such practices. I want it perfectly clear that I have no criticism of industry or business in general. The few whom I have had to criticize are the exceptions and not the rule.

By and large the committee's efforts have received such support. The press and radio deserve a great deal of credit for this, because the companies which have had to be corrected include several of the largest corporations in the United States. They spend millions of dollars for advertising, which the press and radio risk if they publicize their mistakes.

These corporations also employ staffs of publicity men, who occupy themselves in attempts to confuse the issues and obtain public comment favorable to the companies

based on a misunderstanding by the press or radio of the underlying facts.

A few of our better known newspapers and one popular radio news columnist have misunderstood the situation and by their reports to the public have unwittingly assisted in creating a false impression.

For example, the committee found that the Carnegie-Illinois Steel Corporation, the principal subsidiary of the United States Steel Corporation, was producing steel plate for the Navy and the Maritime Commission and Lend-Lease in its Irvin Works, and that the physical tests to which the finished steel plates were subjected to determine their tensile strength were faked and falsified. The company men in charge of the operation of the testing machines testified that about 5 percent or more of the tests were deliberately faked for the purpose of falsely reporting that the steel plate was in accordance with specifications. To do this they instructed the testers under them to cheat.

The case required particular emphasis because of the improper and obstructive attitude which was taken as to it by the Carnegie-Illinois Corporation when the matter was first brought to its attention. Instead of cooperating in an investigation of a serious situation, which had arisen by reason of the carelessness and negligence of the management, it attempted to delay and obstruct the investigation by refusing access to records and an opportunity to examine witnesses. When it became impossible to continue such tactics, it resorted to attempts to minimize the importance of the dishonesty which it was forced to admit had been practiced by its employees. The presentation of its case before the committee was marked by a lack of frankness and candor.

The situation was so bad that Mr. Fairless, the president of the United States Steel Corporation, stated to the committee: "We are just as shocked to get these facts as you and we are just as desirous of correcting them as you are," and "I consider it was very, very poor management."

Mr. Charles E. Wilson, executive vice chairman of the War Production Board informed the United States Steel Corporation that:

"Although the evidence adduced to date does not prove that the culpability for the falsification goes higher than the chief metallurgist, Mr. McGarrity, it does nevertheless indicate, in our opinion, poor management on the part of the officials of the Carnegie-Illinois Steel Corporation.

"Needless to say, this entire situation has deeply disturbed us at the War Production Board, and we are determined, as we feel certain you are, too, that immediate steps shall be taken to put an end to all falsifications, to take appropriate disciplinary action with regard to those responsible for such practices, no matter how high in the organization they may be, and finally so to readjust your organization that, in the future, we can look forward with the fullest confidence to effective, efficient, and straightforward operation of your corporation and its subsidiaries."

Mr. Wilson could not have used plainer language, and he acted only after consulting with the Navy Department and the Maritime Commission and being assured that they concurred in his opinion.

This was not the first time that Carnegie-Illinois Steel Corporation had been guilty of faking tests on steel supplied to the Navy. Forty-nine years ago, in 1894, the House Naval Affairs Committee investigated charges against the Carnegie Steel Co. and found the following charges to have been proven:

"False reports of the treatment of the plates were systematically made to the Government inspectors.

"Specimens taken from the plates both before and after treatment to ascertain the tensile strength of each plate were stretched without the knowledge of the Government inspectors, so as to increase their apparent tensile strength when actually tested.

"False specimens taken from other plates were substituted for the specimens selected by the Government inspectors.

"The testing machine was repeatedly manipulated by order of the superintendent of the armor-plate mill so as to increase the apparent tensile strength of the specimens."

The similarity between the frauds practiced today and the frauds practiced 50 years ago is so striking that a single report might well have served to summarize both investigations.

The committee believed that it was time that such practices should stop and was extremely surprised when a leading Pittsburgh paper ran a scare head all the way across the front of its paper as follows: "Steel slump blamed on Truman—Committee's bungling slows war output."

The story referred to an exhaustive independent inquiry just completed by that newspaper. In all this exhaustive inquiry the newspaper had not once contacted the committee for any information. The article proceeded to say that although official production figures for April were not available:

"Preliminary and informal reports to the W. P. B. on production trends show that instead of April being the month in which all records for steel-plate production would have been broken, this month's production may fall seriously below previous months—possibly fall off as much as 35 percent."

As I understand the newspaper article, it was a charge that because the Senate had dared to require the United States Steel Corporation to be honest we were going to lose up to 35 percent of our steel-plate production, and that that loss should be attributed to the committee's bungling.

This article with its prediction of a 35-percent slump for April was published on April 16, after half the month had expired.

The fact is that after the month had ended and the figures were in, the War Production Board announced that April was a record-breaking month, and that the steel industry produced more steel plate than it had ever before produced in a similar month.

I wonder, and I think you will wonder, who told that newspaper that there was going to be a steel slump and why was such a ridiculous rumor circulated.

Shortly afterward the committee found that the Wright Aeronautical Corporation, a subsidiary of the Curtiss-Wright Corporation, was guilty of selling for installation in Army and Navy planes airplane engines that were not in accordance with specifications.

The engines in question were made at Lockland, Ohio, near Cincinnati, in a plant designed by Curtiss-Wright, but built by the Government at a cost of more than $140,000,000.

I want to tell you just how this investigation started and was conducted. In order to make sure that the engines being produced could properly be used in our military aircraft, both Curtiss-Wright and the Government employed many inspectors, at a total cost of several million dollars a year. The committee received letters from a number of these inspectors, particularly the Government inspectors, complaining that they were being forced to pass parts and engines which were not in accordance with the specifications. Now, these specifications were prepared by Curtiss-Wright itself, and approved by the War Department. Curtiss-Wright has never claimed that the specifications were needlessly made too strict.

A committee investigator was sent to Cincinnati. He found that the majority of the Government inspectors looked to the Senate to correct a situation which they had lost hope of having corrected by Curtiss-Wright. In fact, one of the inspectors broke down and cried as he told his story, saying that he had two nephews in the Air Forces. Before our investigator had finished, not only a majority of the Government inspectors, but also a number of the Curtiss-Wright inspectors made the same charge, namely, that the inspectors were not being permitted to reject parts and engines that failed to conform to specifications.

These men had come to the committee only as a last resort. They had tried to tell their story to Curtiss-Wright. They had tried to tell their story to their own superiors in the United States Army. The only reward of those who attempted to do this was that they were transferred under a cloud, or otherwise penalized. Morale was almost completely destroyed.

Their complaints were unanimous. There were no discrepancies. They had been forced to accept bad materials. In many cases where they attempted to reject material which was clearly bad, Curtiss-Wright succeeded in having them overruled by appealing, over their heads, to their superiors.

They did not charge their superiors with dishonesty—they simply pointed out that, again and again, material which was clearly and dangerously bad, had been accepted. They were able to show our investigator defective parts which had been accepted. They were able to point out engines which had been accepted with defects.

The committee did not make any public announcement of the conditions which its investigator had found, because it wanted to be absolutely sure that it was fair to Curtiss-Wright and to the Army. What the committee did do was to call in both Curtiss-Wright and the Army, and give them each a week or two within which to make their own investigation of the inspection procedures at the Lockland plant. Both later reported to the committee that they had found nothing. Some of the Curtiss-Wright personnel, who claimed to have made an investigation, have since been discharged or removed from their jobs, and the Army has instituted court-martial proceedings against some of the officers upon whom it relied for an investigation.

A subcommittee of the Truman committee then went to Cincinnati to inspect the plant and to hold hearings. Before it finished, it had heard scores of witnesses. One witness would suggest several others. A group of inspectors would go out, voluntarily, and dig up a number of other inspectors who had the same story to tell. The subcommittee took 1,200 pages of testimony, and found a situation which was appalling.

At the subcommittee's invitation, an Army officer accompanied it, and was at its hearings. At his request, the testimony taken by the subcommittee was made available to the Army, which also made a further investigation of its own. The Army and the committee are in substantial agreement that the situation at the Lockland plant was extremely bad, and required drastic corrective action.

General Arnold, commander of the Army Air Force, recently complimented me on the accomplishments of the committee at Lockland and informed me that the committee's action had been of great value and assistance to the Army Air Force.

Maj. Gen. Charles Branshaw, commanding general, matériel command, at Wright Field, recently informed Senator WALLGREN, the chairman of the Subcommittee on Aircraft, that in his opinion the situation was three times worse than the committee had said it was.

The committee leaned over backward in this case to be certain that it was fair to Curtiss-Wright. It even submitted its report to Curtiss-Wright, as well as to the Army, in advance, so that both would have

an opportunity to present any evidence they desired, and to suggest any changes which they thought might merit the approval of the committee. I do not know how we could have been more fair.

Very significantly, Curtiss-Wright confined itself to a few generalities. It could not discuss the detailed facts themselves because they did not admit of argument.

The committee issued a report to the Senate to force Curtiss-Wright and the Army to take further additional corrective action, and to take it promptly.

In its report, the committee specifically called attention to the fact that Curtiss-Wright, through the Wright Aeronautical Corporation, was producing and causing the Government to accept defective and substandard material and that this was accomplished in the following ways:

"1. By the falsification of tests.

"2. By destruction of records.

"3. By improperly recording results of tests.

"4. By forging inspection reports.

"5. By failing to segregate substandard and defective material.

"6. By failing to promptly destroy or mutilate such defective and substandard material.

"7. By orally changing tolerances allowed on parts.

"8. By circumventing the salvage committee set up to pass on the usability of parts outside of tolerances.

"9. By allowing production to override the inspection force, thereby destroying morale of both company and Army inspectors.

"10. By skipping inspection operations."

The committee found no evidence that Curtiss-Wright was deliberately disregarding the specifications for the purpose of sabotage. We understood that the reason why some of its officials wanted lax inspection was that they were not able to produce engines in quantity that conformed to the specifications. For these reasons, the committee expected that the rate of production of engines would fall off when the plant was required to produce engines which conformed to Curtiss-Wright's own specifications. In other words, to get the quality which both the company and the War Department thought was necessary for engines going into military aircraft, it would be necessary to sacrifice quantity until Curtiss-Wright could improve the management and the procedures at the Lockland plant. Of course, this was distasteful to the plant managers whose negligence and incapacity were being demonstrated, and to Curtiss-Wright which would suffer a financial loss because less engines would be accepted and paid for by the Government.

Most newspapers and radio commentators thoroughly understood this situation, but a few of them allowed themselves to be confused by Curtiss-Wright officials who wanted to make it appear that it was the Senate, and not themselves, who should be censured for their inability or unwillingness to produce airplane parts and engines in accordance with their own specifications.

These newspaper articles and radio talks insinuated and, in some cases, stated: First, that the loss of production at the Lockland plant was due to bungling by the Truman committee which had caused inspectors to reject parts that should have been passed; second, that the committee's report was unnecessary and issued only for sensational purposes because Curtiss-Wright had already corrected the situation; third, that in any event, all the defective parts had been found before the engines were finally accepted for use in airplanes; fourth, that the quality of the engines was demonstrated by the job they were supposed to have done in the Tokyo raid; and fifth, that airplane production was going to suffer for lack of these engines.

You may be interested to know that the same man who predicted for the Pittsburgh paper the steel slump that never materialized somehow got himself substituted for a well-known radio commentator. For several days he attacked the Truman committee over the radio for daring to call Curtiss-Wright to account.

If these reporters were not duped, I suggest that they were, themselves, the sensation mongers. It is very significant that no official of Curtiss-Wright has ever publicly to you, or privately to the Senate committee, made any such statements as these.

Let us look at what Mr. Guy Vaughan, president of Curtiss-Wright, had to say as to the charge that production was lowered because the inspection procedures were too rigid:

"Question. The stoppages you refer to are your own stoppages which you have had to instigate to correct a situation that was not right?

"Mr. VAUGHAN. That is right.

* * * * *

"Question. Does the company, through you now, publicly take the position that the reason for your reduction in production is the fact that the Army inspection service is blocking production by its inspection procedure?

"Mr. VAUGHAN. No; it could not.

* * * * *

"Question. And any articles to that effect you would repudiate as not being in accordance with the facts?

"Mr. VAUGHAN. Publicly, internationally, any other way."

Mr. Vaughan could not take any other position because Major LaVista, resident representative of the Army for the Lockland plant had just testified that he had contacted three of the principal officials of the Lockland plant and that they had been unable to point out any cases where their production had been held up by being forced to comply with inspection procedures.

The suggestion that Curtiss-Wright had taken full corrective action before the committee's report was equally unfounded.

"Question. You do not disagree with General Echols in his conclusion that the management of the company at present is not satisfactory.

"Mr. VAUGHAN. I will agree to the fact that we have had a number of things that are not called good management, but I won't agree that the people who have been building up this thing have done a bad job. I think it can be made better as time goes on. It has got to be made better."

Major General Echols, in charge of matériel for the Army Air Force, officially testified on behalf of the War Department that:

"General ECHOLS. In my opinion, the management which has been there for the past several months has not shown itself qualified to accomplish the job as laid out by that plant."

General Echols further testified that:

"General ECHOLS. The Government has had discussions with the top management of the Wright Aeronautical Corporation with regard to getting men to strengthen the management in this plant.

"Question. You mean by that, I take it, General, that in addition to the question of the top man in the plant you are dissatisfied with what you might term the management group in the highest brackets in the plant and have desired that they be strengthened by the addition of other qualified men.

"General ECHOLS. This is my opinion. They should be.

"Question. Why has not the Wright Aeronautical Corporation, of its own volition, provided that kind of management?

"General ECHOLS. I don't know.

"Question. What reasons have they given you for their failure to do it?

"General ECHOLS. The reasons they have given me were that they believed that the present management could work the problem out."

Thus, 6 weeks after the committee had issued its aircraft report, Curtiss-Wright had still failed to provide good management at the Lockland plant, and the situation was still so bad as to require both the Army and the Truman committee to give the company the ultimatum "produce or get out."

As to the suggestion that the engines produced were not defective, Major LaVista testified:

"Three engines which were on the shipping dock, finally inspected and sealed, ready to ship to the destination, were brought back, disassembled, and reinspected 100 percent. Everyone of the three engines were found to be in such a condition that they could not have been installed in an airplane. In fact, the conditions found were bad enough that the company immediately ordered 89 engines, which were ready to ship, returned to the assembly department to be completely disassembled and reinspected 100 percent."

Major LaVista also testified that over 400 engines were turned down on final run due to high oil flow because no effort had been made to maintain a close tolerance on the connecting-rod bearings. When 33 engines out of these 400 were reassembled with a proper fitting, all 33 went through the penalty run without trouble. Major LaVista also testified that parts which had been rejected and which had not been found suitable for salvage were discovered in the so-called green assembly line ready to be assembled into engines.

Major LaVista concluded, and I quote:

"It can be readily seen from the above facts that production could be completely bottled up until such time as these engines and parts are out of the way."

Since the Cincinnati hearing the Army has torn down and reexamined 64 of the 89 engines referred to by Major LaVista. It has also called in 100 engines as a sample selection of the engines produced from January to April prior to the committee's report. So far 10 of these have been torn down and reexamined. The results were obtained from the Army by the committee, in confidence, and I would like to set them forth here for your information as a direct, final, and conclusive answer to the contention that the engines produced were not defective and were fit for use in airplanes.

However, Under Secretary of War Patterson has specifically requested that this information not be made public. Without his consent, I will not make it public.

Since this speech was announced, further conferences have been had with officials of the Army, including Under Secretary of War Patterson. The Under Secretary stated to the committee on Saturday, "Investigations made by the Army confirm the findings made by the Truman committee as to the construction and inspection of engines." I am happy to say that the Army officials have reiterated their views that the Truman committee has performed the most worth-while service in connection with the Curtiss-Wright plant at Lockland.

Under Secretary of War Patterson and other officials of the War Department agree with us that the results of the investigation made by the Truman committee, the matters about which we complained and which we pointed out, were matters of serious import and concern. We also agree that, happily, through vigorous efforts of the Army and the Truman committee, these conditions recently have been largely corrected. Since the committee's report the Curtiss-Wright Co. has installed much better management and procedures of every kind. Rigid inspection is now required, not only by the War Department but also by the company itself. Fathers and mothers

of American boys who are pilots, and the boys themselves, can be assured that the Truman committee, the Army, and all branches of the armed forces will continue the most careful scrutiny of every plant in order that the lives and safety of our boys may be protected as far as it is humanly possible.

As to the contention that the Lockland plant must be good because its engines powered the Tokyo raiders, the fact is that Mr. Vaughan, president of Curtiss-Wright, has written the committee apologizing for that assertion. When he checked up—and it is to his credit that he checked up—he found that none of the planes raiding Tokyo had an engine manufactured at Lockland.

The suggestion that the requirement that these engines be made properly in conformance to Curtiss-Wright's own specifications is holding up airplane production is likewise unfounded. The War Production Board informs the committee that these engines are used in eight types of planes, and that deliveries of completed aircraft have been affected in only one instance, a Navy flying boat.

Let me repeat, I am very glad to be able to tell you that since our report Curtiss-Wright has taken drastic action and recently has made real progress. It has obtained some experienced personnel from other industries. Curtiss-Wright has hired a new senior vice president, who is giving all of his attention to correcting the situation. It has obtained a new manager for the Lockland plant and has relegated the former manager to other work. It has fired some of the principal assistants. It has sought and obtained outside advice as to how to better its inspection and production procedures. The improvements have borne fruit. Production is better and is expected to become much better.

These steps are all to the good, and the committee will support fully every effort of Curtiss-Wright to produce good planes and engines. It will unhesitatingly call attention to any failures where it believes that Curtiss-Wright or any other company is failing to produce good material and is slow or unwilling to take action to correct its failure.

A constructive and timely investigation of failure to conform to Government specifications may be painful to the businessmen involved, but it may also be very useful even to them. Some weeks ago there was a most unfortunate accident to a glider, which resulted in the loss of a number of lives, including that of the mayor of St. Louis and the president of the company manufacturing the glider. I checked on the cause of this glider crash and was informed that it was due to a strut fitting which had been improperly machined down to a point far below Government specifications. As a result it broke under stress and caused the glider to crash. Had we checked earlier and criticized the company for installing these defective parts the president of the glider company might, like United States Steel and Curtiss-Wright officials, have resented it. But he would have been alive today.

The committee will disregard newspaper articles and radio programs which confuse the issues and seek to absolve corporations for their failures. The next time you read such an article or hear such a program, I would appreciate it if you would write me. I will send you a copy of the report of the public hearings in question. After you have read them, if you disagree with the committee, I would appreciate your writing and telling me so. If you disagree with the newspaper or radio commentator, I would appreciate your writing him and telling him so.

Post-War Plans

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. HOFFMAN. Mr. Speaker, Helen Essary, a Washington writer, a supporter of many New Deal plans, a personal friend of Mrs. Roosevelt, Sunday, October 3, wrote a column based on the report of the Senators who just returned from a trip abroad. In it for Americans, because of Helen Essary's political background, there is much food for thought.

The column is as follows:

"If the United States is going to pitch in big-league international politics, it is time it learned to play ball within its own country." This in simple American is the general opinion of the five United States Senators who returned last week from an official tour of the war zone in the south Pacific.

"This means," said Senator RALPH BREWSTER, of Maine, in talking about the 46,000-mile senatorial journey, "that we have got to learn teamwork. More than this, we've got to copy the superb teamwork of the British. Everywhere we went, we found the British agencies pulling together in harmony—for the British.

"Naturally, the British are pulling meanwhile for the United Nations. There is no doubt about that. There is also no doubt that the United States is scattering its resources and brains—and forgetting to which country it owes first allegiance."

Indeed, some of the foreign goings-on of the United States are so harebrained that the people whom this country most wants to help are suspicious of our purpose. This is another conclusion the visiting Senators reached. Especially is this true in Australia.

There, when Senators BREWSTER and MEAD held a press conference, they had to answer these questions: "Has the United States imperialistic intentions? Does she wish to acquire more territory? If she doesn't, why is she spending so much money outside of her own country?"

Our generosity, our determined Lady Bountiful attitude is disturbing the governments of our allies, who in self-protection try to minimize United States aid and to hint to their people that Americans are unstable and changeable.

A year ago when most of the world was terrified of the Japs and Nazis, our allies were happy to accept our aid. Now, so the touring legislators report, many foreigners wish that we would proceed more cautiously with our plans for relief and rehabilitation in occupied, war-shocked countries.

One of the most important officials of a country recently freed from Axis control told the Senators that he was frightened at the headlong rush of the United States to move in with help where it wasn't needed.

That lend-lease magnificence of ours gets twisted up a little here and there, so Senator BREWSTER discovered.

For example, Dr. H. V. Evatt, Minister of External Affairs for Australia, and recently a visitor in Washington, was asked by Australia Prime Minister Curtin to retract a statement he had made on the excess of Australia's lend-lease aid to the United States as against our lend-lease aid to Australia.

Dr. Evatt probably forgot about the retraction for he repeated his original statement to Senator BREWSTER. Later he remembered that the correct lend-lease figures are 600,000,000 from the United States to Australia as against 200,000,000 from Australia to the United States.

The lack of correct information abroad about America's part in the war is another grievance not pridefully pitching, Senator BREWSTER declares. In Chungking our embassy receives every morning from Reuter's, the British news agency, a report that frequently overlooks the importance of some United States war effort.

Three or four days later the American news agencies produce their reports. But who wants to read an old report? The situation got so bad in Chungking that the American Embassy there protested to Anthony Eden about certain articles in Chinese papers, extremely embarrassing to the United States and very favorable to Britain. Mr. Eden said he was sorry, but he "couldn't interfere with the freedom of the press."

Distorted news reports get into Africa, too, the returning Senators say. The natives and troops are fed stories of strikes and dissension in the United States. Senators BREWSTER and MEAD complained to both General Eisenhower and General Spaatz.

These doughty fellows said the news stories were read and approved by them daily, but they had no control over the selection or playing up of the material by the British press and broadcasting companies.

The British Broadcasting Co. controls practically all the South Pacific and in Iceland, where we have as one investment $17,000,000 lend-lease air base, the natives are told tactfully by broadcasts, "Watch out for Americans; you can't trust them." This dears, is the sort of thing brought back here by a United States Senator who has been out on the road to see.

India is one country about which the American legislators have very definite ideas. Leave India alone, they say. It's a hot potato—England's hot potato, not ours.

They wonder, too, how it happens that the O. W. I. has 100 agents in India, selling the Indian people on the American way of life. What right, they ask, have we to propagandize in India? We got pretty angry when a recent Russian Ambassador propagandized in the United States.

Well, I have been trying to tell you some of the discoveries Senators BREWSTER, RUSSELL, LODGE, CHANDLER, and MEAD made on their voyage. It was a thrilling journey. It must be made a useful one.

I should like to have the American people know what the travelers learned. It is time, indeed, that we learn to pitch for America first in this country.

It is not disloyal to the war effort to suggest this. Nor is it disloyal to say to Congress: You have the United States ball in the international game in your own hands.

It's up to you to clear up the confusion and lack of teamwork reported by the representatives you sent abroad. You can't blame everything on the President. Don't you hold the purse strings?

Economy in Government Expenditures

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. SCHIFFLER. Mr. Speaker, the Ways and Means Committee of the House

for the next several weeks will be busily engaged in hearing testimony and in giving study to the requests of the Treasury Department for additional taxes in the amount of approximately $10,500,000,000. The Treasury Department has submitted its plan for raising such sum. The committee will undoubtedly hear considerable testimony from experts from the Treasury Department as well as the testimony of many interested taxpayers. With expenditures in the fiscal year in the neighborhood of $120,000,000,000 and revenues from all present ascertainable sources amounting to only approximately $35,000,000,000 it is obvious that additional revenues to the Government must be made available by new and additional taxes. Inasmuch as several weeks shall elapse before a tax bill is reported there is ample time for the Ways and Means Committee to give careful study to the all-over tax situation, with a view of making the tax burden fair and equitable to all taxpayers. I am certain that the Ways and Means Committee, confronted with a gigantic task, has an intense desire to do this.

While the Ways and Means Committee is in continuous session and working hard at the problem of providing new revenue, is it also appropriate for a suggestion to be made at this time to the Appropriations Committee that a subcommittee thereof be selected to thoroughly investigate and explore the possibilities for economy? From present indications the House shall not be extremely busy for the balance of the year. Soon after the House convenes on January 3 requests will reach it from various departments and bureaus for their annual appropriations for the next fiscal year, and undoubtedly in some instances for a deficiency appropriation for the current fiscal year. I do not claim to be an expert, but it does occur to me, as the result of my observation and experience, that it is possible to effect substantial savings in the cost of government today. We witness much waste, overlapping of bureaus, and the duplication of functions. We have an all-time high of 3,000,000 persons on the Federal pay roll, and this is being continually increased. We are told that there is a serious manpower shortage in civil life, that our production record is in serious jeopardy. I do not know of a more worth-while task in behalf of soldiers, citizens, and taxpayers than to at this time begin a careful study of this problem, with a view of making recommendations to the Congress at the opening of its next session. With a prospect of the war running into at least 2 years yet, and preparations are made in that direction, a sound and realistic appraisal of our fiscal affairs is certainly in order, and I earnestly hope that the Appropriations Committee will be prepared at the opening of the next session of Congress to make sound and constructive recommendations for substantial economies and a more efficient functioning of our Government. Now is the time to begin that task.

Why Subsidies or Higher Prices?

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of September 30, 1943:

WHY SUBSIDIES OR HIGHER PRICES?

The War Food Administration is asking another half billion dollars for subsidies to guarantee higher prices for 1944 farm crops.

On the whole, the farm bloc legislators have opposed these subsidies. Their stand is not as queer as it sounds, however. They see in the Government subsidies a device to increase farm prices a little and then hold them there. They would prefer no subsidy—and no ceiling on farm prices.

There is insufficient evidence that either new farm subsidies or higher prices are needed. Prices are now high. Production is excellent. Farmers are making more money than in many years. They have more cash than in decades. They are reducing their farm-mortgage debts at an unprecedented rate with some of their increased cash income. They are buying War bonds.

In fact, the farmers are doing their share in the war effort in a grand way.

We do not believe that the rank and file of American farmers are demanding subsidies or higher prices. But it cannot be expected that they will rise up and protest against the actions of some farm politicians to get such increases for them. That would be asking a good deal.

The real factors keeping farm production from reaching still higher levels are shortage of manpower, lack of farm machinery and fertilizer. Subsidies and/or higher prices cannot solve these problems. Farmers now cannot get the men, the machines, or the fertilizer, no matter how much money they have—that is, they cannot fill these needs in appreciable amounts. With more money, one farmer might hire a farm hand away from his neighbor, and so on and so on in an ascending spiral of farm wages. But war industry cannot spare workers to go back on the farms, no matter what the farmers pay at this moment.

We believe that the farmers of this country will continue to produce all they can at present prices, if they can sell all they produce. They are doing well, for themselves and for the Nation, and they know it.

There is little excuse for the subsidies being asked or for increased farm prices.

Blanket Doesn't Fit

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Rapids (Mich.) Herald of October 4, 1943:

BLANKET DOESN'T FIT

It isn't the fault of Paul J. Winkler, manager of the district office of the Office of Defense Transportation. It is just another case of the impossibility for somebody in W shington to lay down an over-all rule, know nothing about conditions and sentiments in individual communities, and make the rule fit.

The Washington office of O. D. T. has ruled that milk must be delivered four times a week and that no deliveries shall fall upon consecutive days. As a result of this order, milk must be delivered every other Sunday.

Now it so happens that a great majority of the people of this area have no objection to Sunday delivery of milk. But another large section of the people do object to it on purely religious grounds. They have protested, sent a large petition to the proper authorities in Washington and to our Representatives in the Congress. They have held a conference with Mr. Winkler who has explained patiently that he is merely carrying out the orders of his superiors and has no choice but to obey those orders.

This is one case which very easily could be corrected. It is necessary only that milk be delivered on both Friday and Saturday. That would avoid the delivery on Sunday but would insure those who need their milk on Sunday of a fresh supply.

Fact is, of course, that with modern methods of milk delivery and of refrigeration after delivery, three deliveries a week probably would take care of everybody. But the higher ups of O. D. T. have ruled there must be four deliveries a week the country over and that no deliveries shall be made on consecutive days. That's what makes the trouble for those who object to the Sunday delivery.

The great weakness of most of our bureaucratic system is that somebody in Washington insists on trying to place a blanket over the entire country. It can't be done. Some discretion should be left to the local managers or directors or administrators or whatever they may be called.

In this case if Mr. Winkler had the power to make a ruling he could cause the delivery to be made four times every week on Mondays, Wednesdays, Fridays, and Saturdays. Then there could be no objection on the part of those who now object and there would be much less confusion which will now be the case with deliveries coming on different days on succeeding weeks.

Congress Must Act To Avert a Serious Milk Shortage

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. MILLER of Connecticut. Mr. Speaker, "Nero fiddled while Rome burned!" Today, the executive agencies of our Government do nothing while the Nation's milk supply is drying up.

Congress knew, when it passed the Price Control Act, that some adjustments would have to be made in the price structure of certain farm commodities. We said, in as plain language as we could,

that where it could be shown that due to increased labor costs or for other reasons, the farmer was not receiving a fair price for his product, that prices should be adjusted upward.

Apparently an act of Congress means nothing to the O. P. A., when it conflicts with O. P. A.'s interpretation of a directive from the President. "Hold the line" is a good football phrase, but we are not playing football with Germany and Japan. No good quarterback would try to hold the line with four or five men off-side. If he did, his team would be penalized just as the American people will be penalized if milk prices are not adjusted at once.

This morning I received the following telegram from the general manager of the Connecticut Milk Producers' Association which speaks for itself:

Dairy feed prices skyrocketed again today. Eastern State Farmers' Exchange 16 percent protein dairy ration rose 2.80 per ton again this morning; 14 percent ration, which most farmers are being forced to use, rose 3.20 per ton. No corn being available, this ration has been made largely of Canadian barley and oats. Due to congestion at lake ports we understand Canada has placed an embargo on barley, forcing our feed mixers again into American barley market on which there is no ceiling. Our State milk price hearing last May established the absolute necessity for a minimum rise at one percent per quart in the Connecticut milk price. Since that hearing grain costs alone have increased the equivalent of one-third percent per quart for an efficient Connecticut milk producer. We do not believe that it is a proper function of the legislative branch of our Government to interfere with day-to-day executive or administrative operations. It is quite obvious to all, however, that, so far as the public's milk supply is concerned, the executive and administrative operations have broken down, and the Congress must step in and give them some new orders if we are to avert a disastrous milk shortage.

Berlin Lake Saves Valley

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Youngstown (Ohio) Vindicator of September 26, 1943:

BERLIN LAKE SAVES VALLEY—STEEL MEN SAY RESERVOIR AVERTS SERIOUS DROUGHT—PAYING FOR ITSELF—UNITED STATES RESIDENT ENGINEER ASSERTS IT'S HELPING WAR OUTPUT

Berlin Lake saved the Mahoning Valley from a devastating flood last winter and now is saving the Mahoning Valley from a severe drought which would have seriously reduced the steel plants' output of war steel, local steel executives say.

"Berlin Lake," said Edward J. Tripp, resident engineer of the United States Geological Survey, "is doing a good job of paying for itself this year in increased war production."

ONE AND THREE-FOURTHS FEET FROM TOP

He pointed out that Lake Milton had only 4,500,000,000 gallons of water September 24, 1942. Milton held 8,400,000,000 gallons Friday and is only 1¾ feet from the top of the spillway. Berlin still has 6,400,000,000 gallons left of the more than 23,500,000,000 gallons with which it started last spring.

Nearly four times as much water is flowing down the Mahoning as at this time last year. Tripp said 280,000,000 gallons were released daily from Milton Lake during most of August and up to September 8. The flow now is 200,000,000 gallons daily.

Last year, sixty-one to sixty-three million gallons daily were released from Milton up to September 2 when the flow was reduced to 58,000,000 gallons. On September 9, it was cut to 48,000,000 gallons daily for the rest of the month.

The cleaner water not only has given workers in steel plants better working conditions, but has provided more efficient cooling, thus saving steel plant equipment.

Here is a table of temperatures reported at Youngstown Sheet & Tube Co.'s Campbell Works, which gets the least benefit of improved water conditions:

	1942	1943
	°	°
Aug. 1	110	105
Aug. 25	106	100
Aug. 28	111	100
Aug. 31	109	97.5
Sept. 2	115	101.5
Sept. 7	108	93
Sept 9	112	92
Sept. 16	114	96.5
Sept. 20	100	93
Sept. 24	105	95

RAINFALL REDUCED

Rainfall during August and September was only about half the total rainfall of August and September 1942, Tripp said, which would have helped to make conditions worse here if it hadn't been for Berlin.

Meander Reservoir, the domestic supply for Niles and Youngstown, is down only a couple of feet. However, Ohio Water Service Co. lakes which supply raw water to the local industries are down substantially because of lack of rain.

Mosquito Creek Reservoir, the Trumbull County flood control and low flow control basin now being built by the Army engineers, will be well filled this winter and will release its storage water next summer and fall to insure even further improvement in cooling here, Tripp said.

Fiscal Commando Raid

EXTENSION OF REMARKS

OF

HON. HARRY P. JEFFREY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. JEFFREY. Mr. Speaker, one of the most important problems in the post-war period will be to maintain the internal stability of our Nation. To this end it is important that Congress prepare now to properly control the expenditure of Government funds.

My colleague the gentleman from Ohio [Mr. JONES] has recently introduced three bills to help effect this very necessary end. These measures would enable the Congress to appropriate money more efficiently and to check upon the manner in which these funds are spent.

A recent editorial upon this problem and the proposed measures which appeared in the Dayton Herald on September 27, follows:

FISCAL COMMANDO RAID

In girding for what he describes as a commando raid on Government wasters, Congressman ROBERT F. JONES, of Lima, calls attention to some serious shortcomings in government. To correct them he has introduced three bills—each of them pointing in the general direction of giving Congress more authority over the manner in which appropriations are spent.

Congressman JONES' idea is eminently sensible. It is that Congress, which is called upon to appropriate sums running into astronomical figures, should have facilities for seeing that the money is spent as directed. Also it should have facilities for determining the need of various Government departments for the appropriations they seek. Therefore, Representative JONES proposes that the Bureau of the Budget, now responsible to the President, be held accountable to Congress; that $20,000,000 be appropriated with which the Comptroller General will make investigations, reports, and recommendations on the receipt and disbursement of public funds; that the Comptroller General be authorized to start making disallowances and withhold credits where expenditures are made illegally and to report to Congress on any overlapping functions of Federal agencies.

That Congress should appropriate billions without having the power to oversee their expenditure simply doesn't make sense. The result is that only the executive branch of the Government gets the real over-all picture of the fiscal side of the Government. Congress gets information piecemeal, either by personal investigations or the work of special committees; the complete view of the problem is denied the men who must vote on the appropriations. Today the complexities of government demand that the Congress receive full and adequate information from agents responsible to it alone and not from agents of interested parties in the executive departments. That there is frequent conflict between Congress and the executive departments over what should be considered official public information is evidenced today by the current squabble between the Joint Committee on Internal Revenue Taxation and the Treasury Department, which have been at sword's points over data regarding taxation.

Perhaps when Congressman JONES puts through his three bills to improve Government fiscal management Congress will give attention to another and even more sensible proposal along the same line: That is to integrate the work of the Appropriations Committee (which approves desired expenditures) with that of the Ways and Means Committee which raises the money for the appropriations.

Address of Hon. Walter E. Edge

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. AUCHINCLOSS. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an address

made on September 28, 1943, by the Honorable Walter E. Edge, formerly a Member of the Senate from the State of New Jersey and Ambassador to France, on the occasion of his acceptance of the Republican nomination for Governor of the State of New Jersey:

Mr. Chairman and my fellow Americans, I deeply appreciate this gracious, and I know, sincere, reception.

May I, at the outset, express my thanks and appreciation for the loyalty and unselfishness you have all so decisively demonstrated through the weeks and months leading up to the primaries and this convention? I know it is unnecessary for me to repeat that I have not returned to public service inspired by any personal or selfish ambition. I have made no promises or commitments to any individual or to any group. Neither have I nor will I make any pledges as to appointment to office, beyond the assurance that I will assume personal responsibility for my every action in this regard. If elected Governor, I shall be free in every way to serve the people of New Jersey to the best of my ability. Now that you have nominated me to head the ticket in our great State, I propose with your help to win and I visualize in the future a splendid opportunity for real constructive leadership. In addition to administering the office of chief executive, I recognize a further responsibility to the Republican Party and I hope, if elected, as I confidently expect to be, that with your assistance and cooperation we can present a program that will be a real instrumentality for public good and retain the confidence, respect, and esteem of all classes of our citizenship. I consider this responsibility a trusteeship for the people.

May I assure you that the progressive spirit and demands of this era are fully recognized by me and coupled with the safeguards of experience we will march progressively forward. You of the younger generation of men and women must and will carry on, always responsive, I trust, to enlightened public opinion.

The returns from the primary election unfold several interesting situations. The primaries have proved conclusively that labor will vote as American citizens, free and untrammeled and not at the dictation of labor bosses. The only State-wide candidacies were, of course, those of my opponent and myself standing for the nomination for Governor. The unofficial returns indicate a total vote, Democratic and Republican, of approximately 395,000. Hudson County contributed 111,000 to this total. This is nearly one-third of the entire primary vote in the State.

In other words, one county with a population in 1940 of 650,000, representing less than one-sixth of the population of the State, is accredited with nearly one-third of the total votes cast. Compare, for instance, Essex County, my opponent's home county, with Hudson. The population of that county in 1940 was 837,000. The primary vote Tuesday in Essex was slightly more than 50,000, less than half the Hudson total notwithstanding Essex's population is almost 25 percent larger.

This Hudson vote was 4,000 more than given to the Democratic candidate for Senator a year ago and yet thousands of men and women of voting age have left in the meantime to join the armed forces. Over 50 percent of my opponent's total came from 1 county in the State.

There are only 2 possible deductions to take from these figures—either the voters in the other 20 counties of the State are unconcerned as to the character and policy of their State government, or there is something radically wrong in Hudson County. I make no charges but I pledge this convention and through it the people of New Jersey that if I am elected Governor, no stone will be left unturned to get to the bottom of this unsavory situation. Apparently the only machine working in New Jersey Tuesday was that of the undisputed boss of Hudson County. Perhaps he overplayed his hand.

I demand that the Republican Party courageously meet and endeavor to solve the problems of the coming years. The party must be strong and independent and function as a single entity. I am opposed to bipartisan trading and patronage deals. Mr. Hague will be no part of my administration.

I was amused at a gratuitous suggestion from my opponent that I should refrain from bringing the national administration into the campaign. I can well understand why our friend would be pleased with such a policy. No; I have no intention of neglecting the national administration's domestic policies in this campaign. They are much too closely associated with the everyday life of all classes of our citizens to be ignored. For instance, consider the Unemployment Compensation Commission. I am not only for it but I am for extending its benefits. It was a social reform absolutely in the right direction but, again, I must file a protest when it has become so plainly evident that Washington must be the unchallenged depositary and administrator of this tremendous fund.

In New Jersey alone the fund exceeds $300,000,000. The workers of this State have contributed to that amount over $100,000,000; more than a third. Surely, New Jersey is very interested in the disposition of this fund, that it is not distributed to less enterprising sections. Remember, labor in only four other States contributes to it.

One cannot make a turn today without running afoul of some Federal policy regulating our very existence. I shall discuss all our State problems and propose to refer to several today, but in the meantime you can be assured the Washington merry-go-round will receive proper attention.

Of course, a successful termination of the war transcends all other responsibilities. Our victory in the war must be the beginning and not the end of what we are fighting for.

The inspiring reports from all war centers have thrilled America and her allies, and we pledge every resource in our power to cooperate, praying for a speedy and all-victorious conclusion.

I want to take this occasion to present to this convention and to the public my convictions as to various State and national issues; and, in view of the fact that upon this program, as it were, I will present my case to the electorate of New Jersey, in the interest of accuracy I will read to you the planks upon which this appeal will be made.

May I highly commend the Republican Members of the United States Senate and Representatives for their vigilant services in opposing policies of the national Democratic administration directed toward further centralized and bureaucratic regimentation of home-front activities.

May I also express my deep personal appreciation of the unselfish services of the retiring chairman of the State committee, H. Alexander Smith. He has administered this difficult responsibility with great zeal and tact, and we express complete confidence in his most exacting duties as our national committeeman.

Also, may I congratulate the State committee on its unanimous selection of Lloyd B. Marsh and Mr. Smith's successor. Mr. Marsh, as my personal campaign manager, has been indefatigable in his highly successful efforts to unify and unite the Republican Party and has inspired its membership with complete confidence in a glorious victory.

The recent conference of Republican leaders at Mackinac was most heartening. The unity of action on the outstanding issues of national and international responsibility, together with the clear exposé of Washington's bungling domestic bureaucracy, serves as a rallying message to Republicans everywhere.

THE WAR FRONT

I repeat, our first obligation is to win the war—quickly and decisively.

For this purpose we place every resource of money, materials, and manpower at the disposal of the President, the Congress, and the men of our armed forces.

THE HOME FRONT

We pledge the same full support to the home front that we pledge to the war front and will work toward the end that much of the uncertainty, capriciousness, and mismanagement of domestic affairs during the past 2 years may be eliminated.

The fantastic operations of the O. P. A. and Manpower Commission have been especially detrimental to our people and to the war effort. It must not be allowed to continue. The multiplicity of directives, questionnaires, regulations, inspections, audits, and investigations emanating from Washington have been as damaging to production as absenteeism, and must be systematized, simplified, and reduced.

Disruptive controversies among those in high Federal positions that so continuously impede the war effort reflect upon the qualities of responsible officers. We are opposed to successive terms that entrench bureaucratic cliques in key positions of influence and make them responsive only to their own ambitions.

The constant effort to identify wartime restrictions with social reform and weld the control devices of the emergency into a "new order" for America must be stopped now. It is our duty to warn New Deal cohorts and spendthrifts that we do not intend to allow the establishment in our country of totalitarian principles which we are fighting to destroy in other lands, and that we are not to be silenced by smearing, intimidation, and threat. We will support to the utmost the men of our fighting forces, but as to government—we know the kind we want and we intend to speak for it at all times and fight for it when necessary.

FEDERAL-STATE RELATIONS

The right of the State to function as a sovereignty must be restored. The systematic destruction of the sovereignty of our State, which has patterned almost every major act of the present administration both before and since the war, is the greatest threat to American democracy since the eighteenth century. It is far more than a redistribution of authority as between the States and the National Government. It means the ultimate abandonment of private enterprise, the disruption of organized labor, the abolition of local education, and the elimination of fundamental democratic controls.

This issue affects the lives of every one of us. It affects the pocketbooks of every one of us. It raises the question as to whether the citizens of the American States are to govern or be governed.

Under a long series of catchwords, such as "economic planning," "new nationalism," "socialized industry," "consumption economy," and "public investment programs," the present administration has issued Executive order after Executive order, each one trespassing on the rights of the sovereign States.

These are the great lessons in unpopular government and we pledge every effort to make New Jersey self-sufficient in her own responsibilities and vocal in the fight for a return to American federalism.

THE POST-WAR FRONT

The next 3 years will be a period of war and, we devoutly hope, post-war adjustment;

and at no time in our history has there been more need for enterprise, judgment, and understanding. We must not fail to satisfy the three essential conditions of our way of life: Full employment, a protected standard of living, and effective social security.

In meeting these tremendous responsibilities we solemnly pledge our every effort to assure that during the post-war period:

There shall be a steady and unbroken transition to peacetime occupations, employment at decent wages, and work in each man's special skill or profession.

There shall be opportunities after the war for training every demobilized man and woman from our armed forces and for every civilian worker engaged now in war industry and in this connection we must be always mindful of the large numbers of young men and women too youthful to be in the armed services but who will shortly be ready to enter industrial life.

There shall be a sound and sensible program of public works and services sufficient to cushion a transition period of reemployment. This program will be built around highways, parkways, housing, potable and industrial water supply, health service, recreation centers and airports, and these works and services will be planned to add permanent and productive values to our State. Wherever possible or practicable, they should be developed through the employment of private capital.

Conversion of factories from wartime production to the turning out of peacetime commodities will, I am informed, require a period of from 6 to 12 months. The post-war program I have outlined is designed to provide useful temporary employment pending such conversion.

Every effective resource shall be directed toward the most modern methods of physical and mental rehabilitation of those who return home in need of such services.

We shall support adequate unemployment insurance, retirement plans, and, for those who meet economic misfortune, direct relief. But these can never replace full employment opportunities under our system of private enterprise, nor can they reward, even remotely, the tremendous services that our armies and workers are giving their country today.

We believe that those men and women who served in the armed forces of our country deserve the undying gratitude of a grateful America, and therefore advocate—

1. Adequate compensation for incapacitated service men and women and unstinting aid to the dependents of deceased service men and women by the Federal Government;

2. Physical rehabilitation of the disabled by the Federal Government in cooperation with State governments;

3. Economic rehabilitation of all veterans of the armed forces of America by the States with the assistance of the Federal Government, for the reason that only the States and their subdivisions fully know their own industrial and business needs and the actual economic opportunities available to citizens within their own borders, and can bring such economic rehabilitation close to the men and women defenders of American freedom.

These are our great objectives for the post-war period in New Jersey and we pledge every resource at our command to their complete fulfillment.

THE INTERNATIONAL FRONT

We believe that the United States will emerge from this war the most powerful and influential Nation in the world.

We believe that this great power and influence carries with it responsibilities that we cannot safely ignore and that, still more important, we cannot morally ignore.

American isolation from the rest of the world is ended forever. A new period of international cooperation is necessary to avert future world catastrophe.

New Jersey will, however, be affected by these developments. Trade agreements may influence employment; international exchange may affect wages; excessive post-war foreign commitments may increase Federal taxes.

We pledge ourselves to be ever watchful of these developments in the interests of security at home and a better world abroad.

LABOR AND BUSINESS

We confirm our long-established position that labor has an inalienable right to organize, to bargain collectively through representatives of its own choosing, to strike lawfully in peacetime and to be free from administrative and judicial restraints that embarrass these rights.

We believe in free enterprise, which means that regulation by government should be restricted to the stimulation of production; to the maintenance of fair competitive relations; and to the protection of any group or groups from economic exploitation.

We believe in competition that accepts the profit motive as the most effective means to develop individual initiative; and in progressive compensation for progressive risk as the surest way to provide opportunities for a fuller national life.

We are opposed to monetary juggling that threatens to unbalance budgets, wage scales, and employment; to a public policy of underproduction that is incompatible with the working habits of America; and to the expenditures of public money on nonessentials.

The Republican Party joins with the rank and file of labor itself in condemning the recent excesses of some labor leaders who have callously disrupted war production and imperiled the safety of our armed forces. There is no right to strike in favor of our enemies, at any time or anywhere.

We are proud of New Jersey labor. Its great membership has always voted as it thought, never as it was told. No one can deliver the vote of any group of our citizens. As long as there are free elections in New Jersey, as provided by the Constitution, no one ever will. Labor, made up of free men and women, especially resents the effort to regiment it at the polls in the coming election.

AGRICULTURE

We promise every encouragement to the maximum production of agricultural products at a fair profit to the farmers.

We oppose the unnecessary interference in New Jersey's agricultural affairs by Washington bureaucracies, and approve the substitution therefor of the regional and State administration of farm problems.

We pledge full support to farmers' cooperative markets and to State policies encouraging the establishment of auction markets and city markets to the advantage of both farmers and consumers.

We promise vigorous action to relieve farm labor shortages and to release supplies, materials, and equipment to meet the full needs of the emergency.

We pledge the further extension and development of farm-to-market roads and airway landing strips at frequent intervals throughout our rural sections.

We will give the fullest support and encouragement to the State department of agriculture, the experiment station and extension division of Rutgers University, and particularly recommend improving and modernizing the facilities for scientific research.

CONSTITUTIONAL REVISION

We believe the constitution of our State should be modernized and liberalized to conform with present-day requirements and that it should be particularly revised by providing for (1) a more efficient judicial system; (2) a 4-year term for Governor, a strengthened veto power, and responsibility over administrative appointments; (3) biennial sessions of the legislature; (4) extension of the terms of senators and assemblymen; (5) a more readily available method for the submission of constitutional amendments at general elections without the expense of special elections; (6) such other necessary and timely adjustments that will make the constitution conform with present-day requirements.

In the matter of reorganization of State departments, I can speak from experience. My election as Governor in 1916 followed the creation of the economy and efficiency commission. This commission proposed the elimination of some thirty-odd boards, bureaus, and commissions and their consolidation into five or six major departments. This program was successfully accomplished through legislative enactment. I proposed to carefully review the present admitted overlapping responsibilities with the same definite determination.

Revising or changing the constitution rests solely in the hands of the voters. This is the one activity of government wherein the people rule directly and not through their representatives. The only question to be decided now is one of method.

At the general election to be held in November a referendum will appear on the ballot, which will give the people the opportunity to indicate whether or not they wish the 1944 legislature to prepare a revised constitution and submit it, for the people's approval or disapproval, as a whole at the general election of 1944.

The opportunity for this expression of the people's will was made possible solely by the votes of the Republican members of the legislature.

As I have frequently publicly stated, I will vote "yes" on the referendum and personally hope the people of the State vote likewise.

RAILROAD TAXATION

The income from railroad taxation is vital to the support of government in New Jersey. The old railroad tax structure, however, produced more litigation than revenue.

After a study of the problem by a citizens' group, including a representative of labor appointed by the Governor and by a joint legislative committee, a solution was enacted based on the then existing economic status of the railroads and the State's need for revenue from this source. Immediately upon its enactment, the new tax formula began to yield for the State millions of dollars more in tax revenues than were ever levied and collected under the old law.

The compromise of the tax arrears due under the old law did not reduce the principal, but interest penalties were forgiven. The constitutionality of the compromise legislation is now pending before our Court of Errors and Appeals, and no further action would be constructively effective until a final decision by this court.

If this legislation is held unconstitutional we propose to use every means at the State's disposal to collect every dollar to which the State is legally entitled.

However, in the period since this legislation was passed, the financial condition of the railroads has been greatly improved and the State is now collecting from them greater revenues than ever before. When the court finally clarifies the situation, we propose to re-examine the whole problem as it then presents itself and to determine whether, in the light of the improved financial status of the railroads, the State is receiving the maximum justifiable tax yield from this source.

In any event, we pledge ourselves to treat the railroads as the State should treat any and all other taxpayers. I will meet and solve this problem in a business-like—not a demagogic manner.

EDUCATION

We will make education a major factor in post-war rehabilitation and development.

We want the benefits of education to reach every educational need; and to this end we favor broadened courses of study, more flexible standards of admission to high schools and colleges, and closer correlation between preparation and job opportunity.

We favor equalized educational programs for every child in New Jersey, and pledge a re-examination of the amount and distribution of State school aid to the end that a sound foundation school program is available in every school district.

We endorse the principle of teachers' tenure; pledge the maintenance of the teachers' pension and annuity fund on a sound actuarial basis as it was originally placed by a Republican legislature and Governor Edge.

INDUSTRIAL AND POTABLE WATER

The necessity of increased industrial and potable water supplies has become an acute problem in the northern section of the State.

A plentiful supply of potable and industrial-use water is indispensable. The continued expansion of the State, residentially and industrially, is dependent upon the solution of this complex and troublesome problem.

The solution must not only serve the needs of the State but must treat equitably the public and private rights of our municipalities and citizens owning property and residing in areas in which water supplies are available.

Exhaustive investigations to ascertain available supplies have been made and numerous reports and recommendations submitted.

We feel all necessary information has been obtained, and a final, definite policy should be speedily determined.

The Republican Party pledges the preparation and completion of such a constructive program.

AERONAUTICS

The progress of aviation during the war has demonstrated that airports in the future will be as necessary as railroad stations. New Jersey is so located geographically that with proper development its airports will be the terminus of great passenger and freight lines.

These airports should be built not only as a means of finding employment but as a step in the industrial progress of the State.

THE STATE CIVIL SERVICE

The Republican Party believes the spirit and principle underlying the merit system in public employment should be the sole guide in the administration of the civil-service law. We believe that the persons selected to administer the civil-service law should be appointed solely on the basis of qualification and character, without regard to political considerations.

We condemn the circumvention of the established seniority rights of faithful public employees by pretended departmental reorganizations.

We particularly condemn the countenance or encouragement of strikes against governmental agencies on the part of public employees, maintaining that grievances can and should be adjusted by a properly administered Civil Service Commission. In all civil-service xaminations veterans should have preference.

HOUSING

I believe that no citizen of this State should lack adequate, safe, and sanitary housing. Large areas of our cities must be replanned and rebuilt, and such housing brought within the purchasing power of the lowest-income group.

We propose that all public housing projects in New Jersey shall be subject to State and municipal guidance and supervision, as contrasted with past Federal domination of local housing authorities, and that as far as practicable they should be self-liquidating.

MUNICIPALITIES

The Republican Party believes in the principle and practice of home rule to determine local policies which will best fit local ways of living.

We are opposed to mandatory charges upon local government which are not justified by a public interest of State-wide character.

We shall protect the credit position of all New Jersey municipalities through safeguarding our cash-basis laws.

We pledge every effort toward strengthening local government as the home ground of democracy and as the basis for all popular government.

PENSION AND RETIREMENT FUNDS

The Republican Party's long interest in pension and retirement systems is well known. We established the State teachers' pension and annuity fund and laid the ground work for the State employees' retirement fund.

These two funds have been sound since their establishment and remain sound today. As the next Governor of New Jersey I shall see that they remain so.

Our municipal pension and retirement funds have not, unfortunately, enjoyed the same stability as our State funds. Several comprehensive studies have been made of this situation and proposed remedies have been before the State for many years.

The fact still remains, however, that our local pension and retirement funds are not on a sound actuarial basis and that the future economic security of many faithful public employees is no better protected than the exigencies of annual appropriations will permit.

As Governor, I pledge my best efforts to remedy this situation, in the interests of both our county and municipal employees and the efficiency of our local governments.

FINANCE

The Republican Party is fully aware of the great fiscal pressures that will arise with the post-war period.

We are likewise aware of the staggering Federal taxes that are a necessary part of the war effort and that will doubtless continue beyond the emergency.

We believe that additional taxes at the State level will be an impossible burden;

We pledge, therefore, the following fiscal policies:

A constructive application of such funds as Congress may make available to the State for post-war development.

The systematic encouragement of private enterprise to use its capital in post-war projects as part of the State reemployment program.

The strictest economy and efficiency in State administrative services, and the more adequate control of State appropriations and State expenditures.

SOCIAL SERVICES

New Jersey has always been zealous in its care and attention to its unfortunate residents and citizens.

The board of charities and correction, now known as the department of institutions and agencies, which was created on a nonpartisan and nonsalary basis during my former term, has performed a fine service and is meeting this grave responsibility in an intelligent, constructive manner.

Likewise, the relief agencies of the State have met this difficult duty in a masterly way.

The Republican Party believes that all welfare and social services should be more closely coordinated.

It further believes that provision for rehabilitation, vocational training and retraining, employment services and all special services which may be established to assist our returning service men and women should, as far as practical, be centered in local welfare departments under State supervision and guidance.

We favor wider coverage under the unemployment compensation law, to reduce the number receiving relief while temporarily unemployed, and the extension of unemployment benefits to provide compensation for unemployment caused by illness.

We favor the timulation of local health centers, including general hospitals, convalescent areas, and group health clinics; and will promote experimentation in the field of State health insurance.

We are opposed to the federalization of unemployment compensation funds as detrimental to the interests of the employers and employees of New Jersey. We favor, on the contrary, each State's custody of its own trust fund under Federal supervision and audit.

Under stress of wartime tensions, the problem of juvenile delinquency, particularly in our larger war-production areas, has increased. Because of its significance in the development of adult criminality, this is a problem which should be met by vigorous and cooperative action on the part of all individual agencies and organizations concerned with the training and guidance of children. We favor the creation of broad preventive programs on a municipal and county level and pledge the utmost cooperation of State welfare and correctional agencies in the formation and coordination of such efforts.

The Republican Party feels that these needed social changes can be brought about within available financial resources, and are a necessary and vital part of the post-war program.

WOMEN IN GOVERNMENT

The Republican Party is aware of the tremendous part women are playing in the war effort; the part that they will occupy in the economy of the post-war period; and the part they will take in the public life of the State and Nation. We favor this movement of women into places of responsibility and influence and will provide ways and means of maintaining these opportunities.

MINORITY GROUPS

A world at war has brought home once again the aggravated problems of minority groups. Where force is dominant, where prejudices are armed and powerful; where power is in the hands of those who identify it with their own superiority; then race, creed, and color are too easily made the basis for discrimination and even atrocity.

Never before has it been so important that we guard against this terrible force. Never before has it been so vital to our unity that we make tolerance, understanding, and equality of opportunity the basis for every public policy. America has been built on these concepts, and America can only survive by holding fast to these concepts.

The Republican Party was founded on such principles, and the Republican Party will always maintain them.

I realize this constitutes a very heavy and extensive program. So did the pledges made when I was a candidate for Governor during World War No. 1, but the record shows we carried them through.

In conclusion, may I reemphasize my determination to wage this contest on a high plane, to fearlessly discuss issues, problems, and their possible solution. I refuse to adopt any other policy and will not be swerved from that determination. The unity of our party as compared to our opposition is an inspiration to your nominee and with your loyal cooperation victory is assured.

Will the American People Be Able To Recapture the Liberties Which They Have Surrendered During the War?

EXTENSION OF REMARKS

OF

HON. HAL HOLMES

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. HOLMES of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Judge N. K. Buck, of the Superior Court of the State of Washington before the Spokane Chamber of Commerce on July 7, 1943.

Judge Buck is an outstanding lawyer and jurist of the State of Washington.

WINNING ON BOTH FRONTS

I was a small boy in Lewiston, Idaho; and my father had a team and wagon. What he needed them for I don't know, but he had them, and I liked to handle them. There was one of our neighbors who wanted to move some household furniture and my father offered the services of myself and the team. That suited me just fine because there was nothing I liked better than driving, unless it was riding horseback, and that goes to this day, and is true of any man or boy who learns to love horses. There is no greater exhilaration than that which comes from the feel of the reins drawn over the backs of a good team of horses. No wonder, then, that I was elated to find myself in charge of such an outfit with its accompanying responsibilities.

A neighbor went with me, a boy slightly older than myself, but I drove. I got into the yard but then I faced the job of getting the wagon backed up to the door, and there was a barn, a chicken house, a wood pile, and various other obstacles. All at once I found myself bewildered; I didn't know how to back the wagon around to the necessary position. The older boy saw his opportunity and suggested that he take the lines long enough to get into position. I consented, and right there made one of the many mistakes of my life. He took the lines but refused to give them back and I have never been more mortified than to thus find myself done out of that proud position of driver.

How did I get myself into that unfortunate situation? Why couldn't I recover that which I had lost? Because I had voluntarily surrendered my rights and I didn't have the two-thirds majority necessary to get them back.

And that's just where the American people find themselves today. They have surrendered the reins of government because they have been told that they are incapable of defending themselves in time of attack. The question is, Will they ever get back that which they have lost?

We are winning the war against Hitler; we will win against Hirohito; there isn't a doubt as to the outcome of this conflict, but what is it costing us? It seems almost treason to ask that question because we are importuned to forget the cost and to bend every effort toward winning. Good advice, but there is a limit beyond which the American people cannot go if they are to win something more than a shadow of victory.

Of what avail will it be to win against Hitler if we lose against Hitlerism? In our war against Hitler we have valiant allies without whom the outcome would be more than doubtful. Russia, China, Britain, and America are standing shoulder to shoulder to rid this world of the brand of dictatorship represented by Germany and Japan, and it is in part due to such aid that we are so confident of the outcome.

But as against Hitlerism, we can have no allies; the battle for freedom on the home front must be won by every people unaided by any other, because the very nature of freedom is such that they who hold it only with the assistance of others do not have it at all. And so I say that it will avail the American people nothing if they win against Hitler in Europe and lose against dictatorship in America.

Is there any foundation for such fears? Is this the time to express them?

I was in Hollywood some months ago and there learned something that sent a chill down my spinal column. I learned that not a line of script can go onto the screen, not a sentence can be spoken; the young hero cannot tell the heroine he loves her unless the words are first submitted to and approved by a United States bureau chief.

If one wants to know how far the American newspapers and magazines have been put under control, let him read how tough is the American censorship in the April Harpers. Twice during the last year direct quotations from justices of the Supreme Court have been deleted from articles prepared by American correspondents. Permission to publish them was refused. Gentlemen, the bureau censor did not want th world to know what the United States Supreme Court justices said to the American people.

Unless something is done to stop this tidal wave, it will not be long before there will be stationed in the office of the Spokesman-Review, the Chronicle and in every weekly newspaper office in this broad land of ours a Government censor who will blue-pencil articles of news which the editor thinks should be given to his readers. That censorship will not be negative only; it will tell the owner what he is to print as well as what he is not to print. That censorship will suppress free expression of editorial opinion, and will require that views be expressed in conformity to what the Government wants the people to think.

A few weeks ago your own Dr. Warren of Whitworth College came to Yakima and I heard him give his experiences covering a period of several years while he was a missionary in Japan. That was some years ago but even then the war spirit was growing in that island kingdom. Dr. Warren said, "I asked the people over there whom I met, 'Why do you want to go to war with America?' The reply was, 'We don't want to go to war; we don't want to fight America but America is getting ready to fight us, and we must be ready; we must strike first. We know that is true because every newspaper says so, every radio broadcast.'" In Japan every means of communication is under strict control of the government; the people hear what the officials want them to hear and nothing more.

But, gentlemen, even in such an autocracy as Japan, the powers that be do not dare to altogether flout the will of the people; they know that in order to fight any kind of war they must educate the people to the point of hating an imaginary foe; and they know that by control of sources of information and of opinion, they can bend the people to their own will. We are now at war in the Pacific because the press and radio of Japan have been government controlled for many years.

This is the danger which is facing the American people today. Is it a danger which can and should be avoided?

Ours is a constitutional form of government, and the way to test any policy and any alleged usurpation of government is to compare what is being done with the provisions of the supreme law of the land. If the Constitution says certain things can be done, then they can be done without violence to the rights of the people; if the Constitution does not expressly provide for such authority, then its exercise is clear violation of the law; and he who perpetrates such action is a public enemy.

What does the Constitution say about freedom of speech and of the press; that Congress shall make no law cutting off freedom of speech and of the press? No; not that; it says Congress shall make no law abridging such freedom.

What does abridge mean? It doesn't mean eliminate, abolish, or to do away with. It means such freedom shall not be curtailed in the slightest; it must not be foreshortened; the corners must not be trimmed; such freedom must not, under the Constitution, be abridged; and when Congress permits and authorizes such abridgment then Congressmen are not true to their oaths of office.

Is there anything else that makes me fear we are losing the war against Hitlerism? Yes; many things.

Look again at the Constitution; and I do not apologize for urging that the Constitution be carefully and continually read, because unless the American way of life is safeguarded by the American Constitution, then it is not safeguarded at all. The Constitution is the bible of liberty and freedom, and just as the Bible must be continually referred to by those who would live within its precepts, so must the fundamental law of the land be continuously rehearsed by those who would resist any encroachment upon the liberties of the people.

When Moses gave out the Ten Commandments he told his followers to teach the law to their children, and to write it upon the foreheads of the people; in other words, to get the law into the skulls of those who are most concerned with it.

So we must get the Constitution into our minds and keep it continually before us if we hope to defeat Hitlerism.

In the light of such necessity, ask yourself whether there is authority under which Congress can tell you how much rent you can charge for your house or building; under what constitutional provision is Congress given authority to require you to ask permission before you can raise the wages or salary of an employee? Where is there authority for limiting what a man may receive for his services?

About a year ago I heard it announced that a new policy would soon be adopted, and that if a man were found more useful in milking cows than in doing something else, he would be compelled to milk cows for the duration. To say I was shocked and skeptical would be to put it mildly; but that time has now arrived.

Yet 80 years ago another war was going on in this country, and out of that war came the thirteenth amendment to the Constitution, and that provides that neither slavery nor involuntary servitude except as punishment for crime shall exist within the United States.

What is milking cows to a man who would prefer to be a carpenter? It is involuntary servitude, nothing less; and the inauguration of such a program is just as much a violation of the thirteenth amendment as it would be if Congress replaced the shackles on the colored people of the South.

But these are wartimes, we are told; the country is facing an emergency, and emergency powers must be called into play to save our Government. One should, of course, respectfully listen to such comment, but the speaker should be reminded that there isn't a line in the fundamental law of the land granting any more power to Congress or the Chief Executive in wartime than in the time of peace. Those who excuse what is going on upon the ground of emergency powers are either totally ignorant or are attempting to cover up the real issue.

The Constitution is not a difficult document to understand; its language is clear and simple, and therein lies its greatness. Any man who can read can understand what

it says. In order to understand it, however, one should keep in mind what happened during the time it was being considered for ratification by the people.

Before they would consent to adopt the Constitution the people insisted that certain things be ironed out; and so they compelled the submission of what is known as the Bill of Rights as amendments, and those amendments were adopted soon after the Constitution itself was ratified; and without those rights being insured, the Constitution would never have received approval. Keep that in mind when considering this matter.

One of the things upon which the people insisted when they demanded amendments was a limitation upon the right of Congress to pass laws upon certain subjects. So this is what was approved and it is a part of the Constitution, one of the most important parts—perhaps the most important clause in that instrument:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."

Nothing could be simpler, nor more effective so far as language can protect the people from dictatorship. Unless you can place your finger upon the direct authority in the Constitution, there is no such authority given to Congress. It's just that simple; when in doubt as to any Federal law, look for the express authority to pass it, and if such authority cannot be found, the law is unconstitutional.

But again we are told the Government is facing extinction; the people are facing slavery, and if we are to defeat the foes of free government we must not quibble over the fine points of personal liberty; we must ignore the Constitution for the present in the interest of victory, after which we will return to the government of our fathers.

There are three things wrong with that statement. In the first place, it assumes that a democracy is incapable of self-preservation; that it cannot win a war against totalitarianism. With that I will not agree; if it be so, then free government is but a snare and a delusion, and Hitler is right in his concept of the relative places of people and state.

In the second place, if that theory is accepted then America has already lost the battle against Hitlerism; for there has never been an instance in recorded history in which a government usurped authority and ever returned it to the people short of a revolution. Whatever rights are taken away from the people in the name of liberty are lost forever.

In the third place, I refuse to admit that the Constitution is weak in not providing for every emergency. There is not and cannot be a single emergency which justifies violation of constitutional provisions.

In order to set myself right I want to make it plain here and now that I am as all out for victory as any man can be; and I realize that to make that victory certain there must be a unification of authority to an extent never before dreamed of. Personal rights must give way to a national emergency.

I believe Congress and the President should be given all the authority they are now exercising, and more besides; the difference being that such authority should be conferred as provided in the Constitution itself.

How can that be brought about? By amendment. When I suggest that to some people they are shocked beyond telling. They say we must not put such things in the Constitution because then they would be permanent; we must let the President exercise unauthorized power, and then he will return it after the war.

But I am not willing to risk our liberties upon any such uncertainty. I would lawfully place whatever authority is necessary in hands that are capable of exercising it, and then I would lawfully take the power away when the emergency is over, thereby leaving nothing to the whim of any man or group.

How can the Constitution be amended to provide for any such crisis as that through which we are now passing? Let me word such an amendment for you.

"Notwithstanding anything in this Constitution to the contrary, Congress may by joint resolution, supported by a two-thirds majority of both Houses, bestow upon the President such power and authority as may be necessary to insure the defense of the Government or to meet any national emergency, such authority and power to be strictly limited to such period as may be fixed by such resolution, not to exceed 2 years from the date of passage; and such authority may be revoked at any time by a joint resolution supported by a majority of the Members of both Houses. The power of revocation herein granted shall extend to such extraordinary power and authority heretofore granted as Congress may by majority vote indicate."

What would be the result of that amendment?

No. 1 effect would be that all authority anybody could ask could be given to the President or to a war commission. Such authority would be limited in time not to exceed 2 years, and then would be automatically canceled unless renewed. Such authority could be taken away any time by a bare majority. In other words, it would take a two-thirds majority to take away even temporarily the rights of the people, but such rights could be restored by a mere majority.

That would result in putting our Government for the time being on the same basis as that of Britain, that is, a parliamentary system; but it would at the same time insure the advantages of our own constitutional Government.

But another objection is that we can't stop to amend the Constitution. It is said it would take years to put through an amendment. That is an argument put forward either in ignorance or in an attempt to confuse the issue.

Our Constitution could be amended in 30 days. Let's take a look at what the instrument, itself, says about amendments. An amendment may be proposed by a two-thirds majority of Congress, no approval by the President is necessary. It may be ratified by three-fourths of the States either through legislatures or by conventions as may be decided by Congress. If Congress were to see the matter in its true light a simple amendment could be proposed in a week's time, conventions could be called in 2 weeks' time, and the trick would be turned.

To summarize: there is an admitted need for enlarged powers to be given to the Chief Executive, there is provision in the Constitution under which such change could be brought about, and it should be done the constitutional way rather than by tearing our fundamental law to shreds.

The people are surrendering their reins of government; if they ever expect to take those reins again into their own hands, they would do well to move quickly.

Economy Not an Increase in Taxation

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. HOFFMAN. Mr. Speaker, the President's demand for $10,560,000,000 in new additional tax money brings the suggestion that too long Congress has waited to force the administration to quit wasting the taxpayers' money.

That it is being wasted almost everyone back home knows, for they see the evidence all around them. From the Democratic South comes the Mobile Press Register and, under date of September 18, gives us an editorial entitled "Waste in Federal Spending at Home Causes a New Flare-Up in Congress." That editorial is as follows:

Dispatches from Washington a few days ago stated that Congress soon may be asked to increase the national debt limit to $300,000,000,000. Chairman CANNON, of the House Appropriations Committee, commented that the current rate of Government spending—which he estimated at between seven and eight billion dollars a month—is approaching the present statutory debt limit of $210,000,000,000.

This picture of the Nation's fiscal situation becomes a powerful argument for Government economy in nonessential expenditures. Two or three days before Chairman CANNON's remarks, another member of the House Appropriations Committee—Representative JONES, of Ohio—had quite a lot to say on the floor about the need for "a commando raid on the wasters in the Federal Government."

Mr. JONES suggested an appropriation of $20,000,000 for the balance of this fiscal year to better equip the Office of Comptroller General Warren to supply Congress with reports and recommendations by which both manpower and money might be saved.

"The people," remarked the Congressman from Ohio, "are quite satisfied with the progress at the fighting fronts, but they are miserably disappointed with the conduct of the war on the home front. * * *

"We must admit that we have not begun to start to commence to cut waste of manpower and money on the home front; even if we have the will to do it, we do not have the manpower in Congress to get the job done properly. Since we are in war I am quite willing to use the facilities of the General Accounting Office, the agent of the institution of Congress, and I think their manpower ought to be available to any Member of Congress who wants to put his shoulder to the wheel to attack this waste on the home front."

If he had not already received it, Representative JONES evidently heard an earful from the folks at home during the grassroots vacation which Congress recently ended, for he told his colleagues that "the American people are expecting and depending upon the Congress" to eliminate waste and duplication of effort.

He argued that the $20,000,000 appropriation he proposed, together with a bill he has prepared to broaden the duties of the Comptroller General's office, would be "an effective step in the right direction to arm us with the manpower, facts, and original data for a commando raid on the wasters in the Federal Government."

Mr. JONES described $20,000,000 as "a parsimonious sum when compared with the enormous expenditures of the executive department for research in the political-science and social field." So far as we have seen or heard, nobody—not even a bureaucrat—has challenged that statement.

We do not know how much economy might be effected by Congress through appropriating $20,000,000 to increase the facilities and functions of the Comptroller General's office, but if it led to a real, effective curb on unnecessary and wasteful expenditures in domestic operations of the Federal Government, it would be a good investment.

The morning papers here in Washington tell us that the President's demand has caused a new flare-up in Congress. Chairman DOUGHTON, of the House Ways and Means Committee, says that some of the suggested increases in excise taxes are utterly indefensible. These flare-ups in Congress are becoming an old story and so far they have all died out, not only before any fire was really built under the administration but before even a smoke was discernible.

Congressmen did, as suggested in this editorial, get an earful when they were home during the recent recess. Congressmen at that time were told in no uncertain terms some of the things which they should do. They came back to Washington filled with fire and fight but Congress itself folded up like a punctured paper bag and is now back in the old rut, letting the spenders and the planners waste the people's tax money, continue with their plans for the remaking of America and the feeding of the world, regardless of either our constitutional provisions or our ability to pay.

Comments on Foreign Policy

EXTENSION OF REMARKS
OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. COFFEE. Mr. Speaker, many people in America are perturbed about the apparent collaboration between the United States and discredited Fascist elements in Italy and in Europe generally. Many sincere people are concerned as to what are the real aims of our Government in connection with the war. Do we really favor truly democratic policy for the occupied countries of Europe? The Soviet Union is very suspicious of the A. M. G.—Allied Military Government—set-up by the British and the United States, which follows our conquering armies to take over civilian administration. What is the scope and function of the A. M. G.? Is it a purely temporary agency, or is it instituted for the purpose of imposing long-range influence over the areas taken from the German armies? What assurance have we that Russia agrees with our program? Is the A. M. G. actuated by democratic philosophies or is it intertied with imperialistic planning?

One of America's great newspapers, the St. Louis Post-Dispatch, printed in its September 24 issue an impressive and provocative editorial in this connection, which speaks for itself. Here it is:

MOSCOW TALKS DEMOCRACY

In a dispatch remarkable for its astonishing implications, David M. Nichol, Moscow correspondent of the Post-Dispatch and Chicago Daily News, sets forth Soviet opinion on American and British policy in occupied countries. The most astonishing and disturbing implication is that the Soviet Government favors a more democratic policy toward these countries than the United States or Britain.

There are many question marks in Soviet circles, as well as in this country, concerning A. M. G. (Allied Military Government), set up by the British and ourselves to follow the conquering armies and take over civil administration. In the first place, is A. M. G. a purely temporary instrument or is it designed to exercise long-range influence over the future of the areas taken from the German armies? Are its functions for the military purpose of keeping order until popular elections can be held, or for the political and imperialistic purpose of directing the course of European events for several years to come?

These questions might well arise from a natural suspicion, from a certain Russian jealousy over the spheres of European domination after the war. But the Soviet magazine, War and the Working Classes, explains its point of view in this way: "Restoration is the affair of the people themselves. A program can only be determined by their sovereign will for defense of which the United Nations took up the sword."

Here is a mouthpiece of Stalin actually talking good democratic doctrine—a doctrine implicit in the Atlantic Charter and the four freedoms to say nothing of a doctrine implicit in 700 years of British freedom and 167 years of our own. While our own State Department plays around with European Fascists, reactionaries, and unemployed monarchs the principle of self-determination is trumpeted from Moscow.

The Soviet Government's main war aim is to crush fascism in Europe and, in order to do this, it feels that not only should the "master criminals" be punished, but that retribution must be visited upon the "brutal underlings"—the Gauleiters, the Gestapo, and the administrative forces of nazi-ism, and their equivalents in Italy. That assumedly is our policy, too. Why, then, comes the ringing question from Moscow, does A. M. G. with its authority complete and unquestioned, keep subsidiary Fascist officials at their posts, as it is doing in Sicily? Is A. M. G. not backed by the Allied armies' might?

Moscow feels further that A. M. G. aims are too closely linked with "security for Anglo-Saxon banking, industrial, and trade circles." "If this charge is true," writes Mr. Nichol, "if political problems will be subordinated to the preservation of the property values of the Nazi occupation period—it is not difficult to see an affinity between such ideas and those, for example, of the frightened industrialists who backed the Vichy Government in France and collaborated with Hitler rather than see France reborn."

Is this not the deadliest of comparisons? Here we are, in what has been called a people's war, yet we are suspected—as conquerors—of having so tender a concern for property, while millions of men are shedding their blood, as to deal with the minor architects of the war. It is a Moscow view, true, yet it brings up a question that should be answered in the most forthright way by President Roosevelt and Secretary Hull. Even the suspicion that we are befouling our war aims should be promptly and categorically denied, if it is not true.

Of course, we Americans and British may well suspect that Russian policy toward Europe has ambitious motives, despite all the assertions that the Soviets have no interest in the post-war set-up so long as fascism is destroyed and so long as the peoples of the various countries are allowed to elect their own governments in a democratic way. It may well be that Moscow wants to make them her next of kin economically, socially, diplomatically, establishing over them a hegemony almost as tangible as actual incorporation in the Union of Socialist Soviet Republics.

It might be said parenthetically here that the best way to keep people from wanting Soviet domination or protection is to prove by word and deed that we wish to extend to them our own democracy. Our foreign policy, however, has so far failed to capitalize and dramatize democratic principles in Europe.

On the authority of what he calls competent observers, Mr. Nichol says there is a conviction that Moscow has no desire to bolshevize Europe. He says that such a charge is one of Goebbels' most telling inventions. Russia, to be sure, has territorial ambitions. She wants the borders that existed before the Hitler attack, including Bessarabia, White Russia, the western Ukraine, and the Baltic republics. This is a question of Russian security. She may want parts of Bulgaria and Finland.

Beyond this, Soviet policy, according to Mr. Nichol, seems to be that the Moscow government does not care particularly what types of governments arise so long as they are free expressions of free people, undominated by Fascist elements and unhostile to Moscow. To this, the Post-Dispatch would like to add that it learns on very high authority that Stalin definitely does not want a bolshevist Germany after the war. This is because he fears that, once Germany turned Communist, the old pan-Germanic elements in Germany would try, as did Trotzky, to start a world-wide Communist movement that might reduce Stalin's stature and perhaps threaten his position. He fears that the dynamism of the German people, which made nazi-ism a world menace, would function with even greater intensity if given the vehicle of Marxian doctrine.

In any case, regardless of sincerity of motives, what ghastly confusion it must be for the conquered peoples of Europe to find Soviet Russia preaching the democratic doctrine of self-determination, and then to turn around and find the United States and Britain, with their historic tradition of freedom, flirting with the Darlans, Peyroutons, Badoglios, little kings, and the ragtag and bobtail "brutal underlings." This ironic spectacle must strike them with wonder and dismay.

Legislation for Post-War

EXTENSION OF REMARKS
OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Maj. A. L. BULWINKLE from Air Transport for September 1943:

LEGISLATION FOR POST-WAR—LEGISLATION IS NEEDED NOW TO PERMIT SOUND PLANNING SO THAT CIVIL AVIATION MAY MOVE FORWARD RAPIDLY AND GIVE WIDESPREAD EMPLOYMENT TO OUR RETURNING SOLDIERS

(By Maj. A. L. BULWINKLE)

The development of air transportation in years past has required the combined efforts of government and industry. Neither, alone, could have made America's civil air transport system the greatest in the world. Together, they have veritably wrought wonders.

But we are determined that however proud our past achievements, they will be far surpassed by those of the future. With that aim, the Committee on Interstate and Foreign Commerce of the House of Representatives has spent the greater part of its time during the present session in work on a bill, introduced by our chairman, the Honorable CLARENCE LEA, of California, to revise our civil-aviation legislation so as to be prepared for the post-war period of growth.

No discussion of civil-aviation legislation can be complete without acknowledgment of Mr. LEA's leadership in constructive legislation for air transportation. During his 26 years of unbroken service in Congress he has been unfaltering in his devotion to the cause of assuring for America the full benefits of this new means of transportation.

TRIBUTE TO CONGRESSMAN LEA

At the close of the First World War he participated in an exhaustive investigation of the part played by our air service in that conflict. The report he then wrote is still regarded as one of the greatest expositions of the practical problems and accomplishments of a fighting air force ever written. And it closed with a stirring call for energetic development by America of a civil-aviation industry as one of the surest guaranties of preparedness and as a means for adding greatly to the welfare and prosperity of a peacetime America.

Nor did he stop with prophecy and exhortation. He immediately set to work for proper legislation. His efforts were at last rewarded in the Air Commerce Act of 1926, in the framing of which he was largely instrumental. That act has stood the test of time. With but little substantive amendment it remains today, as incorporated in our Civil Aeronautics Act, the basic framework for our Government's promotion of civil aviation and regulation of air safety.

Again in 1935 he set to work for further legislation, this time to add to the law a charter of economic stability for air-transport enterprise. And with great pains and infinite patience he pursued the objective, often in the face of apathy and even hostility, until success again crowned his efforts with the Civil Aeronautics Act of 1938. With that act civil air transportation was given full recognition as an essential adjunct of the national defense, and its development and economic stability became a confirmed objective of our Government policy.

Now that air transportation has demonstrated by actual accomplishment its inestimable value to our Nation at war and offers such rich promise for advancing our trade and commerce in the days to come, Mr. LEA has again brought forward a legislative proposal to strengthen America's civil air arm. Once again, looking forward to the need for the steady, sound growth of air transportation, he has presented a statesmanlike measure for suiting the laws of the land to the needs of a new industry, that it may be further fostered as the public interest requires

FOR CONSTRUCTIVE LEGISLATION

In the committee's work, under Mr. LEA's leadership, to present to the House the best possible legislation, there has been manifest a genuine concern by both parties for aviation's future welfare. The great problems involved in aviation's development do not present party issues. Both parties are striving together conscientiously to frame the most constructive measure. And the senior Republican member of the committee, the Honorable CHARLES WOLVERTON, of New Jersey, no less than Mr. LEA, has given unstintingly of his time and has contributed without limit of his extraordinary legal knowledge and ability in guiding our committee to wise decision.

The pending bill proposes a number of steps of particular importance to the future of air transportation. Each deals with a problem which is generally recognized to merit special treatment.

FEDERALIZATION NECESSARY

Foremost is the extension of Federal regulation so that it will cover air commerce for hire between points within a single State as well as between points in different States.

At first blush this proposal might seem to be an infringement upon States' rights. However, careful study of air transportation's problems will show that the proposal is a necessary means for most fully protecting the interests of the several States and for advancing the development of air transportation for the benefit of the whole country.

For more than 20 years there has been complete unanimity, among students of aviation, in the view that air transportation can develop as it should only under a legal framework which is uniform throughout the country. One of the groups which has given most disinterested study to the problem of aviation law is the Committee on Aeronautical Law of the American Bar Association. This committee has been active in the field ever since 1921. During a large part of that time the committee has assisted in drafting and seeking to encourage adoption of uniform State laws affecting aviation. However, after nearly 20 years' experience the committee came to the conclusion that the desired end could be satisfactorily achieved only through an all-embracing Federal regulatory law. The committee's reasons are convincingly set forth in its reports and in a very lucid communication which the committee sent to our committee.

CELESTIAL NAVIGATION REGULATED BY STATES?

The fact of the matter is that the House of Representatives came to the same conclusion in 1926 when it adopted the first air commerce bill. That bill, as adopted by the House, recognized that air commerce is a unit and does not regard State lines. While certain modifications were made in the scope of that bill as finally worked out in conference, every year's experience in the growth of air transportation since 1926 has confirmed the wisdom of the view taken by the House so long ago.

Air transportation is not like surface transport. It is not confined to a fixed roadbed, as in the case of rail transportation. It necessarily uses the entire air space as its highway, depending upon federally provided facilities as aids to navigation. In fact the day is coming when, even within the continental United States, much of air transportation will be navigated by facilities provided by the stars in the heavens.

Furthermore, the speed of air transportation is such as to place it in a category entirely different from surface transportation, and the profound technological developments during the present war will vastly accelerate the pace of our entire air commerce. It is a plain matter of physics and of engineering that the area of a State, in relation to air transportation, is hardly larger than the area of a county in relation to transportation by motor vehicle. There are many counties in this great Nation which could not be traversed by a motor truck in the time it takes a transport plane to cross even one of our larger States.

Moreover, the costs of air transportation are such that it would be economically impossible to seek to develop air transportation routes confined to points within a single State or confined to intrastate traffic. Consequently, even the most conventional view of the extent of Federal jurisdiction would require the application to all these routes of Federal regulation. To add to that regulation duplicating or conflicting State regulation for a portion of the traffic transported on the same airplanes and subject to the same costs would seriously burden the industry, and gravely impair needed coordination in the air-transport system, without accomplishing any compensating public good.

Therefore, to save the taxpayer's money, to avoid unnecessary red tape and multiplication of Government regulation, to promote a coordinated system bringing the benefits of air transportation to all parts of the Nation, inclusion of all air transportation within the scope of the single Federal regulatory act is essential.

ZONING IMPROVEMENT NEEDED

A second vital problem with which the proposed bill deals is that of airport zoning. The inquiries of the Select Committee of the House of Representatives to Investigate Air Accidents brought sharply into focus the grave need for assuring proper airport zoning. Years ago accidents in air transportation due to some mechanical failure in the aircraft or to some trick of the weather were predominant. However, with the industry's progress accidents of this nature have well-nigh disappeared. Today accidents in air transportation—fortunately very rare—are more likely to occur in connection with landing or taking off at the airport. And even where the accident itself does not consist of encountering some structure near the edge of the airport the presence of a structure may contribute to the accident through its psychological effect upon the pilot.

We all know that the safety of air transportation has within the span of 10 or 15 years made as much progress as has the safety of other forms of transportation in the course of 50 or 100 years. And those who have studied the problem carefully are confident that it is within our power to make air transportation just as safe as, if not safer than, older forms of transportation. But our power to assure this end must be exercised. And the most effective single step that we could take to hasten the day when air transportation becomes as safe as sitting in our own front yards, is to provide the legislative means necessary for clearing and protecting the approach paths to airports.

REGULATION OF OBSTRUCTIONS

The pending bill, in its present form, sets up machinery whereby the Federal power of condemnation will be made available to the local airports to assure the clearance and protection of the approach paths with proper compensation where property values are adversely affected. The bill contemplates a great Nation-wide program worked out in cooperation between the Federal authorities and the agencies of the several States and municipalities, with every encouragement given to the local agencies to take the initiative and to solve the problem in their own localities.

It may be that this provision for airport zoning will not prove adequate. It may be that at some time the Federal Government will find it necessary to apply to the air space the same kind of regulation of obstructions which it has applied to the navigable water since 1890 whereby the Federal Government itself can directly regulate the nature and extent of such obstructions. However, the proposal in the pending bill does provide a necessary machinery so as to assure that every State and municipality will have the needed power to accomplish a sound zoning program, and further provides for assistance to be extended by the Administrator of Civil Aeronautics to the various localities in formulating sound zoning standards. This would seem a commendable approach.

The importance of airport zoning, of course, goes far beyond the question of making air transportation safer and more efficient. The employment of our military aircraft, as well as the safety of private flyers, equally depends upon proper zoning of structures in the vicinity of airports. If such zoning is not accomplished we may some day find, when faced with a national emergency,

that, despite the investment of millions of dollars in airport facilities, fatal obstructions have been permitted to arise in the approach paths making it difficult and dangerous for our military air forces to be employed wherever they may be needed for the national defense.

A further point of special interest to the future of air transportation dealt with in the bill is that of economic regulation for the contract carrier by air. The bill follows, for such regulations, the same general pattern established for contract carriers by motor vehicle in title II of the Interstate Commerce Act. It provides that the air contractor must secure a license, must file and adhere to tariffs showing reasonable minimum rates, and must submit to proper regulation of his minimum rates in the case of domestic air commerce.

Such regulation is an essential step in any program for sound post-war development of air transportation. If such regulation is not provided our whole commercial air system will be faced with economic chaos upon the war's end. If we were to stand by and to permit without any restraint whatsoever the use of hundreds or thousands of second-hand aircraft in miscellaneous contract operations, willy-nilly, depending upon the whim of the operator, we would invite a disastrous depression in our aircraft manufacturing industry and seriously set back the progress made in recent years toward a sound economic foundation for the growth of air transportation. Adequate steps must be taken to encourage and protect responsible operators who have the ability to discharge the obligations of serving the needs of air commerce, whose service will assure permanent development and will provide a dependable and growing market to sustain the aircraft industry.

WOULD STRENGTHEN PRIVATE FLYING

In many other respects the proposed bill would promote the sound development of air transportation. Equally important are its numerous provisions which will encourage and strengthen private flying. Provisions for an airport-development program, a continued civilian pilot-training program, a new broad program of aviation education, and other important steps, have been recognized as constructive and far-sighted.

Taken altogether the several items in this bill will, if adopted, furnish a worthy supplement to the Civil Aeronautics Act of 1938. The bill is inspired by the thought that civil aviation requires intensive development and determined encouragement. We know that the destiny of civil aviation cannot be realized without hard work and careful planning by our Government and by those in the industry. We know that the immediate post-war years will be most critical from the standpoint of our Nation's future, because then we must be alert to avoid a crippling deflation in aviation which might do permanent harm to the future position of our Nation.

New York Grand Jury Finds That the Safety of the Country Is Being Jeopardized By Undesirable Aliens

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. ALLEN of Louisiana. Mr. Speaker, a recent report of a Federal grand jury in the District Court of the United States for the Southern District of New York on the question of aliens and immigration is worthy of consideration by every Member of this Congress. The jury after having investigated the question for a long time reached the "unanimous opinion that the safety of this country and its institutions is being jeopardized by undesirable aliens." While I may not agree with all that is said in this report, I do hope that the membership of this House will read this grand jury report and give serious consideration to it. Under unanimous consent, I include this grand jury report in my remarks.

PRESENTMENT TO THE DISTRICT COURT OF THE UNITED STATES FOR THE SOUTHERN DISTRICT OF NEW YORK

(Submitted to and accepted, approved, and ordered filed by court, September 17, 1943)

Whereas the undersigned constitute all the living members, and former members of the third May 1942 grand jury of the District Court of the United States for the Southern District of New York; and

Whereas there was presented before this grand jury certain testimony and evidence in the so-called German-American Bund cases; and

Whereas this testimony and evidence has led this grand jury to certain conclusions deemed proper and imperative to be brought to the attention of the Congress and the executive department of the Government for such action as may be necessary or appropriate, the undersigned members of this grand jury respectfully show and allege as follows:

1. The jury is of the unanimous opinion that the safety of this country and its institutions is being jeopardized because (a) undesirable aliens have been and may be admitted into this country as immigrants and naturalized as citizens; and (b) the supervision and education of aliens and the facilities for continued education of naturalized citizens by the Government of this country are not adequate.

2. This conviction was arrived at by the jury after hearing, over a period of months, the testimony of a great number of naturalized citizens, many of whom had been living in this country for a long period of years.

Some of these witnesses were virtually unable to speak or understand English. Many could not read or write English. Others appeared to be wholly illiterate.

An alarming number of these witnesses was found to be completely ignorant of the basic principles of our form of government and devoid of any concept of the fundamental duties and rights of citizenship in this country. Some manifested a disbelief in and a contempt for our constitutional form of government and had obviously taken the oath of allegiance with no intent to observe it. Others, who may have taken the oath in good faith, appeared to have been lured back to their former allegiance. Most witnesses openly stated that they would not bear arms for the United States against the country of their origin.

With consternation and a sense of shame the jury also heard the testimony of native Americans, whose parents or grandparents had been immigrants, who were not grounded in American history or American principles and whose testimony revealed them to be disloyal and dangerous citizens.

3. The jury has not made a study of the statutes governing immigration and naturalization or the procedure by which immigrants are prepared for citizenship and naturalized. However, in the light of the situation disclosed by the facts above recited, it believes that the safety and welfare of this country require either the enactment of new legislation or the improved administration of existing legislation covering the subject, or both.

4. The jury believes in immigration, but in selective immigration. It affirms the principle that in all legislation governing immigration the paramount consideration is the welfare of the United States, not that of the immigrant. It recommends that only those be permitted to immigrate who are likely to contribute directly or indirectly to the welfare of this country and who may be readily assimilated as citizens.

5. The jury believes that better education of immigrants is urgently needed, regardless of whether the privilege of naturalization is exercised. It recommends that only those aliens be naturalized who are able to speak, read, and write the English language on at least eighth-grade level, who have satisfactorily passed an examination with respect to the fundamental principles of our American form of government and the traditions of its democracy, and who manifest sympathy with and loyalty to such principles and traditions.

6. The jury further believes that, upon the termination of the present world conflict, this country will face a wave of proposed immigration of proportions unprecedented in our national history and that, unless the dangers inherent in the situation are now anticipated and guarded against, the welfare of this country and of its institutions will again be placed in gravest jeopardy.

7. In view of the considerations herein set forth, the jury recommends that the Congress again study the subject of immigration and naturalization, consider the extent to which existing legislation and procedure should be revised, consider means for improved administration of existing laws and regulations, and take such action as to the Congress may seem necessary or appropriate for the protection and welfare of the country: Now, therefore,

The grand jury respectfully petitions the court to accept this presentment and order it filed, to authorize the Federal Grand Jury Association for the Southern District of New York to print and send copies of it to the Members of Congress and to the proper officers of the executive department of the Government, and to permit such other use as may properly be made of this document.

Dated New York, N. Y., September 17, 1943.

A. Vere Shaw, foreman; J. Roy Allen; Ralph Seward Allen; Joseph M. Bing; Elisha Canning, Jr.; John L. Cleveland; Harry J. Fitzpatrick; David R. Gimbel; Byron E. Hughes; Alton S. Keeler; Henry H. Livingston; Raymond A. Lockwood; Jean Ellis Poletti; Winthrop Steele; Harold F. Strong; A. Stewart Walker; Gertrude Walsh; Edward Watson; John P. White; John P. T. Woodin; Roger M. Woolley; Ex-member Boyd G. Curts.

The Bureaucrat

EXTENSION OF REMARKS

OF

HON. HOWARD BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to a constituent:

WASHINGTON, D. C., *October 5, 1943.*

DEAR AL: In your recent letter you asked me to give you the definition of a bureaucrat. The following definition, though not

listed in Webster, is the result of painstaking research, painful experience, and the testimony of victims.

A bureaucrat[1] (also known as a Fascist or Nazi, according to the natural habitat plundered by him) is one who lives off the fruit of other people's labor, under the pretense of performing essential supervisory functions over the man who labors and produces the fruit.

Characteristics: The bureaucrat is self-confident, bumptious, rude, superior, and overbearing in manner. He has only one answer to every question—governmental planning and the party is the one right, the one truth, the one finality, and individual freedom the one wrong and the one lie. In a true democracy he makes an excellent doorman, elevator starter, train caller, or official guide. He has energy, zeal, and a holy allegiance for red tape. He sometimes makes a splendid corporal or even a first lieutenant in the Army.

Under one-party government he is the stool pigeon, the snooper, the agent provocateur, the shouter of slogans; and a three-letter governmental agency is his glib solution for every human problem. He is the promoter of pressure-group demonstrations, the carrier, in other words, of the dirty work of his superiors in the party. He does it all the more readily because the party offers him compensations which he had perhaps never before known—it gives him a salary (plus expense accounts), an imposing title, power, an official passcard, importance. Indeed, it singles him out for special attention, and he comes to think of himself as a man of destiny.

He is patronizing to the people who had been his equal before political pull gave him power, but he is hostile to the people who had been above him—that is, to those who had risen in life through their own efforts and individual ability.

The bureaucrat hates everything he couldn't obtain in a fair contest to get ahead in the world. He would like to destroy capitalism and free enterprise so that he would have nobody except his immediate political boss over him. Pettiness is his chief characteristic, in intelligence, in character, in vision, in humanity, in everything but insolence and stupidity.

Yours,

HOWARD.

[1] A bureaucrat is not to be confused with the true civilian public employee, who quietly, conscientiously, and efficiently performs the many necessary tasks and duties essential to the operation of government.

A Challenge to Congress

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Sun-Telegraph of September 28, 1943:

A CHALLENGE TO CONGRESS

President Roosevelt is entirely wrong, although probably within his rights, in expressing the view to Congress that its legislative ban on the continued Federal employment of three specified officers is "unwise, discriminatory, and unconstitutional."

And the President is especially wrong in asserting that, since he regards the act of Congress as an unwarranted encroachment upon the authority of the executive and judicial branches of the Government, it is not binding upon them.

The prohibition against further employment of the three officers was effected by a formal act of Congress.

It was signed by the President.

Hence it is the law of the land, in conformance with the established and only constitutional processes that exist for the enactment of law.

It is undoubtedly true, as the President says, that he did not approve of the act, and would have vetoed it if it had not been attached as a rider to other legislation he did approve.

But the inescapable fact remains that he refrained from exercise of the power of veto—the only constitutional power possessed by the President for the purpose of nullifying an act of Congress.

The President is clearly entitled to his opinion about an act of Congress.

He is not entitled to ignore or flaunt a formal act of Congress duly signed by himself.

He is not entitled to say an act of Congress, especially after it has his signature, has force only if he desires to recognize it.

If it should be true that the President can be bound only by such law as he approves, then, indeed, we have a dictatorship, as Representative DIES asserts would be the consequence if Mr. Roosevelt's position on this matter should prevail.

The great merit of the American system of government is not in any supposed infallibility of Congress.

But the remedy for possibly mistaken legislation is reconsideration by Congress, and repeal of the offending legislation when and if the facts warrant.

The remedy is never in the arbitrary and tyrannical assumption of powers that do not exist by the President.

There is more to the present case, of course, than the issue of whether the authority of Congress or the arrogance of the President is to prevail.

The three officers Congress seeks to remove from Federal employment are objectionable to Congress because of their purported sympathy and affiliation with subversive organizations inimical to the democratic interests of the country.

They are objectionable to an overwhelming majority of the American people for the same reason. As Representative DIES well says:

"Mr. Roosevelt apparently does not know the sentiment of the country. He is making a play for left-wing political support. But that is only a handful of Americans."

Nevertheless, the vital issue presented by the President himself makes the status of the three officers originally involved a secondary matter.

What must be determined is whether or not Congress can make the laws of the country, as the Constitution empowers it to do; or whether or not the President can accept or reject the acts of Congress according to his own judgment.

Upon this determination depends whether or not the United States is a democracy, or whether or not it is under a dictatorship.

President Roosevelt has raised the issue. Congress must meet it.

Why H. R. 2400?

EXTENSION OF REMARKS
OF
HON. HAMPTON P. FULMER
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. FULMER. I have today announced that the hearing before the Committee on Agriculture of H. R. 2400 will commence on Tuesday, October 26. This bill, of which I am the author, is designed to repeal all Federal excise taxes, license fees, and related restrictions on the manufacture and sale of margarine manufactured in this country.

WHY H. R. 2400?

For many years the following Federal taxes and license fees have been imposed on margarine:

Ten cents per pound on yellow-colored margarine.

One-fourth cent per pound on uncolored margarine.

Six hundred dollars per year on manufacturers.

Four hundred and eighty dollars per year on wholesalers of colored margarine.

Two hundred dollars per year on wholesalers of uncolored margarine.

Forty-eight dollars per year on retailers of colored margarine.

Six dollars per year on retailers of uncolored margarine.

H. R. 2400 is a bill to eliminate these Federal restrictions, disguised as a revenue measure, against domestic margarine by repealing:

First. The excessive excise tax of 10 cents per pound on yellow-colored margarine and one-fourth cent per pound on uncolored margarine.

Second. The additional and unreasonable annual tax of $600 for manufacturers, $480 for wholesale dealers, and $48 for retail dealers of margarine (if wholesale or retail dealers sell only uncolored margarine, the annual tax is reduced to $200 and $6, respectively).

Third. Related restrictive provisions. For example, a restaurant or boarding house that now serves margarine and colors it is classed as a manufacturer and forced to pay the annual tax of $600 in addition to the per-pound tax of 10 cents.

The Federal margarine tax and license fees were never intended to produce revenue, and in fact over a period of years have produced a negligible amount. H. R. 2400 repeals all taxes, license fees, and related provisions, regarding domestic margarine. A tax for revenue purposes would not be justified if levied only on one particular food product. It is certainly not necessary, however small, for the purpose of policing the margarine industry. The Food, Drug, and Cosmetic Act of 1938 and the definition and standard of identity for margarine, promulgated thereunder, provide sufficient protection to the consumer concerning the content and the labeling of the product.

This was the basis on which the standard was promulgated.

The bill does not affect, and the consumer will continue to enjoy the benefit of, the method by which margarine is now manufactured and labeled under the definition and standard of identity for margarine administered by the Federal food and drug authorities "to promote honesty and fair dealing in the interest of the consumer."

Two-thirds of the Nation's retail grocers cannot now handle margarine because of the existing taxes; consequently, millions of consumers are now deprived of the opportunity to purchase a low-cost, healthful table spread, and a substantial market is closed to important farm products and vegetable oils, the major ingredients of margarine.

The enactment of this bill will also free the consumer from the time-wasting job of adding color to margarine in her own kitchen—a manufacturing process which should be done at the factory.

Margarine, a wholesome and nutritious food, is entitled to the same legal rights and should be subject only to the same legal responsibility under Federal law as all other foods. This bill, if enacted, will accomplish that result.

Whatever may have been the purpose of enacting this trade barrier, no valid reason for its maintenance exists today. It is a product of American farms; it is made from the oil of cottonseed, soybeans, peanuts, and beef cattle. It is fortified with vitamins, properly labeled, and is recognized as having a rightful place in the American diet by all nutritional authorities. Indeed, fortified margarine is included in the Government's nutrition program as one of the seven basic foods necessary for an adequate daily diet. Aside from the fact, therefore, that it is a product entitled to a market free of artificial legislative restrictions in peacetime, in view of the Government's nutrition program and the inadequacy of table fats, the present taxes actually hinder the war effort. An editorial in the September 27 issue of the New York Times on the proposed milk subsidy makes this interesting observation:

A milk subsidy, from this standpoint, makes more sense than the existing butter subsidy. It makes no sense at all to subsidize the richer man's butter while taxing the poorer man's oleomargarine, which is precisely what the Government now does.

The Poll Tax Again

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD I include an editorial appearing in the Fort Smith Times Record of Fort Smith, Ark., under date of September 29, 1943. This editorial bluntly states the fundamental issue involved in the present effort to fix by Federal legislation the qualifications of voters in the respective States in defiance of the plain provisions of the Constitution to the contrary. The editorial is as follows:

THE POLL TAX AGAIN

The poll-tax bill is bobbing up again in Congress. The Senate Judiciary Committee will hold hearings about a month from now on the bill already passed by the House which would abolish the poll tax as a qualification for voting for Federal officials. The chief issue in the hearings will be the constitutionality of the bill.

Eight States in the South still have poll taxes as a qualification for voting in primary and general elections. Most of the States had poll taxes or something like them originally. Gradually, the poll tax has been abolished in all but the eight Southern States, and systems of registration have been substituted as a means of determining who are qualified voters.

A majority of the States do not have poll taxes The representatives of the non-poll-tax States in Congress far outnumber the representatives of the poll-tax States. A majority of each House may be expected to vote to abolish the poll tax as a qualification for voting.

The trouble with the poll tax bill is that it attempts to do by majority vote something which the Constitution prohibits. Substituting a majority vote for constitutional guaranties is no new thing. It has been attempted over and over, especially in the past 10 years. It has succeeded in some degree, through new interpretations by the courts of what the Constitution means.

We think the Federal Constitution assures to the States the right to determine whether they shall have a poll tax or a registration system or some other method of listing qualified voters. We think the poll-tax system in Arkansas is none of Congress' business. When we get ready to abolish the poll tax in Arkansas, we may do so by amending our own State constitution. Until we decide we want to do that, and do it by a majority vote of our own people in a regular election, any effort to do it for us by a congressional act is a violation of our rights under the Federal Constitution. If Congress can do that, then it can otherwise fix qualifications of our voters. Our law says that a resident must live in the State 1 year, the county 6 months, and the voting precinct 30 days before he is qualified to vote, he must be 21 years of age and he must have paid his poll tax within the time specified by the legislature. There are other qualifications. For example, he cannot vote if he has been convicted of a felony and not pardoned. If Congress can change one of these qualifications, it can change the others, and the State's control over its own elections goes glimmering.

There are reasonable arguments both for and against the poll tax as a qualification for voting. Our people in Arkansas have approved the poll tax by majority vote by rejecting a recently offered amendment to abolish it.

The issue as to the pending poll-tax bill in Congress is not whether a poll tax is sound or unsound. It is whether the Constitution means what it says, whether the Constitution sets up rights which majorities of Congress cannot overturn at will, whether we shall continue to have constitutional government or scrap the constitutional limitations and have government by majorities of the moment.

An Open Letter to Congress

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cambria Dispatch, Portage, Pa.:

AN OPEN LETTER TO CONGRESS

We charge that you are playing politics with the selective service. That title no longer applies to the draft law because you have made an absolute farce of the selective part of it. You are making every effort to lower the whole plan on a basis of class and that is just what selective service is designed to guard against. In this effort you are making the 18-year-old boys to bear the brunt. From a political point of view this action can be termed as being expedient, since the youngsters cannot vote, but from a fair, just, and moral point of view it is vile. This Congress, because of its attitude, will live to see the day when it will bear a stigma of shame which will cause its Members to wish they had not been Members of it.

The short-lived vociferous agitation against lowering the draft age was thrown to the winds after the compromise brought it down to 19 years. The 18-year age was then hit upon and Congress and the military gave the impression they had made a find which brought them into a veritable frenzy comparable only to that exhibited by the prospector when he makes his strike. These boys were immediately classed as worthy of no consideration. Jam them into service without abandon is the rule.

Inconceivable as it may seem you even refused to pass a law under which these boys could be deferred to complete their high-school education, the one ambition of a boy who desires to continue studies, and the denial of which is nothing short of criminal. Those who return, being unable to show a high-school diploma, will be handicapped for life, because of your lack of moral sense. At your door must be placed the blame for the lack of opportunity which is the right of every youth, particularly in a country which professes to have a democratic form of government.

You are now being primed to pass a law giving blanket deferment to fathers to make a still greater farce of what you still insist is selective service. No sane person wants to see anyone go to war, but you passed a selective-service law under which to procure the forces to fight the war and now you are bent upon destroying every vestige of fairness attached to selective service in practice, by making 18-year old boys the goats. True, ordinarily a father with a family should be below single eligibles for draft, and selective service honestly operated would do just that. Selective service would make it selective and place each case on its own merits. A blanket deferment of fathers would force the boys to fight for the protection of fathers who never earned the right to that title. Is that fair?

Then, too, your position is inconsistent. In and out of Congress and with Mrs. Roosevelt, who has attained an important place in Government, in spite of the fact that she is not an elected official, is a large segment of people who strongly encourage marriage among men in service, claiming it will give them an incentive for which to fight. How

can you argue sense into the proposition that married men shall be deferred under a blanket law, but that it is well for them to marry after they are in the service.

You squelched horribly and proved false to the boys of 18, when after you succumbed to putting them into the draft, you backed down on your demand that they be given a year's training before they leave this country. That is a provision in the draft law of England, but you failed to have enough consideration for your own boys to demand the same thing. In an effort to ease the slur upon you for not holding to that demand you stated that you were assured by the military that this would be done but that they did not want to be bound by law. Why did they not want to be bound by law? Because they then had determined to do what is now being done, shipping these mere boys overseas within 3 months after they have been taken into the service.

Without a murmur you permitted a change in the method of registration which is discrimination against the boys of 18 years resulting in many of them being put into service far ahead of young men who had registered long before.

The 18-year-old boys have been placed in the war plan to give the impression that they are worthy of no consideration, that it is they who have been hit upon to stand the brunt of this beastly war. Taken from homes at that age, deprived in many instances of a completed high-school education, the first experiences of life they get are the exceedingly severe rigors of training only more matured persons should be subjected to and then they are plunged into the horrible engagements of war. Every moral code dictates against it but you have not raised your voice in opposition.

For propaganda purposes the Government plays much upon the age of some Germans and Italians who are taken prisoners, calling them mere boys. According to many reports, these mere boys are near the 20-year mark. Is it your suggestion that an 18- or 20-year-old German or Italian is a mere boy, but that an American of that age is a matured man? Shame upon those who deal in such trash and call it news.

You can still make amends to some degree, but not to the extent that you can wash away a stain which is upon you and which will haunt you through years to come.

The question you will some day be required to answer is, "Where is justification for the claim that the burden of fighting this war is upon the teen-age boys?" What will your answer be?

Removal of Farm Labor From Farms

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. SCHWABE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a summary of the opinion of the State of Missouri farm labor committee expressed at a meeting of the committee at Columbia, Mo., on September 17, on the farm-labor situation in the State of Missouri, which I am sure is representative of conditions in other sections of the country, as follows:

The farm labor situation in Missouri is very tight with the loss of every year-around worker from now on meaning a curtailment in food or feed production. This was the opinion of the Missouri Farm Labor Committee at its meeting in Columbia on September 17.

In the southeast part of the State cotton picking is under way with some shortage of workers indicated. Several hundred recruited pickers from nearby areas hard hit by the recent dry weather have gone into the Cotton Belt to help fill the demands for pickers. Rains have slowed picking considerably.

In the apple-growing areas of the State picking is moving ahead with growers reporting that they could use more pickers but managing to get most harvesting done without excessive loss. In the apple section near Waverly a heavy windstorm recently shook off many apples, some of which were entirely lost because not enough pickers could be obtained to move the apples as rapidly as needed.

Northwest Missouri farmers are reporting a relatively good crop of corn and are expecting to need 600 to 800 pickers from outside the area to aid them in shucking the much-needed crop. An effort will be made by the Agricultural Extension Service to secure small groups of workers from Ozark counties where they can possibly be temporarily spared at this period of the year for corn shucking in northwest Missouri.

In northeast Missouri a big crop of soybeans is expected to increase the need for day-labor workers in that area.

Dairymen in many parts of the State have indicated that they will require helpers soon or they will have to curtail production by selling cows. The shortage of dairy workers is particularly acute around Kansas City, St. Louis, Hannibal, and Springfield.

The committee pointed out the big part taken by farm women, children, and older men and women in aiding agriculture to scrape through the year so far without serious total losses of crops. It was pointed out that some loss had occurred because crops were not harvested or planted at the best time, and that a number of farmers are planning to shift to a less intensive type of farming in the future in order to get by with the labor available. Reports read at the meeting indicated that the already depleted number of hired farm workers on farms had dropped another 16 percent in the past year. A survey made on September 1 showed that farm operators were working an average of 13.7 hours per day.

J. H. Dinwiddie, district supervisor of the Employment Service of the War Manpower Commission, stated that investigation showed there was no hoarding of farm labor in Missouri and that farm laborers who could not be placed immediately on farms were made available for industrial use by the Extension Service. He stated also that the recent rulings of the Commission were to the effect that farm workers no longer could become free agents available for city jobs simply by laying out of work for 30 days.

Scott Meyer, of Hannibal, vice chairman of the State Farm Labor Committee, pointed out that the job of the farmer in this war was to run the food-producing factory, and that to keep this factory going requires a certain amount of manpower. With the reduced farm labor supply, the farmers of Missouri can supply food or men, but not both. The Federal Government should make the decision as to which is needed most. It should make little difference to farmers from a profit standpoint since most of them will be lucky to break even now.

The Extension Service announced that during the past 3 months it had made 42,717 placements in Missouri, 3,743 of which were year-around ones and the remainder seasonal.

Members of the committee present included Scott Meyer, Hannibal; Ronnie Greenwell, Hayti; John Plassmeyer, Loose Creek; C. E. Klingner, Sr., Fair Grove; Ernest Wray, Maryville; Charles Peterman, Miami; H. Baxter Hall, Clarence; J. W. Burch, Rocheport; J. D. Monin, Jr., Columbia; Max McNulty and J. H. Dinwiddie, Jefferson City; A. C. Mussman and K. G. Harman, Columbia.

Members of the Armed Forces Should Get a $5,000 Insurance Policy Without Premium Payments

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, I have introduced a bill, H. R. 3376, for the purpose of amending the National Service Life Insurance Act of 1940 to provide that, notwithstanding any other provisions, all persons in the armed forces shall have in force the amount of $5,000 insurance without the payment of premiums. The bill is as follows:

That (a) notwithstanding any provision of the National Service Life Insurance Act of 1940, as amended, any person in active service on or after December 7, 1941, and prior to the termination of all hostilities in the present war shall be deemed to have applied for, and to have been granted, national service life insurance as of the date of enactment of this act or of entry into active service, whichever is the later, in the amount of $5,000. Premiums on such insurance shall be waived during the period beginning with the date of enactment of this act and ending 6 months after the termination of all hostilities in the present war, and any person entitled to the benefits of this act shall pay premiums during such period only on such amount of national service life insurance granted to him as exceeds the sum of $5,000. At the expiration of such period the insured may reduce the amount of such insurance to not less than $1,000.

(b) If any person entitled to the benefits of this section dies before designating the beneficiary or beneficiaries of such insurance, death insurance benefits shall be payable in the manner stated in section 602 (d) (2) of the National Service Life Insurance Act of 1940, as amended, if application for such benefits is filed within 1 year after the date of death of the insured.

SEC. 2. Any person in active service on and after December 7, 1941, who has died prior to the date of enactment of this act without having in force at the time of death National Service Life Insurance, insurance under the War Risk Insurance Act, as amended, or insurance under the World War Veterans' Act, 1924, as amended, in the aggregate amount of at least $5,000, or without being entitled to the benefits of section 602 (d) (2) of the National Service Life Insurance Act of 1940, as amended, shall be deemed to have applied for and to have been granted insurance as of the date of entry into active service or December 7, 1941, whichever is later, in the aggregate sum of $5,000. So much of such sum of $5,000 as is granted by this section shall be payable in the manner stated in section 602 (d) (2) of the National Service Life Insurance Act of 1940, as amended, if application for such payment is filed within 1 year after the date of enactment of this act.

SEC. 3. The Administrator of Veterans' Affairs is authorized and directed to transfer from time to time from the National Service

Life Insurance appropriation to the National Service Life Insurance fund such sums as may be necessary to cover all losses incurred and premiums waived under this act.

SEC. 4. The term "active service," as used in this act, shall have the same meaning as when used in the National Service Life Insurance Act of 1940, as amended.

Why Taxes Are High

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. JOHNSON of Indiana. Mr. Speaker, the administration is now asking for an increase in taxes. I think the following editorial from the Terre Haute Star of Saturday, October 2, very graphically tells one reason why taxes are high. The editorial is as follows. I quote:

WHY TAXES ARE HIGH

The Washingtonian was telling, over lunch, why he was on leave looking for a job in a private industry, though he now is receiving from a Government agency the highest salary he ever attained.

"I like the work," he said, "and I think it is of major importance. It is being carried out efficiently, intelligently and without politics. I like my associates and my superior. If I find another job, probably it will involve a reduction in my income.

"But here's the difficulty: I haven't anything to do. Circumstances have changed since I went to Washington a year ago, and our agency now can carry out its duties with less manpower. Much of the time I sit around with nothing to do—and I'm not old enough, yet, to enjoy that.

"Last summer I tried to resign. I told my superior why—that I didn't have enough work to keep me busy. He was sympathetic. But he didn't want me to leave. So he offered me an assistant."

We laughed, it seemed very funny. Offering an assistant in order to retain the services of a man whose only complaint was lack of work.

"It isn't as funny as you think," retorted the Washingtonian. "There was logic in the offer. What he really was doing was offering me a raise if I would stay.

"Under civil-service regulations, the only way I can get a raise is by bossing my subordinates. One more helper, and my salary could be increased. That is why I was offered an assistant."

"But why," we asked, "is your superior so anxious to keep you, if there isn't enough work? Is it on the basis of personal friendship?"

"No," said the Washingtonian. "We are friendly enough, but not that pally. I suppose he wants me to stay for the same reason that he offered me an assistant—because his status, too, depends upon the number of subordinates he has. If I left, he would have to find somebody in my place or he would drop a step in the hierarchy, which might have financial implications for him."

There are many reasons why taxes are high. Among them is the cost of the war. But multiply this incident many thousands of times, and there is another reason.

Mr. Speaker, if the Government would stop its waste, extravagance, bungling, and boondoggling, an increase in taxes would not be necessary. This administration fails to realize that economies in governmental operation would be just as effective as new taxes in the same amount.

The people are willing to pay whatever taxes they are able to pay and which are necessary, but they are strenuously opposed to having a tax burden heaped upon them on account of needless and useless Government expenditures just to satisfy the bureaucracies and to keep the politically faithful in fat salaried jobs.

There never was a time when the people were taking as much interest in their Government as at the present. The people have become thoroughly disgusted with bureaucratic control and mismanagement. They are rightfully demanding that the Congress assume its full responsibility; they are sick and tired of the results brought about during the past several years by the majority in Congress who were subservient to practically every legislative wish of the Chief Executive, even to the point where they were commonly referred to as "rubber stamps."

The people want and expect their representatives in Congress to be alert and independent. They consider Congress as the people's branch of government and expect, through their representatives, to have a voice in shaping the course of their Government.

There are over 3,000,000 officials and employees on the executive pay roll of the Government, but only two of this number, the President and the Vice President, are elected by the people.

The people realize that Congress is their only hope and they are demanding that Congress stop issuing blank checks and delegating its authority, and return to Congress its constitutional powers and responsibilities.

As cited in the above editorial, there are many more Government employees than are needed. Even Paul McNutt, War Manpower Commissioner, admits there is great waste of manpower in governmental departments, but frankly says he is going to do nothing about it. This expresses the general attitude of the bureaucrats, and, while they do not intend to do anything about it, it is my prediction that the people will do something about it in November 1944. They are determined that waste, extravagance, bungling, and regimentation be stopped. They are thoroughly convinced that this will never be accomplished under the present administration.

The Cotton Farmer Deserves a Better Price

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, yesterday I introduced a bill, H. R. 3375, for the purpose of placing a floor under the price of cotton at 40 cents per pound. The bill is as follows:

That clause (a) of paragraph No. (10) of the act of May 26, 1941, entitled "Joint resolution relating to corn and wheat marketing quotas under the Agricultural Adjustment Act of 1938, as amended," is amended to read as follows:

"(a) To cooperators (except cooperators outside the commercial corn-producing area, in the case of corn) at the rate of 40 cents per pound in the case of cotton, and at the rate of 85 percent of the parity price for the commodity as of the beginning of the marketing year in other cases."

SEC. 2. Section 302 (c) of the Agricultural Adjustment Act of 1938, as amended, is amended by striking out "at rates not less than 52 percent and not more than 75 percent of the parity price of cotton as of the beginning of the marketing year" and inserting in lieu thereof "at the rate of 40 cents per pound."

SEC. 3. Section 3 (a) of the Emergency Price Control Act of 1942, as amended, is amended by inserting before the period at the end thereof the following: "or (5) in the case of cotton, 40 cents per pound."

SEC. 4. (a) Section 3 of the act of October 2, 1942, entitled "An act to amend the Emergency Price Control Act of 1942, to aid in preventing inflation, and for other purposes," is amended by striking out the semicolon at the end of clause (2) and inserting in lieu thereof a comma and "or", and by inserting after clause (2) the following new clause:

"(3) In the case of cotton, 40 cents per pound."

(b) Section 3 of such act is further amended by inserting after "the higher of the prices specified in clauses (1) and (2)" the following: "and (3)."

(c) Clause (1) of section 8 (a) of such act is amended to read as follows:

"(1) To cooperators (except cooperators outside the corn-producing area, in the case of corn) at the rate of 40 cents per pound in the case of cotton, and at the rate of 90 percent of the parity price for the commodity as of the beginning of the marketing year in other cases."

American-Slovaks Inspired by Sgt. Matej Kocak

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. WEISS. Mr. Speaker, one of the greatest heroes of World War No. 1 was Sgt. Matej Kocak, United States Marine Corps, a humble American-Slovak. The heroic deeds of Sergeant Kocak have been an inspiration to all Americans. For his gallantry, Sergeant Kocak received the Congressional Medal of Honor, and Marshal Foch decorated him with the Medaille Militaire and the Croix de Guerre.

In memory of the heroism of this great American-Slovak, Sergeant Kocak, the American-Slovaks throughout the Nation, united in the Slovak League of America, were inspired to undertake their drive, now in the stages of completion, to raise $6,000,000 in War bond sales to purchase three fighting ships to help crush the Axis.

As part of my remarks, I am happy to include the exclusive story of Sergeant Kocak's heroism as disclosed by Maj. Louis Cukela, United States Marine Corps, to Joseph G. Pruša, managing editor of the Slovak Record, the voice of opinion of the American-Slovaks:

EXCLUSIVE STORY BY MAJ. LOUIS CUKELA, WHO SHARED HEROISM WITH SGT. MATEJ KOCAK IN WORLD WAR NO. 1

OFFICE OF THE POST QUARTERMASTER,
MARINE BARRACKS, NAVY YARD,
Philadelphia, Pa., September 16, 1943.

MY DEAR MR. PRUŠA: I have just received your letter and am replying immediately since you desire the information on Sgt. Matej Kocak for the twenty-fifth anniversary of his death. First, I want to thank you for your very interesting letter and at the same time commend you and your Slovak organizations for your efforts in paying a sincere tribute to a most gallant hero and a former buddy of mine.

The following account, I trust, will be of some assistance to your publication:

On June 9, 1917, the First Battalion of the Fifth Regiment of United States marines was formed in the city of Philadelphia and embarked for overseas on the 11th of June 1917 in a convoy of 42 transports and warships. Among those of this battalion, Sgt. Matej Kocak and myself were members. This convoy landed in France on June 26 at the port of St Nazaire.

On the way over there were several incidents, one of these to be noted happened on June 22, 1917, off the southern coast of Ireland. German underboats or submarines as they are called attacked our convoy about 10:30 at night. The transport on which we sailed was the U. S. S. *De Kalb* and was one of the first transports to open fire on the enemy submarines.

Sgt. Matej Kocak was a member of the 5-inch gun crew which were a part of the guns that opened the fire. The order from the flagship came to disperse, which was carried out immediately, some ships of the convoy took a southern course to the Azores, some a northern course to England, and others proceeded to France. At 8 a. m., June 23, the flagship radioed to assemble and by 12 noon all the convoy was intact proceeding to France. Later on it was found out by German reports that one of their two submarines was sunk by the American convoy at 11 p. m., June 22. The afternoon of the 26th we entered the port of St. Nazaire, France.

Drilling and training there for about a month, and then ordered into lines of communication. After a short duty we were ordered into regular training in the town of Breuvanes, a small town in the vicinity of Neufchateau in the Province of Vosges. After this intensive training period we were transferred to Naix au Forge and from there directly to a quiet sector of Aix near Verdun facing the enemy.

March of 1918 found us skirmishing with the enemy for about 2 months in the L'Esparge sector. From here we were transferred about May 15. On the road to Meaux which on June 22 led us in the vicinity of Belleau Woods where the marines fought so splendidly and so successfully to save Paris, and which shall not be forgotten by any Marine that participated in that operation. On June 6 the Fifth and Sixth Regiments of Marines formed the Fourth Brigade of the United States Marine Corps belonging to the Second Division.

Taking the Belleau Woods and accomplishing our task with losses amounting to on June 6 alone, 65 to 70 percent casualties in the Fourth Marine Brigade. On July 15, after a few days rest behind the lines, reconditioning and replenishing our ammunition, supplies, and other necessities, we embarked in 1,200 camions (trucks) driven by Indo-Chinese drivers, The evening of the 17th of July found us in Villers-Cotterets, south of Soisson, it was in this battle where my buddy, Sgt. Matej Kocak, distinguished himself and won America's highest honor—the Congressional Medal of Honor. His citation is as follows:

"Kocak, Matej, Sgt., Company C, Fifth Regiment Marines, Second Division, Albany, N. Y., Soissons, France, July 18, 1918. When the advance of his battalion was checked by a hidden machine-gun nest he went forward alone, unprotected by covering fire from his own men, and worked in between the German position in the face of fire from an enemy covering detachment. Locating the machine-gun nest, he rushed it, and with his bayonet drove off the crew. Shortly after this he organized 25 French colonial soldiers who had become separated from their company, and led them in attacking another machine-gun nest, which was also put out of action."

On July 19 in this melee he commanded some French Moroccan units who got detached from their own units and accomplished great success in enveloping the enemy's right flank killing many Germans and capturing an entire company.

For this deed he was decorated by Marshal Foch with the coveted Medaille Militaire and the Croix de Guerre with palms.

From there we had been together in the major operations of St. Mihiel and Champagne Sector in which both of these engagements Sgt. Matej Kocak fought heroically and commended by his officers for his military deeds, when on October 4, within a distance of less than 100 feet from me, Sgt. Kocak was killed by fire from a German machine-gun nest which he was attacking.

I sincerely repeat that Sgt. Matej Kocak was the inspiration to his men and his platoon which he commanded. A sober young man, very religious and ready to give advice to his men at any time called upon.

It is men like Sgt. Matej Kocak, my fallen Slovak comrade, that I cherish his memory in my heart, and many others that have contributed their all for the freedom of the U. S. A.

I am sorry to say that I have no picture of Sergeant Kocak, and inclose one of myself taken sometime ago as a captain which I would appreciate it very much that you return after it has served its purpose.

Thanking you for your best wishes and assuring you of my willingness to serve you, I remain

Very sincerely yours,
LOUIS CUKELA,
Major, A. A. Q. M., U. S. M. C., Retired.

Congress Must Simplify Income Tax Returns

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, Congress has been in session 3 weeks, but has accomplished little. I am sorry because I returned to Washington imbued with the enthusiasm to do something which only my contact with the home folks can inspire.

For one thing, there is the foremost problem of straightening out the income tax mess. Congress must simplify the present tax law so that taxpayers can understand it. Why should people have to worry about the difficulty of figuring out their taxes in addition to raising the money to pay them.

The present confusion is an outrage and it seems to me that we could at least be tackling this subject so our people will be relieved of a tremendous burden.

The Food Situation in South America

EXTENSION OF REMARKS
OF
HON. HUGH A. BUTLER
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of the food situation in South America, delivered by me at the National Food Conference, Chicago, September 16, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is an oft-quoted statement, "Food will win the war and write the peace."

With this statement, I am in accord. I come from a Midwestern State, Nebraska, and I know how important food is to both the war effort and to the settlement of post-war problems, which must hinge on food for the devastated war lands.

I have just returned from a 20,000 mile journey by air, during which I visited all of the Latin-American republics. While there I had an opportunity to observe the food situation in all of the Central and South American countries.

In discussing this problem, I should start by correcting the popular impression that there is a general abundance of food in all these countries. Apparently everyone has heard so much of Latin-American agricultural surpluses and agricultural exports that people have assumed those countries have more food than they know what to do with. These surpluses, however, are not, for the most part, the basic foods capable of sustaining life. On the contrary, most of them are food and beverage specialties like coffee and cocoa, or agricultural raw materials such as cotton and mahogany lumber. In reality, only 4 or 5 of the 20 Latin-American republics have actual food surpluses. The rest do not grow enough for their own needs. And, in fact, it is the extreme concentration on a few commercial crops for profitable export at the expense of the cultivation of basic food crops, which is, in part, responsible for the semistarvation conditions in many of the southern countries.

For purposes of rough classification, these Latin-American nations might be divided into three agricultural groups. First, there is the small group which have exportable food surpluses. This includes only Argentina, Costa Rica, El Salvador, and the Dominican Republic.

Second, there is the equally small group which, while heavily dependent upon imports for food deficiencies, do export single commodities such as coffee, cocoa, and cotton.

These items, be it noted, are not in the category of basic foods.

Third, there is the remaining majority of countries who are without sufficient food to meet their own needs. Of course, at times, advantageous circumstances, such as a bountiful rainfall, alleviates this condition, but even with the most advantageous agricultural conditions the variety necessary to a normal and balanced diet is lacking.

Repeatedly I have been asked, "Why is it that these Latin-American countries are not able to supply their own agricultural needs?" The answer cannot be simply expressed, for it is a mistake to look upon all Central and South America as a single area with a single problem. It should be understood that each Latin-American country is different from every other geologically, climatically, temperamentally, and in production possibilities. These differences apply to agriculture as well as to every other phase of their national lives.

A short review of some of the principal factors in the food situation of a few of our southern neighbors will help to make this clear.

For example, El Salvador, though still deficient in some basic foods, comes close to meeting her over-all internal needs. She has many small farms and truck gardens and produces a considerable variety of foodstuffs and does actually export some. With her own agricultural experiment stations and studies showing progress, she may be expected to solve her problems internally and become a large exporter of agricultural commodities.

Cuba presents, as a contrast, the picture of a nation which has concentrated so heavily on a few crops for export that production of food necessities has been sacrificed in the process. There is plenty of productive land in Cuba, much of it still undeveloped. The Cubans are industrious and intelligent farmers. But the whole national policy has been so directed toward provision of sugar, tobacco, and a few other special products for the American market that the average peon does not produce his own food and must depend on imports for such basic products as rice, flour, and lard. Even the large vegetable production in Cuba is intended for the early vegetable market in the United States, not for the Cuban peasant. Although the evils of this one-crop economy have been pointed out again and again, no substantial effort has been made to reorient Cuban agriculture toward a more independent, self-supporting basis.

Brazil is another nation which has come to rely too heavily on foreign markets for one or two plantation-produced specialties. Her people are almost wholly dependent on the prosperity of one or two agricultural industries, such as coffee and cotton. Yet Brazil's vast area, larger than the United States, offers every opportunity for development of an adequate, balanced agricultural program. This development awaits only recovery from the jungle of millions of acres of rich, virgin soil. If her people had a sturdy and ample diet, Brazil could be rich, powerful, and independent, for the other vast natural resources of the country, rich in mineral deposits, could be developed by a well-fed, energetic people.

Paraguay, half-starved, poverty-stricken little country that it is, nevertheless has opportunities for development equal to those of any other country on the continent. The people there are almost the poorest in the world. Yet, there is ample land for food production, the country does not suffer from overpopulation, and the subtropical climate is ideal for producing a wide variety of foods. Paraguay needs only development of her land resources and improvement in transportation facilities.

Bolivia is at the opposite extreme. Her mountainous terrain would make it difficult to produce enough food for the population under the best of circumstances. Although the eastern section of the nation is a rich, undeveloped jungle, the bulk of the people are concentrated in the western mountainous area and have almost no means of livelihood except work in the tin mines. Often a Bolivian has to choose between keeping his llama for transportation or eating it. It seems likely that Bolivia will have to continue to depend to a large extent on selling her tin and importing a large part of her food supply, although the inadequate transportation makes even that remedy difficult.

Primarily, I believe the problem is one of lack of development and need for technical assistance. For example, in Honduras, agricultural development is at such a low level that the people of Honduras do not have enough to eat. In periods of drought, such as the one which they have just experienced, the people of Honduras turn to bananas and plantin, but poor transportation facilities make it very difficult to get even these.

While I was in Honduras, I was told that right now, this fall, unless some 50,000 sacks of corn could be procured for the people of Honduras in the back regions of the country, thousands of persons might suffer. And yet, when I talked with a well-educated able young agricultural technician in Honduras, I learned that there was no real excuse for the existence of such a condition. He described land that was available and sufficiently fertile to grow enough food in Honduras for the entire populace. He defined the problem as one of need for more technical assistance and for popular agricultural education along practical lines.

In many of the countries of South America there are great barren stretches which seem to be an awesome obstacle to the people who live there. But they need not be, because scientific study shows that many of them could be brought into fruitful production if irrigation projects were developed, for in many cases the water is available. It is my feeling that if the United States as a matter of policy wants to see increased food production in the other Americas, our task would be to demonstrate how these semiarid lands can be brought into production.

For instance, in Yucatan, a Province of Mexico, there is a vast area of flat land where irrigation, if properly engineered, would bring hundreds of thousands of acres into production. In and around Merida, the principal city of Yucatan, I motored for many miles and saw evidences of water as close as 30 feet from the surface. Indeed, right in the city of Merida, some of the people have tapped this water supply and have built swimming pools for themselves. It would be as easily used for irrigation. The common people of Yucatan eat principally beans and corn, yet with well-planned irrigation systems, a vast area could be opened up for profitable growing of a variety of food crops.

Sometimes the problem is not solely that of land development, but merges with political considerations. In Peru, where there is a shortage of food, I learned that the Incas in the pre-Spanish period had more land under cultivation, grew more food, and fed about three times the population that occupies Peru today.

I learned further of one agricultural project in Peru which involved some 300,000 acres that could be brought into effective production quickly with perhaps less than a $5,000,000 expenditure. This in itself could solve the food need for a large part of the population. This project was undertaken, so I was informed, by a previous administration but political consideration of the following administration stopped the project. Consequently, there is insufficient food in some areas of Peru.

Transportation is another factor to be considered. Even with a substantially increased production these countries will still have difficulty in adequately feeding the people. The lack of roads, or other means of travel makes it almost impossible in some areas to transport food any distance except in very small quantities.

Most unfortunate of all is the feudal psychology which permits large segments of a populace to live in an undernourished condition while it exports in large quantities the very foods needed to feed its people.

There are millions of peons, landless, living and working as serfs on the edge of starvation in many of the countries to the south. This situation exists even in parts of the Argentine. Yet, normally Argentina exports beef and grain in large quantities. It is not uncommon to see underfed children whose parents are too poor to buy meat in the Argentine—the second greatest meat-producing country in the world. This situation exists in several of these countries.

No summary of the food situation in the South Americas, in my opinion, would be complete without some reference to the Argentine beef and grain situation. This, I recognize, is a highly controversial subject, but I should like to say that from my own observance the Argentine produces a completely adequate food supply for itself and some of its neighboring nations both of grain and meat. I should think that they would find it to their interests to deal with their neighbors and distribute much of their surpluses in their own adjacent area.

However, the feeling in the Argentine is that they want to get their products into the United States markets and into other world markets to compete with our agricultural products because of higher prices which exist in those markets.

In the Argentine, the contention is strong that the United States excludes their beef because of economic considerations. They stoutly contend that we are guilty of hypocrisy in excluding their beef. They say that it is not true that we keep their beef out because of hoof-and-mouth disease.

However, I saw hoof-and-mouth-disease-infected cattle in all parts of the Argentine where I visited, which were in six or seven different and well-separated areas.

Not only did I see evidences of hoof-and-mouth disease in various places in the Argentine, but it was also freely admitted to me by cattle raisers themselves that it existed, that it was widespread, that it was universal, and that they didn't ever expect to overcome it. Furthermore, many of them even held the viewpoint that it was not serious.

A peculiar admission was made by a high official of the Argentine in discussion of the hoof-and-mouth question. He said, "We do not have hoof-and-mouth disease in the Argentine. We only have a mild form of it."

Right at this time Argentina has no legitimate complaint about beef marketing. We in the United States have directly or indirectly helped her market, or have bought outright a tremendous portion of her entire production. Our Army and Navy have bought untold quantities of her beef as canned beef. Through lend-lease we have aided Britain in the purchase of additional vast quantities and through lend-lease shipped to England, Africa, and other fighting zones a huge volume of chilled beef and various meat products from the Argentine.

One final cause of the prevailing malnutrition I would like to call to your attention, and that is the extreme emphasis that is placed upon one or two crops for export

In virtually every Latin-American country the productive energies of the people are diverted toward expansion of some product that can be sold abroad for cash, while the production of food to meet the most vital needs of the people is neglected.

In Brazil, coffee, cocoa, and cotton cultivation have been pushed to this uneconomic point. In Cuba, the big cash crop is sugar; in Peru, Long-Staple cotton; in Ecuador, cocoa; in Colombia, coffee; and in several of the Central American countries, bananas or coffee. In all these countries the pattern is nearly the same. The good lands, those that are in condition for immediate cultivation, are in the possession of corporations or large landholders who are interested primarily in plantation agriculture for a cash profit. The peasants, finding no land immediately available or lured by the prospect of money wage, work these holdings for a small pittance which is hardly sufficient to buy enough of the expensive foreign foods to keep them and their families alive. The profits of the operation go to those who control these holdings, and are used to purchase foreign luxuries, instead of the purchase of food that is so desperately needed by the people.

This extreme concentration on a single money crop has been encouraged by our own national administration through our foreign-trade policy of so-called reciprocal trade agreements. In each of these countries production of the money crop has been stimulated by the belief that the United States would provide a market for the surplus. Thus Cuba, for example, has been granted a tariff reduction on sugar, a liberal quota, and United States Government loans to perpetuate her one-crop economy, while her production of food for native consumption has declined and, at the same time, our own sugar production has been severely restricted. Certainly the first step toward leading Latin America toward a more diversified agriculture must be the withdrawal of our support of these inflated industries.

To sum up the food situation in Latin America:

There is an inadequacy of food produced, there is insufficient variety of food to make up a normal and healthy diet, agricultural methods are backward, the need of machinery is intense, more economical farming is a major need, and distribution facilities for food produced must be developed to enable a fair and equitable distribution.

And this problem of nutrition to a large extent underlies many other problems of Latin-American development. The basis of their progress must be a sound agriculture and improved health. Otherwise, these peoples by and large will not have a sufficient degree of physical and mental vigor to do much for themselves.

The conditions I have just cited are being combated, it is true. There are a number of state projects for food production in Brazil and some of the other Latin-American countries. But the total effect of such measures cannot be great in view of the limited resources of Latin-American governments, and they can hardly be expected to make any fundamental difference in the over-all picture. Such a tremendous job of national development as this can hardly be accomplished by a government bureaucracy. Any program of economic expansion which does not use the tremendous energy of individual initiative and private endeavor cannot be expected to do the job.

That question, however, is primarily one that is up to the governments concerned to face and answer. It is their responsibility and their opportunity, not ours. Any attempt on our part to dictate their methods, must surely create ill-feeling and meet with rebuffs. That, I think, is something that should be remembered by some of our administration theorists who are trying to foist state socialism on Latin America under the name of hemispheric solidarity.

Our role, however, need not be entirely passive. What we can do to assist directly in the solution of this food shortage is extremely limited. Yet, it is quite obvious that if we expect to get substantial production of strategic materials and minerals, the workers must have food enough to maintain production. What we can do is to help those nations to help themselves. I have tried to point out that much of the difficulty stems from the primitiveness of agricultural methods, the inefficiency of the agricultural system, and the lack of knowledge and technical improvements. Wherever we can make available technical advice, training of agricultural students in this country from those countries, and information of improved agricultural methods, we can contribute substantially to increased food production and maintenance of a continuous basic supply.

There is a great market for farm machinery, tools, and implements of all kinds. It was suggested that in several countries some enterprising businessmen from the States might very profitably help groups in South America to organize into community groups and rent tractors and other equipment which one farmer alone as an individual could not afford to buy. This may be a possibility that would be of considerable help to food production in which some American interests might engage.

What we should not do, in my opinion, is to attempt to make up the Latin-American deficiency from our own limited supplies, as has been suggested by some. I could not approve a program which involves our giving away the substance we need, which our military forces need, which we need in other parts of the world in connection with our strategic moves. Nor do I favor a program by the United States Government to assist our neighboring republics in food production to a point where they will have competitive exportable surpluses. However, whatever approach we do make must be based on a willingness to continue it to a successful conclusion, for if we undertake only "flash in the pan" measures of stop-gap food providing, then in some future emergency we will either have to increase our aid in one form or another, or incur great enmity among our friends in the neighboring republics.

Our present administration is establishing food-distribution centers, undertaking food doles, setting up model farms, establishing experiment stations, operating or encouraging the "collectivist" farming scheme.

It has taught them to be dependent upon loans, grants, and other assistance from our Government in case of need. It has first led them to depend upon the foreign market, and then made them believe that if that fails, Uncle Sam will always come to their help. What we should be doing instead is teaching them how to help themselves by growing their own food for themselves.

An energetic program of home production of their food needs would probably mean the end of the old plantation system, with its startling extremes of wealth and poverty, with its strange paradox of food exports from countries whose poor lack the necessities of life. We can all agree that these contradictions will have to go.

But these discrepancies seemingly have impelled our administration favorites in Latin America to sell socialism to those countries. What we ought to be selling them is efficiency instead of socialism. That doesn't cost so much, and it might direct the attention of those governments to the real roots of their problems, and lead them toward the real solutions of a more diversified, more productive agriculture.

This Bill Provides That Any Railroad Man May Retire After 30 Years' Service Regardless of Age

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, I ask unanimous consent to have incorporated in the Appendix of the RECORD a bill I have just introduced to amend section 2 (a) of the Railroad Retirement Act of 1937, as amended, relating to eligibility for annuities. The bill reads as follows:

That subdivisions 1 and 2, and the first paragraph of subdivision 3, of section 2 (a) of the Railroad Retirement Act of 1937, as amended, are amended to read as follows:

"ANNUITIES

"SEC. 2. (a) The following-described individuals, if they shall have been employees on or after the enactment date, shall, subject to the conditions set forth in subsections (b), (c), and (d), be eligible for annuities after they shall have ceased to render compensated service to any person, whether or not an employer as defined in section 1 (a) (but with the right to engage in other employment to the extent not prohibited by subsection (d)):

"1. Individuals, without regard to age, who on or after the enactment date shall have completed 30 years of service.

"2. Individuals who on or after the enactment date shall be 50 years of age or over and either (a) have completed 20 years of service or (b) have become totally and permanently disabled for regular employment for hire, but the annuity of such individuals shall be reduced one one-hundred-and-eightieth for each calendar month that they are under age 65 when the annuity begins to accrue.

"3. Individuals, without regard to age, who on or after the enactment date are totally and permanently disabled for regular employment for hire and shall have completed 20 years of service."

SEC. 2. The amendments made by the first section of this act shall not be applicable with respect to annuities for any period prior to the date of enactment of this act.

Address by Frank E. Gannett at National Food Conference

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the Honorable Frank E. Gannett at the National Food Conference, Chicago, Ill., on September 16 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, the heads of the agricultural departments of 16 States urged me to call this National Food Conference and act as chairman. I am glad I was able to accept this call, because I believe that food is the most important subject before the Nation today. We cannot win this war or write the peace without an adequate supply of food. Food is as essential as tanks, planes, guns, and ships. It is our patriotic duty to see to it that there is sufficient food for our men in our fighting forces and for our people at home who are producing the necessary war material. We are called upon to provide food for our allies and for the starving millions who have been and will be released from the Nazi yoke.

Never was there such a demand on a people as this need for food. The utmost that we can produce will not be enough.

It may be well to remind you that this terrible war in which we are engaged is due fundamentally to the lack of food. Wars over the centuries have been caused by the need for food. For self-sufficiency in food, Mussolini grabbed territory in Africa. For the same reason Hitler attacked Russia and drove into the rich Ukraine. It was for the lack of self-sufficiency in food that Japan began her gangster seizure of adjoining territory and finally attacked Great Britain and us in the Far East. Thus you see the importance of this subject before us cannot be exaggerated. It must be given our first consideration if we are to win the war and write the peace.

I am delighted to see this great interest in this meeting, and on behalf of the commissioners, secretaries, and directors of agriculture, I welcome you here today. The presence here of such a large audience is proof that the agricultural leaders who conceived this idea of holding this conference were correct in their view that there was a crying need for a full discussion of this vital subject.

In their petition to me a number of the commissioners said, and I quote:

"The programs of food production, rationing, price ceilings, and distributions are showing steady day-by-day deterioration. It is apparent there is bungling and confusion in the wartime food program on the part of the numerous duplicated agencies dealing with this vital problem. This confusion is causing uncertainty, apprehension, and distrust in the public mind, thus militating against our country's war effort.

"At this time there is urgent need for a national food conference at which all aspects of the food situation, including increased production, processing, rationing, price ceilings, and distribution may be openly discussed."

There is need, as these commissioners say, for a thorough discussion of these great questions before us. In order to deal with every phase of this important subject, we have arranged a wonderful program. I don't believe there ever has been anything equal to it. Six United States Senators are to speak to us, and we are to hear from nationally recognized authorities on the various phases of food at each of the five sessions.

Let me say right here that our program has been arranged so that we may get all the light possible on the food situation. We want to find out how we can produce more food and how we can best distribute it to consumers when it is available.

I am sure that the fine addresses we are to hear at this conference will stimulate our thinking and encourage us to greater efforts to meet the crisis that we face. I am sure that out of the discussions will come some sound, practical suggestions for improving the whole food situation and solving this great problem.

As a result of unexpectedly favorable weather, the indications are that we shall have this year a far better crop than was expected. The indications are there will be a decrease of only about 10 percent from last year's figures. This production has been obtained in the face of great handicaps and gives the farmers of America good reason to be proud of the remarkable job they have done.

Last spring I sent out a questionnaire to thousands of farmers, editors, and publishers. More than 5,000 farmers and a thousand editors replied. Ninety percent said that lack of trained help was the farmer's biggest problem; 89 percent blamed the Government's interference for decreasing production; 83 percent said that price ceilings were too low; 79 percent said lack of machinery and repairs hindered production most.

If it had not been for these obstacles, what an amazing supply of food we might have harvested this year. Of course, it is too late now to alter production for 1943, but we must begin this minute to make our plans for 1944 if we are to have increased production. The obstacles that the farmers face must be removed.

Our war plants have done an amazing job in the production of material. Never has there been anything like it. The Government has given industry all possible encouragement to make this great achievement possible.

But in the production of food that has not been the case, in spite of the fact, as I have said, that food is just as important as the product of any factory.

So far the Government has not even had a program, and so far as the general public knows, there is no program for next year's crucial production. Farmers are winding up the season with no definite knowledge of what their plans should be for next year, except for a few goals specific only for wheat and for official recognition of the already obvious fact that triple-A restrictions are out of the window, farmers know nothing of what the attitude of the Government will be for 1944. They have been given no specific assurance on prices, labor, transportation, feed, fertilizer, farm supplies, and a dozen other items necessary for successful food production. The "desk" farmer in Washington doesn't seem to realize that farm production cannot be turned on and off like a spigot. They don't understand that farming is a continuous operation that must be planned ahead some 6 months to a year and in many cases even longer.

Planting time for winter wheat and other small grains is at hand, but the farmers don't know yet what to do. Every day lost means a loss in food production.

For these reasons it was especially appropriate that we should have a discussion here which would center interest on the food situation and reveal to the public the great need for action. We hope that this conference will create such strong public opinion that results will promptly follow.

In order that we may crystallize the thinking of this conference, I am going to appoint a committee to draft resolutions after they have heard the subjects discussed. These resolutions will be submitted to the conference and, if acceptable, will be passed on to the Congress in the hope that it will bring about the legislation that will be needed to correct unfavorable conditions.

Post-War Problems

EXTENSION OF REMARKS
OF
HON. TOM CONNALLY
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a notable address on the subject Post-War Problems, delivered by the Honorable Jesse H. Jones, Secretary of Commerce, before the New York Board of Trade on September 30, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For the first time since Hitler invaded Poland in 1939, we are justified in a feeling of optimism about the trend of world news. That does not mean that the war is nearing an end, for there is much tough going ahead. We have hardly set foot in Europe, and every step of the way to Berlin will be won at great cost and great sacrifice. When Germany has been defeated we will still have our hands full in the Pacific.

We do have the enemy on the defensive, but the price of victory will still be very, very dear. We do foresee the destruction of the Axis' threat to rule the world, and, while the day of victory may yet be further away than we like to think, the day of peace will come.

It is necessary, therefore, that we be in a position to shift from war to peace without too much lost motion in the shifting. There lies the responsibility of business and industry, as well as Government.

We must be prepared to give jobs to the men and women now in the armed forces, and many others engaged in war work. This is what I mean by post-war planning. There is no mystery about it. It is just as necessary to prepare for peace as it is to prepare for war. They both mean work, and more work; planning, and more planning, as the scene changes.

Many people think that the war slipped up on us, but let's go back and see what we did, looking to the possibilities of war.

Beginning in January 1940, the President asked Congress for more than $7,000,000,000 to expand our Army and Navy, and Congress voted the money. In his speech before the Congress, May 1940, the President asked that we prepare to build facilities that could construct 50,000 airplanes a year. Few people thought this possible. June 1940, Congress gave the Reconstruction Finance Corporation extraordinary powers to build war plants, and to buy and stock-pile critical and strategic materials. Under this authority, the R. F. C. has authorized the expenditure of more than $24,000,000,000 for purely war purposes, building plants of all character, and buying critical and strategic materials in all parts of the world. We have substantial stock piles of every material needed to prosecute the war, including natural rubber, and our synthetic-rubber industry, started 2½ years ago and accelerated immediately after Pearl Harbor, is already producing almost to the capacity of our former requirements.

September 1940, Congress passed the Selective Service Act, and October 1940, the President traded 50 over-age destroyers for American air bases on British island possessions.

December 1940, the President pledged that the United States would be the arsenal of democracy.

In 1941, at the request of the President, Congress passed the Lend-Lease Act, with an initial appropriation of $7,000,000,000. Aid was extended to Russia. Congress rewrote the draft act and revised the Neutrality Act, so as to enable us to maintain the flow of military supplies to those nations fighting the Axis. All of this planning, mind you, was before Pearl Harbor. For a democracy in which only Congress can declare war, we were doing very well in preparation, for what, to the President and Secretary Hull, was the inevitable.

Since Pearl Harbor, we have met the demands of total war. We have seen all our forces mobilized. We have seen warfare on a gigantic global scale. We have seen military campaigns mapped out as never before were conceived by the mind of man. We have seen brilliant world military strategy.

We have also seen the stupendous victory won by private enterprise. The achievements of American industry have made possible the conquering march of our armed forces.

These achievements represent the ingenuity, the efforts, and the patriotism of a people nurtured in the philosophy of free enterprise, and trained in the school of private business.

This magnificent achievement by private industry shows what we can do when forced into war, and what we can do in returning to peace.

But we must prepare. We must find new jobs, new markets, new outlets for the vital energies of our people. Our post-war planning must take into account other countries, with particular consideration for those which have been overrun by the enemy. It must include the reconstruction of their enterprise as well as their people. We must literally bind the wounds of a war-torn world.

By this I do not mean that we in the United States can shoulder the whole load. But we must so plan as to give our own people work, and, in cooperation with the other United Nations, be of every possible assistance to the people of those countries which have suffered most.

To be able to help others, we must first be strong ourselves.

This is the challenge that industry and government will face in the post-war period. Private initiative alone cannot do it. In many instances government must continue to have a hand in business. It must make investments and take risks where private capital cannot afford to, just as government had to take risks and do most of the financing for expansion of our industrial facilities to meet the demands of war.

In addition to the billions spent by the War and Navy Departments, and the Maritime Commission, in building for war purposes, the Reconstruction Finance Corporation, through its subsidiary, Defense Plant Corporation, has authorized more than $9,000,000,000 for the construction, equipment, or expansion of 1,753 plants throughout the country for the production of war supplies.

These include 534 plants for the manufacture of airplanes, airplane engines, and parts; 84 plants for the production and fabrication of aluminum; 35 plants for the production of aviation gasoline and related products; 116 plants for the manufacture of machine tools; 40 plants for the production and fabrication of magnesium; 60 plans for the mining and production of minerals and metal products; 75 plants for the manufacture of ordnance; 98 plants for the manufacture of radio and other scientific equipment; 65 plants for the construction of ships, ship engines and parts; 164 plants for the production of iron, steel, and related products; 60 plants for synthetic rubber and the chemicals and materials necessary to its manufacture; 14 plants for the manufacture of jewel bearings and diamond dies; 43 for the production of hemp and rope fiber.

We have built 6 pipe lines for the transportation of petroleum products.

We have opened or financed 2,000 mines for the production of critical materials in our own country.

I enumerate these to indicate the extent to which Government is in business, and some of the industries in which it has a large stake. Thus, it is clear that Government and business must find a solution which will be fair to both.

When the war is over, Government should get out of active industry as soon as it can, without too much unnecessary loss. And business will do well to recognize the taxpayers' investment, when negotiating for Government-owned plants, properties and supplies, and not expect too many bargains.

Many of our war plants can be converted to the production of peacetime requirements, and to avoid monopolies and too much concentration, local people should have the first call on such plants. A substantial amount of our excess plant facilities and supplies can very properly be used in other countries, if means can be found to finance them, and I think they can.

Obviously, what to do about Government-owned facilities and supplies will be a matter for the President and the Congress to determine. The solution will not be an easy one, and those of us in administrative positions, aided by business and industry, must present plans, suggestions, and ideas that will be helpful to them in making their decisions. The future of our economy will depend, in substantial measure, on how the post-war world is organized, but I see no threat to business.

Personally, I have stated, and here repeat, that I have no fear but that government will deal fairly with industry because I am convinced that our people want to maintain the principle of free enterprise which is the foundation upon which our economy has been built.

But until the day of victory we must bend our backs to the production needed for war. We must not let the military advantages we have won fool us into thinking that the war will soon be over. False optimism that slows down the flow of materials which we must maintain to every fighting front will result in the loss of thousands of lives.

Our men are fighting wherever duty calls them. They are supporting our highest patriotic traditions. They are offering their lives that our country may endure. They ask no questions and shirk no duty.

They only demand of us that we supply them with things to fight with, and bring them back to the kind of country they left and that they are fighting for. We at home would be unworthy of the sacrifices they make if we fail them. We will not.

If we are to judge by the results of polls, by expressions in Congress, by the editorial opinion throughout the country, the public view has shifted radically in the last 3 years in favor of political and military collaboration with other nations for the preservation of peace. Whether public opinion has shifted in the same sense, in the direction of post-war international collaboration in the economic field, is not so clear. Yet it is apparent that political and military arrangements cannot preserve peace if we have economic warfare.

Therefore, the good-neighbor policy which, with the approval of the President, Secretary Hull has been developing these past 10 years will become of increasing importance.

In the decades prior to the depression we were too busy supplying our own needs to properly develop our foreign trade.

With some rare and very successful exceptions, American businessmen had regarded foreign trade as a byproduct. They had not made the same effort to cultivate and advance it that other nations did. This was particularly true on this hemisphere.

The war has emphasized that the nations of the Western Hemisphere should develop their social and trade relations and further cement the ties that now bind them together. This can be done in perfect fairness to people of other parts of the world.

In doing this we cannot expect our neighbors to deal with us if we do not attempt to meet and anticipate their needs. We must supply them with what they want—not just what we want to sell them. And we must be prepared to develop markets for them in this country.

That is the way in which American business can back up our Government in the furtherance of the good-neighbor policy, and to its own advantage.

The opportunities which will open with the coming of peace are almost inconceivable.

There are few enterprises which will not face tremendous demands. Take our own country alone. We need new houses, new roads, new automobiles, household appliances, furniture, refrigerators, gas and electrical appliances, etc. These constitute just a few of the items which will be needed in vast quantities. If we buy War bonds with our excess earnings, and save them, we will be able to buy the many things we have been denied during the war, and that will create a demand which will provide work and make business.

We shall have a healthy infant industry coming to maturity in airplane travel and shipping.

There is probably not a State, county, or municipality that will not need to extend or repair its facilities—schools, streets, waterworks, sewerage, fire protection, etc.

Railroads, bus and truck lines will need to repair and replace their equipment. Public utilities will need overhauling, and there will be the reconstruction problems in the countries that have been overrun. People in the farthest outposts have learned that there are new things to be had that will improve their living conditions. They will want as many of these as they can get, and there will be the normal advances of science and invention that are continually contributing new things to improve our living standards and make work.

The United States will be called upon to supply goods and services for many parts of the world.

Business and government will necessarily have to cooperate in this great task.

The Department of Commerce, established to foster and promote our trade and commerce, will be available to business.

In closing, I should like to emphasize that we have nothing to fear if we carry into the future the confidence, the courage, and the ability with which we have always met any situation.

Food for 1944

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an address entitled "Food for 1944," delivered by Wheeler McMillen, editor in chief of the Farm Journal and Farmer's Wife, at the National Food Conference, Chicago, Ill., on September 16, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After nearly 2 years of war, the Nation finds itself without visible evidence of a consistent food policy. Food is more necessary than munitions as material of war. It can be a powerful instrument for shaping the peace. Needless risks are being incurred with respect to the character of the final victory, and needless chances are being taken with civilian morale. An orderly and understandable food program, projected into 1944 and 1945, could greatly lessen the gamble.

Little definite information has been made public as to the food draft expected for either the Allied or occupied countries.

Farmers find themselves short of machinery, of labor, of fertilizer, and of supplies. As producers they are confronted with confusions and uncertainties and entangled in red tape and restrictions.

Domestic consumers, including war workers, find themselves presented with time-taking regulations, puzzling contradictions, black markets, and sometimes useless ration coupons.

There can be little reason to expect that those whose exceptional talent for confusion has been its main cause will be able to bring order out of widespread chaos.

A fresh start needs to be made. There is one possible way by which this might be done.

Congress has reassembled this week. Most of its Members are well aware of the most disturbing aspects of the food situation. They probably do not expect that its many complexities, already compounded by administrative confusion, can be straightened out, nor that a food policy can be created, by any direct act of legislation.

Congress could, however, provide for bringing the full facts to light and for prompt initiation of a correct program.

One method would be to require the appointment of an independent committee of eminent Americans. This should be a committee of the caliber and character of the Baruch Committee on Rubber. It should be instructed to get at the truth and to recommend the necessary actions. Such a committee, created and confirmed by Congress, would certainly command public backing of such power as to bring obedience to its recommendations.

The value of such a report would be measured by the stature and public acceptance of those who prepared it. No precaution should be neglected to assure that the members, if such a committee is chosen, be individuals whose independence and integrity instantly command the respect of all classes of Americans.

I know of no other practicable method for bringing quickly into the full light of the national day the force of truth necessary to assure maximum production and distribution of war food.

That the food problem has been mishandled beyond excuse is apparent from even a casual view of the facts.

No foresight was required to be aware of one thing. In a total war of world size, no matter how much food is produced, there cannot be too much. Probably there cannot be enough. Few mistakes can be afforded.

Those who have first-hand acquaintance with agriculture in the United States know that modern farming is a skilled occupation. They know that foodstuffs, any more than dollars, are not picked from bushes without previous effort. In Washington their practical voices were ignored.

Draft, labor, and price programs were initiated which promptly and tremendously reduced agriculture's manpower.

For manpower there is a partial substitute in machinery. It was promptly decreed that for 1942 there should be available for machinery less than one-fourth of the amount of steel normally required. Apparently never more than about 3 percent of the total steel output has normally been required for farm equipment. It is possible that more steel has been wasted in needless extravagances than could have been used to build more than the normal farm machinery output. Grudgingly the allotment of materials for farm equipment has lately been moved up to around 80 percent of normal. Now, it does not seem unreasonable to presume that since there cannot be too much food and there can be too little, since farm manpower has been drastically reduced, and since new and up-to-the-minute machinery can tremendously expand food production, the sensible procedure now might well be to double the normal output of machinery rather than to continue to curtail it. Metals are vital on the food front, as well as on the fighting fronts.

Perhaps others on this program will speak of the incredible lengths of Government interference which made even the restricted equipment output stupidly difficult for farmers to procure. The Washington experts thought, for instance, that they knew more than either farmers or the machinery trade about where the machinery ought to be delivered. Consequently they sent cotton machinery where there was no cotton, fertilizer drills where there was no fertilizer, and otherwise managed to intrude their own special confusions into farming, into the equipment business, and into transportation.

The procedures affecting the meat supply have been equally revealing. No farmer could stay in business if he followed Washington ideas of livestock operation and economics.

The Nation's output of meat and of such livestock products as milk, butter, cheese, and eggs is made possible by constant and understanding human attention to animal needs. Productive animals receive attention daily, frequently two or three times daily, through most of their lives. Little of importance can be done for them by inexperienced, part-time help.

Although machinery can considerably expand production of field crops, the most necessary factor in the output of animal products probably is still experienced manpower. The experienced manpower is increasingly absent or aged.

While the competition for the grand championship in the confusion makers' class is not yet closed, the Washington blunderbund offers no contenders more promising than the creators of the meat situation.

Feeder cattle and lambs are reasonably abundant in the range States, where their early growth can be put on with the most natural economy of resources. Last year saw the record crop of all time in the Corn Belt, and this year's crop is better than could have been expected. Corn makes meat. The lean young creatures of the range, normally moving to the feedlots of the Corn Belt, there blossom out with pounds and quality. Other corn makes pork, and usually there is plenty left to be shipped into the skilled hands of the northeastern dairy and poultry farmers to make milk and eggs.

But the Corn Belt feed lots are relatively bare of cattle and lambs. The Northeast's granaries are desperately short of feed.

We have the young cattle and the lambs, we have the corn, we still have the dairy cows and chickens. It would appear that we should have an excellent prospect for plenty of good meat, milk, and eggs.

What is lacking? Only common sense in the Washington agencies. Monkey wrenches in the price machinery, crowbars in the production machinery, and impertinence instead of expertness have nullified the patriotic efforts of a million farmers and ranchmen. There can't be too much food nor too much meat. There will be vast quantities less than might have been produced had not the rash power of Federal ignorance been intruded.

The excuse for interference has been that prices have to be controlled to restrain inflation. Few will take issue with the purpose.

What has been consistently ignored is that plenty is the surest barrier to inflation. The administration's total of cross-purposes, crude mistakes, and deliberate politics adds up dangerously near to more promotion than prevention of inflation.

Run-away inflation follows scarcity of goods and excessive debt. The administration has steadily contributed to both causes. The necessities of war are bound to cause scarcities and to pile up debt. Interferences with production by stupid and confused direction are making the scarcities worse than they have any need to be. Combined with that, the administration squanderlust heaps up the costs of both military and civilian goods. If the tragedy of inflation is added to the tragedy of war, Washington will be its Pearl Harbor.

No more amazing product of upside-down thinking and fourth-term politics has yet been offered by the mystery minds of the administration than the program for subsidies and roll-backs. The net effect is to feed war-prosperous consumers by borrowing grocery money from the pockets of the future veterans of this war. It is a deceptive plan to increase Government debt, which will burden the earnings of our fighters during all the years after they put off their uniforms. It is a scarcity-promoting scheme, since it proposes to subsidize the consumption of those food items of which we have least in proportion to need. It ignores the common sense of farmers who do not ask for subsidies when none are needed and no constructive purpose can be served. If the program is advanced because the administration is timorous in the presence of certain labor leaders, let the high political command recall that Americans are primarily concerned at present with winning a war and saving a nation for its greater future.

There is no occasion for side-stepping the central fact regarding this whole sorry picture of confusion over the food situation. It is the direct consequence of disorderly administration. The Chief Executive delayed appointing a food administrator until months of time were lost. Since then he has appointed three. With none has he exercised the plain common sense of making their authority equal to their responsibility. He has continued fragments of authority over food production and distribution in widely scattered agencies. In most of these agencies inferior appointees exercise authority inferior to their responsibility, and exercise it with knowledge of agriculture inferior to their zeal for power.

It is because this is the central fact of the problem that I have ventured to suggest that Congress assume the initiative by providing that a distinguished committee shall report the facts as they are and make recommendations that cannot be ignored.

This war means too much to the future happiness of Americans to permit any faltering. Critical shortages of food can prolong the war. Conditions in the Old World are such that there is no possibility that more food can be grown in the United States than will be needed here and over there. Food may conceivably become one of the most powerful instruments for strengthening the American hand in laying the foundations of an enduring peace.

We are concerned, therefore, not merely with the food supply of the immediate present but with what can be produced in 1944 and in 1945 and for years still further distant.

Farmers are tremendously anxious to do everything they possibly can. They have worked long hours, taking pride in each extra bushel and pound of output. They have resorted to every expedient to make their equipment extend its service over additional years and additional acres. They have understood that a warring nation cannot supply them with every production need. While the prices of their products have risen, the costs of every item entering into production have risen faster. They have worked patiently with inadequate and often inefficient labor. Farm labor has often more than doubled in cost because it has done less work at higher wages. Farm wives and children have toiled extra hours.

Their patriotism and determination clearly demonstrated by their achievement, should entitle the farm people of America to the right to use their own judgment and to make their own decisions. They know how they can best accomplish the maximums of production. Their work should no longer be hampered by the excesses of Federal obstruction. Their output should not be retarded by the desire of those in power to exercise controls, to write checks, and to establish political security for themselves. With a war to win, such luxuries cannot be afforded.

Unless a miracle of change takes place, little can be expected from piecemeal corrections of past mistakes. Either the stage must be set for a fresh start along more workable lines, or 1944 and later years will find the food power of the Nation less than it can well be made.

Farmers ask only for the least possible interference, for the most possible machinery, labor and supplies, and for prices at levels which will permit them to produce to the utmost and stay in business to produce again in future years.

The more nearly this simple principle is observed, the less rationing Americans will have to endure, the less want will have to be suffered by the victims of war abroad, the more lives will be saved, the stronger will be the Nation for war and for peace.

Food is indeed fundamental.

Freight Rate Legislation Will Not Fix Prices

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Freight Rate Legislation Will Not Fix Prices," published in the Louisville Courier-Journal for September 27, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREIGHT-RATE LEGISLATION WILL NOT FIX PRICES

The report of the special board appointed by President Roosevelt to study the Transportation Act of 1940 bears out all of the contentions of southern spokesmen before the Interstate Commerce Commission on the advisability of equalizing the national freight-rate structure.

The three-man board which reported on Friday bore out the contention of counsel for the Southern Governors' Conference that railroad operation actually costs less in the South than it does in the Northeast.

Now that this point has been sufficiently debated so as to render it useless as a major railroad argument, the roads have adopted a different tactic. Although reductions in some class rates were made to the South a year or so ago, through the appeal of the Southern Governors' Conference to the I. C. C., the basic principle of regional discrimination has not been tackled by the Commission. The southerners, therefore, with general support from the West, have prepared to ask Congress to instruct the Commission to abolish the principle of regional differentials.

But at a recent meeting of southern and western Governors, called largely at the request of the southerners to plan for a common front on freight rate legislation, a surprise speaker appeared in the form of William Jeffers, the former Rubber Coordinator now returned to the presidency of the Southern Pacific Railway. Mr. Jeffers, delivering a solemn warning against permitting Congress to enter the "price fixing field," apparently so impressed the westerners that no united action was agreed upon. Mr. Jeffers was, of course, merely voicing the latest concerted opinion of the powerful railroads and in doing so was lending himself to a somewhat disingenuous campaign. None of the bills which stand any chance of adoption (most of them probably will be rewritten into one embodying a short general principle) authorize Congress to fix freight rates or to enter the price-fixing field. They merely provide that Congress shall authorize the I. C. C. to abolish regional differentials.

But just as they stuck firmly by the plea of higher costs in the South until it was thoroughly discredited, the railroads apparently intend to wave the terrible banner of congressional price fixing wherever it will do the most good. It is not likely to impress the South, however, and it has not impressed the three members of Mr. Roosevelt's Board.

William C. Bullitt's Candidacy for Mayor

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have inserted in the RECORD two oratorical gems and misstatements of fact made last night in Philadelphia by the well-known chairman of the Republican National Committee, Mr. Spangler. They are to be found in an article published in the Philadelphia Record. I hope the Members on the other side of the Senate will keep Mr. Spangler in Philadelphia until the mayoralty election is over.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPANGLER VISITS CITY TO AID G. O. P. MAYORALTY RACE—NATIONAL REPUBLICAN CHAIRMAN RIDICULES BULLITT AS "A KING JESTER"

(By Thomas P. O'Neil)

The Republican high command yesterday brought G. O. P. National Chairman Harrison E. Spangler, of Iowa, into Philadelphia as part of its campaign to defeat William C. Bullitt, Democratic candidate for mayor.

Spangler went to fantastic lengths to accomplish his mission.

He ridiculed Bullitt as "a King Jester."

SENT BY "NEW DEAL CROWD"

He declared the Democratic candidate was sent to Philadelphia to take over control of the city government by "the inner New Deal crowd."

He predicted that if Bullitt is elected the pay roll would be tripled, taxes increased, and Philadelphia would have "government by directives instead of by ordinances."

MAKES TWO APPEARANCES

The Republican national chairman made two appearances here—before about 1,000 division committee men and women in the afternoon at Town Hall and before the twenty-fourth ward Republican Club's fortieth annual banquet at the Bellevue-Stratford in the evening.

Spangler spoke extemporaneously at the afternoon session.

"When your city chairman, Mr. David W. Harris, invited me to come here," he said, "I debated whether it would be entirely proper for a person from a distant State to participate in even a small way in your local election.

SO HERE HE IS

"But when I heard the opposition was importing a nonresident of Philadelphia to run for mayor, I thought I had as much business here as he had—so here I am."

Spangler charged the New Deal wants to capture Philadelphia "because it is the only one of the great cities of America that has not faltered" in its Republicanism in city elections.

He declared the New Dealers "are looking hungrily at this stronghold and want to impose their kind of government on the people of Philadelphia.

"So the inner New Deal crowd sat down to pick you a candidate for mayor," Spangler continued. "Harry Hopkins was there. So was HENRY WALLACE, the boomerang man. And Frankfurter was there, too."

HOPKINS FIRST CHOICE

According to Spangler, Harry Hopkins was first choice for mayor of Philadelphia, "but they decided against him because he is so good at giving things away they thought they'd better continue to let him handle lend-lease.

"Then," Spangler added, "they decided upon a man known around Washington as one of the king's jesters.

"If he is elected—and I know he won't be—there would be an immediate tripling of the number of your public officials. Your streets would be overrun with men on the pay roll—just as they are in Washington. And these pay-rollers wouldn't do anything but draw their pay—just as they do in Washington.

CREDITS ECONOMY TO G. O. P.

"Your taxes would be suddenly increased, as they have been in all the New Deal cities. You now have the lowest tax rate of any large city in the country. That's because the Republican Party which controls your municipal affairs believes in good government, efficiency, and economy."

Finally, Spangler conjured up a vision of "government by directives" in the event of a Democratic victory here.

Winding up his address to the division workers, the G. O. P. chairman said:

"Judging from everything I get, Philadelphia will be more Republican after the November election than it has been for many years."

CHARGES NEW DEAL PLOT

At the twenty-fourth ward dinner, Spangler said "the palace guard of the White House is seeking to New Dealize Philadelphia by sending one of the Federal yes-men into the city to seek the office of mayor."

"They have said to you, the people of Philadelphia," said Spangler, "that you are no longer competent to choose your own elected officials.

"Do you believe for a moment that if William Bullitt were elected as your mayor he would consider himself the servant of the people of Philadelphia; that he would battle side by side with you to restore local self-government in America?"

ADDS ICKES, GUFFEY, AND FLYNN

Spangler retold his story of the "inner New Deal crowd," adding Secretary of the Interior Harold L. Ickes and United States Senator JOSEPH F. GUFFEY to the list of those he said were present.

GUFFEY, he said, proposed Bullitt, but nobody would "second the nomination." He thereupon telephoned to "Boss Ed Flynn in the Bronx," Spangler said, and Flynn gave his approval to "this millionaire playboy."

PREDICTS HIGHER TAXES

Spangler warned against loss of self-government in Philadelphia in the event of Bullitt's election and predicted waste rather than economy in Philadelphia government and higher taxes.

"Under the New Deal nationally," he said, "there are today more than 3,000,000 Federal employees. Election of Bullitt would bring to your city the philosophy that government is the art of adding more and more people to the public pay roll."

Election of the Republican candidates for office, he predicted, would mean a government dedicated to service of the people of the city, economy in government, and "constant obedience to the principles of republican government upon which our Nation was founded here in Philadelphia."

WAGE-TAX CRITICS DENOUNCED

Critics of Philadelphia's wage tax were denounced by Acting Mayor Bernard Samuel as "municipal mongrels."

"I call upon all civic-minded people of Philadelphia to get together and gag these howlers with ballots," Samuel urged.

Washington Community War Fund Campaign

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD the timely and able remarks delivered by Mr. Preston Delano, Comptroller of the Currency, now the chairman of the Government Division for the Community War Fund, made by him at the opening of the Government division mass meeting held on Monday, October 4.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mr. Jennings, distinguished guests, and ladies and gentlemen, this meeting marks the opening of the 1944 Washington Community War Fund campaign. We who are gathered here today represent the Government division of that campaign, which has for its purpose the raising of funds for three great causes:

First, the aid and comfort of our armed forces at home and abroad;

Second, assistance to our fighting allies and to those unfortunate people who lie under the domination of a ruthless enemy; and

Third, the relief of that portion of the local citizenship, which, less fortunate than ourselves, needs a helping hand.

This year the Community War Fund is faced with the necessity of raising a sum far greater than ever before, and the Government division is asked to carry its share of this increased burden. There is little need to explain the reason for the heavier task. The world drama in which we live provides the answer. We shoulder the responsibility willingly, but with the poignant realization that it is one of unusual difficulty. It calls for determined resolution.

We are appealing to our fellow Government workers at a particularly unfortunate time, when they are already heavy laden with other demands and obligations. Only the extreme urgency of our case justifies our course. But the case is urgent and no cause ever more just.

To meet the gravity of this situation, there has been assembled a great organization of Government personnel—some 7,000 in number—of which you here today constitute the leadership. You are the striking force. A comprehensive program has been laid out for your use. There are the usual forms and reports—some good literature has been prepared which you have already received. I believe over a million and a half pieces have been distributed. Others will talk to you of these technical details.

I have mentioned the difficulties. They are heavy and yet they should be swept aside by a realization of the significance of the thing we are attempting to do. We are not seeking a dole for charity. We in this division are members of a Government at war. Each individual has his or her share in this vast Federal machine which includes the military and naval arms. These fighting arms face special hardships and dangers. It is simple justice that we behind the lines should give up a trifle of our present comfort to our fellow workers who have drawn the harder lot. Our Government provides its fighting men with the best weapons and equipment in the world but it is our responsibility to see that they have that little something more which is so important—a bit of sympathy and comfort, that touch of home without which the strain and risks of war become unbearable.

This young and very imperfect civilization of ours is rich—rich because it has time in its purse. In its growth there is the pledge of a better future. It is perhaps unfortunate for us that we do not live in that future. Yet we can contribute to it. It seems to be the task and responsibility of this generation to hold fast to certain principles painfully established and without which we perish. Unless we do stand fast, there can be no future. It is a hard post to which we are assigned, but it is one of great honor.

National War Fund

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the President last evening in connection with the national war fund.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends and fellow Americans, we, the people of the United States, know now that ultimate victory is certain, but that it is still a long way off and that for it we are paying and shall have to pay a great price.

In the genius of the American people—for freedom and decency and friendliness among neighbors—lies one of our best weapons for that victory, and certainly our greatest insurance for a peace that will be just and lasting. Our men and our allies know they have made no covenant with our Government alone. They know they have the backing of all the resources and spirit of the American people themselves. In that conviction alone lies the winning morale which no slave of a dictator can ever know.

That is why I am glad to speak to you tonight about the National War Fund. It is a philanthropic federation with three simple aims: First, to determine the nature and the extent of the war-related needs; second, to see that everybody has a chance to contribute to the funds required; and, third, to channel the sums raised for its member agencies wherever American help is currently most needed—enough and on time.

The National War Fund has the hearty approval and support of all the Government agencies concerned with our management of the war. For the National War Fund, by its unity, its economy, its competent management, and its elimination of waste, duplication, and delay, is playing a part in our total war effort which all of us in Washington regard as an absolute essential.

In its unity of purpose, and its federation of agencies without surrender of State and local freedom of method, the National War Fund combines the American genius for organization, the American capacity for economy, and the best of our American tradition for giving freely, promptly, and in proportion to our means and the need.

For these reasons, when your local War Fund or Community Chest asks you to give—for our own forces, for our allies, and for the needs at home, I ask all of you to think about it carefully before you give.

I ask you to remember that the U. S. O. is your share of what we are doing for our own fighting men, and the forces behind the lines. I ask you to consider that War Prisoners Aid does what no government can do. I ask you to think of United Seamen's Service in terms of the people's debt to the men who took our ships across in the darkest hours of the war. And I ask you not to forget that the people of Russia and China and of all the other United Nations—and especially the unfortunate, hungry men, women, and children of all the overrun and enslaved countries—see in your personal and friendly concern the brightest ray of hope and the greatest power for good in the world today—the

sovereign voice of the people of the United States.

I ask you, therefore, to give thoughtfully, and generously, and proportionately—remembering as you give, that a share in the National War Fund is a share in winning the war, and in winning the right of freemen to live in a better world.

Beheading of an American Flyer by the Japanese

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from today's newspapers giving an account of what the President said in his press conference yesterday regarding the beheading of an American flyer by the Japanese.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BEHEADING OF ALLIED FLYER CALLED BARBARIC BY PRESIDENT

President Roosevelt yesterday described the Japanese beheading of a captured Allied flyer as barbaric conduct which proves that Japan lacks civilization, and he reported at the same time that the Japanese military position in the entire Solomons-New Guinea area is weakening.

His remarks came at a news conference after the State Department made it plain that the Jap officers responsible for the execution will be brought to judgment by the United Nations if possible.

He labeled the Japanese uncivilized in response to a question about the beheading of an Allied flyer—whose fate was revealed in a diary taken from a Jap prisoner in Salamaua, New Guinea.

(The diary related that the flyer was forced to sit on the edge of a bomb crater, his hands tied, while the local Japanese commander beheaded him with a sword in accordance with the Japanese Samurai code. It said that after the victim was executed in the presence of Jap troops, his abdomen was laid open with the same sword by an enemy seaman.)

JAPS LACK CIVILIZATION

Mr. Roosevelt was deliberate in saying that the Japanese lack civilization, explaining it is the worst epithet he could possibly hurl at them because it is the one thing that gets under their skin.

He said the people of the United States are drawing their own conclusion over this instance of barbaric Japanese conduct.

Mr. Roosevelt also spoke of other instances of cruel treatment by the Japs, but declined to elaborate. It was recalled, however, that last spring he branded as inhuman and barbaric the Japanese execution of some of the American flyers who raided Tokyo and vowed that those responsible would be brought to book.

On that occasion this Government formally warned Tokyo that acts of "criminal barbarity inflicted upon American prisoners in violation of the rules of warfare" will be avenged.

Yesterday the State Department called attention to that note in response to inquiries concerning the latest atrocity.

After the execution of several of the flyers, who participated in the Tokyo raid, Japanese broadcasts proclaimed Japan's intention to deal likewise with any airmen taken prisoner during raids on her territory and said Premier Hideki Tojo's government "regretted" that the United States did not support its "new international law in matters of aerial warfare."

Japanese broadcasts also pledged that every American flyer participating in future raids on Japanese territory "has a special pass to hell—and rest assured it is strictly a one-way ticket."

(The Tokyo government itself ignored the United States protests and refused to furnish details on the execution of the flyers.)

REDS CONDEMN HITLER

Meanwhile the Soviet Information Bulletin disclosed that Russia is just as determined as the other United Nations to mete out "stern punishment" to Adolf Hitler, leaders of his government, and other German officials responsible for wartime atrocities.

The Soviet attitude was set forth in an article which said criminal responsibility for atrocities attached to Hitler and his cabinet ministers, the Nazi Party leaders, the German Army command, and Hitler's commissioners and representatives in the occupied areas.

It said heads of financial and industrial concerns supporting them are the "organizers of these crimes and associates with them."

Bernard M. Baruch

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. MAYBANK. Mr. President, on many occasions during the recent debate on the important measure which has just been passed, the name of Bernard M. Baruch has been mentioned in commendation for his faithful service and the excellent work which he has done. I ask unanimous consent to have printed in the Appendix of the RECORD four brief editorials in commendation of the excellent service rendered by that distinguished American.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Pine Bluff (Ark.) Commercial of September 29, 1943]

SUPPORT MARSHALL, OR—

Bernard Baruch, in whom the country has great confidence, pleads with Congress and the people either to give General Marshall what he wants—that is, the men he asks from the draft—or to throw him out.

"The man in charge of the job should be given unqualified support. No cheese paring. No trading down. Give him what he needs. In such a matter it is better to be safe than sorry."

Mr. Baruch's appeal was made to a congressional group considering the Wheeler bill, which would defer drafting of pre-Pearl Harbor fathers at least until January. General Marshall, Admiral King, and other high military and naval experts previously had urged that Congress do nothing to interfere with the drafting of the men now programmed for induction.

If, after all the arguments that have been made, General Marshall and Admiral King insist, on their own initiative and not out of loyalty to nontechnical superiors, that they need 1,221,000 men during the last third of 1943, they should have them.

We must have confidence in somebody to decide such questions on the basis of knowledge that cannot be shared with the lay public and of military education and experience that only the best of the brass hats possess.

There is ground still for grave doubt whether, if the armed forces are built up to the size projected, industry will retain sufficient manpower to supply them with all the shipping, equipment, and supplies they need. But in the end the Chiefs of Staff must decide that.

If laymen, including Congress, were to interfere and make a mistake, the consequences would be too terrible to consider. On the other hand, if the Chiefs of Staff are permitted to rule and they prove to be overoptimistic, the sin will be on their heads.

It is doubtful if Congress should or will override the insistent demand of General Marshall and Admiral King. But that demand is not for pre-Pearl Harbor forces; it is for a specified number of physically capable men.

The Selective Service System must decide whence the recruits shall come. This is not of the same highly technical character as the other question. Laymen have a right to insist that before pre-Pearl Harbor fathers are drafted, every other resource shall have been exhausted.

That has not yet been done. In this field Congress still has room to function as guardian of the people's rights.

[From the Charleston (S. C.) Post of September 25, 1943]

NOTHING ELSE TO DO

It remained for Bernard M. Baruch, wise and patriotic South Carolinian, to say the last word to the Senate committee about the Wheeler bill to defer the drafting of pre-Pearl Harbor fathers. Mr. Baruch had just completed a carfeul study of the manpower situation. He knew a lot about it before he made the survey. It was somewhat absurdly rumored at Washington that Senator WHEELER expected Mr. Baruch to save his bill from defeat—although later WHEELER said he had little hopes of this because "Mr. Baruch is an administration man." One thing Mr. Baruch is not is a WHEELER man, insofar as the attitude of this Nation to international affairs is concerned. Baruch was no isolationist. He did not go into details about the drafting of fathers. He told the committee that if Gen. George C. Marshall said it was needed for the success of the Army, that was enough for him and ought to be enough for the Senators. "If you don't give him what he wants, then throw him out," advised the plain-speaking associate of War Mobilization Director James F. Byrnes.

If General Marshall and Admiral King and the men over and under them agree on the view that it would be a backward step at this time to defer the drafting of fathers—and they do agree on it—Congress should be guided by their advice. These men have been appointed to direct the military phase of the war and they will be held responsible for it. We depend on them to get the greatest possible results at the smallest possible

cost. A man who fought bitterly for isolationism whenever opportunity offered, Senator WHEELER, of Montana, introduced a measure for the arbitrary deferment of eligible men on the ground that they were fathers. The generals and admirals tell us they cannot afford to have any such exemption granted now, that it will upset the military schedule and prevent taking full advantage of the successes we have gained, which means lengthening the war. Why should Congress hesitate a moment to reject WHEELER'S leadership and advice on such a subject and to accept the advice of men like Marshall and King? That is the substance of what Bernard M. Baruch had to say to the Senate committee. There is nothing else to do and there is every indication that Congress will do it.

[From the Rochester (N. Y.) Democrat and Chronicle of October 1, 1943]

BUDGETING MANPOWER

One point made by Bernard M. Baruch in his recent report on manpower has received comparatively little public consideration. This was his approval of the so-called budget system of apportioning manpower in war industries, as practiced particularly on the Pacific coast. Available labor, under this plan, is pooled and the various industrial plants are given quotas on which they may draw. Workers themselves are assigned to jobs according to production needs of the locality.

An essential feature of the budget plan is the establishment of local control to adjust the available workers to available jobs. Mr. Baruch made the point that successful local administration is the key to the manpower problem. Local authorities are best equipped to know the needs of the community, to keep count of the available workers, and to know where and when they can be used to best advantage.

When properly organized, the budget system prevents overlapping of jobs and the accumulation of surplus manpower at any one point. It removes the temptation for one concern to bid against another for the services of workers. It is a simple device, in short, to spread manpower evenly over the war production areas of the country.

A corollary feature of the budget system is the adjustment of Government contracts to the labor supply of the community. It furnishes a check by which to balance Government work against the facilities for performing it. It ends the indiscriminate award of war jobs, in which one community may have more than it can handle while some other community has a surplus of workers. It brings the whole business within scientific proportion.

War plants throughout the country, we understand, are gradually coming to the budget system. Until it is generally adopted, we cannot say that we are making the best use of our manpower, either for industry or for military service.

[From the Green Bay (Wis.) Press Gazette of September 27, 1943]

A JOB WELL DONE

Lack of rubber was expected by our foes to be a mortal blow to us. But we appear now to be secure.

Mr. Roosevelt cannot be blamed for getting off on the wrong foot in respect to this material. The claims were so conflicting they would have confused anyone. They necessitated a specialized investigation.

Correctly the President called in Mr. Baruch when he found himself pretty deep in trouble. Mr. Baruch did that very essential thing immediately, he got the facts straight. Then the President called in a competent, though swearing, director named Jeffers, president of the Union Pacific Railroad. And the great work began of constructing on our own soil plants for the manufacture of synthetic rubber.

Not so long ago Mr. Jeffers, his work concluded because he could see all the machinery going and the end in sight, retired to his railroad job. Col. Bradley Dewey, his successor, told the American Chemical Society recently that the "specter of collapse from rubber shortage is gone." He elaborated with the declaration that by the end of the year we will have established a rate of production of 850,000 long tons of rubber annually, more than we need to keep rolling. Already our rate of production is past half of that amount.

No dictatorship under the sun could have handled this delicate problem more efficiently since the appointment of Mr. Baruch. For that let us say, well and good.

But let us not forget that when this war is over we are going to have quite a decision to make in respect to rubber and synthetic rubber, whether to aid South and Central America in the production of this highly critical war article, make it from our own agricultural products, or continue the very old-fashioned method of going clear to Asia for it.

Lame Ducks in Ermine

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Lame Ducks in Ermine," published in the Fort Wayne (Ind.) News-Sentinel of October 4, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAME DUCKS IN ERMINE

In the Senate at Washington some months ago, bitter but unsuccessful opposition was raised against President Roosevelt's appointment of former Senator H. H. Schwartz (Democrat, of Wyoming) to be a member of the National Labor Mediation Board.

Senator EDWARD V. ROBERTSON, Republican, who defeated Schwartz in the election, in November 1942, was joined by Senator E. H. MOORE (Republican, of Oklahoma) in charging that the former Senator was being rewarded, by a Federal appointment, for 6 years of rubber-stamp approval of New Deal policies.

But such rewards are, of course, commonplace—almost automatic—under the New Deal regime.

One might fill whole pages with instances wherein Democratic Congressmen, Governors, and other public officials have been emphatically repudiated by the voters of their States, only to be accorded high honors by the Chief Executive through an exercise of the appointive power.

One such instance occurred as long ago as 1939, not long after senatorial elections in the State of Wisconsin, wherein the voters had stingingly repudiated New Deal Senator F. Ryan Duffy's bid for a second term.

No sooner had the people of Wisconsin turned thumbs down on Senator Duffy, emphatically signifying that they desired to have no part of his notions of government expressed on their behalf in Washington, than President Roosevelt went to the patronage wardrobe and procured for Duffy a judicial robe.

Thus a Senator who had run a poor third in a field of six in his attempt to succeed himself on Capitol Hill was made a Federal district judge, assigned to the very State whose citizens had declined to continue him in office, and enabled, in certain cases, to preside over courts elsewhere.

In the November 1988 elections in Wisconsin Senator ALEXANDER WILEY, Republican (the present incumbent), came close to scoring a clear majority of the votes cast for six senatorial candidates.

Wiley polled 446,770 votes. His next opponent (Ekern, the Progressive candidate) polled 249,209. Senator Duffy (now Judge Duffy) received zealous New Deal support, but was able to muster only 231,976.

Thus, WILEY, whom the smear brigade subsequently listed as a despicable "isolationist," and as among the company of "illustrious dunderheads," won a nearly 2-to-1 victory over his New Deal "rubber stamp" opponent, Senator Duffy.

In that same election, three minor candidates polled a total of something under 10,000 votes, to produce a total of 937,503. Duffy's share of the Wisconsin suffrage in that election, therefore, figured out to less than one-fourth of the total.

There were many who supposed that the popular verdict, as expressed at the polls, would mean that Senator Duffy, upon completion of his one term (1933-39), would go quietly back to Fond du Lac to resume his law practice, perhaps engaging (as formerly) in Democratic politics "on the side."

But the dopesters' hunch that a plum would be passed Duffy's way proved to be the right hunch. Scarcely had the gentleman from Fond du Lac become ex-Senator Duffy, early in 1939, than the President commissioned him as Judge Duffy.

The President's decision cannot have been anything but highly pleasing to the Fond du Lac lawyer who had unsuccessfully endeavored to multiply 6 years of senatorial service by two.

For, when he became Judge Duffy, he became judge for life.

But the Duffy case, we repeat, is by no means exceptional or extraordinary; it is, rather, an extremely familiar and quite characteristic example of New Deal procedure.

There have been numerous other such instances in all parts of the country.

In 1940—2 years after Senator WILEY defeated Duffy et al., in Wisconsin, and in the same year in which "isolationist" Senator BOB LA FOLLETTE was overwhelmingly reelected from that State—an upsurge of anti-administration feeling here in Indiana retired New Dealer Sherman Minton from the Senate, and sent RAYMOND E. WILLIS, Republican, to Washington as Minton's successor.

Four months after the expiration of Minton's one and only term in the Senate, the President appointed him to the United States Court of Appeals.

Skipping a number of similar cases, we come down to the election of November 1942—and less than a year ago—when a whole galaxy of New Deal rubber stamps went forth to smear their opponents, and fairly to froth at what was alleged to be the stupidity and "dunderheadedness" of all pre-Pearl Harbor opposition to the New Deal's foreign policy—and some of its domestic policy, as well.

Everybody but the New Dealers—and, no doubt, even some of them—must have a fairly vivid memory of the results of that desperate smear campaign. It failed—utterly, miserably, and wretchedly.

A whole flock of badly spanked lame ducks went squawking from the polls—in a beeline to the pie counter.

Nor did their hopes for Presidential balm and soothing sirup go unrewarded.

Prentiss M. Brown, who had bawled and bugled all over the place in behalf of the whole New Deal program, got a terrific sock at the polls in Michigan.

But there had been no fading, crisping, or yellowing of the day-after-election newspapers recording Brown's ouster from the Senate, when Brown was affectionately tapped by Mr. Roosevelt to be national czar of the price-fixing, ration-regulating Office of Price Administration.

Similarly, that rubber-stamp of rubber-stamps, the breast-beating Josh Lee, of Oklahoma, was yanked out of the Senate by the disgusted voters of his State last November—only to be promptly coddled with an appointment to the Civil Aeronautics Board, despite the fact that he knew next to nothing about aeronautics.

It's all quite according to the strange New Deal Hoyle.

Washington Wonderland

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. CANNON of Missouri. Mr. Speaker, under leave granted to extend my remarks, I include a letter from the Secretary of the Interior commenting on an article which appeared originally in the magazine Nation's Business, was copied in condensed form by Reader's Digest, and reprinted by the department of governmental affairs of the Chamber of Commerce of the United States for general distribution:

THE SECRETARY OF THE INTERIOR,
Washington, September 30, 1943.

MY DEAR MR. CANNON: The inquiry by telephone from your office presents a welcome opportunity to tell you about the Board on Geographical Names and its part in the war, and to inform you that the article in the Reader's Digest is a succession of gross untruths, quotations made up by the author, and malicious distortions. The man who wrote it, though informed that the Board is engaged largely in services for the armed forces and other war agencies, chose to say nothing whatever of that and to try to make the Board appear ridiculous.

The Board on Geographical Names is not a new agency. The original Board was established by President Harrison in 1890 at the request of the map-making agencies of the Government, to provide official forms and spellings of place names in governmental use and thus to eliminate the endless confusion resulting from the use of different names for the same place or feature, such as mountain peaks and rivers, or the use of the same name for different places or features, even within the pages of a single publication. The tremendous amount of military mapping required by our global war was not anticipated early enough to permit in advance the solution of the complicated place-name problems involved, especially in the treatment of names from foreign languages not using the Roman alphabet, such as Chinese, Japanese, Malay, and Arabic. Neither were there ready for use the voluminous gazetteers and place-name indexes necessary for rapid identification of literally millions of inhabited places and natural features whose locations and proper designations may be needed at a moment's notice by some branch of the armed forces. The task of making ready these geographic tools of war is not unlike that faced by the manufacturers of airplanes in that the goal which must be achieved would have been considered fantastic before the war.

As a consequence, the war agencies requested that the Board be enlarged and reorganized to provide for the immediate performance of the services urgently needed in connection with the military mapping program. This has been done. More than a million names are being transcribed into Roman characters from the characters of Japanese, Chinese, and other Oriental languages. The work is being carried on by the Board and by other agencies in accordance with standard procedures promulgated by the Board. The Board has prepared, and is in the process of reproducing for the use of the armed forces in the field, place name finding lists to accompany several series of military maps covering areas of present and possible operations. These lists will enable an officer in the field to identify rapidly and positively on his maps a village or river referred to in an order or other communication. It may be mentioned in this connection that relatively minor or obscure features become of major importance when battles are fought for them.

The Board is also putting together very rapidly a master alphabetical file of place name cards, including varying forms, spellings, and locations of names of inhabited places and natural features in areas of immediate interest, so that questions concerning them can be answered with maximum speed and accuracy. Inquiries concerning these places come to the Board at the rate of hundreds per week from the branches of the armed forces and the war agencies. While the most difficult tasks imposed on the Board by the war are those relating to foreign names, the Board is also being called upon to render more domestic place name decisions this year than have been rendered in the entire period 1890–1943. A cumulative report which will contain for ready reference all the decisions of the Board to date is being edited and is nearly ready for publication. The last cumulative report was issued in 1932.

The pronunciation service, which has been requested by the radio industry and which has been found particularly useful by it, is only a byproduct of other work, and is not done to tell people how they must pronounce place names but to inform them how the inhabitants pronounce them. The pronunciation and grammatical forms of geographical names in foreign languages must be known in order that they may be written on maps and in intelligence reports in such a manner that they will be spoken as nearly correctly as possible. While this may not seem important at first glance, upon more careful consideration it will be obvious that reference to hills, rivers, villages, and many other military objectives must often be made by the spoken word and if such names are mispronounced in such a way that they cannot be identified, or are mistaken for other objectives, the consequences may be serious. Since pronunciation of foreign names must be known anyway, it is very little trouble to provide these pronunciations for the benefit of broadcasters. Furthermore, the more widespread is the knowledge of the proper forms of foreign names the fewer will be the discrepancies in their use which would cause trouble later. However, it is most unfortunate that this minor feature of the work is emphasized out of all proportion by this article. This does not begin to compare in importance with the problems posed by the variation in the application of names of features along certain foreign coasts which are or soon may be the scene of combined sea, land, and air operations by the armed forces. You will appreciate that in these cases it is imperative that the greatest consistency and accuracy of geographic nomenclature be achieved at once, and it is to such problems that the activities of the Board are now principally directed.

If you would like to observe in detail the work of the Board, you will be welcome at any time.

Sincerely yours,

HAROLD L. ICKES,
Secretary of the Interior.

The Synthetic Rubber Program

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. O'MAHONEY. Mr. President, one of the most notable executive achievements in this Nation's participation in preparing for the effective prosecution of the war was that of William M. Jeffers, formerly administrator of the rubber program. Mr. Jeffers has now returned to his normal duties as head of the Union Pacific Railroad, but the work he has done is still the subject of public approbation. In the Philadelphia Record today there appears a statement by Mr. Jeffers on the synthetic rubber program which I feel is deserving of reproduction in the CONGRESSIONAL RECORD. The editor of the Philadelphia newspaper a few days ago published an open letter to Mr. Jeffers entitled "What Happened to Rubber?" Mr. Jeffers' statement was in response. I ask that the editorial, the statement of Mr. Jeffers, and the reply editorial of the Philadelphia Record be printed in the Appendix.

There being no objection, the statement and editorials were ordered to be printed in the RECORD, as follows:

WHAT HAPPENED TO RUBBER?

WILLIAM M. JEFFERS, Esq.,
President, Union Pacific Railroad,
Omaha, Nebr.:

A month ago today you resigned as Rubber Director.

You told the President: "The big job covered by the recommendations of the Baruch report is done."

You added: "The greatest contribution that I can make in the present emergency is to return to an on-the-job handling of the operation of the Union Pacific Railroad."

We now learn that the big job has not been done. We are not getting enough synthetic rubber tires. The Nation faces a possible break-down in rubber-borne transportation.

In view of these facts, hadn't you better return to your job as Rubber Director and stick to the job until it is done right?

Perhaps you didn't see the Associated Press survey from Akron, printed in Sunday's newspapers.

Executives of five major rubber companies, leaders in the industry, warned that immediate and drastic steps must be taken to avert the threatened collapse of motor transport.

One official warned that the tire industry normally operates with a stock pile of 16,000,000 tires. The reserve is now less than 3,000,000 tires.

Another, referring to the Government demand for at least 30,000,000 passenger-car synthetic tires in 1944, declared that unless precautions are taken there is "great danger of a serious break-down in our transportation and a consequent disruption of our war production effort."

Another declared: "It is going to be impossible to produce enough tires to keep freight and passengers rolling satisfactorily until difficulties in processing synthetic rubber into finished tires are solved; until manpower and equipment shortages are eased and unless we avert a developing fabric shortage."

These aren't Army and Navy "loafers" or "expediters" whom you once criticized. These are hard-headed businessmen, like yourself.

You may say that your job was only to get synthetic rubber factories started, that you had nothing to do with the finished product.

That wasn't all of the job the President gave you.

The President's directive gave you "full responsibility for and control over the Nation's rubber program in all its phases."

As Rubber Director, you were given authority to direct other Federal "departments, establishments and agencies" and the President directed that "full compliance shall be accorded such directives by the Federal agencies concerned."

You had the courage to fight the farm bloc over use of cotton instead of rayon, and we applauded you. You fought with the Army and Navy over priorities, with Elmer Davis over publicity.

Why didn't you fight for enough manpower and equipment to see that tires were made?

Saying your job was done when the synthetic plants were set, but before enough tires were being produced, is like a man in charge of famine relief calling it a day when the wheat is planted—before it's harvested and made into bread.

If you think the charges of a crisis in rubber aren't true, tell us.

If the situation is the fault of someone else, tell us.

If you weren't through, come back and finish your job.

Sincerely,

THE PHILADELPHIA RECORD.

JEFFERS SEES GOVERNMENT MAKING TIRES—KNIFING OF SYNTHETIC PROGRAM MUST STOP, HE SAYS

William M. Jeffers, who put the synthetic rubber program on its feet, declared yesterday that "it may be necessary" for the Government to go into the business of manufacturing tires and other rubber articles.

DEPLORES BICKERING

That action, he said, may be forced in order to "provide acceptable tires at a fair price" and to "do away with continual bickering and knifing" of the synthetic-rubber program.

Jeffers' statement—the first since he resigned as Rubber Director a month ago—was made in a telegram to the Record.

It was in answer to an editorial published Monday, and sent to Jeffers by wire, suggesting that he erred in stating he had finished his "big job" at the time of his resignation.

CRITICIZES COMPANIES

The former rubber czar criticized the rubber manufacturers and the War Production Board in his statement, which reviewed the present situation with regard to tires—a situation described by manufacturers as critical enough to threaten the collapse of motor transport.

Jeffers said the taxpayers of this country have invested $750,000,000 in synthetic-rubber plants, an investment which can and should pay dividends.

WANTS INVESTMENT UTILIZED

"I am a firm believer in private initiative and private business," he continued, but declared that in order to protect the investment and save the program Government manufacture of rubber goods may be necessary.

The American people, he declared, will insist on their investment being "utilized for the good of all, rather than being manhandled for and by a few."

Jeffers, who returned to his job as president of the Union Pacific Railroad after leaving Washington, made it clear that responsibility for success of the rubber program, in his view, now lies with the manufacturing companies and Government agencies, such as W. P. B. and the War Manpower Commission.

JEFFERS' MESSAGE

Jeffers' telegram in full said:

"In my letter of resignation to the President I said: 'The big job covered by the recommendations of the Baruch report is done'; and that is exactly the situation. You say, 'Hadn't you better return to your job as Rubber Director and stick to the job until it is done right?'

"As to the Associated Press survey from Akron quoting the views of the executives of five major rubber companies, I doubt that the chief executives of all of the rubber companies made any such statements. Regardless of whether they did or not, it is of interest to note that the executives of the five major rubber companies have finally appreciated their responsibilities in keeping this country on wheels."

SOME NEGLECTING TIRES

"The American people think of rubber in the manner in which it is largely used, namely, tires. Some of these rubber companies are devoting too much of their manpower and facilities to other than making tires for military or civilian use.

"Some 6 weeks ago I invited the executives of all of the rubber companies, as well as the officers of the rubber workers' union to meet with me in Washington to discuss what I considered at least a 20 percent lag in production.

"Curiously enough the rubber workers' union was represented by their international president and the presidents of some 32 locals. The rubber companies were represented by 2 presidents of small rubber companies and the so-called major companies were represented by subordinate officers, most of whom were of the production expert type rather than the men at the top."

SLOW-DOWN EVIDENT

"I hold no brief for the rubber workers' union in this situation for the reason that there were two strikes which seriously interfered with the production of tires that should not have happened. Second, and again admittedly, there was a slow-down in production. But that is not the whole story.

"The question of adequate intelligent supervision on the job, the matter of keeping machines in proper condition and keeping material up to the man at the machine, the matter of using more of the available manpower on the production of tires and less hoarding of labor in other departments not engaged in tire production, are all contributing to an unsatisfactory output.

"The officers of these unions attended this meeting ready and willing to commit themselves to doing a job if the proper cooperation was forthcoming from the rubber industry."

LABOR SHORTAGE ISN'T SERIOUS

"While there is a shortage of manpower in the rubber industry it is not nearly as serious as the shortage of manpower on the American railroads. These railroad men in maintenance and particularly in transportation, train and enginemen and yardmen, are not confining themselves to 7 hours per day as they are in the mines while the country is faced with a coal crisis. They are working 10, 12, 14, and 16 hours per day in an all-out effort to keep traffic moving in support of the war.

"As to the tire-fabric problem, in my letter to the President I said there was a shortage of tire fabric for which the War Production Board was responsible. The Rubber Director, as such, was completely without authority to correct the tire-fabric situation because the Chairman of the War Production Board personally had held it up for reasons best known to himself.

"The question of shortage of manpower in the rubber industry was repeatedly called to the attention of the War Manpower Commission.

"The increase in the military demands for tires in the larger sizes for the handling of mobile artillery, as well as for the larger sizes for the heavier planes that are now being turned out, further complicated the situation."

CITES INDUSTRY'S DUTY

"This, however, is war and it is duty of rubber companies as well as every other industry in the country to think more about winning a war and getting the job done, and less about what their position might be postwar.

"Rubber companies still have salesmen on the road who ought to be making tires in the plants. Your attention is directed to the type of advertising of some rubber companies with which you are or ought to be familiar, praising the synthetic tire. Seemingly now they want to reverse themselves and talk up their difficulties in turning out synthetic tires.

"Colonel Bradley Dewey, who worked with me for the past year on the rubber program, understands this problem thoroughly. With him in his organization is Tompkins of the U. S. Rubber Co., whom I consider tops in the rubber industry. Babcock, of Firestone, who is in Dewey's organization, is one of the Nation's top men in developing the use of synthetics in all types of tires.

"If Colonel Dewey will continue to not only ask for, but demand, the ultimate in support of the rubber program from these rubber companies, from the War Production Board, and from the War Manpower Commission, the rubber program will come through."

SHOULD PAY DIVIDENDS

"The taxpayers of this country have an investment of three quarters of a billion dollars in the synthetic rubber plants. Here is an investment that can and should pay dividends. I am a firm believer in private initiative and private business, but in order to protect this investment and make certain that there is no unnecessary interference with the rubber-borne transportation on the highways of this country and to assure the manufacture of acceptable tires at a fair price, and, at the same time, to do away with this continual bickering and knifing of a program, it may become necessary for the Government to go into the manufacturing of tires and rubber goods generally.

"In short, the American people, I am sure, will insist upon the investment of these tremendous sums of money being utilized for the good of all rather than being manhandled for and by the few.

"I note statements in the press from a Dr. Phillips, of the O. P. A., who is now experting on the rubber program. This is just another instance of the Phi Beta Kappa boys trying to get themselves into the spotlight. There are practical men in the O. P. A., who, if given the opportunity to head up the rubber problem within the O. P. A., will do a job."

A WARNING FROM MR. JEFFERS TO THE TIRE MANUFACTURERS

On Monday the Record printed an editorial addressed to William M. Jeffers, who resigned a month ago as the Nation's Rubber Director.

We cited testimony from executives of five major Akron rubber companies (Goodyear, Goodrich, Seiberling, General, Firestone) warning of a possible break-down in rubber-borne transportation because of a threatened lack of synthetic tires.

When Mr. Jeffers resigned, he said that "the big job was done." The Record editorial suggested he should return and finish the job if the Akron claims were true.

Mr. Jeffers' reply, which appears elsewhere in today's Record, is thoroughly honest. It concedes there are still many things wrong with the synthetic rubber tire industry; that there is a 20-percent lag in production; that the whole job hasn't been done.

The blame he places elsewhere, out of his jurisdiction.

The question of manpower—held chiefly responsible for the crisis in the Akron statements—he said was "repeatedly called to the attention of the War Manpower Commission."

The question of shortage of tire fabric is the responsibility of the War Production Board "because the Chairman of the W. P. B. personally had held it up for reasons best known to himself."

But most of the blame he puts on the Akron tire manufacturers, and hints they are more interested in post-war advantages than in producing to win the war.

Six weeks ago, Jeffers says, he invited executives of all the rubber companies to meet in Washington to discuss the lag in tire production.

The United Rubber Workers Union (C. I. O.) sent its international president and presidents of some 32 locals.

The rubber companies "were represented by two presidents of small rubber companies and the so-called major companies were represented by subordinate officers."

While he blames the union for previous strikes, Jeffers declares: "The question of adequate, intelligent supervision on the job, the matter of keeping machines in proper condition and keeping material up to the man at the machine, the matter of using more of the available manpower on the production of tires and less hoarding of labor in other departments not engaged in tire production, are all contributing factors to an unsatisfactory output. * * *

"It is the duty of rubber companies as well as every other industry in the country to think more about winning a war and getting the job done, and less about their post-war position."

As for the remedy—

Jeffers, president of the Union Pacific Railroad, is a strong advocate of private initiative and free enterprise.

But he warns that to stop bickering and knifing of a program it may become necessary for the Government to go into the business of manufacturing tires.

The people will insist, he says, that their present investment in synthetic tire plants be used for the good of all and not mishandled for the good of a few.

Those are strong statements coming from the head of one of the biggest—and most progressive—of American railroads.

The Record is glad to have raised this issue if it will lead to increased tire production and solving of the threatened crisis in transportation. The tire manufacturers have had their warning, from an able American businessman. We trust they get down to the business of producing tires for the Nation's war machine.

Renunciation of Extraterritorial Rights in China

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, October 6 (legislative day of Wednesday, September 15), 1943

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared on the subject of the renunciation of our extraterritorial rights in China.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, the decision of the United States Senate to make available as a Senate document my brief work on the history and significance of our relationships with China in the field of so-called extraterritorial rights is one which may help to spread in the United States a greater understanding of this subject.

It may be said that in one sense the recent treaty between China and the United States makes extraterritoriality a dead issue, because the former inequality is now ended. But in this viewpoint the treaty is considered as the end of something which existed in the past, and there is a larger viewpoint. In the greater sense, the treaty marks the beginning of something precious and sacred, the formal recognition of the full sovereignty and equality between two republics founded on the same fundamental principles.

It is particularly appropriate for the Senate to take this action at this time, because it coincides almost to the day with the thirty-second aniversary of the birth of the Chinese Republic October 10, 1911, symbolizing to the Chinese people what July 4, 1776, symbolizes to the American people. This decision, therefore, may be considered, among other things, a special tribute by the Senate of the United States to China in the celebration of her great anniversary.

Even though at this moment part of the territory of China is occupied by our common enemy and that our great ally has suffered and sacrificed during the past 12 years in a heroic way, this anniversary is the brightest in the history of the Republic. For this aniversary occurs at a time when the war has shifted decisively and the unconditional surrenders of Japan and Germany are as certain in the future as the unconditional surrender by Fascist Italy, which is already an accomplished fact.

Today the allies of China are redeeming every promise which has been made, and the overwhelming might of the United Nations is beginning to take form in the Pacific and in Asia.

The immortal founder of the Chinese Republic, Sun Yat-sen, knew at the time of his death that his great work was just beginning. He would be happy on this aniversary to know the glorious future that is assured for China as a sovereign nation and as a member of the sisterhood of free nations and the brotherhood of free people.

Again History Repeats Itself

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Dr. Nicholas Murray Butler, president of Columbia University, at the opening of the one hundred and ninetieth year of Columbia University, September 29, 1943:

AGAIN HISTORY REPEATS ITSELF

(By Nicholas Murray Butler)

Nearly 65 years ago James Anthony Froude in his brilliant volume on Julius Caesar[1] wrote these words, which read as if they were written of the United States in 1943:

"The younger Gracchus brought forward and carried through, with enthusiastic clapping of every pair of hands in Rome that were hardened with labor, a proposal that there should be public granaries in the city, maintained and filled at the cost of the state, and that corn should be sold at a rate artificially cheap to the poor free citizens. Such a law was purely socialistic. The privilege was confined to Rome, because in Rome the elections were held, and the Roman constituency was the one depositary of power. The effect was to gather into the city a mob of needy, unemployed voters, living on the charity of the state, to crowd the circus and to clamor at the elections, available no doubt immediately to strengthen the hands of the popular tribune, but certain in the long run to sell themselves to those who could bid highest for their voices. Excuses could be found, no doubt, for this miserable expedient in the state of parties, in the unscrupulous violence of the aristocracy, in the general impoverishment of the peasantry through the land monopoly, and in the intrusion upon Italy of a gigantic system of slave labor. But nonetheless it was the deadliest blow which had yet been dealt to the constitution. Party government turns on the majorities at the polling places, and it was difficult afterward to recall a privilege which once conceded appeared to be a right. The utmost that could be ventured in later times with any prospect of success was to limit an intolerable evil; and if one side was ever strong enough to make the attempt, their rivals had a bribe ready in their hands to buy back the popular support."

Obviously, there is nothing new about what is now taking place in the economic life of

[1] Froude, James Anthony, Caesar: A sketch (London: Longman's, 1879; New York: Charles Scribner's Sons, 1879; Harper Bros., 1881), p. 25.

various modern countries including our own. Until we really learn that history repeats itself we shall not be able to make effective progress, based upon the teachings of human experience.

The fact that history does repeat itself has been recorded over and over again for more than 2,000 years, and yet its fundamental lessons remain to be learned. Human nature does not substantially change, but environment alters in evolutionary—and sometimes revolutionary—fashion. What this means is that he who wishes to understand the present and to look forward to a genuine knowledge of the future, must first of all study the lessons of the past. He must learn to look backward with wisdom in order to be able to look forward with intelligence.

There could be no more important course of instruction at the present time, either in secondary school or in college, than one on the development of free institutions and free government. This course would go back over several thousand years. It would take account of the amazing happenings in the Far East long before western history began. The significant book by Jawaharlal Nehru, entitled "Glimpses of World History,"[2] gives to the western reader, probably for the first time, some insight into the thought, the institutional life and the accomplishments of far eastern nations for centuries before there was a western world. The outstanding fact is that this unchanging human nature is called upon to deal with rapidly changing experiences. Unless we know how present-day conditions had their beginnings and what were the forces which brought them into being, we cannot expect to be able to deal with them effectively. Once again it must be repeated that in order to understand the present, one must first of all understand the past which brought it into being.

History has become the most important instrument of liberal education. It, and it alone, can give us a comprehension of the world in which we live, as well as a view of those problems which are developing to face us in the world of tomorrow. It is fantastic to suppose that the facts of the moment, as recorded by the newspaper press and by the radio, can give us anything beyond an invitation to try to find out what those facts mean.

Unfortunately, the most important books which are written in this field frequently fail to attract the public attention which they deserve. It is a quarter century since Dr. Spengler wrote his outstanding work entitled "The Decline of the West."[3] It was read with attention, but without enthusiasm or full comprehension and often with sarcastic comment. Nevertheless, the happenings of the years which have followed its publication have illustrated and justified its argument. The truly great histories of liberty which have come from Croce, Pareto, Ferrero, and Mosca in Italy, and from Ortega in Spain, have attracted comparatively little attention among English-speaking readers. Nevertheless, these works are the chief contribution of this generation to a genuine knowledge of how our free institutions, as we call them, came into existence, of what they really mean and how they can best be protected and advanced. The most important educational task of today is to teach an understanding of the present and a comprehension of the possible tomorrow by an accurate knowledge of yesterday.

[3] Spengler, Oswald, Decline of the West (New York, Knopf, 1939). (Originally published as Der Untergang des Abendlandes, Munich, 1918; first translation into English in 1926 by Charles Francis Atkinson.)

Motion Picture Star, John Garfield, Comments on the Soviet Union

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. COFFEE. Mr. Speaker, the eminent motion picture star, John Garfield, some time ago, made an address in the city of Los Angeles, at a great mass meeting in the Shrine Auditorium in that city, at which I was a principal speaker, in which Mr. Garfield spoke feelingly of the contribution made to victory in this war by the Soviet Union.

I believe his remarks are worthy of the attention of the country and should be given wide circulation.

Because of my respect for Mr. Garfield's histrionic attainments, I am inserting his brief speech in the CONGRESSIONAL RECORD. The speech is as follows:

These few words on the epic struggle being waged by the Soviet people can add little to what we already know and what we feel. But I do want to say a word about the specific subject of this panel—cultural relations between ourselves and our colleagues in Russia.

I am not a politician or a statesman. I'm supposed to be a tough guy on the screen. Right now we're all tough, but the fact of the matter is that like all people, I'm a peaceful citizen interested, as you are, in peaceful pursuits. Culture comes under the heading of a peaceful pursuit. It's a fancy way of saying that you enjoy a book or a piece of music or a movie, or history. Sometimes it's hard to acquire culture because there are always those who try to keep others in ignorance. And while a lot of us did have a chance to enjoy Russian culture, through reading or seeing movies, a great many of us dismissed Russia because we were ignorant of the country and listened to those who had a conscious or unconscious purpose in spreading lies about the people of Russia. Well, I'm interested in facts. And since Russia was invaded by Hitler, we've had an opportunity to find out some of the facts.

The facts are simple. Two hundred million people have, in 25 years, merged themselves into a bulwark against fascism. Twenty-five years ago the Russians were an illiterate people. Today, illiteracy has disappeared All those stories about Russian terror boil down to this. The terror of ignorance has been liquidated and the horror of poverty executed. Once we know that, and we know it because men like Ambassador Joseph Davies, Wendell Willkie, Harry Hopkins, and others have brought home these facts, then we can start investigating and understanding Russian culture and cultural conditions. For one thing, I find that all art belongs to the people and you can't have people's artists unless the artists are part of the people.

We in Hollywood have finally gotten our chance to be part of the people. We've gotten it the hard way. It took a war to bring us in contact with the people and the problems of the country. We aren't privileged to carry guns and we are not face to face with the enemy. But we are part of the war effort, an effective part. And my hope is that we will be part of the peace effort, just as all citizens must be.

By that I mean that our job isn't over when Hitler is defeated. We engage in all these drives because we believe in this war. And we believe in this war because we believe in the peace that must follow. One thing that peace must do is to continue the relationship between the American people and the Russian people, otherwise there will never be a complete and final peace. We can accomplish this if we continue to be allies and friends. And I'd like to see the actors in Hollywood say to the actors in Moscow: "Friends, we applaud you in wartime. Let's see more of you and I hope you will see more of us. Let's not break off this relationship. Let's pledge ourselves to eternal friendship. Governments maintain international relationships. Well, let us do the same thing. We're together in tough times, let's not lose each other when times are better.

"In other words, artists of the Soviet Union, shake."

Court Quorum

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. HOBBS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Post of October 4, 1943:

COURT QUORUM

The judicial term upon which the Supreme Court commences today will bring a number of significant cases up for review. Operations of important war agencies of the Government, including the Selective Service System and the Office of Price Administration, will be submitted for judgment. In addition the docket contains several pleas involving questions of minority rights. Wartime pressures inevitably place strains upon our ordinary legal processes and give rise to questions centering around the exercise of extraordinary governmental powers. The decisions of the Supreme Court are never more essential or urgent than in such a time as this.

Yet the Court is handicapped in the discharge of its obligations by the antiquated law which stipulates that no fewer than 6 of its Justices are required to constitute a quorum. This requirement has remained in effect since the days when the Court had 10 members. Now that it has only 9, a quorum could reasonably consist of a simple majority of 5 Justices. Such a change has been proposed in legislation introduced by Representative HATTON SUMNERS, chairman of the House Judiciary Committee. Chief Justice Stone testified last spring to the fact that some change is necessary if the Court is to dispose of 2 important cases on which it has been unable to take action because of liability to secure a quorum of 6.

These cases concern application of the antitrust laws to the Aluminum Co. of America and application of the "death sentence" provision of the Utility Holding Company Act to the North American Co. Four Justices have disqualified themselves from acting in these cases because they had connections with them before ascending the bench. Since the Court now has three former Attorneys General and one Solicitor General in its membership it is entirely possible that these Justices will feel impelled to disqualify themselves from other litigation for the same reason.

Such inability of the Court to act amounts to a frustration of justice. The remedy is simple and logical. Congress should act promptly to give the Supreme Court the relief prescribed by Congressman SUMNERS. This would enable the Court to dispose of the old problems inherited from past terms and to avoid new dilemmas of the same sort in the future. There can be no reasonable question as to the validity of judicial proceedings conducted before five Justices.

Ceiling on Hogs

REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, October 7, 1943

Mr. WILSON. Mr. Speaker, I take this time to read a statement of Mr. Hassil E. Schenck, president, Indiana Farm Bureau, Inc., and member, board of directors, American Farm Bureau Federation:

Yesterday, October 4, might well be termed "Black Monday" by hogmen throughout the Nation, for it was then that Washington specialists deemed that free marketing of hogs should come to a close. The specialists say $14.75 a hundredweight, less than 15 cents a pound, is the limit beyond which packers must not pay if they expect to remain out of prison, though these same packers paid an average of 40 cents a hundredweight above this top on the market day just preceding. Farmers are wondering if this is the Government's E award for excellent production.

This decree, by the stroke of a pen, denies free enterprise to the hogmen of America. It is but another of the misdirected philosophies conducive to bare meat platters on the tables of this Nation, and is contrary to the recommendations by the National Meat Board, whose members represent producer, packer, and consumer interests. The decree represents nothing other than governmental control founded on theory rather than the practical.

SAYS UNITED STATES BROKE FAITH

Never has the Government broken faith with American farmers more than under the present decree. A year ago the urge went out for greater hog production. Farmers responded with 126,000,000 head of hogs, which is far beyond any previous production. Nothing was said about ceilings by Government ruling until the crop was well on its way to market, and then it was held off until the flow of finished hogs started to the receiving yards.

Farmers are keen enough to realize the unfairness of feeding industrial workers who are on a time-and-a-half-for-overtime-pay basis supported by the Government, while they at the same time, receive no pay for their extra 30 hours a week. The breaking of faith and the monetary loss are factors most disturbing to the morale of farm people; however, something more is at stake—free enterprise has vanished under such a system. The top of $14.75 for hogs—a ridiculously low ceiling as compared to all other phases of our economic society—means the high-quality hogs and those of low quality will sell at the same figure. It will penalize efficiency and premiumize inefficiency. Thus, the poor herdsman will profit equally with the progressive and the public will pay the same price for poor and good meat. In fact, the incentive to produce good meat has been eliminated.

MEANS HOGS ARE HOGS

The public open markets have been the places where producers and packers met to bargain and to establish livestock prices according to volume and grade. Both these groups have labored for years to establish premiums for good livestock, to pay the good herdsman for his extra care and knowledge, and to bring a higher quality product to the consuming public. The new decree means that hogs are hogs; it means that farmers no longer have anything to say about the price of their products, and it means that since all packers will bid the top price it seems certain that Government agencies will have to step in and allocate which packer gets what and how much.

Back of this whole program probably is the plan to force subsidy payments to farmers and to provide cheap food for the industrial workers of the Nation. Congress is facing concerted effort to force the subsidy payment program. Farmers are against such programs that will cause the soldiers who return from the battle fronts to pay the grocery bills of those who stayed at home and received time-and-a-half for their war work.

CHARGES DISCRIMINATION

Since agriculture has received but about one-eighth of the increase of the national income since 1939, it has become apparent that no abnormal earnings are accruing to farmers and that there is no reason why the industrial workers of this Nation should have a portion of their grocery bill paid by the whole of the taxpaying public.

The fact that the Federal Government has seen fit to slap a ceiling price on hogs after the work has been done, not at the beginning of the season, has far-reaching influence. For instance, the price of corn was established at a trifle above $1 a bushel after it was produced, which may have given the idea that farmers would go ahead, anyway. Ceilings were placed on beef, which, in effect, is a top on live cattle. The program outlined by the Government for the coming year seeks an increase of 19 percent in cattle slaughtering and a 3-percent increase in corn.

WARNS OF FUTURE

Certainly corn ceilings at around $1 a bushel is small incentive for expansion, and anyone acquainted with the cattle industry knows that but few cattle are coming to the Corn Belt feed lots. While increased cattle slaughter is now recorded, let no one be misled, for in this act the public is eating well into next year's supply of beef about 8 months in advance of normal procedure.

Farmers are patriotic in times of peace and in times of war, but at the same time they, too, are caught in the entangling mesh of heavy taxation and support of public affairs. Ten years ago farmers produced and sold hogs at around 3 cents a pound, when the streets were worn thin by the shuffling feet of the unemployed. Today they are asked to feed a nation of workers who are now paying by far the smallest percentage of their income in all history for food, and at the same time to lose the free initiative that has characterized agriculture.

Government and Business

EXTENSION OF REMARKS
OF
HON. MICHAEL J. BRADLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, October 7, 1943

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under the unanimous consent, which I have received from the House, I am presenting for insertion in the CONGRESSIONAL RECORD an editorial published on October 4 in the Philadelphia Evening Bulletin:

GOVERNMENT AND BUSINESS

The Republican leader of the House, JOSEPH W. MARTIN, Jr., cites Government ownership of many defense plants as a possible threat to the future of free enterprise. He promises that Congress will be on guard against the encroachments of Government bureaucrats, who are suspected of designs on our system of private ownership.

No Government bureaucrat brought about the investment of public money in defense plants. Private capital, for understandable reasons, did not wish to risk funds in the creation of large industrial capacity which might be of no use after the war. Since an expansion was absolutely necessary if the Nation was to be defended, the Government had to put up the money.

There is little use in trying to read ideological motives into the expansion of Government activities in wartime. Such a growth of Federal power is inevitable.

Representative MARTIN reflects the general desire of most Americans that our expanded industrial capacity shall be used by private enterprise after the war. But scheming bureaucrats are not going to be the main obstacle. If private business shows that it can use our increased plant and machinery to give jobs to millions and raise our standard of living, no bureaucrat will stand a chance of blocking such a program. Only when business declines the challenge will Government step in.

Suggested Steep Liquor Taxes—More Bootlegging—Prohibitionists Again on the Rampage

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, October 7, 1943

Mr. CELLER. Mr. Speaker, the Treasury Department has suggested that there be an increase of six to ten dollars per proof-gallon on distilled spirits. Ten dollars per proof-gallon would mean a tax of $2.50 per quart of 100-proof spirits.

As one who has lived through the horrors of prohibition, I want no recrudescence of wholesale bootlegging and moonshine. I feel that this drastic increase would be sufficient incentive to bring about the return of bath-tub gin, ginger jake, hair-tonic rye, and needled beer. Bootlegging would be revived on a huge scale, and I question whether the Treasury Department would get a dollar of increased revenue. The members of the Ways and Means Committee should think most maturely before bringing about this enormous increase. It must be remembered that the tax recently was increased from four to six dollars, and now it is proposed to increase it to $10.

The whisky industry has been producing solely for the war effort. All distillers are making alcohol for rubber and smokeless powder. There is probably only a year and a half's supply of potable whisky. Beverage whisky, both rye and

bourbon, is mighty scarce. It is axiomatic that as the supply of whisky diminishes, the greater the bootlegging racket becomes. That was indeed the lesson of prohibition. It was the absolute scarcity of legal liquor that gave rise to Al Capone's ascendancy.

Because of the 1½ years' supply, the sales, of necessity, will be at low ebb. I do not understand how the Treasury expects to get increased revenue, especially, if illegal liquor will take the place of legal liquor.

In the fiscal year 1942, the collection of excise taxes on alcoholic beverages exceeded in the beginning $1,000,000,000. This was an increase of 33⅓ percent over 1941. In the fiscal year 1943, there was another 40-percent increase in the collection of these taxes, the total being $1,423,481. That is a rather tidy sum to get out of liquor. While it may be true that the traffic can stand some increase, it cannot stand increases up to $10.

Furthermore, Cuba is not so far from the United States. In fact, it is only a stone's throw by airplane. Neutral spirits can be manufactured quite cheaply in Cuba, and the inducements for bootleggers to run rum to the United States would be great.

The distillers asked recently for a furlough to enable them to make a small quantity of potable liquor so as to replete the diminishing supply. They were denied this right, although Cuban and Puerto Rican rum distillers were bringing in their liquor in vast quantities. In fact, Cuba has increased her alcohol production, which was twenty-five to thirty million gallons a year to seventy million a year. This is an increase of more than 100 percent. This increase has been at the expense of our own distilling companies.

Furthermore, large quantities of tequila have been imported from Mexico.

PROHIBITION AGAIN ON THE RAMPAGE

The prohibitionists are endeavoring to bring about national dryness not by any cataclysmic change like the eighteenth amendment. They are striking with might and main, inch by inch, as it were, by means of local options. Township after township, county after county are being conquered. Liberal and responsible men everywhere should be on their guard. It is dangerous to say, "It cannot happen again." They ignore the evident signs of danger. Oklahoma and Kansas are old offenders and remain dry, but 76 out of 120 Kentucky counties have been "dried up" by local options.

One-half of the 54 counties of Texas have voted dry. In North Carolina and Utah there is dangerous support of enlarged prohibition forces. The prohibitionists do not hesitate to take advantage of the men in the armed forces who are not home to vote. Just like in the last war, many of the men who might have voted against local option or local prohibition are on the high seas or in war theaters of operation or in cantonments. The drys use the slogan "Protect the young men in the armed forces." These men really need protection against the blue noses.

The increase of taxes, as aforesaid, would cause a revival of hijacking and bootlegging, play right into the hands of the drys. This is the type of ammunition that the drys can readily use. They take political advantage of the presence of juke joints, moonshining, and hip-pocket flasks.

I have an interesting letter sent by the publisher of Liberty magazine to the conference of alcoholic beverage industries.

AUGUST 3, 1943.

Mr. FRANK KANE,
Conference of Alcoholic Beverage Industries, New York, N. Y.

DEAR MR. KANE: In the Vox Pop column of the May 8, 1943, issue of Liberty magazine, a letter from one of our readers was reproduced, the text of the letter being as follows:

"BROOKLYN, N. Y.

"I want to go on record as opposing soldiers and sailors—officers are the worst offenders—visiting night clubs and wasting their time and money—drinking and watching floor shows.

"There should be a rule that men in uniform could not be admitted to such places for the duration.

"R. C. WINSTON."

The first 10 days following, over 800 letters had been received, largely from servicemen, and in the next month another thousand letters came in from all over the world.

There were lots of V-mail letters, and there were some letters from wives and mothers of servicemen, and letters from fighters back home in hospitals. These letters were unanimous against the viewpoint of Mr. R. C. Winston, and in reading them you got a clear understanding of fighting men and their families taking this item not as an end in itself, but as exemplifying a viewpoint toward their rights as citizens.

I am calling this to your attention with the thought that you will undoubtedly be interested in the violent reaction on the part of men in uniform against any attempt to legislate away their liberties in their absence. Reading these letters, one cannot fail to realize how resentful these men would be if we were to permit prohibitionists to bring back a repetition of the Volstead era. One of the letter writers enclosed a copy of a recent editorial from Stars and Stripes, the official newspaper of the A. E. F., with the following paragraph encircled:

"We can remember the days of prohibition, when moonshine whisky made fortunes for bootleggers, crooked politicians, and dishonest police officials. As a result, we claim we know what we want in the way of liquor legislation and feel those at home should wait until we return before initiating further legislation on liquor control."

I think that one paragraph capably sums up their attitude toward prohibition activity at this time.

Best regards.

Yours very truly,
LIBERTY MAGAZINE,
PAUL HUNTER, *Publisher.*

Furthermore, it is interesting to repeat part of a statement that appeared in the book, Under Cover, by John Carlson, published by E. P. Dutton & Co. I insert parts of pages 516 and 517 thereof:

Nazi agents will miss no trick to foment discord. The current cries and agitation of the drys to bring back prohibition—and with it "hootch" and its effect on war morale—is highly pleasing to the Nazis. Their agent in Switzerland, "Dr." Robert Hercod, is secretary of the Nazi-subsidized International Bureau Against Alcoholism. Hercod wormed his way into the confidence of Americans and became correspondent for The Voice, organ of the Board of Temperance Union of the Methodist Church; as well as the American Issue and the Union Signal, official organs of the Antisaloon League and the Woman's Christian Temperance Union. Hercod's Nazi propaganda crept into numerous articles he wrote for American consumption.

Quick to take advantage of the sneak attack on Pearl Harbor, Nazi agents spread about the lie that the surprise attack was due to the fact that our men were in a drunken stupor—a lie which was believed in and disseminated by some prohibitionist factions. And bootleg Americanism on behalf of prohibition has been propagated consistently by Kullgren's Beacon Light, Garner's Publicity and Winrod's Defender.

Captain Edward Page Gaston, reserve officer and director of the World Prohibition Federation, helped promote the dry cause in Washington. I first interviewed Gaston, founder of the Patriot Guard of America in 1940, in New York, and after I had told of my membership in the Mobilizers and the Nationalist Party, he commended me as an "upstanding young American who loves his country." He then offered to speak for the Mobilizers, gratis, or any other patriotic group I named. I interviewed him again in Washington in February 1943, and learned that he was a personal friend of Hercod, whom he had met in Paris.

Certain prominent drys were mentioned as his (Gaston's) supporters.

An Act of Justice

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

AN ACT OF JUSTICE

Repeal of the Chinese exclusion laws, under the terms of the Magnuson-Andrews bill now before the House and Senate Committees on Immigration, would be an act both just and gracious. The Chinese people are our allies in war. They have won the admiration of Americans by their gallant struggle against the more powerfully armed forces of Japan. An awakened China in the postwar period promises to be a powerful influence in world affairs. If the world is to live at peace, there must be bonds of friendship between the Orient and the Occident.

More than 60 years ago this country raised a barrier against Chinese immigration. It has been continued ever since. The barrier became necessary because employers of labor in this country sought to enrich themselves by the importation of Chinese coolie labor. The coolies were brought in by the thousands, until the people of the West cried out against the practice. This coolie labor was willing to work for far less than our own workmen. It worked longer hours and lived on less food. It was a threat to American standards of living.

Repeal of the exclusion laws today does not mean lifting the bar to unlimited immigration. It means placing the Chinese on the same footing with other nations, under the immigration quota system, which limits immigration from all other countries. Indeed, the number of Chinese who would be permitted to enter this country as immigrants would be limited to 105 a year. Not by the wildest stretch of imagination could this number affect the living standards of the American people.

Representative MAGNUSON, of Washington, Democrat, introduced his repeal bill last April,

and Senator ANDREWS, of Florida, Democrat, offered the same measure in the Senate last week. No good reason exists for delay by Congress. Many reasons can be found for prompt action. The first is the removal of a stigma against the Chinese people, which quite naturally rankles in the hearts of Chinese leaders. A second lies in the fact that China of the future is bound to be a great field for the expansion of international trade, of which the United States should have its full share.

The peoples of the Orient are stirring. Under the leadership of President Chiang Kai-shek the Chinese will make great strides. All that can be done in reason to help cement the friendship between the East and the West should be done—if a future war, perhaps more devastating than even that of today, is to be avoided.

This country, because of the tremendous flood of immigration from all parts of the world which was bringing to these shores more than a million aliens each year, adopted the quota system, under which each foreign nation is limited in the number of persons it may send here. Today the maximum immigration possible in any one year is 153,774 persons. The Magnuson-Andrews bill does not seek in any way to break down the quota system. It merely extends it to the Chinese. To do this now—not waiting until pressure after the war—would be a friendly act that would be appreciated.

Chicago—Water and Polio

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of September 30, 1943:

CHICAGO—WATER AND POLIO

Chicago has thought up a new "reason" for demanding diversion of more water from Lake Michigan.

Tests of water in the drainage canal, spokesmen say, show the presence of the infantile-paralysis virus. If Chicago is to be saved from an epidemic of the disease, it is added, sewage must be flushed more rapidly into the Mississippi.

This is just another of those arguments, and the House Rivers and Harbors Committee should recognize it as such. If the poliomyelitis virus is dangerous in water, there surely is no national advantage in speeding it down a river lined on both shores by hundreds of cities and villages.

The best that diversion could do would be to help Chicago at the expense of other cities. The argument is as empty and as selfishly conceived as all the other arguments brought forward by the Illinois metropolis.

There is just one proper way to handle sewage—and that is so to treat it that it is harmless. Chicago, defeated year after year in its diversion attempts, has made a start at such treatment—using Federal work-relief money for the worthy purpose. What it should now do—just as other Lake Michigan cities have to do or should do—is to use some of its own money to complete modern sewage-disposal facilities.

Nobody wants Chicago to have an epidemic of infantile paralysis or any other epidemic. Neither does anybody want epidemics to visit cities down the Illinois and Mississippi Rivers. Chicago should be told what its obligation is. It should be told that it must purify its sewage before emptying it into an interstate and navigable watercourse.

If Chicago does this, danger from waterborne epidemics will cease—and the whole health argument for diversion will be unnecessary.

No Entanglements

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Parkersburg News of September 26, 1943:

NO ENTANGLEMENTS

Inspired by international star-gazers, administration leaders, and a must bill, the House ignored the advice of Washington, scrapped the Monroe Doctrine, ignored the real wishes of the American people, and prepared a bed in which John Bull and Uncle Sam will retire.

When these gentlemen emerge from the bedroom, Winston Spencer Churchill will be wearing Uncle Sam's trousers, with the money in the pockets, and Franklin Roosevelt will be clad in a brief pair of shorts, clutching an armload of promissory notes and a few hundred billion dollars in war debts. The promissory notes will be as worthless as the First World War debt, but the few hundred billion will have to be paid by the American taxpayer.

Having just returned from a vacation in which the various Members of Congress had an opportunity to feel the pulse of the down-to-earth men and women, and returning to their duties with the real impressions and wishes of the great mass of our citizens, they should not be influenced by the opinions of a few prominent citizens who gained their impressions from top-notch radio commentators and columnists who do so much of the thinking for our people, and feed the same brand of soothing sirup little men who were never elected to office spoon out.

The average American citizen is not adverse to sharing his blessings. However, he does not want to go out and police the world, feed the world, lower tariff walls, and destroy his own way of life to do so. His main wish is to win the war, bring our boys back home and forget the entire sorry mess. He does not want any part of WALLACE's milk route other than to see that the needy and undernourished children and aged of the United States receive enough to eat, cover their nakedness, and have a place to shelter them from the storms. They prefer to do that themselves if this Government will allow them to work and not destroy our economic structure by trying to provide for nations which have been at war for over a thousand years. Nor to protect any boundary lines for nations who have held millions of people in thralldom for the last few hundred years. And they also want to see the rest of the world devote the first few years of peace to raising the food and fiber to clothe and feed themselves instead of having Uncle Sam do it while they rehabilitate themselves so they may compete with the United States for world trade.

There will be many upsets in world economy and dominance coming out of this war. England will emerge as top dog. The conquest of Africa assured the world of that. With that vast empire added to her dominions an undreamed reservoir of raw materials will fall within her control and any one who knows England knows how this material will be used. If she desires to hold the former French territory in Africa for England, will the United States be expected to clean up that mess?

From all indications Russia will become top dog in Europe. If she revives the old czarist ambition of going through Afghanistan and taking India, will the United States be supposed to clean that up? Can you picture the English lion taking a nice juicy bone from the Russian bear with the American eagle acting as referee? What will India do? Will we aid Britain in holding 400,000,000 people in thralldom? If this is a war for true democracy will England hold India after it ends, or will the right of self determination be granted India? If so, will we help whip India into line for the English yoke? Winston Churchill has declared that he was not elected as Prime Minister to dissolve the British Empire. That is sufficient warning, to anyone who can read or think or hear, of England's post-war ambition. However, nothing has ever emanated from our own Government as to what we will do about that.

Will the Dutch East Indies be returned to Holland against the wishes of the inhabitants of those treasure houses in the South Pacific, or will the inhabitants be allowed to determine the form of government they wish to follow, or whether they will be allowed to govern themselves?

These are questions which should be answered by our own Government, not after the war is won but before any world peace plans are formulated and thrust upon an unwilling people. Those who claim that citizens of the United States are willing to assume this responsibility do not know what they are talking about. Harry Hopkins may have been right when he said the people were "too damned dumb" to understand, but they are not too damned dumb to understand that this Nation is not either able or willing to feed, clothe, and police the world.

Why not win this war, disarm the gangster nations and turn them over to Europe and Asia, and wash our hands of the entire mess? If Europe and Asia cannot handle two hundred million Germans, Japs, and Italians, let Europe and Asia suffer the consequence and not saddle their burdens on the United States for the third time. This is no time to destroy our ways of life and the things our forefathers have fought to preserve and obtain for us over a period of 175 years.

Forget all First World War debts. The debtors never intended to pay them at the time they were contracted, and by all means give a receipt in full for lease-lend. Then we will not be called Uncle Shylock by the nations we save.

Keep a standing army of 3,000,000 men—maintain a two-ocean navy and do not turn our millions of returning soldiers and sailors loose to stand in bread lines and be fed by community soup kitchens while they search in vain for jobs. Rather, let the American people set to work, protected by the provisions of our own Constitution, instead of the sick theories of the New Deal, discharge our national obligations, and restore our way of life. American industry and labor can accomplish that miracle and are willing and anxious to assume the responsibility. And these groups will be backed by all the people of the United States.

In these days of bitter quarrels between bureaus and Congress; bureaus and bureaus,

the President and Congress, labor and capital, race riots and racial groups, friction and divisions within our own country will only aid the enemy. Peace talk and plans before the war is won are just as deplorable and criminal as over-confidence and optimism caused by a few victories.

It would seem that a statement of the intention of the administration is due the American people at this time instead of after the war. It would be better to forget these controversial issues and concentrate on winning the war and saving America for Americans.

We wonder what the Senate will do with this hot potato.

Good for Men, Too

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. HORAN. Mr. Speaker, much criticism is heaped upon the fourth estate. Some of it, of course, is entirely justified. It is encouraging to me to be able to have the following included, by unanimous consent, in the Appendix of the RECORD. It is good advice, intended for the women of America, but good for men, too:

THE GENTLER SEX—KEEPING UP WITH CONGRESS

(By Malvina Lindsay)

(A resolution for any woman who doesn't think the country should be "turned over to the politicians.")

I resolve to write during the present session of Congress at least one letter to a Senator or a Representative expressing my views on some important legislation. I will do this—

Because whether or not I have a vote, I do have a voice, and it is my obligation as a member of a democracy to assert that voice.

Because with so many men absent in war service, it is my special responsibility to take a part in government at home.

Because one of the causes contributing to Rome's decline was the fact that men citizens were away in battle so much of the time and women were either so politically inept or so engrossed in their personal affairs that they let the control of the farms and the government get into the hands of usurers and politicians.

Because the Fascist virus, as Herbert L. Matthews points out in the recent book, The Fruits of Fascism, developed in a political vacuum caused by the Italian people's indifference to political affairs.

Because the German people have successively been under the heels of the Prussian militarists and the Nazis, and precipitated two tragic wars on themselves and on the world, due to their long-continued failure to take any interest or hand in governing themselves.

Because Congress at this session will deal with matters of tremendous importance, matters vitally affecting my life and the lives of those who come after me.

Because its action on peace plans and this Nation's post-war relations with other countries will make it an instrument of destiny in the world, and because I must necessarily share the responsibility for whatever action it takes.

Because I have no right to remain silent and disinterested now and sit back later and say complacently, "Congress was to blame."

Because if everybody thought, "I am only one and no one will pay any attention to what I say," we would cease to have representative government.

Because Members of Congress who take courageous, unselfish, enlightened stands—often against personal interest—need the encouragement and approval of citizens who understand and appreciate what they are doing; and because the bolstering of a man's confidence stimulates his creative power.

Because Members of Congress who are undecided on momentous issues may be helped in making up their minds by the response from citizens.

Because in a time of war when the executive branch of the Government must be necessarily dominant, the legislative branch should be strengthened—and my interest in it may help in a small way to do this.

Because in the controversial issues to be decided in this session Congress will receive tons of form and rubber-stamp letters from pressure groups and special interests, and because a single independent letter from a conscientious citizen will have just that much more meaning.

Because throughout the Nation the uninformed, the misinformed, the prejudiced, and the ignorant, egged on by demagogues, will be expressing themselves to Congress, and because a letter from me, if dictated by conscientious thought and honest conviction, may help to tilt the scales on the side of reason.

Because I myself need the practice and the discipline of participating in government.

Because by writing a letter to Congress I will be sharing its perplexities and its burdens—instead of standing aloof as a carping, critical onlooker—and because my own heart and mind will be enlarged by the experience and I will feel more thoroughly a part of my Nation, and know in fuller measure the blessing of being a free-speaking citizen of a democracy.

The Present Food Crisis

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. JONKMAN. Mr. Speaker, yesterday I received recommendations of the Michigan Food Conference, an organization of farmers, processors and distributors, who met at Lansing, Mich.

One of their recommendations is "unification of the whole food production, processing, and distribution program under one Government agency," as recommended in H. R. 2739, known as the Jenkins bill, and H. R. 2837, known as the Fulmer bill.

The people are looking to Congress for a remedy in the tangled and oppressive food situation. Our food problem is plagued with the same muddled frustration which the Baruch committee described in the rubber fiasco as "administrative procrastination, indecision, conflict of authority, clash of personalities, lack of understanding, and failure to act." Congress did provide relief in the rubber famine by passing a bill in July of 1942 requesting the President to appoint a committee for the production of synthetic rubber, which resulted in the appointment of William Jeffers, who brought order out of chaos in our muddled rubber situation.

The people are looking to Congress to pursue the same course in providing a solution to the present food crisis in which 10 or more agencies are all thwarting not only each other but every other agency in the production, processing, and distribution of food. Congress now has before it a great opportunity for constructive action. The people are looking to Congress for this action and one of the biggest steps in that direction will be an early passage of the Fulmer bill, unifying the production, processing, and distribution of food for our fighting forces and the American people.

The following recommendations are in line with that ideal, and express the sentiments of those who are familiar with the problems confronting us:

RECOMMENDATIONS OF THE MICHIGAN FOOD CONFERENCE OF FARMERS, PROCESSORS, AND DISTRIBUTORS, AUGUST 9, 1943, AT LANSING, MICH.

PREAMBLE

Ill-advised activities and propaganda by various agencies, public and private, are resulting in programs that are adversely affecting production, distribution, and processing of food. Producers, processors, and distributors of food are experiencing unnecessary costs and hindrances as the result of unwarranted and destructive machinations and bungling. All of this is resulting in higher prices to and less food for the consumer.

The situation has reached a stage where all food industry groups are being obstructed seriously, with resulting discouragements in their efforts to grow, process, and distribute food for our armed forces, our allies, and for civilian needs. The entire food program will be defeated if these matters are not corrected soon. It may even result in serious food shortage, with accompanying hunger in this country and the starving of millions in foreign lands. In the light of the above, the recommendations of the conference are:

1. Unification of the whole food production, processing, and distribution program under one Government agency.

2. Recognition of all branches of the food industry as essential to the war effort to the same respect and to the same degree as is the production and handling of armaments.

3. Administration of a price program on the basis of encouraging production, and elimination of price ceilings which tend to have the opposite effect.

4. Solution of the inflation problem on a constructive basis by encouraging production and siphoning off the ever-increasing purchasing power of the American people through taxes and enforced savings by additional purchases of War bonds.

5. Elimination of subsidies and discontinuing their use as a means of controlling inflation and prices.

6. Requirement that Government agencies making announcements affecting the food program do so in conformance with the terms of the 1942 Price Control Act, and only after consulting with those familiar with the practical phases of food production, processing, and distribution, and sincerely receive their suggestions.

7. A return to constitutional government with the Congress, the elected representatives of the people, functioning as the policy-making, legislative branch of government, as opposed to government by directives from the administrative branch.

8. Approval for all essential expenditures by Government for the prosecution of the

war. Elimination of the waste of money and duplication of effort by Government agencies, or permitted by them in the war effort.

Michigan Food Conference of Farmers, Processors, and Distributors, C. L. Brody, Lansing, chairman; Michigan Allied Dairy Association; Michigan Allied Poultry Industries; Michigan Bean Shippers Association; Michigan Canners Association; Michigan Chain Stores Bureau; Michigan Elevator Exchange; Michigan Feed Manufacturers Association; Michigan Independent Packers Association; Michigan Live Stock Exchange; Michigan Milk Producers Association; Michigan Potato Growers Exchange; Michigan Retail Grocers Association; Michigan State Farm Bureau; Michigan State Grange; Michigan State Millers Association; Midwest Producers Creameries, Inc., Michigan district.

Canadian Feed for Livestock

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a letter from Judge Jones to the majority leader, the Honorable JOHN MCCORMACK, in reference to House Joint Resolution 155. It is hoped the Ways and Means Committee will give this resolution immediate consideration:

WAR FOOD ADMINISTRATION,
Washington, October 1, 1941.

Hon. JOHN W. MCCORMACK,
Majority Floor Leader,
House of Representatives.

DEAR MR. MCCORMACK: This responds to your letter dated September 23, 1943, transmitting a copy of House Joint Resolution 155 and requesting an expression of views with respect to the resolution. The resolution would suspend for a period of 90 days all import duties on wheat, oats, barley, rye, flax, or hay, or products thereof imported into the United States from Canada, to be used as, or as a constituent part of, feed for livestock.

The objective of the resolution is to make feed available to livestock producers in the United States in greater quantities and at lower prices. During recent months acute shortages of feed have developed in many sections of the United States and feed prices have advanced sharply as supplies have been reduced in relation to livestock numbers. I am, of course, strongly in favor of any legislation which would be effective in making available to producers feed in greater quantities or at lower prices, and to the extent that House Joint Resolution 155 would be effective in this respect, I favor its enactment.

During the 12-month period ending July 31, 1943, almost 100,000,000 bushels of oats and barley were shipped from Canada to the United States, and during the past 2 months about 20,000,000 bushels of wheat and some additional quantities of oats and barley have been shipped into the United States from Canada for use as livestock feed. We hope that during the coming year it will be possible to bring in substantially larger quantities of grain for feed. The limiting factor in the importation of grains for feed from Canada, however, is transportation rather than price. The transportation situation is such that it may not be possible to bring in sufficient supplies from Canada to reduce materially feed grain prices in the United States and thereby bring about lower feed costs to livestock producers. However, any additional amount that might be brought in would be helpful.

I believe that a brief statement of my views as to the effect of the enactment of the resolution upon each of the commodities listed would be helpful.

Hay: We understand that there are some surplus supplies of hay near the border in eastern Canada. This hay is very much needed in the drought areas of this country. This surplus hay could be used particularly in the drought area of Maryland, Delaware, Virginia, and West Virginia. Removal of the duty on hay would tend to facilitate the importation of hay and would, we believe, be reflected to some extent in lower prices to producers of livestock products in this country. Since this hay is in eastern Canada and the principal transportation bottlenecks on imports from Canada are in connection with feeds brought in from the western Provinces, we believe that transportation can be arranged for the supplies of hay which might be obtained from eastern Canada.

Flax: Flax, as such, is not used as feed or as an ingredient of feed. Moreover, flaxseed is seldom used as feed or as a feed ingredient, and, in view of the protein feed shortages existing in Canada, we do not believe that there would be substantial stocks of linseed-oil meal available for shipment to this country. As we interpret House Joint Resolution 155, the exemption from duty would apply only to flaxseed if it were to be used as such as feed or feed ingredient, or to linseed meal if it were imported as such into the United States for use as feed. In other words, the exemption would not apply to flaxseed imported for processing into oil and linseed meal. Any other view of the meaning of the bill would compel the conclusion that wheat for milling could be entered duty-free since mill feed is an important product of the milling. Even if the bill were amended or interpreted so as to exempt flaxseed imports from import duties, we question whether livestock producers in this country would be benefited thereby. In view of the critical shortage of protein feeds in this country, it is probable that all linseed-oil meal produced would continue to sell at the ceiling price and, therefore, the only effect of the removal of the duty would be to increase the margins of flaxseed processors or dealers or to increase the price that our processors or dealers would have to pay in Canada for flaxseed.

Rye: We have on hand in this country substantial stocks of rye which could be used as feed if it were practicable to do so. Rye, however, is not usually regarded as desirable feed for dairy cattle or breeding herds. Until ways and means are found of using at a faster rate the domestically produced stocks of rye, there may not be much interest in importing rye for feed.

Barley: Barley produced in Canada cannot be exported without export permits, and on September 21, 1943, the Canadian Government discontinued the issuance of export permits, in view of the reduced production of barley this year and the increased need for this grain in the eastern Provinces. At the present time, therefore, it would not be possible for purchases of barley to be made regardless of the amount of the duty in effect. It is not anticipated that very large quantities of barley will be made available for exportation to this country prior to the harvesting of the next crop. The Canadian Government has imposed an equalization fee on barley exports to this country which represents the difference between the ceiling price in Canada and the market price in the United States less the import duty. On September 21, 1943, when issuance of export permits was temporarily discontinued, the equalization fee being levied was 39 cents (Canadian funds) per bushel on barley shipped from exit ports west of Fort William and 43 cents (Canadian funds) per bushel on barley shipped from Fort William and exit ports east thereof. It would be helpful if Canada could find it possible to modify the equalization fee.

Oats: Substantial quantities of oats will be available for shipment into the United States from Canada but here again the supply in Canada and transportation facilities rather than the import duty are the limiting factors. As in the case of barley, an equalization fee is also being collected with respect to oats and removal of the import duty would probably merely mean an increase in the equalization fee, with the benefits of the removal of duty going to the Canadian producers. The equalization fee on oats has been increasing gradually, and on September 24, 1943, the amount of the equalization fee was 25 cents (Canadian funds) per bushel on oats brought in from exit ports west of Fort William and 34 cents (Canadian funds) per bushel on oats brought in from Fort William and exit ports east thereof.

Wheat: To facilitate the importation of wheat for feed, the President, by proclamation, issued on April 20, 1943 (No. 2584), authorized the importation from Canada of wheat and wheat flour by the War Food Administrator or persons designated by him without regard to the quota limitations established by the proclamation of the President, issued May 28, 1941 (No. 2489). The War Food Administration, through Commodity Credit Corporation, is now bringing into this country for use as feed all of the wheat for which we have been able to arrange transportation. This wheat is being sold at the feed wheat prices authorized by the Congress; that is, on the basis of the parity price of corn.

While I am entirely in accord with the objective of House Joint Resolution 155, to make feed available to livestock producers in greater quantities and at lower prices, the resolution may not accomplish as much as we would like, except as to hay. At the same time we favor its enactment.

In view of the time limitations involved, we have not submitted this letter to the Bureau of the Budget so that we can make no statement as to its relationship to the program of the President.

Sincerely yours,

MARVIN JONES,
Administrator.

Sweden Protests

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of October 6, 1943:

SWEDEN PROTESTS

What is happening to the Jews in Denmark today is but the tragic repetition of

what has happened to the Jews of every country which the Nazis have occupied. Blamed for the militant opposition which has developed in Denmark to the German occupation of that country, they have become the latest victims of Nazi savagery. They are being taken from their homes, separated from their families, and deported to the wastelands of Poland, there to be enslaved and ultimately destroyed.

The picture is the all-too-familiar picture of insensate barbarism which Hitler has painted from one end of Europe to the other. It has only one bright spot, namely, the reaction of the Swedish Government and people to the plight of these Danes of Jewish faith. From one end of Sweden to the other strong objections to Germany's action have been made, even such a Hitler lover as Sven Hedin joining in the chorus of protest. And the Swedish Government, to its great credit, has not only sent a formal note of protest to the German foreign office, warning the Reich that "serious repercussions" will be felt in Sweden, but has also offered to give refuge to the deportees. In taking this stand Sweden is not only living up to its own enlightened tradition, but is also serving as the spokesman of humanity.

For the Unconditional Surrender of Fascism

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I herewith present a letter addressed to me by James Loeb, Jr., executive secretary of the Union for Democratic Action, as well as a statement from such organization:

UNION FOR DEMOCRATIC ACTION,
New York, N. Y., October 1, 1943.

Congressman EMANUEL CELLER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN CELLER: Enclosed is the text of a statement issued last June from this office. You will note that you were one of the four Congressmen who signed. Unhappily, the situation foreseen in the statement seems about to be effected. We would, therefore, urge you to do everything possible on the floor of the House to repeat the warnings contained in this statement.

We believe it essential to distinguish between the acceptance of military aid and the granting of political power. As Count Carlo Sforza has so well stated in his interview in the New York Times this morning, support for the Italian monarchy by the United Nations would have a disastrous effect in alienating the sympathy of the large anti-Fascist masses of Italy.

We cannot believe that the demoralized and disorganized Italian Army can be of such value as to warrant paying this horrible price. We are convinced that the Nazis will be driven from Italy by the combined might of the American, British, and Canadian armed forces, together with the enthusiastic cooperation of an Italian population disgusted with monarchy and dictatorship and aspiring to a genuine democracy.

This is indeed the crisis of the war.

Cordially,

JAMES LOEB, JR.,
Executive Secretary.

FOR THE UNCONDITIONAL SURRENDER OF FASCISM

We are engaged in a total war against fascism.

American lives, among others, are being sacrificed in that total war.

Our Government, through the voice of our President and Commander in Chief, has pledged that the war will be carried through to the unconditional surrender of the Fascist enemy.

But Fascists are always for sale. As the overwhelming power of the United Nations becomes more apparent, they will become increasingly for sale, and at a seemingly decreasing price.

But whatever the legal terms, the price in the end will be a totalitarian Europe and World War No. 3.

To pay that price would be a crime without name.

To pay that price would be betrayal of those who have fought and died and of those who have fought to live.

To pay that price would be betrayal of those countless millions in the conquered lands to whom we have repeatedly appealed in the sacred name of freedom, who have fought unremittingly against Fascist barbarism, and have looked to us for liberation.

To those of us who believe these things current rumors regarding new Darlans in Europe are more than disquieting. These rumors are particularly strong in Italy. Such men as King Victor Emmanuel, Count Ciano, Dino Grandi, Crown Prince Umberto, and General Badoglio are being mentioned as possible collaborators with the Allied cause, as non-Fascists, and even as anti-Fascists.

We respectfully submit that men such as these who have faithfully collaborated with fascism for more than 20 years can hold no positions of control in a democratic order in Europe.

We must not pay their price.

Were it not for previous policies and actions of our Department of State which have aroused doubts throughout the democratic world, all these rumors might be ignored as the inevitable accompaniment of a global war.

We feel that it is opportune now, before policy has been fixed, for the free citizens of an embattled democracy to reiterate their profound belief that there can be no compromise between fascism and democracy, between Fascists and Democrats.

We trust that the Allied armies, now poised to strike at the heart of fascism, will be victorious not only as military conquerors, but as armies of liberation.

William Agar, Luigi Antonini, Henry A. Atkinson, George Baldanzi, Robert Bendiner, G. A. Borgese, W. Russell Bowie, Dwight G. Bradley, Louis Bromfield, Van Wyck Brooks, Henry Seider Canby, John Alden Carpenter, Congressman Emanuel Celler, John L. Childs, Congressman John M. Coffee, Albert Sprague Coolidge, Elizabeth Sprague Coolidge, Congressman Daniel Ellison, Irving Engel, Waldo Frank, Walter Frank, Christian Gauss, Frank P. Graham, John Green, William Green, Ernest Graham Guthrie, Mortimer Hays, Marion C. Kilpatrick, William H. Kilpatrick, Freda Kirchwey, Jack Kroll, Max Lerner, J. A. MacCallum, Alonzo F. Myers, W. W. Norton, June Proyines, A. Philip Randolph, Elmer E. Rogers, Congressman Will Rogers, Jr., Waverley L. Root, Lisa Sergio, Guy Emery Shipler, Robert G. Spivack, Johannes Steel, Maurice Stone, R. J. Thomas, Clifton M. Utley, Oswald Veblen, J. Raymond Walsh, Max Zaritsky.

Individual Control Necessary to World Peace

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Judge William H. Wadhams, of East Jewett, N. Y.

Judge Wadhams is an international lawyer, has had offices in Berlin, Paris, and New Delhi, India, and is permanent adviser to the Chamber of Princes on the Federation of India.

As a member of the executive committee of the League to Enforce Peace, Judge Wadhams worked on the plan for a League of Nations, and observed at close range the cause of its failure. He is presenting a new and more hopeful approach to securing an enduring peace in this article.

The Government Printing Office informs me it will cost $112.50, which is $22.50 in excess of the allowance.

The article follows:

Mr. President, ladies, and gentlemen, doctors of medicine are the fighters of death and the conservers of health. You look into the eyes of men and women throughout this State, and you learn their innermost thoughts, and you have glimpses into their souls. You know that these people are determined, first, to win the victory over the enemies we are now engaging, and then by some method to see to it that this fatal disease, this terrible calamity of war, which from time to time inflicts mankind, shall not continue in the world. You work to save lives, yet one bombardment of one city by 4-ton blockbusters kills more people in an instant than you could save in a hundred years.

The tragedy is great. The remedy must be severe, and it must be applied. I was holding court in New York, when the messenger came in and said, "Armistice! Armistice! Armistice has been signed today." The court adjourned, and everyone rushed into the streets. The war was over, the killing was finished, our boys were coming home, peace reigned again in the world. We formed a procession. We marched up Broadway. The people all came out of their offices, and they fell into each other's arms. There was dancing and rejoicing, for the war to end wars had been won. It was going to be a new and a better world, and we were going to have peace on earth and good will among men.

Some of us had been working on a proposition as to how to bring that about. We had an organization called the League to Enforce Peace. Ex-President Taft was its president and Lawrence Lowell, of Harvard, was the chairman of its executive committee. We formed a committee to organize a plan, and we drafted what we called a League of Nations. We went about talking about it. There was a pretty general approval, and we had a great dinner in Washington at which the heads of all the elements in the United States, the clergy, the leaders of industry and of labor, the doctors, the lawyers, the professions, and all classes and conditions of men were present.

This program which we had prepared was presented to President Wilson, and he adopted it, and worked on it, and took it over to Paris with him. There had been some modifications in it; the teeth had been drawn. I had

the privilege of being in the clock room at the Quay d'Orsay when he presented it to the peace conference in the form of the Covenant of the League of Nations. The delegates and the ambassadors could only take in one guest apiece, and I had the good fortune to be taken by our Ambassador as his secretary: so I clung to his coattails, and found myself sitting next to Orlando, of Italy, on the one hand, and Jules Cambon, of France, on the other.

As President Wilson arose slowly and solemnly, he seemed to look into the future, offering peace to mankind through his League. There was a moment when it appeared that he was the savior of men, for all the peoples of the world were longing for peace. When he had finished reading, there were many speeches of approval. However, as he sat down, after reading the Covenant, Clemenceau, the Lion of France, who had done such wonders in the World War but who had no peace vision for the future, turned around and looked at Cambon, who was sitting beside me, and winked. That wink told the whole story of the future of the League of Nations.

Having an office abroad, I had the opportunity to follow the League's course, and to see its failure and collapse. Let us hold an autopsy. What was the cause of the death of the League? An autopsy is only valuable for another patient, in case we find out how we can apply the reasons of death that we have discovered. The cause of the death of the League was that it was not a peoples' league; it was a governments' league. It was a league of diplomacy. The Covenant was as good an instrument for the expression by a League of Nations of the common and unanimous will of the governments of its members as could well be drawn, yet it failed.

Before we go further and investigate what were the defects of its provisions and what may be a cure, I wish to warn you that the establishment of peace is not a thing that can be done overnight. First the victory must be won, and nothing must divert our attention from winning that victory, because until the aggressor has been vanquished there can be no peace. There can be no peace until we have utterly routed a people who have been educated to believe that hate is a virtue and that was is a normal condition. After the victory we will have to clear up the ruins—and such ruins as have never been contemplated. There are no kitchen utensils left for the women in their kitchens in France. The leather has been torn from the chairs, and the sofas, everything that is movable, everything that they can lay their hands on, the Germans have carted off to Germany, including my library; and the last I heard the Frigidaire had also gone after the library. Factories are gutted, the machinery is gone, and that which is there is being used to the utmost and will be worn out and valueless. The populations are being removed and scattered over the face of the globe. Children are being sent apart from their parents to unknown places, and their names changed. The mere work of trying to gather together the scattered remnants of what lives is in itself a tremendous task. Epidemics and starvation such as have never been known threaten the peoples of the world, starvation that looks for a crumb of bread. The Germans have not left these countries yet, and I tremble to think of what they will do before they leave them. Collaborationists saved Paris, but who knows what will happen to Paris and all the other occupied places before the enemy leaves?

Restoration is the first work before anything else can be set up. Industry must be started, trade begun again, and transportation put in order. Employment must be found. We will have to do a large part of that unless we want to live in a world of corpses.

Then after that, what? After that, the beginning of cooperation. Cooperation will form itself by reason of necessity. The victorious nations will have to establish and maintain order in the world by reason of the conditions which will confront them. That cooperation will lead to something else. It will finally gather together the nucleus of a new order to maintain the peace which has been won.

And now I speak of what is very, very dominant and very important to you all and to all the people who want peace. I have read all the speeches, I have read Vice President WALLACE's speeches, I have read Mr. Willkie's speeches, I have examined the reports of groups which are studying the new world organization, and I do not find in them an examination of the cause for the failure of the League of Nations.

It would seem reasonable, would it not, that when we have had examples before us of efforts to maintain peace and to organize states in combination, that we should examine those organizations to find out why they fail, and then, having found out why they have failed, to see if we can apply a cure that will make them work?

They say—and I speak of the scoffers, and the timid, and the unbelievers, and the doubters—how can it ever work? How can any world organization ever work in view of human frailties, of the competition and jealousies of nations, of the inimical force of politics, and of the ambitions of rulers and of politicians? How can it ever be made to work?

If those who establish the post-war organization follow the old League lines, if they follow the old methods of attempted national cooperation, if they follow the plans that seem to be now in contemplation, they are bound to fail, and that in a very short time. The reason they are bound to fail is because of the very structure of such combinations of states or nations. Let us examine two examples.

We had in this country a United States of America before our own was organized. It was called the Confederation. It was composed, as you know, of the Thirteen Colonies. They were combined in a league, in a United States, but they lasted only 8 years. Why did they fail?

It was interesting to me, having worked on this problem on my own account, to find that I had support in very high quarters; and that support comes from Alexander Hamilton. Hamilton told the Colonies why they failed, and what the cure was. It was not a people's league; it was a league of States. This is what Hamilton had to say on the subject: "The great and radical vice in the construction of the existing Confederation is the principle of legislation for States or governments in their corporate or collective capacity as contradistinguished from the individuals of which they consist." This was the defect, and in the Constitutional Convention they found the cure and formed a more perfect union.

If you smuggled something into the port of New York under this new and better union that was formed, and should say to the customs officers, "I am a resident of the State of Massachusetts. I appeal to the State of Massachusetts," it would not do you any good. Why? Because the 20 powers given to the central Government of the United States are controls over individuals. You, as an individual, are brought up before the court, not as a member of a State. The Government deals directly with you as an individual. When the Constitution of the United States was established it did not say, "We, the Thirteen Colonies," or "We, the thirteen States," or "We, the thirteen nations." No, it proclaimed, "We, the People." We, the People, have organized this Government to establish justice. And so it must be with any league of nations if it is to endure.

We are held together here by what I call an impersonal concept: our love of justice and our love of freedom, which thrills in every American heart. You have an impersonal concept in your medical society that binds you together in unity: your individual obligation to the whole, as individuals. If you are going to have peace in the world, you must have an organization or a government of peoples having in their hearts the concept, "We will no longer submit to being destroyed by war. We will set up a body of law which will say 'This thou shalt not do because it leads to war'," and so we pass from the field of diplomacy into the sphere of law, and have a hope for life.

The League had its chance and what happened? The first opportunity was with Manchuria and Japan. Japan marched into that country without any just reason, yet the League did not even attempt to apply sanctions. Nations could not agree just as the Colonies could not agree. They had been brought to disaster because each Colony was first for itself and the devil take the hindmost.

Then came Italy and Abyssinia. Now the theory of the League was plain enough. These sanctions were: First, sever all diplomatic relations; second, sever all commercial relations; these would bring any country to its knees at once.

What happened? The traitor, Laval, went to Italy, and he came back with a formula, "easy sanctions gradually applied." That suited many interests in several countries, and they went on selling to Italy what she needed. Although we were not a member of the League, we could have done something, but we kept on selling them oil. The Italians went over to Africa, and they did not have a war; they just burned up the poor Abyssinians with their poison gas, and charred corpses were strewn over the desert, while the peoples of the world said, "The League has lost its authority. Are these traitors more important than this organization which we have set up to maintain peace in the world? Are these traitors going to abandon the effort until war is upon us again?" Well, the war is again upon us, and here we are in the midst of it.

It is said that if the United States had gone into the League this would not have happened. We could have taken part without being in it; and it did happen. Is our Government so superior? Are our representatives so exalted in their ideas and their ethics? Are we so willing to make sacrifices for the common good and peace of the world?

It is said that if the League had had teeth it would have succeeded. Let me tell you what happened. The League would not even apply the commercial sanctions which were provided. Do you think they would have applied military sanctions, which is what "teeth" means? If they had been there, would they have gone to war with Italy when they would not stop trading with her? Certainly not. This claim that if they had had teeth in the League it would have succeeded is sheer nonsense. There is something much more serious the matter with the League than that. It is the basic principle of such an organization that counts. There was a fundamental defect in the League's structure.

You can examine all the national and international combines, and you will find that if this defect is present they—all of them—fail, and when it is not present they succeed. That is why all the leagues that have been formed upon the personal-obligation principle, dealing directly with the individual, have succeeded, and when they rely upon nation dealing with nation they do not succeed.

And why not? It is because of the virtue of nations. I repeat, the virtue of nations.

A nation has been a very useful thing in the organization of mankind, but what is the duty of those in charge of a nation? To make the nation the most powerful, the richest, and the greatest country in the world. We hear a lot of that here. We enjoy waving the flag and letting the eagle scream. The duty of those in charge of a nation is to protect and promote the interests of its individuals. Very good. That is a very noble virtue, yet, in the hands of foreign offices, state departments, and government agencies, it immediately blocks any cooperation by a league because all the others are thinking the same thing. They are thus bound to come into conflict, and it is impossible for them in the nature of things to agree. History proves it. Legislation by a league is merely a proposal. It has to go back to the nations that form the league, and then, in order to get it adopted, you have to persuade them—you have to persuade them through diplomatic channels. The proposal is referred through its foreign office to a careful executive and to a jealous legislative body and to a debating committee, and in the meantime the aggression goes on and the countries take sides, and the war proceeds. This is the inevitable result of the formation of a league along the old lines. It does not deal directly with the individual; it deals only with governments. Governments need take no affirmative act to defeat the league plan. All they have to do is to sit down and do nothing, or, as in the case of Italy, present an evasive plan.

When you consider what is at stake you will realize the importance of a proper foundation for any new order. How are they going about it now? Are they going along the old league lines that always fail? How are they thinking now? The old league had a general mandate to maintain peace based upon treaties between the nations.

The new league, whatever it is, will have definite and limited powers enforceable by law. What will those powers have to be? We have heard about the "four freedoms." We know that the "four freedoms" are a glorious thing to have. Are you going to rely upon moral suasion to get them? If so, you will join the ranks of the wishful thinkers who are expecting by their wishfulness to obtain peace in the world. If you don't get them by moral suasion, are you going to get them by treaties, pacts, agreements among nations? The mere mention of the Kellogg Pacts raises hilarious and bitter laughter. War was banished by those pacts. Who forgot that? Are you going to rely upon balances of power? The trouble with power is that it does not remain balanced. The very conception of a balance of power is the antithesis of peace for the reason that by balancing power you are building up strength just as the German strength was built up to balance power in Europe, and when one of the parties obtains the upper hand, and the government is in the hands of ruthless and determined and ambitious leaders, your balance of power leads inevitably to war.

A league has to act through persuasion, and how are you going to do the persuading? A country's agents, of whatever party or whoever they are, who undertake to carry out a resolution of a league which is apparently a disadvantage—a temporary disadvantage—to their country, would have no chance of success. A jingo press would make it immediately perfectly clear to everyone that it would be an outrage for the nation to go forward along the lines of the league's resolution. It would be easy to create a national clamor, a national demand to break away from the league. That is what Lord Bryce pointed out. He said, "There are two kinds of leagues." One is "a league in which a number of political bodies, be they monarchies or republics, are bound together so as to constitute for certain purposes, and especially for the purpose of common defense, a single body. The members of such a composite body or league are not individual men but communities. It exists only as an aggregate of communities and will therefore vanish as soon as the communities which compose it separate themselves from one another. Moreover, it deals with and acts upon these communities only. With the individual it has nothing to do."

Such is the structure of leagues which, like the League of Nations, fail to maintain peace. As Lord Bryce says, they vanish. The second form of leagues, those which succeed, is a union of the people of nations which compose it. It does not deal through the government of those nations, but directly with their citizens, demanding individual obedience to its laws.

There is no use in blinding our eyes to the situation. It is not that I am condemning governments or their agents. They do the best they can even when they are in the hands of devious politicians and ambitious men. They do the best they can, and it is human nature that they should, because otherwise they would not remain in office; they cannot resist organized pressure and the people are unorganized. The people cannot express themselves sufficiently, clearly, promptly, and energetically enough to prevent the acts which produce wars. We did not want this war. We did not cause it. We did not enter upon it because we were after anything in the world. We had to go into it to defend ourselves. We know that. But we are looking forward to other aggressors in the future who, like this arch fiend of hell, may put all the world into the devouring jaws of death. We have the power to prevent it, but only if you really want to prevent war. Are you really enthusiastic enough for freedom? We give our money, we give our sons, we give our people, we give everything for war; but what are we willing to give for peace? How much peace could we have bought with what we have expended? What years of millennium could have been purchased with this enormous waste of billions of dollars and millions of men?

Do we really want peace? Then organize for it. We, the people, we insist upon a government of law; we insist upon establishing a league that will assure us the Four Freedoms by giving it the necessary power over individual violations of its laws. I have not the time to discuss these laws with you. However, I will mention some examples. One of them concerns freedom from fear. We all live in fear. We don't know when a bomb is coming here. Those who live in the war-stricken areas are momentarily in fear of bombs that may be dropped from the skies, or, if sailing on the sea, in fear that the unseen submarine may destroy them. All the peoples long for freedom from fear, freedom from the fear of the monsters of the world, freedom from fear of the education of hate and war.

How are we going to stop this insane horror? By control of those who make the wars; by control of those who make the machinery of war. Everybody is agreed that we must stop this business of building these terrible instruments of destruction. But don't think we can stop it by acting through governments. History shows we cannot. But we can stop it by acting through law. Let me give you an example.

Supposing at some future time some future Mr. Goering started manufacturing arms and that it is against the law of nations for anyone to manufacture arms unless he has a license from the league created to see to it that the people shall have peace. Under the old league form, the council of the league would pass a resolution and through its diplomatic channels would address the government in which Mr. Goering lived. That government would say, "Thank you very much. We will make an investigation." Perhaps weeks or, more likely, months later would come a reply to the league, "We have investigated this matter very carefully, and we regret to say we find a grievous error has been committed. Mr. Goering is not manufacturing arms; he is manufacturing agricultural machinery."

What are we going to do about it? If we reject the reply of the government in which Mr. Goering lives, we are attacking his nation. We are promoting a crisis which, if Mr. Goering persists, can only be overcome by force, and that means war.

What is the other alternative? The other alternative is to do what they did in the case of Italy: Swallow our pride, forget it, let Mr. Goering go on manufacturing arms and build up his war machinery, as well as other Mr. Goerings, until again the flame of war bursts upon the world; and so our league has also failed, whichever course it pursues.

Now supposing you had a real people's government, a league which pursuant to law had power to arrest individuals who violated its laws. The military police would swoop down in an airplane, arrest Mr. Goering, and take him to the nearest court, where he would be tried. It would be his offense, not the offense of the country in which he lives. Such a league deals directly with the individual, the individual who is stopped from doing the forbidden act. All acts of government, or of corporations, or of companies are performed by individuals. That is the way we stop crimes in the United States. As you know, there are only about 20 powers that by the Federal Constitution are given to the Federal Government, and they are all to prevent disobedience by individuals. To obtain freedom from fear we must stop armaments. We never will stop the production of armaments by nations through treaties, pacts, or agreements, or through any league based upon such foundations; but we can stop such production immediately, by league action against the individual.

That will give us freedom from fear. And now we come to freedom from want. I am reminded of something that concerned this city of Buffalo. At one time I was counsel for the New York Produce Exchange. We looked upon the Great Lakes and found no boats were moving on them. The Great Lakes had dried up. And why? Because the railroads had made the freight rate from the foot of the Lakes, from Buffalo and Erie to Boston, New York, and Philadelphia so high that they had forced all freight to come all rail from the West, thereby depriving the shipper of cheap transportation on the Lakes. I went before the Interstate Commerce Commission and presented the case, and they changed the rate and made it a reasonable rate from the foot of the Great Lakes to the Atlantic seaboard, and the boats began to move again on the Great Lakes. To do that I did not bring in the State of Illinois, I did not bring in the State of New York, or the State of Ohio, or the State of Massachusetts. No, I brought in the railroads; the individuals had to obey the order of the court.

To insure freedom from want, control transportation and trade so that the raw materials may go where they are absolutely needed, and so that there may not be great congestions of produce burned up in one spot while people are starving in other places; prevent the suffering and distress that cause new wars; bring the steamship companies into court. We will never obtain freedom from want by relying upon the voluntary actions of national governments.

Freedom of the press and the freedom of speech may be protected in the same way by requiring individual obedience to protecting laws. Any man who is oppressed ought to have a chance to be heard. At present there is no international court where he may apply for protection. There was no international bill of rights.

As nearly as we have come to it so far, the "four freedoms" and those expressed in the Atlantic Charter are a draft of the Bill of Rights. That is what the people are longing for, because it contains in it the rights that man must have if he is to enjoy peace and freedom. Therefore, it is our obligation to see to it that this is a government of the peoples with responsibility of the people to obey. We made this Government a government of laws and not of men. That has been the trouble with France. France collapsed because it has been a government of men. They followed their leaders in the French Revolution. Then they followed the glory of Napoleon. Now some of them followed Vichy and its leaders. They were divided into factions and they were working for one purpose—for themselves, not for France. They had no moral force to hold them together. The motto of the French Government, "Liberty, equality, and fraternity," was mere words, a slogan. No; there was no unity in France; and if we are going to have peace in the world we have got to have unity in our people, a unity insisting that the people obtain a real organization of law to maintain peace.

Listen and watch. Listen to the speeches. Watch the proposals. See what speakers are talking about—whether they are talking about boundaries, or about big and little countries, or about forms of government, or about regional groupings. If you have a law of nations, it does not make any difference whether you live this side or the other side of a boundary; you are bound to obey the law. The boundary line is no obstacle to putting in such a plan. There is no objection to regional groupings, Pan American Unions, the Danubian Union, or even a United States of Europe, providing all the citizens, the nations of such unions, are also bound to obey the law of nations to preserve peace. It does not make so much difference what the form of the government of each nation is, much as we would like to promote the democratic idea. Whether you are living under the common law of England in Massachusetts or under the code Napoleon in Louisiana, it makes no difference; you are bound by that central law just the same, and the size of the state has nothing to do with it. If you are a citizen of Delaware or of Texas, you have the same obligation to obey the central law. The local law of the States and the size of States are no obstacles. Forms of government are no obstacle. If you are a subject of His Majesty the King Emperor, or if you are a citizen of the Soviet Union, or of the United States of America, you are equally bound as an individual to obey the law of nations. I believe the Russians would be for it; they want peace; after this war they want a law that will say a man cannot do this if it is going to interfere with the peace of the world. You can agree upon this fundamental: that every individual, no matter where he lives, has got to obey the law of nations and not do those things which make for war. So I draw to a conclusion and say, we, the people, shall insist upon a law of nations, which each one of us will uphold and will obey; otherwise I see the hordes of Genghis Khan sweeping the world, rushing from Asia over Europe; I see the thousands of horsemen of the Huns destroying civilization again; and I see the most terrible of all these calamities, the burying of all that is precious in dust and ashes.

Liberty-loving men, freedom-loving men, watch what is being done. If they are talking in the terms of sanctions by nations against nations, sanctions imposed to maintain world order in the future, if they are talking of pacts and treaties, they are talking in terms of failure. Such methods failed before and will fail again; so let us as the people insist not upon dreams but upon the will to live in peace established by law so that at last mankind may rise to its destiny.

Tort Claims Against the Government

EXTENSION OF REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. STEWART. Mr. Speaker, in these days of crisis, when all our thoughts and all our efforts are concentrated upon winning the war and establishing peace and justice for all, we may find it difficult to divert our attention even for a few moments to a relatively minor problem. But because it concerns an improvement in our system of justice, I do not think the subject of which I desire to speak is out of time or place. I refer to a needed and long-overdue improvement in the remedies available to our citizens who are injured in limb or property by the negligence of Government employees. The desirability of improvements in the field of tort claims against the Government was made the subject of a special message from the President in January 1942, and bills to provide for suits on such claims were considered quite extensively during the last Congress. Indeed, tort claims bills of one type or another have been under the consideration of Congress durthe past 20 years. Nevertheless, a statute providing a comprehensive and adequate procedure still remains to be passed.

We have progressed a long way since the maxim that the sovereign can do no wrong first entered our law. It was sensed almost a century ago that this doctrine of sovereign irresponsibility should have only a limited application in America. During the past century Congress has slowly but surely peeled away from the Federal Government its protective mantle of immunity from suit in court for the wrongful acts of its agents.

As early as 1855 Congress established the Court of Claims and permitted suit to be brought against the United States upon contract claims and also upon claims arising under Federal law or regulation. In 1887 the United States district courts were given concurrent jurisdiction with the Court of Claims up to $10,000. Soon consent to suits against the Government was extended into the field of torts. For example, in 1910 Congress permitted the United States to be sued in the Court of Claims for patent infringement. During the First World War, when the Government took over the operation of the railroads and other utilities, Congress made the United States subject to the same liability for property damage, personal injury, and death as the private owners would have been. A few years later, in 1920 and 1925, suit was permitted in the district courts on account of damage or injury caused by Government vessels, without limitation as to amount.

But despite all the progress that has undeniably been made in this field, there still remains a large and important class of wrongs for which there is yet no satisfactory remedy—the ordinary common-law tort, such as personal injury or property damage caused by the negligent operation of a Government automobile by a Government employee while carrying out some official task. Thus, while the Government may now be sued for breach of contract, patent infringement, or admiralty tort, it still is immune from suit for a common-law tort. The victim of a collision with a post-office truck now has only two sources of redress: he may seek a very limited administrative award from the Federal agency concerned, or he may attempt to obtain a private act of Congress for his relief. The first is often inadequate and gives him as a matter of grace that which he should have of right; the second is time-consuming and unfair to both Congress and the claimant.

The power of administrative adjustment is decidedly limited. The act of December 28, 1922, authorizes the heads of the executive agencies to settle claims up to $1,000 for property loss or damage caused by the negligence of their employees, and to certify the award to Congress for payment. A few Government agencies are specially authorized to make similar administrative adjustments of claims for personal injuries up to $500. While the remedy given by these statutes is better than no remedy at all, it is generally recognized that the present procedure for administrative adjustment is inadequate. Not only is the permissible maximum settlement below the level which would permit justice to be done in the more serious type of accident, but the claimant has no right to test in court the accuracy or fairness of the award. It is of course usually no comfort to the maimed or damaged claimant that he can sue the Government employee who was at fault, because not infrequently the employee is not financially capable of meeting a sizable judgment, and as a rule the loss or injury occurs in situations in which the Government should in all conscience bear the responsibility.

The ultimate recourse of a claimant who fails to obtain satisfactory administrative relief is to seek a private relief bill. During the past 20 years the system of redressing Government torts by private bill has been the subject of strong criticism by Members of the Congress, including those on the Claims Committees who have had the most direct contact with such bills. In committee reports, in speeches and debates, Members of the Congress have urged that relief of Government employees' torts by private bill is unfair to the claimants and excessively burdensome to the Congress. More than 2,000 private relief bills are introduced in each Congress. Any single bill has little better than a 15-percent chance of being enacted, and even these may require diligent pursuit of the matter for years. As the reports and statements of the Claims Committees show, the limited time available for consideration of each private bill renders impossible a full hearing to each claimant, and there is no opportunity for examination and cross-examination of witnesses or receipt of testimony. The result, according to these sources, is a hasty investi-

gation generally entrusted to a single committeeman, consisting in most cases of an ex parte presentation of the facts by affidavit. After the bill is considered and approved by the full committee, it must be considered and sometimes debated in the pertinent House of Congress. This process is then repeated in the other Chamber. In view of the short period allocated to the Private Claim Calendar and the pressure of matters of greater public importance, a private claim bill frequently fails to pass both Houses in the same session, requiring its reintroduction in the succeeding session. The foregoing criticisms come from the statements and writings of members of the Claims Committees. This is what those who have the present responsibility think of the means we have provided for discharging those responsibilities.

The widespread recognition that the present procedure is burdensome and inadequate—which is shared not only by Members of Congress but also by legal scholars and authorities—has led to a number of attempts to provide an adequate remedial procedure in place of private relief bills. The first proposal that tort claims be remitted to the courts was made in this Chamber in 1919, and since that time a number of bills to this effect have been introduced and considered in both Houses of Congress. In 1929, a Federal Tort Claims Act was actually passed by both Houses, providing for administrative settlement and judicial review of tort claims, but it was vetoed for procedural reasons. In the Seventy-sixth Congress, this body passed a Federal tort claims bill providing for administrative settlement of claims up to $1,000 for personal injury or property damage caused by the negligence of a Government employee while acting within the scope of his employment, with jurisdiction in the Court of Claims and the district courts over such claims up to $7,500. In the last Congress, a similar bill covering claims up to $10,000 was passed by the Senate and favorably reported, in somewhat modified form, by the House Judiciary Committee, but the pressure of more important business during the closing days of the Congress prevented enactment of the bill into law. This bill was reintroduced early this year by the gentleman from New York [Mr. CELLER], as H. R. 1356, and is now pending before the Committee on the Judiciary. It would authorize Federal agencies to settle tort claims up to $1,000 for death, personal injury, or property damage, with jurisdiction in the district courts over such claims up to $10,000.

Gentlemen, I urge that this bill be given serious consideration by all of you. It is a sound and necessary step in removing the archaic and unjustifiable immunity of the Government for the wrongful conduct of its agents and employees. Especially in these busy and hectic days, which witness a steadily increasing use of automobiles and other mechanical equipment capable of causing damage to persons and property, the absence of a satisfactory procedure for redressing wrongs is a grave defect in our social policy.

The bill will supply a well-defined, continually operating machinery to redress tortious wrongs arising out of Government activity in place of existing procedures, which are admittedly inadequate and burdensome to the Government and the claimant. It will remove an existing inequality in our law which permits suit to be brought against the United States for certain types of tort claims, such as admiralty and maritime torts, and yet precludes suit on the ordinary common-law type of tort, such as personal injuries or property damage resulting from negligent operation of an automobile. It will place the United States, in respect of torts committed by its agents, upon a footing of real responsibility to its citizens, with certain limitations required for the protection of important governmental functions. By removing a large number of private tort claims from Congress and the Claims Committees, it will give the National Legislature more time to devote to matters of wider importance, and will thereby benefit the public as well as claimants and Members of the Congress. To quote from the President's message to Congress of January 1942, recommending the passage of legislation similar to the Celler bill, "we should grant the responsibility for handling such matters" as tort claims, "to those equipped with year-around facilities and time to dispose of them."

I believe that a thought expressed by President Lincoln in his first annual message to Congress on December 3, 1861, adequately expresses the justification and sound policy underlying the bill:

> It is as much the duty of Government to render prompt justice against itself in favor of citizens as it is to administer the same between private individuals. The investigation and adjudication of claims in their nature belong to the judicial department.

Unemployment After the War

EXTENSION OF REMARKS

OF

HON. FRED NORMAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. NORMAN. Mr. Speaker, I have just returned from 2 months spent in my district during the recent recess. I traveled extensively over the area I represent in the State of Washington, and made 66 addresses during the period.

Some of these addresses were made on the invitation of various Townsend Clubs. I found these groups holding well-attended meetings. Their membership rolls are being well maintained, and their interest in the movement is at a high level. They have quite a number of very capable and intelligent leaders who are doing good work in the cause they represent.

When the war ends, which we all hope will be soon, there will be a great problem to solve with the millions of men and women released from the armed forces and from the production of war materials. In this connection, it is interesting to consider the suggestion recently made by Mr. Beecher Hess of the National Townsend organization, which follows.

I am quoting Mr. Hess: "Our young men and women will be returning from foreign service, our wartime factory workers will be looking for peacetime jobs. We may keep 5,000,000 in our armed services, perhaps another 10,000,000 may be used in arsenals, military supply plants and in other Government service, another 20,000,000 will be used in production of peacetime commodities. We still would have some 15,000,000 unemployed. Some authorities have estimated 20,000,000. The progressive increase of commodities made by scientific methods and machine production using less and less manpower will continue to enlarge this unemployed group. Now, if we are going to have this unemployed class, is it not commonsense to plan now who shall be included in it? The tempo of modern-day production has been so stepped up that youth and middle age only can qualify. This leaves the aged as the logical group to be designated as the unemployed class. The Townsend plan will provide some 12,000,000 of our seniors with monthly annuities sufficient to maintain a substantial purchasing power and a market for the products of mine, factory, and farm. Retiring the aged from gainful employment will afford jobs for the youth and middle-aged. This is a sound, economic plan to meet the obvious post-war conditions."

Newsprint Shortage

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I desire to include in the CONGRESSIONAL RECORD an editorial which appeared in the Dallas Morning News, September 24, 1943, concerning the subject Newsprint Shortage:

NEWSPRINT SHORTAGE

A grave situation will arise next year in the matter of the newsprint supply if the figures of the War Production Board can be accepted. There is no reason to believe that they are not accurate.

During the next several years there will be greater need of a full free press than ever before in the history of the Nation. The daily press is the greatest medium for the crystallization of public thought that there is in the Nation. This medium for a meeting of the public minds exists, not so much in the newspapers' own opinion columns (its own editorials, the columnists, and letters from readers) as in a fair and impartial

presentation of the news for the public's own decisions on basis of facts. Every publisher knows—every observing reader knows—that the volume of legitimate news varies greatly from time to time. Never in our history has there been as much significant news—news that the public ought to know—as there is today, and as there will be during the next few years. There will come the critical and then closing episodes of World War No. 2 and the rising volume of news relating to the after-war peace plans.

Every day we read or hear that this is a shrinking world—a world of rapid transportation and communication—in which every man is neighbor and fellow citizen to every other man in the world. It is true, and by the same development the obligation of every man to keep abreast of world affairs has been greatly increased. The American press—and especially a free and unlimited daily press—must play a greater role than ever before in keeping the public informed.

The press can be just as effectively limited by a paper shortage as it can be limited by law or dictator's decree. The bottleneck at present is lack of manpower to gather the pulpwood. Our own National Government has cooperated by making wood-pulp production an essential industry. Canada, which holds a monopoly on production of most of the newsprint used in the United States, has not done so. The answer must be found in greater effort to produce pulpwood in the forest areas this side of the Canadian line, including our east Texas. The production and gathering of pulpwood in east Texas, since the establishment of the two large paper mills at Lufkin and Houston, could be developed greatly as a remunerative farm avocation—something that has not been fully realized in the farm program of this State. Large and small newspapers and periodicals should lend their assistance in putting such a program into operation. It would help meet a war emergency. It would lead eventually to freeing this country from dependence on Canadian wood-pulp supplies, and it would contribute to present and future full and free dissemination of world news and crystallization of democratic thought.

The American System Briefly Stated

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. DONDERO. Mr. Speaker, I offer for the CONGRESSIONAL RECORD the following editorial from the Daily Tribune of Royal Oak, Mich., of October 1.

This short and succinct statement includes the foundation and the principle on which the American system of free enterprise has been built. If the people did not have the right to sell their skill, their labor, and their ability for the best price obtainable, free government in the New World could not exist. It is on that principle that the Republic of the United States has been established, has expanded, and developed into the most progressive and powerful Nation on the earth. Of late years this system has been under attack and many thoughtful people, including many Members of the Congress of the United States, have witnessed this attack with much misgiving and serious concern.

If this system of the American people is destroyed, their form of government will be destroyed with it. May the American people in their wisdom not only encourage but preserve forever their American way of life.

The editorial follows:

WE NEED SEED MONEY

Every once in a while, in some discussion of taxes, I see the expression "seed money." Do you know what it means?

If it were not for seed money the majority of the people who read these words would not have the jobs they now occupy. For most of our present-day industries exist because (1) somebody had an idea; (2) somebody was willing to take a chance; (3) some seed money was dug up to start a new business or enlarge an old one.

Everybody knows now that a few men who risked money in the Ford Motor Co. made tremendous profits. But nobody guaranteed them. And while one company was making good in an unparalleled way, others, which seemed to have just as good ideas or had just as much thought, effort, and money put into them, failed. The investors in those lost everything.

Seed money means "that part of profits which is 'plowed back' into a business."

Most of the talk about seed money these days comes from people who are arguing that the Government should not take too much of business profits in taxation. They assert that if industries and business are going to reconvert promptly to peacetime operation, they will have to have money with which to do it. They will not have this if it has all been taken in taxation.

How the plowing back of profits works to create employment is shown by the following statement by the McGraw-Hill Publishing Co. It says:

"American improvement is essentially a Joe Doakes affair. Here's how it works:

"1. Joe invents something and invests seed money in equipment and materials to make it.

"2. People buy it.

"3. That makes good-paying jobs.

"4. Joe invests more seed money to improve his product or his method of making it.

"5. More people buy it.

"6. That makes more good-paying jobs.

"7. Joe invests more seed money in more and better machines to get volume production.

"8. So Joe lowers his price.

"9. Still more people buy.

"10. That makes more good-paying jobs.

"Try to figure out any other foundation for American wealth, leisure, culture, fighting strength, or material possessions.

"This simple progression, multiplied by millions of instances, explains why seed money is so important in our national life."

The First Lady's Contribution to the Winning of the War

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. HOFFMAN. Mr. Speaker, returning from one of his political long-distance trips through the United States, President Roosevelt said in substance that the people of Washington were less conscious of the war and its obligations than any other community.

Beyond question he was correct, and the First Lady, his wife, seems to be the one who leads in that indifference to war's actualities.

The morning mail brought me a letter from a resident of my district, asking that his son be given a furlough and returned to this country for a short rest period. His boy, who enlisted, who had very little training, has now served continuously for more than 18 months in a malaria-infested battle area, and we know that that boy needs a rest.

Yesterday's mail brought a letter from another father, whose wife, because of worry over her son's absence, is in danger of becoming permanently mentally deranged and confined in a public institution. This boy has been in the service for 2½ years. He has been overseas for 2 years. He has never had a furlough since joining, but his application for one has been denied.

Now it may be true that the exigencies of war require the continuous service of these boys and thousands of others in similar situation on the battle front. But if that is the situation then it is time that the Roosevelt family, Harry Hopkins, and some others of the Washington advocates of war and the use of our money, material, and men by foreign nations, begin themselves to use a little common sense, make some worth-while contribution toward the winning of the war, devote their energy to that end rather than to the establishment permanently of the Roosevelt family in the White House.

If your son, brother, or husband is serving abroad; if he has been serving there for a year or more and cannot be released temporarily from the fighting area to in a measure regain his strength and fighting skill, neither his morale nor yours is increased by the perambulations, the "galivantin' around," the escapades of the First Lady.

Westbrook Pegler, in a recent piece, gives us some news of her latest trip. That article is as follows:

NEW YORK, October 4.—The Newspaper Advisory Committee of the Office of War Information has decided that the American public is not being informed adequately about the war. As to military matters, this committee obviously is better qualified to pass judgment than any layman, but any layman can see that adequate information concerning Mrs. Eleanor Roosevelt's latest expedition has not been given.

The people have not been told who initiated this personal junket or who paid for it, and it is perfectly plain that the proceeds of Mrs. Roosevelt's newspaper column, a private enterprise, cannot pay the cost. She went in a great four-engined bomber, manned by two captains, three master sergeants, and a staff sergeant, who took 23,000 feet of film, and was attended by George Durno, a Washington journalist, who is now a major of the Air Transport Command.

The salaries of these men would be a considerable item, and the rental of the plane on any reasonable basis, plus the gasoline, would be an appalling obligation for even the richest columnist. The public is completely uninformed as to these costs, and a vague statement that Mrs. Roosevelt would repay

the American taxpayers by turning over the proceeds of her column to be divided between the Red Cross and the American Friends Service Committee belittles the intelligence of even the blindest personal devotee of the tourist who, this time, went so far as to refer to herself as the wife of the "ruler" of the United States.

The Red Cross and the American Friends Service Committee, whatever their worthiness, are not the United States Treasury, which paid the cost of the journey with money derived from taxes paid by the sweat of everyone who toils and from bonds sold ostensibly to pay only legitimate and necessary costs of the war. There is no obligation reduced to figures, but there is an implied admission in the fuzzy promise to pay a couple of other fellows that the junket was not undertaken in the public interest.

No person who travels in the legitimate interest of the United States Government is expected to pay his own costs.

It would appear that Mrs. Roosevelt became a field service worker of the Red Cross only for the purpose and duration of this trip and, in that case, it would be the Red Cross which conferred a favor on Mrs. Roosevelt, and at a sacrifice, incidentally, of a degree of public confidence in the organization under the management of the President's political house pet, Norman H. Davis.

Inasmuch as Mrs. Roosevelt is an active, subtle, and indefatigable politician and in view of the delicate political situation surrounding Gen. Douglas MacArthur, the Red Cross, by the connivance at a pretext, has permitted itself to be drawn into politics, and that is bad not only for the Red Cross but for those who, in the end, look to the Red Cross for its services.

In a speech a few months ago, President Roosevelt, counseling the people at home to endure patiently the rationing of gasoline, illustrated his plea with the information that a Flying Fortress consumed 1,110 gallons of gasoline in a bombardment mission of about 700 miles from north Africa, the equivalent of about 375 A ration units and "enough to drive your car five times across the continent." On this basis, Mrs. Roosevelt, in a flight of 26,000 miles, consumed 41,070 gallons, representing 130,875 A coupons, and 185 trips in your car across this continent. Moreover, in the fragmentary developments of the story, it has now been disclosed that the plane had been remodeled inside and fitted with seats and a bed.

All this, too, is aside from the fact that Mrs. Roosevelt traveled by automobile in Australia and New Zealand, using fuel imported, every single drop, over vast stretches of perilous ocean in tankers, and is always attended on her journeys by other cars hauling the official retinue and the sightseers. That happened many times at home, even when citizens of good conscience were willingly denying themselves all unnecessary mileage.

The interference with the work of the busy generals, admirals, and other officers fighting a war undoubtedly was real and seriously detrimental, but, of course, it is not measurable, and no officer could admit that his work had been impeded without abandoning all hopes of promotion.

Mention of the 23,000 feet of film suggests that when the fourth-term campaign really warms up, the American taxpayers and bond buyers will discover that they have paid for just that much political propaganda, fed to them as tonic for their morale. A civilian can't buy a 50-foot spool of film these days.

Pat Robinson, the I. N. S. correspondent at Guadalcanal, wrote that Mrs. Roosevelt kissed her radical political protégé, the inveterate professional youth of rising 30 summers, Joe Lash, for whom strenuous efforts were made to obtain a free commission in the Navy, now a sergeant in the Army.

Robinson also said he asked Pvt. Martin Bazar, of Providence, R. I., how he felt about being visited by the President's wife, and that Bazar replied: "I'd rather be visited by my own."

O. W. I. Is Discredited by Press

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interesting article depicting the attitude of the American press toward the activities of Elmer Davis and the Office of War Information:

[From the Washington Times-Herald]

(By John O'Donnell)

At long last, the American people are getting the cold facts on the thoroughly discredited and misnamed Office of War Information which they are now keeping in an administration love nest at the cost of about $50,000,000 a year.

It now develops that Mr. Elmer Davis' O. W. I. has been two-timing its congressional sugar daddies who ladle out the taxpayers' dough on Capitol Hill.

From what happened last week in Washington—particularly as a result of the blast from leading Washington correspondents, chiefs of wire services, and heads of bureaus—it is reasonable to predict that the unhappy Hoosier Davis will quit his job and that Congress may toss the whole O. W. I. set-up out the window, abolish it in toto, and start in all over again.

And this would be the healthiest gesture that could be taken if the Congress is sincerely interested in seeing that the American people get an honest count on their war.

These are the O. W. I. developments of the last few days:

1. O. W. I.'s very own advisory board, made up of newspaper chiefs personally friendly to Director Davis, have bluntly stated that O. W. I. has fallen down on the sole job for which it was created. Chairman Roy Roberts, managing editor of the Kansas City Star, wrote the report, signed by his editorial colleagues, which declared:

"It is the judgment of the Newspaper Advisory Committee to the Domestic Branch of O. W. I. that the American people are not being adequately informed about the war."

2. Senator HENRY CABOT LODGE, Republican, of Massachusetts, returning from a global tour of every combat area, reported to his Senate colleagues his contempt for O. W. I. propaganda activities in friendly foreign countries. The Senator regretted that he had opposed cutting down O. W. I.'s money for this work 6 months ago, now thinks he was mistaken, and charged that O. W. I. representatives overseas were doing propaganda work "never contemplated by Congress and for which no clear-cut executive policy exists."

Meanwhile, lusty roars were going up in this Capital because we reporters had been forced to sit on information which later broke in London—in great part by the speeches of Winston Churchill. The result was that important war news reached American ears, not from Washington, where it should have been released if Davis was effectively on the job, but from London.

In other words, London has become the news source of the war so far as the American people are concerned. Churchill, speaking to Parliament, handed out war news which Roosevelt, speaking to the Congress a few days earlier, kept secret.

The newspapermen's trade paper, Editor and Publisher, did a bit of good reporting on the situation and collected the opinions of a representative group of high-grade, respected Washington correspondents.

Almost without exception, they agreed that the O. W. I. had fallen down on its job, that the American people were not getting the whole truth about the war, and indicated that Davis' outfit was taking publicity orders from the White House and White House-controlled sources.

And White House publicity these days, as all Washington knows, is geared directly to the fourth-term campaign of F. D. R.

The most forthright statement on the situation comes from the veteran Jesse S. Cottrell, of the Charlotte (N. C.) Observer, whose 30 years in the press galleries were broken only by 8 years in the Diplomatic Service and 3 in the Army during World War No. 1. Caustically Cottrell states:

"Elmer Davis' O. W. I. is a delusion and a fraud—the biggest bulletproof haven for New Deal draft dodgers in the world * * *. Washington correspondents are unnecessarily somewhat cowed and bluffed—we have outdone ourselves to cooperate patriotically. There is little we can do about it."

Arthur Krock, chief of the bureau of the New York Times, thinks that London will continue to beat Washington on news, "including news in which the United States has a special interest," until, among other proposed solutions, "Elmer Davis, by resigning, brings the issue officially into the open."

The Christian Science Monitor's bureau chief, J. Roscoe Drummond, surveying the present news situation in the Capital under O. W. I., warns that "there is a greater danger today of an under-informed democracy than an over-informed enemy."

He charges that "Elmer Davis, of O. W. I., is too frequently vetoed" by higher-ups on thin grounds of security.

United Press Bureau Chief Lyle Wilson thinks coldly that Churchill scoops Elmer Davis' O. W. I. for the simple reason that Churchill gets the news and O. W. I. doesn't have access to it.

The President's biographer, Ernest Lindley, Washington editor of Newsweek, points out that Churchill has "unquestionably been scooping us on our own stories * * * does it almost every time he makes a speech." Lindley thinks that "Churchill's judgment as to what can be told without aiding the enemy is more sensible" than the controlling judgment in Washington.

Several of the correspondents put the blame for the deliberate withholding of war news from the American people directly on the White House doorstep and their caustic phrases indicate the wide gulf of mutual dislike which now separates Franklin Roosevelt from the professional news gatherers in Washington.

Krock, of the New York Times, for example, coolly thrusts at F. D. R.'s self-proclaimed knowledge of journalism with the urbane observation that the situation will not be remedied until "the President learns to know what news is to which the public is entitled, and how to tell it or take counsel from those who do."

He suggests that F. D. R. take counsel from Churchill and "deal with Congress, the American public, and the press as adult partners in the war instead of as trustworthy subordinates and mental minors."

In the same vein, Arthur Sears Henning, of the Chicago Tribune, suggests that "It may be that Mr. Churchill is an abler reporter than Mr. Roosevelt." With gentle sarcasm, the veteran Henning points out that the President "does not profess to know news, his lectures to us reporters being confined to the proper way to write a story."

Columnist Ray Tucker, of the McClure Syndicate, points out that Churchill "believes in treating and trusting his people like grown-ups, whereas Washington feels that Americans are only babes in arms. But this may derive from the human fact that the British statesman has been an experienced world reporter for 40 years, while Mr. Roosevelt was merely editor of the Harvard Crimson."

Helen Essary, of the Washington Times-Herald, also puts the blame on F. D. R. and his White House press conferences.

Says the lady: "Mr. Roosevelt's trick of turning aside legitimate questions on international policy with bright quips is becoming a habit, and not a pretty habit when men are giving their lives for his country and theirs."

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. LAMBERTSON. Mr. Speaker, Benjamin Harrison said, "We have no commission from God to police the world."

It takes 83,000 employees in the Treasury Department to gather the quid pro quo and then disburse it and the borrowed.

Milk, butter, and beef will be definitely reduced in production next year, the principal reason being too much male cow in the O. P. A.

The whole country would like to hear the full report of the seven Senators whether or not parts of it conflict with the O. W. I.

Industrial Connecticut last Monday held elections in 143 towns, 127 going Republican. Two years ago their House delegation was solidly New Deal.

Organized labor is not making any attempt to repeal the Connally-Smith antistrike bill. There is evidence that the 30-day "cooling off" provision is really cooling.

Two days after the globe-circling Senators said that Great Britain was furnishing little or no oil from Persia, the Mediterranean suddenly became open for navigation, on radio.

A Cabinet member testified this week before a House committee that certain new groups of Government workers were being "brigaded in." That means two or three regiments at a time.

When 500 rabbis were met on the outside Senate steps and their petition was heard by the Vice President and Senators, they were bringing to Congress their plea in our American way.

Kimmel and Short have waived the statute of limitations on their court-martial. There is a general belief that they will never be tried by this administration. It is difficult to believe but that they had orders which made them seem treasonably negligent.

The world series, with its 70,000 daily in New York, gathered from hither and yon without travel limitations, is luckier than the annual Army-Navy football game to be played up the Hudson. It was limited, by Executive decree, in attendance to a 10-mile radius. This is war.

Congress Gets 1944 Food Plan This Week

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD a news item which was in the Washington Post October 3, 1943:

CONGRESS GETS 1944 FOOD PLAN THIS WEEK

Important changes in the Nation's agricultural pattern will be outlined to Congress this week by the War Food Administration in 1944 farm production schedules calling for the use of every available acre of land and the use of every farming facility.

Direct food consumption foods such as dry beans and peas, soybeans, peanuts, wheat, vegetables and potatoes will get first claim in the program and lower-yielding types of feed crops will give way to those with higher-output possibilities.

Because the over-all feed supply anticipated will be 18 percent smaller per animal unit, the goals will call for a reduction in some types of livestock—particularly hogs, broiler-type chickens, and turkeys.

INCREASES FORECAST

The goals presented by W. F. A. with adequate growing conditions, should bring the following percentage increases above the 1942 yield: wheat, 26; soybeans, 22; sugar beets, 42; fresh vegetables, 10; vegetables for processing, 6; dry beans and peas, 18; milk, 3; beef cattle and calves marketed for slaughter, 19; corn, 3; hay, 3; eggs, 1.

Decreases will be suggested as follows: hogs, 17 percent; sheep and lambs on farms, 4; farm chickens, 3; commercial broilers, 20; turkeys, 4; barley, 2; sorghums, 5; oats, 9; rye, 3; flaxseed, 1.

No change is anticipated for cotton and rice, but a 10 percent increase will be recommended for tobacco to meet a sharp increase in foreign and domestic demands.

These goals will call for the use of 380,000,000 acres of crop and by far the largest ever utilized by this country. Considerable land now idle will have to be cultivated and record amounts of fertilizers will be needed.

MILK CONTROL EXTENDED

Other food-front developments yesterday included:

1. Extension of Federal control over milk sales to eleven new metropolitan areas in Ohio, Illinois, Kansas, and Missouri, the program to go into effect Tuesday.

2. Announcement by W. F. A. that civilian supplies of tea have been increased one-fourth as a result of better shipping conditions.

3. A joint announcement by W. F. A. and O. P. A. that a subsidy program to reduce the price of peanut butter from around 33.1 cents a pound to an average of 26.5 cents had been agreed upon.

A rebate of 4½ cents a pound will be made to manufacturers on amounts of the food sold for home consumption. Commodity Credit Corporation, sole buyer and seller of farmers' stock peanuts, will make the payments.

The program will be effective as soon as administrative details can be completed, it was said.

Mr. Speaker, I have never been one who believes that the people of this country can be fed properly when decreases in production of food of various types or forms are suggested from time to time. Furthermore, according to this article it is not apparent to me that the program of restriction on the amount of cotton to be grown by small family-sized farms is to be removed.

International Bimetallism

EXTENSION OF REMARKS

OF

HON. ANDREW L. SOMERS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1943

Mr. SOMERS of New York. Mr. Speaker, under leave to extend my remarks, I include a statement entitled "International Bimetallism," published by Francis H. Brownell, chairman of the board of directors of the American Smelting & Refining Co.:

INTERNATIONAL BIMETALLISM—THE MOST SUITABLE MONETARY STANDARD FOR THE POST-WAR WORLD

WHY STABLE MONEYS ARE ESSENTIAL

A nation can never be healthy when its currency depreciates sharply and fluctuates erratically in value from day to day. We have only to remember the economic chaos and human misery that spread over the continent of Europe after the First World War, before currencies were stabilized, to realize that people must have confidence in the money they use if industry and agriculture are to function normally and employment is to be provided the people.

If the purchasing power of a nation's money, be it the dollar, pound or any other unit, is declining rapidly, so that prices of goods soar skyward, an economic collapse, unemployment and social unrest will inevitably follow. When the foreign exchange value of a currency depreciates, international trade cannot be conducted along orderly lines and high trade barriers that choke commerce are the result.

At the end of the present global war, what will be the purchasing power of the moneys of France, Belgium, the Netherlands, Poland, Norway, Czechoslovakia, Denmark, and Yugoslavia, inflated as they have been under German occupation? What will be the buying power of the currencies of the defeated Axis nations, Germany, Italy, Hungary, Rumania, and Bulgaria? Can the internal economies of these nations and of the countries of the Far East, China, the Dutch Indies, the Malay Peninsula and Japan, revive while their peoples use highly inflated moneys of doubtful value? Can international commerce with these countries, and between them, be resumed on a large scale without monetary stability?

Every businessman knows that an early, effective stabilization of their moneys is an urgent and absolute prerequisite to both internal recovery and the revival of the foreign trade of these countries. The need for such immediate currency stabilization has been recognized by the governments of the United Nations, representatives of whose treasuries have been conferring continuously during recent months to evolve a plan to assure the earliest possible stabilization of currencies through international agreement.

The need for monetary stabilization is clear. International collaboration is required to achieve it. We must make sure, however, that the standard adopted to assure such stability is sound and adequate, so that stabilization will be lasting.

WHY WE MUST RETURN TO A METALLIC STANDARD

We all know that the international gold standard broke down during the thirties. This largely resulted from the unsound provisions of the peace treaties following World War I, which made the monetary gold stock of the world inadequate. Economic nationalism, reparations and war debts and other consequences of these peace treaties finally caused so marked a maldistribution of existing gold among the nations of the world that survival of the gold standard became impossible.

The use of the precious metals as standard money is one institution which has worked well through the ages. Gold and silver have been used as money in ancient, medieval and modern times. Peoples have learned to have confidence in gold and silver coins, and in monetary units that are anchored to gold and silver and are convertible into these metals.

On the other hand, the nations of the earth have had repeated unhappy experiences with paper money. Hence mankind has always preferred "hard money." In our own Civil War of the 1860's, United States paper currency fell to a substantial discount and, when peace came, there was an insistent demand to "resume specie payment."

History abounds in examples of paper moneys deteriorating in value and at times becoming worthless as the result of wars, revolutions and other vicissitudes of the issuing nation. But we do not have to turn to history for examples of the unhappy consequences of inconvertible paper-money issues. We have only to look at the nations of Europe and China today to see the tragic consequences when they are flooded with huge issues of paper money rapidly depreciating in value toward the point of worthlessness.

IS THERE ENOUGH GOLD?

Extended periods of monetary stability in the past have been invariably associated with the use of the precious metals, gold and silver, as monetary standards.

The international gold standard was dominant in the leading countries of the world through most of the nineteenth century and the period down to World War I. Many urge a return to it after the war. But that standard had broken down long before the present war began. Gold had disappeared from circulation and the price had been increased from $20.67 to $35 an ounce, thus in effect increasing the volume available. This failed to solve the difficulty, however.

The monetary gold stocks of the world, according to the best available estimates, do not greatly exceed $30,000,000,000 at the prevailing price of $35 an ounce for the yellow metal. The monetary gold stock of the United States amounts to $22,000,000,000, which is more than 70 percent of the world stock. Obviously, the $8,000,000,000 or so of monetary gold owned outside the United States is very far from adequate to permit the other nations of the world to return to any type of workable gold standard.

Furthermore, it is not enough that each nation have some gold to make the international gold standard workable. Each country must have a gold reserve that is large enough to take care of adverse contingencies as they arise. A nation should be in position to export a considerable quantity of the yellow metal to cover a temporary deficit in its balance of international payments without being forced to suspend gold conversion and abandon the standard.

How much yellow metal would be needed to make possible a lasting return to the gold standard by the peoples of the world after the war?

The amount of gold reserve desirable for each country will depend upon its price level at home and the volume of trade and other transactions that it carries on with other countries. The higher the price level, the larger the gold reserve required for domestic purposes.

After the war, commodity prices probably will be higher than before the conflict, since a drastic deflation would not help reconstruction. The expressed policy of the British Government, as stated by Sir Kingsley Wood, Chancelor of the Exchequer, in his 1943 budget speech before the House of Commons, is to retain the then price level after the war, and this level was 60 percent higher than it was in 1939. Similar considerations will probably cause this country to follow the same course and seek to maintain the existing wage and price levels in the post-war era.

The larger a nation's foreign trade and financial transactions with other nations, the greater the metallic reserve required for these purposes.

It is essential for the welfare of the peoples of the world that foreign trade after the war should be far larger than in the pre-war period. The general determination of nations to lower trade barriers, develop economically backward regions, and cooperate in global reconstruction all point to a vast expansion of commerce between nations. The larger the volume of such trade, the greater the disequilibrium that may develop in the balance of international payments in any one year, and so the larger the amount of gold needed in any attempted return to an exclusive gold standard. Hence, regardless of the fact that the gold stocks sufficed for the world's needs for a monetary metal to settle international balances before 1914, and for a few years in the 1920's seemed adequate with the help of the artificial mechanism known as the "gold exchange standard," plus large foreign loans by the United States, there is every reason to believe that a serious shortage of gold for post-war needs looms ahead. This shortage will arise even apart from the fact that the existing supply of the yellow metal is so unequally distributed among the nations of the earth. What is evidently required, therefore, is the expansion of the present monetary gold stock through the addition to it of the other great monetary metal, silver.

THE WHITE AND KEYNES PLANS

Recognizing that the inadequacy of the present gold supply, and the small gold holdings outside of the United States, bar a general return to the gold standard after the war, the American and British Governments are preparing plans for economizing on the amount of gold required to achieve monetary stability. These plans, and the American White plan in particular, are nothing more or less than efforts to return to a partial international gold standard with a smaller amount of gold. The Keynes plan does not necessarily require any gold. The International Stabilization Fund, under the White plan, would give each nation a considerable credit on its books against which only a fractional deposit of gold need be made. Both plans are, in effect, types of managed currency.

Commentators on these plans, almost without exception, have pointed out, however, that when a country's maximum credit on the books of the proposed International Stabilization Fund has become exhausted, the same problem will arise as when gold holdings are all exported under the international gold standard. The inadequacy of the medium for settling international balances will thus again become apparent.

If a plan like the White or Keynes schemes is ultimately adopted, therefore, every practical measure should be taken to increase the ability of a nation to maintain its credit balance on the books of the International Stabilization Fund, and thus the stability of its currency, even though its balance of international payments turns unfavorable for a considerable period of time. This calls for an expansion of the volume of settlement media beyond the limit imposed by the amount of gold available.

ASIA AND AFRICA

Both the single gold standard and the White and Keynes plans ignore the preferences of the silver-using peoples of Asia and Africa. The humble status of countless individuals devoid of banking facilities or without need of them, who use the rupee, the yuan, or the tael as their medium of exchange and as their store of wealth, makes silver the most desirable coinage for their needs. Unlike gold, silver can be minted into coins of small denominations adequate to the modest requirements of myriads of farmers and tradesmen who, from one year-end to the other, seldom earn through hard labor more than $100 in our money. Nor will they willingly accept paper currency, which they distrust for many reasons, not the least, if the latest, of which is the experience of China. The average Asiatic does not aspire to the possession of gold, which is beyond his reach. Silver is what he wants, because silver is the gold of the masses.

Any post-war monetary system must recognize the situation of these people, who constitute approximately 1,000,000,000 human beings or nearly one-half of the estimated population of the earth. The importance of this section of the world in the future from a commercial standpoint will be much greater than in the past.

INTERNATIONAL BIMETALLISM

Silver has been in use as a monetary metal as long as gold, and over a large part of history and a large portion of the earth's surface it has been preferred to gold.

Before 1816 all countries, and until the 1870's all countries except England, had a bimetallic monetary system. But they never established identical ratios between gold and silver When transportation improved, this difference in ratios led to arbitrage. When gold was overvalued, gold coins were melted down or exported, and silver became the sole money in use. When silver was overvalued, it was driven out of circulation by gold.

Economists have pointed out right along that this basic difficulty encountered by bimetallism would not arise if the same ratio were adopted by the leading commercial nations of the world by agreement at the same time. The great English economist Alfred Marshall, probably the outstanding social scientist in the English speaking world of the past century, said in his great work on Money Credit and Commerce, "An agreement entered into by all the commercial countries of the world to keep their mints open to gold and silver at almost any reasonable ratio would tie the values of the metals to that ratio, so long as the agreement lasted." He urged that currencies be made convertible into gold and silver together, with an ounce

of silver considered equivalent to one-twentieth of an ounce of gold.

The world's monetary gold stock today is less than 1,000,000,000 ounces, of which the United States owns more than 70 percent. The world's monetary silver stock is well over 5,000,000,000 ounces, of which the United States holds approximately half. Were the nations of the world to agree upon international bimetallism, with a fixed and permanent ratio of 20 to 1 established between silver and gold, as Marshall suggested, there would be an immediate increase of more than 25 percent in the aggregate stock of standard money. If we take the countries outside of the United States alone, their holdings of standard money would be increased by some 50 percent. A ratio of 10 to 1 would double the above percentages. But the actual ratio should be determined by a commission advised by experts—economists, bankers, geologists, mining engineers and others qualified—after full investigation of the many factors involved. They should particularly consider the amount of metallic money desired and the possibility of increased silver production at various price levels.

In this connection, it is interesting to note that in 1940, the last year for which full statistics were made available, the world produced about 41,000,000 ounces of gold and about 273,000,000 ounces of silver. The production ratio was thus approximately 7 ounces of silver to 1 ounce of gold in that year.

ADVANTAGES OF INTERNATIONAL BIMETALLISM

The adoption by international agreement of international bimetallism as the world's monetary standard, with or without the use of an international stabilization fund to economize on the use of monetary metals in settling international balances, would have the following far-reaching advantages:

1. The volume of standard money would be immediately increased, particularly outside of the United States, to meet the larger needs of the post-war world. This would enable nations to maintain the stability of their currencies even if an adverse balance of payments should compel substantial shipments of gold and silver for a time to other nations, or to the international stabilization fund.

2. The yearly addition to the world's stock of standard money would be expanded, for the normal annual output of some 40,000,000 cunces of gold would be supplemented by production of some 270,000,000 ounces of silver.

3 The stock of monetary metal could be expanded further, if found necessary, through drawing in considerable quantities of silver from the arts.

4. Nations whose populations desire would be able to restore the coinage of standard money on a large scale. This has become progressively less possible as the gold shortage has caused all governments, including the United States, to withdraw the yellow metal from circulation.

5. If a world-wide shortage of standard money should again threaten, it could be corrected through stimulating silver production and lowering the ratio of silver to gold by international agreement.

6. The adoption of international bimetallism would not make the international stabilization fund plan unnecessary, but would rather help assure the success of any such plan by facilitating each nation's ability to replenish its credit on the books of the international fund through its power to deposit silver, as well as gold, for the purpose.

7 This is the only monetary plan that assures the world at large will possess an adequate stock of monetary metals, no matter how large domestic and external trade becomes, and no matter at what points world prices are stabilized.

8. A much larger number of nations would be themselves producers of standard money under international bimetallism, and thus would be aided in maintaining the stability of their currencies through the production of monetary metals within their borders. The Western Hemisphere, chiefly Latin America, produces about three-fourths of the world's silver, while the Eastern Hemisphere turns out about three-fourths of the gold.

The United States should support international bimetallism because, without lessening or impairing the use of gold or damaging the monetary situation in any country, such a system would serve best its economic interests and those of the Western Hemisphere.

International bimetallism will escape all of the disadvantages that arise when any one nation resorts to the use of two standard monetary metals, instead of gold alone.

International bimetallism retains every advantage of the gold standard, but possesses a number of additional advantages over gold.

The end of the war and the launching of a cooperative effort by all nations to restore monetary stability with the return of peace provides an unparalleled opportunity to bring this superior international monetary standard into effect, thus assuring a more effective and lasting monetary stability in the post-war world.

Germany Must Be Held to Strict Compliance With the Terms Imposed by the United Nations

---

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by David Lawrence from the United States News of October 1, 1943, entitled "And So We Resolve Again."

At this time I wish to compliment Mr. Lawrence on the able and forceful arguments and sound suggestions that he has so convincingly presented in his article.

While I have not at all times agreed with Mr. Lawrence in the opinions carried in his articles and have differed with his views on some subjects, I feel that his résumé of the conditions described in his editorial are most constructive and enlightening. I do not know the reasons for his going as far as he has in his article, but with one exception I endorse same as he sets forth conditions that cannot be truthfully contradicted. The exception is to his statement that harsh treatment was accorded Germany by the Versailles Treaty, and I hope his statement is not made for the purpose of urging that, after the defeat of Hitler and his Nazi gangsters, Germany be given more liberal consideration at the hands of the United Nations.

I concede that Germany suffered after the First World War; however, is it not true that she was responsible for that war, just as she is responsible for this war that has already cost millions of lives, and misery and suffering beyond description to many more millions of people? I concede that the masses in Germany suffered but Mr. Lawrence should be aware that German capitalists and industrialists have not lost, but have utilized their great wealth even during and after the war by means of ingenious manipulations of the Farben cartels in investing tremendous sums in nearly every outstanding industry not only in the United States but in every section of the world.

They have arranged working agreements in violation of the law with many corporations, such as the Standard Oil Co. of New Jersey, General Electric, the duPont Co., and many others too numerous for me to mention. They are not interested in rehabilitating the masses in Germany.

Mr. Speaker, I for one, shall insist that when Hitlerism is completely defeated, which I hope will be shortly, the provisions in the Treaty of Versailles be enforced, and that Germany, as well as Japan, will never be permitted to rearm and will be made to comply strictly with the letter of this treaty or any future treaty finally granted them by the United Nations.

AND SO WE RESOLVE AGAIN—

We have resolved through the Atlantic Charter.

We have resolved through the Mackinac Charter.

We have resolved through the Fulbright resolution.

We have resolved by Presidential declaration to establish the "four freedoms"—freedom of speech, freedom of religion, freedom from fear, and freedom from want.

And we have said that there shall be no more war, that aggression shall cease and that righteous nations must band together to enforce the peace by every means at their disposal.

We have resolved again to make a "lasting peace."

But of what avail are these resolutions when the ones we made in the midst of World War No. 1 were rendered meaningless after the war?

Anybody drafting a post-war resolution or endeavoring to set up a charter for a world association or organization to maintain peace is respectfully referred to the speeches, resolutions, round-robin petitions, and pledges made by both Republican and Democratic spokesmen in and out of Congress in 1918 and 1919.

Anybody seeking to preserve American sovereignty as against a superstate is respectfully referred to the debates in the Senate preceding the vote on the League of Nations Covenant which was offered as an integral part of the Versailles Treaty.

And anybody wishing to find all the words and the phrases needed to commit the nations of the world—by national or international police force—to respect and preserve the territorial integrity and independence of every country, large and small, need only to read over again article X of that same Covenant of the League of Nations.

We said all that could be said at the end of the last war. We adopted a constitution for the world which had in it every element of moral and physical obligation. The League Covenant remains today as splendid an expression of world idealism and practical

collaboration as it was when President Woodrow Wilson submitted it to the Senate in 1919 only to have it rejected by a coalition of Democrats and Republicans though accepted by Britain and France, and, subsequently, by Russia and Germany.

It is not resolutions with high-sounding phrases that we lack.

We need only one word. And that word—translated into actuality—is character.

Of what avail are resolutions, pledges, promises, or virtuous expressions if our elected leaders are not ready as yet to sacrifice the customary political maneuvers of the hour, the personal ambitions, the quest for material gain, and the greed for autocratic power which today as yesterday seems to dominate the governments of the principal allies in this war?

We are failing today not in the writing of general resolutions but to be frank about our post-war aims—frank with our own people or with the people of other countries.

Resolutions will not fool anybody—not even the American people, who have learned something about foreign policy these last 20 years.

Nor should we be deceived by the cry that America has had no foreign policy for 50 or more years, but that the British have had a foreign policy, and that the answer to the world's ills now is a new military and political partnership with Great Britain.

The truth rather is that the American people are not ready to accept imperialism and the British people are not yet ready to abandon imperialism.

We need no written alliance with Britain committing ourselves indefinitely to London's maneuvers in world politics.

We have given ample proof that we stand ready—as we have twice demonstrated—to give our blood to preserve the English-speaking civilization and culture as against militarism and tyranny and dictatorship.

We have gone to war twice now to try to make the world safe for democracy—safe for representative government, safe for nations to trade with one another in good neighborliness and mutual respect.

But what we have not demonstrated—neither we nor the British governments of the last 2 decades—is that we have the character to carry out our pledges, to make our words come true.

The first prerequisite to the attainment of character is fundamental honesty. We must not only be honest with other peoples but honest with ourselves.

Why, for instance, do we persist in telling our own people that the League of Nations Covenant was a failure when it wasn't this document or its resolutions or provisions that failed, but the governments which, due to politics and pacifism at home, refused to support that League—we being the principal shirkers?

Why do we tell our own youth that the trouble last time was that we didn't march to Berlin in 1918, that we didn't drive home the lessons of defeat?

Is that honest?

For anyone who will take the trouble to go back to the files of our newspapers in 1918 will discover that the German Navy was completely defeated and what remained of it was ordered surrendered under the terms of the armistice. It will be found, moreover, that the German Army was completely demobilized, and Germany was disarmed--forbidden to build big warships or war planes or submarines or to raise armies. A small police force of 100,000 men was all that was permitted Germany, and provision was made for an international commission—on which Britain and France were represented—to inspect and make public reports.

We also declared to the whole world the guilt of the German leaders and wrote this into the Versailles Treaty where all could read it.

These were the words. But what action did we fail to take to make the words mean what they said?

We—that is, the Allies—imposed an impossible reparations burden which the German people could not pay. France took all the raw materials she could extract from Germany as "payment in kind," and we left the struggling republic a ready victim of economic anarchy and chaos so that by 1923 Germany went through her terrible inflation—bankruptcy affecting the assets of 80,000,000 persons.

That was the year Hitlerism won its first victory—not in 1933 when Hitler, as a symbol of a nation's desperate groping for economic equilibrium, assumed actual control. The German people had sunk to the lowest point in economic suffering. Any leader who promised any relief thereafter was welcomed.

And as Hitler saw that Germany needed more territory, needed areas from which raw materials could be stolen, the British and French Governments sat idly by and let him build up a war machine. From 1933 to 1939—during 6 whole years of Hitler's regime—what did Britain and France and America do? What was behind the failure of Britain and France to see what was happening under their noses? They were close by—after all, we were 3,000 miles away.

Did the British and French resume the building of their own armament so as to enforce the terms of the Versailles Treaty? Did they stop Hitler when he marched into the Rhineland? Or did the British conservatives, anxious to preserve their capital and their trade, join with the British pacifists in ignoring the threat to the world of a new aggressor? Wasn't selfish materialism more important then to the British and to ourselves? Didn't we by action of both Houses of Congress in 1935 pass a law, signed by President Roosevelt—just before his second election—which barred the weak democracies from getting arms from our shores? Of what avail are resolutions about world peace when, after winning a great war and disarming the enemy, the same victorious conquerors allow their military forces to disintegrate and refuse to allow their arsenals to be used to meet the threats of tyrants wherever they arise?

Was the British foreign policy in respect to Italian aggression in Ethiopia, in respect to Japanese aggression in Manchuria, in respect to the noble efforts of the loyalists in Spain, a foreign policy which thoughtful Americans approved then or now? Are we asked to accept that kind of characterless behavior as the basis for a future alliance?

There were in Britain then, as there are today, men of character who cried out at this chauvinism, who begged for a different distribution of economic resources in the post-war world of the 1920's, for a peace built not on hate or revenge but on the Ten Commandments and the Golden Rule—based on tolerance, mutual respect, unselfishness, and honesty.

We do not need more resolutions. We need humbleness, penitence, reexamination of our true motives, and the courage to rehabilitate the conquered as well as to restrain the conquerors.

We need, in brief, a dedication to spiritual values and a commitment not just to the words or rituals but to the actual practice of a Christian philosophy.

For the key to character is to be found in confession of error and reappraisal of our inner purposes and not in denunciations or hypocritical phrases.

We must honestly recognize that neither we nor the British nor the Russians are the sole proprietors of this world but merely temporary trustees obedient to the will of God. He created human beings everywhere equal—not to live under master rulers or a system of vested privileges. He gave to all persons irrespective of creed or color the right to enjoy freedom of opportunity—the inalienable right to life, liberty, and the pursuit of happiness.

The Covenant of the League of Nations still lives. It is built into the existing treaty structure of 44 nations. Let the United States ratify that covenant and pray God to give us the will and the courage to make it at last an effective instrument of international cooperation. For by its provisions, special alliances are expressly forbidden and, instead, the member nations are equally obligated to use all their force and resources as against aggressor states—whether members or nonmembers—to enforce and maintain the peace of the world.

DAVID LAWRENCE, *Editor.*

Modern Explorers and Pioneers

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, October 8 (legislative day of Wednesday, September 15), 1943

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Modern Explorers and Pioneers," delivered by me over the Mutual Broadcasting System on Thursday, October 7, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, we are living in an age which requires that we lift our sights—enlarge our horizons—if we are to be fit to meet the challenges of this and the coming period.

Television, radio, radar, the telescope, the airplane, and the microscope, and other advances in the physical sciences have enlarged our horizons.

We on the home front, as well as our boys on the far-flung outposts on the battle lines in the British Isles, Italy, India, Burma, Guadalcanal, Africa, Persia, and the Aleutian Islands are beginning to comprehend why we are fighting. We are beginning to comprehend our job—and some job it is—the obligations and the opportunities to make the earth a better and a safer place to live in.

As the hope of the world, America is the most significant Nation on earth. As the most powerful Nation, America must make sure that wisdom from on High is hers to guide her decisions and her steps. We cannot escape world responsibility.

Whether we like it or not, we are, as a nation, in a commanding position. What we do in our dealings with world affairs now and when the war is over and victory is ours—whatever we do will determine the direction of the peoples of earth for generations to come. Mere mechanistic systems, materialistic ideals will not be adequate. Among our leaders personal, private, or open selfish ambitions and antagonisms must be laid aside. It is for us to be fully responsive to our job for world building and world reconstruction—facing every problem honestly, courageously, and with vision. That is basic. We now come to the problems.

What part will America play in the political reorganization of the world?

At the Mackinac conference the Republicans of the Nation answered that question dynamically and sensibly. They said in part: "We must preserve and protect all our own national interests. We must aid in restoring order and decent living in a distressed world. We must do our full share in a program for permanent peace among nations. A specific program must be evolved in the months to come, as events and relations unfold."

The advisory council specifically approved the following:

"1. Prosecution of the war by a united Nation to conclusive victory over all our enemies, including—

"(a) Disarmament and disorganization of the armed forces of the Axis;

"(b) Disqualification of the Axis to construct facilities for the manufacture of the implements of war;

"(c) Permanent maintenance of trained and well-equipped armed forces at home.

"2. Responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world."

The Mackinac declaration stated further—"We work toward a policy which will comprehend other means than war for the determination of international controversies; and the attainment of a peace, that will prevail by virtue of its inherent reciprocal interests and its spiritual foundation, reached from time to time, with the understanding of the peoples of the negotiating nations."

The second problem that confronts us might be phrased this way—what direction will America take, political and economic, within her own borders? In other words, what are our plans for employing not only our boys who come back from the services but the fifty-odd million of our people who are now working on the farm, in war production plants, in the civilian economy, and in Government? Will we turn to state socialism, as a solution, which means that the state will practically own and control all the means of production?

What is to be done with the thirty-odd billion dollars that the Nation has invested in war-production plants, and so forth? Will there be less or more centralization of government? This tremendous problem on the home front is the problem of each one of us. It is a job, for every citizen. Yes, each of us, can do his part to see that jobs come into being; demand of Government demobilization of useless Government agencies; increase necessary production; keep thinking straight, and remain free from race and class hatred; practice tolerance and keep the racketeer out of American life.

Government can be helpful in post-war planning, but unless we are going the way of state socialism, we must make sure, that the Government is the servant and not the master. It must not hold the economic reins. It must not termite legitimate initiative. Laws must be so executed, that the citizen will not be handicapped in his legitimate efforts to produce wealth and build industry. I repeat, this is a job for every citizen.

On August 3, 1942, I spoke in the Senate of the need of government as part of its tax program permitting reserves to be built up in industry, these reserves to be utilized if necessary for reconversion of industry back to peacetime activity and for the maintenance of labor during the post-war period.

I again suggested the same idea to the Senate on September 14, 1943. At the same time I brought out this idea which I think is fundamental, that we must get rid of those individuals who profit by division, who create antagonisms between management and labor, who build their house on Hitler's tactics—divide and conquer.

In the post-war period it is emphatically necessary that we work in harmony. Only that way will provide the opportunity for high adventure and solution of our problems. Only in that manner will we be able to successfully negotiate the political and economic bumps.

Nothing more detrimental could happen to labor than to have state socialism imposed upon America, and certainly labor is interested, together with management, in seeing that private enterprise is maintained as a going concern in America.

Every thinking person knows that it was the energy and the genius of the average citizen that built America. Such citizen knows that when the industrial life current is interrupted we get poor times. The way to keep that current flowing steadily is for every citizen to look after the job at hand, which primarily calls for a manifestation of cooperation.

When this war ceases we will probably have a national debt of over 250 billion, with an interest charge of $5,000,000,000 per annum. That item, together with the expense of government, will make it imperative that we have a substantial national income to keep America solvent. The job can be done if we recognize—we of the farm, the factory, the office, of the little town and the big town—that we are all in the same boat and have to pull together. This is a fundamental fact, and if we fail to pull together it will be to the detriment of the heritage that our children are entitled to have transmitted to them intact and unimpaired.

I have a great hope and faith. With God's help—the help that will make us see straight and build constructively—we will bind up the wounds of the Nation. These wounds are more than physical.

A new age of pioneering is upon us. We will break new trails in science. We will discover ways of bringing the peoples of the earth to live together in harmony. We will develop new means of power. We will prove to the nations that the role of the Samaritan makes for peace and concord. A great adventure for America is up ahead if we Americans will prove ourselves equal to the task. My faith tells me that we will.

In the peace era let us proceed with circumspection and with faith, with buoyancy and expectancy, in this great new opportunity for world conquest; a conquest not by fire and sword, but by lifting the fallen and downtrodden, teaching the ignorant, and making whole the discouraged and fearful.

What a job. Yes, a new age of exploration and discovery is upon us. As we proceed, new vistas will open up. This way, leads to world liberation from the chains of hatred and fear, the chains that the centuries have forged.

Truly before us, up ahead, there is a glorious future for our beloved America and the world. Modern explorers and pioneers, I salute you.

I thank Station WOL and the Mutual Network for this opportunity of using its facilities. This is ALEXANDER WILEY, United States Senator from Wisconsin, saying good-night.

This Should Help Oklahoma Greatly

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. JOHNSON of Oklahoma. Mr. Speaker, during the past decade or longer the Soil Conservation Service has rendered invaluable assistance to the farmers of America, and especially to farms and farmers of Oklahoma, in the splendid, efficient service it has given. Its supervision of the several organized soil-conservation districts in Oklahoma; the surveying, construction, and supervision of thousands of vitally needed terraces on many of our State's watersheds; its strip planting and other soil building, as well as soil-conservation practices, as well as the assistance the service has given thousands of individual farmers of Oklahoma, is to be highly commended. In fact, the Soil Conservation Service has been a godsend to many appreciative farmers, as well as to many sizable farm areas of our State. Moreover, in any post-war program that may be considered, there is no question but what the conservation of our fast-diminishing topsoil in many farm areas and the checking and holding of the precious moisture where it falls will undoubtedly become of vital and extreme importance.

Under the leave granted me, I am including, herewith, as a part of my remarks a portion of an editorial recently appearing in the Oklahoma City Times, which presents much food for thought on the subject of water and soil conservation. It follows:

THIS SHOULD HELP OKLAHOMA GREATLY

Suddenly the American people realize that we need to save our topsoil, for food is really getting scarce, and it has been shown that soil conservation will produce an immediate increase in food production to the amount of anywhere from 20 to 40 percent.

One great trouble with the Federal soil conservation program is that the A. A. A. has wedged in a department that overlaps on the fine original Soil Conservation Service by establishing an elaborate system of benefit payments. In Oklahoma there are as many as 44 different practices, including the drilling of wells and planting of gardens, for which subsidies are paid, and many of these have nothing to do with the big job of keeping the soil from washing into the ocean.

The original Soil Conservation Service gets $20,000,000 a year, and this is the agency that sets up conservation districts, with expert supervision, but with no subsidies. The subsidy agency, under A. A. A., gets $300,000,000 a year. This puts the emphasis on the wrong place.

The newly established program for the treatment of soil erosion in the Washita Valley of Oklahoma—the second of its kind in the United States—seems to start in the right direction.

The Oklahoma water resources division of the State planning board is cooperating in this project, and the specifications provide for complete watershed treatment of the tributary uplands of the valley, at an estimated cost of $11,243,000.

There may be uneasiness as to how the Federal Government can get money for even such a worthy purpose, but at any rate it can be said that the principle is far better than dambuilding or the payment of millions of piddling individual subsidies, many of which really accomplish nothing.

The spending of Federal money for watershed treatment is a legitimate function because flood control is necessarily an interstate matter, and the whole American public is vitally interested in the saving of the soil and water resources of the Nation. After a number of false starts elsewhere, it seems that the Washita project really proposes to

get somewhere with the vexing problem by working to hold the water right where it falls.

* * * * *

There still may be some question as to spending so much of the taxpayers' funds when individual farmers have shown themselves to be willing to spend their own money in terracing and otherwise treating their own lands, but the Washita project deserves the benefit of the doubt until and unless it proves to be wasteful, or subversive of individual effort. At any rate it has the enormous argument on its side that it begins at the right spot, in stopping both floods and soil erosion.

Poland Fights On

EXTENSION OF REMARKS

OF

HON. MARTIN GORSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. GORSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio broadcast by the Honorable Francis Xavier Swietlik, dean of the law school of Marquette University:

Four years ago Hitler marched into Poland. For days representatives of many nations made frantic appeals to the Nazi dictator in the hope of averting the calamity which threatened the world. All these appeals fell on deaf ears. Hitler was determined to resume the struggle for world domination which his predecessors began in 1914 and which they so abruptly brought to an end 4 years later. Poland was chosen as the first victim of his aggression. It is therefore fitting that we Americans and all United Nations pay tribute on this fourth anniversary of the world conflict to this gallant ally.

Poland's determination to survive as a nation, and especially her contribution to the common cause of the United Nations under most trying conditions, imposed upon her by a ruthless enemy, will constitute one of the brightest pages of her heroic past.

In spite of a serious disadvantage in numbers and armaments, as compared with the might of the enemy, Poland resolved to resist the unwarranted and unprovoked attack upon her sovereignty. She proclaimed to the world that the honor of a nation is more sacred than peace at any price. Her people, soldiers and civilians alike, fought heroically in the face of overwhelming odds. After several weeks of Spartanlike resistance her armies were overcome by the might of the invader.

And yet, although seemingly conquered, Poland fights on. The terroristic and repressive measures of the Nazi geared to break the spirit of the Polish Nation served only to inflame the people to greater resistance. Poland today presents a tragic picture. Her fields are laid barren, her cities are a mass of ruins, her people wantonly and wilfully despoiled of their property and herded off to restricted areas and concentration camps; her food is confiscated by the enemy, her youth and intellectuals are ruthlessly exterminated, her seats of learning, churches, and convents are defiled, and her helpless and unoffending university professors are taken from their classrooms and rushed in trucks to concentration camps. This ruthlessness, however, has not broken her spirit. Poland is seething with unrest. Sabotage, anti-Nazi posters, underground publications read by millions of people at the risk of losing their lives, all serve to keep the spirit of resistance alive and will no doubt prove a decisive factor in the defeat of the common foe when the zero hour arrives. This underground activity compels the Germans to garrison Poland with a large number of troops which today could be used to advantage by the enemy on the various fighting fronts.

The contribution of the Polish armed forces to the common war effort is no less effective than the struggle of the people in the occupied areas. After the debacle in France a large contingent of Polish soldiers escaped to Great Britain, where they are awaiting the time when in comradeship with their allies they will return to the Continent of Europe to come to grips with the Nazi. An army of about 100,000 soldiers has been organized from among thousands who had been prisoners of war in Russia and today constitute an integral part of the Allied forces in the Near East under the command of General Anders. The Polish Army is today the fifth in size among the Allied armies. Polish soldiers are fighting on every front wherever the enemy can be found, ready and willing to offer their lives in the common struggle for freedom.

The exploits of the Polish Air Forces are a familiar story to all of us. It accounted for approximately 500 certain and 250 probable enemy planes. Sixty-two Polish bombers took part in the raids over Cologne and the Ruhr Valley. This air force was responsible for the destruction of 17 percent of the German planes shot down over England and the English Channel in the memorable Battle of Britain.

The Polish Navy and merchant marine, though small in size, are playing a vital part in exterminating the submarines and in carrying needy war supplies to the fighting forces on the front.

It is strange that present-day aggressors do not heed the lessons of history. They may succeed to temporarily erase the geographical boundaries of a smaller nation; they may eject hundreds of thousands of its people from their homes and confiscate their possessions; they may colonize the land and homes stolen from others with their own people, but they cannot crush the determination of a nation to live and to resist until her God-given freedom is again restored to her. Poland stands today as a supreme proof of the indestructible power and determination of nations to survive.

In the meantime, Poland is enduring untold hardships in the firm hope and belief that when this war is over she will be restored to the fullness of her rights as a sovereign Nation.

We must bear in mind that we are fighting this war for certain principles of right and justice. Unless we establish these moral principles as a fundamental motive of all our actions in formulating the future peace of the world we cannot expect a durable peace.

The President of the United States announced to the world that this war is being fought for the purpose of establishing four fundamental freedoms in all parts of the world—the freedom of worship, freedom of expression, freedom from want and freedom from fear.

The architects of the post-war world must go further, however, than to merely assure to the individual the enjoyment of the fundamental rights embraced in the four freedoms. They must assure the strict compliance by every nation of the terms of treaties solemnly entered into. The occupation of the territory of smaller nations by forcible aggression must be forever outlawed. The policy of appeasement, a compromise with right and justice for the purpose of military or political expediency, must be abandoned. Nations in their relations with each other must scrupulously observe the same principles of right, justice and morality which we expect every individual to observe in his dealings, with his neighbors. Unless such a foundation of morality underlies the future conduct of nations toward each other, we cannot expect a permanent peace.

Statements recently emanating from official Soviet sources that after this war is over the Baltic States and the eastern half of Poland will be formally annexed to the Soviet Union, furnish some justification for fear on the part of the smaller nations of the united front that this moral issue may be straddled for the sake of political expediency. It would be most unfortunate for the future peace of the world if the rights of any small nation were to be sacrificed in order to satisfy the appetite of a more powerful ally.

Most Americans are convinced today that in order to assure a permanent peace our participation in world affairs after this war is over will have to be greater than it was in the past. The experience of the last two decades must make us realize that our own security as a Nation is vitally affected by what happens to other nations of the world. Nothing would be more likely to persuade the American people to return to their traditional pre-war aloofness from all participation in world affairs than would a departure from the principles laid down in the Atlantic Charter, and as further implemented by statements of our President and the State Department. We have reason to believe that this country will never consent to become a party to an exparte settlement of the soverign rights of any one of our allies. It is our traditional policy to protect the rights of the weak and to refuse to recognize the taking of territory by force. As a Nation, our Government recognizes the fundamental principle that all men are equal before the law. The humblest of our citizens is protected in the enjoyment of his inalienable rights set forth in the Bill of Rights.

In our relations with other nations we have always refused to recognize the taking of territory by force. The Kellogg-Briand treaties, initiated by this Government, make that policy clear. That policy was constantly adhered to by our State Department. Secretary of State Henry L. Stimson refused to recognize the illegal occupation of Manchuria by Japan. Our present able Secretary of State Cordell Hull refused to give like recognition to the annexation of Ethiopia and Albania by Italy, and in the summer of 1940 Mr. Sumner Welles, as Acting Secretary of State, refused to recognize the occupation of the Baltic States by Russia. This policy of refusing to give cognizance to aggression is clearly set forth in the Atlantic Charter, which is subscribed to by the Allies. The Atlantic Charter contains solemn obligations entered into by the United Nations in the solemn moment of war and constitutes in outline the foundation upon which a permanent and just peace can be established.

In all occupied countries struggling men and women are looking to the United States with hope and assurance to lead them out of chaos to a brighter day. Let us assume that leadership, and true to our historic past, let us carry the blessings of freedom to all parts of the world and establish a peace founded on the recognition of the just rights of every nation, large and small.

Allowances to Dependents of Servicemen

REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. CLASON. Mr. Speaker, yesterday the Senate passed Senate bill 763 by a unanimous vote, 69 to 0. Before doing

that the Senate adopted an amendment offered by Senator JOHNSON of Colorado to increase the amounts paid by way of allowances to dependents of servicemen. The main feature of that amendment is to increase the amount to be paid to a wife and one child to $80 from $62, the present rate, and to provide for $20 in addition in place of $10 for each additional child.

From the evidence which I have heard at hearings held before the House Committee on Military Affairs, I believe Senator JOHNSON is well warranted in selecting the amounts placed in his amendment. This bill will come from the House committee before long in some form. If it does not come in a form providing as large allowances as the Johnson amendment—and I believe that it will provide for $5 less per month for the first, third, and additional children—I propose to offer as an amendment the terms of the Johnson amendment when the bill is so reported.

Living expenses are extremely high today. By law we are requiring fathers, young and old, to enter the armed services and to go far from their homes. Many fathers will be unable to provide for their loved ones out of their own resources. The evidence introduced in the hearings clearly demonstrates that in most parts of the United States the allowances under the Johnson amendment will provide no more than maintenance for the dependents at the average American standard of living. It is not fair to compromise on less, taking food or clothing from little ones. I urge you to support the Johnson amendment.

Government Insurance on Ships

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. JONES. Mr. Speaker, I thought the House might be interested in examining the modus operandi of the Government insurance on ships. I am inserting a letter in the CONGRESSIONAL RECORD which I received from Mr. Lindsay Warren in answer to an inquiry I made in regard to the steamship *Effingham*. I expect to broaden my observations on the entire program in a few days, but for present purposes I wish the membership to examine this letter to see the extent of insurance money over and above the price paid for the ship that a certain company collected after it was sunk.

You will note the letter says that the price paid for the ship per deadweight ton was $5. The insurance paid per deadweight ton was $75. The sales price for the ship was $48,470; the insurance paid for the ship was $727,050.

If any one of you insured your home and tried to collect any excess value from an insurance company, I have always understood you would go to jail.

I now wish that you would examine the letter of Mr. Warren, Comptroller General:

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, D. C., July 28, 1943.

Hon. ROBERT F. JONES, M. C.,
Appropriations Committee,
House of Representatives.

MY DEAR MR. JONES: I have your letter of July 21, 1943, requesting certain information in connection with the construction and operation of the steamship *Effingham*. The data requested are as follows:

Steamship Effingham: Year built, 1919; deadweight tons, 9,694; cost, $1,966,849.35; year sold, 1932; purchaser, Lykes Bros. Steamship Co.; sales price, $48,470; price per deadweight ton, $5; mail-pay, 15 voyages, April 15, 1943, to May 4, 1937 (approximately), $247,000; operating subsidy accrued 1937-40, $139,209.43; voyage profit, 1941, 1 voyage to Red Sea, $326,300.72; lost in 1942, insurance paid by War Shipping Administration, $727,050; insurance per deadweight ton, $75; depreciated value, residual book value, $48,020.

The records of this office show that the entire amount of operating subsidy ($5,612,050.45) paid to Lykes Bros. Steamship Co. on all of its vessels so operated, which amount includes $139,209.43 accrued on the steamship *Effingham*, is subject to recapture by the United States Maritime Commission pursuant to the provisions of the Merchant Marine Act, 1936, as amended.

Sincerely yours,

LINDSAY C. WARREN,
Comptroller General
of the United States.

The Old Army Game

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. BENNETT of Missouri. Mr. Speaker, several years ago Hon. E. Y. Mitchell, Assistant Secretary of Commerce in the Cabinet of Franklin D. Roosevelt from 1933 to 1935, made startling revelations of corruption in that Department and loss to the taxpayers of millions of dollars through questionable deals between administration officials and private interests controlling the big steamship lines and the merchant marine generally. Mr. Mitchell's reward for this public service was to be kicked out of the President's "little cabinet." The revelations of this former New Deal official were carefully documented by him and in 1936 included in a book entitled, "Kicked In and Out of the President's Little Cabinet."

In normal times the Mitchell book would have unseated a national administration. However, in recent years we have become so accustomed to repeated and daily scandals of great magnitude, we have become so used to having facts concealed from us, from having facts misrepresented to us, so used to being browbeaten, insulted, penalized, robbed, regimented, and kicked in the pants by Washington officialdom that the public consciousness has become numbed, callous, and indifferent to many things which merit congressional investigation and impeachment proceedings against important figures in the executive department.

The situation in the shipping industry, perhaps the greatest racket of the modern age, has grown steadily worse since Secretary Mitchell was silenced by removal from the stage of public affairs. Under leave to extend my remarks in the RECORD, I include herewith the following article from the Sunday, October 10, 1943, Washington Times-Herald, showing how these ship deals are costing the taxpayer $60,000,000 which must be made up in increased taxes on the forgotten man:

SHIP DEALS COST NATION $60,000,000—YEAR-OLD REPORT REVEALS FINANCIAL MANEUVERS

(By Willard Edwards)

A confidential report to the Comptroller General, disclosing a bewildering series of financial maneuvers which have cost the Government more than $60,000,000 of taxpayers' money, was brought to light yesterday.

The report has lain in the Government's files for more than a year, never having been forwarded to Congress, although the law specifically requires the Comptroller General to report to Congress every contract and expenditure made in violation of the statutes.

DEALINGS REVEALED

Revelations contained in the report involve the dealings of the United States Maritime Commission and its predecessor, the United States Shipping Board Emergency Fleet Corporation, in connection with the American President Lines.

Former Assistant Secretary of State Henry T. Grady is now president of the steamship company, having run the line at a $25,000 yearly salary since the death of chairman of the board William Gibbs McAdoo, former Senator from California, in November 1940.

A supplemental report on the American President Lines for the period 1938-1941 shows a total profit of $13,429,000. The total accrued subsidy was listed at $8,958,000 and a net profit to the lines was $6,861,000. The balance on deposit as of December 31, 1941, in capital and special reserve funds was $4,413,000.

OBSERVERS STARTLED

In view of these figures, observers have confessed themselves startled, to put it mildly, at reports that the 90 percent of stock is to be sold for a minimum figure, one rumor fixing the sales price at $250,000.

The Maritime Commission is now about to dispose of the 90 percent of stock in the steamship corporation which it acquired in 1938. This stock, valueless at the time, has become valuable by reason of the millions paid in subsidies and the sale to the Government of ships at fabulous prices, according to the report, the charter of vessels for war uses at exorbitant rates, and insurance assumed by the Government on lost vessels at 10 and 12 times their worth.

GRADY REPORTED INTERESTED

Among the private interests bidding for the stock is said to be a group headed by Grady. The Commission announced last week that it has before it several proposals calling either for operation or outright purchase and that an announcement may be expected soon.

The story in the report goes back to 1924 and 1925 when the corporation, then known as the Dollar Steamship Lines, purchased from the United States Shipping Board 12

combination passenger-cargo vessels built by the Government in 1920 and 1921.

These fine, new ships had cost the Government $62,037,459 to construct, an average of more than $5,000,000 per vessel. The Dollar Lines got them all for $9,475,000. The Government—and the taxpayer—took a loss on that deal of $52,562,459.

In 1938, according to the report, the Dollar Lines was insolvent and about to discontinue its service when the Maritime Commission created in 1936 to succeed the United States Shipping Board, brought about a reorganization of the company, changed its name to American President Lines, and installed Senator McAdoo as chairman.

PROTESTED AND DENOUNCED

The reorganization was protested and denounced by two members of the Maritime Commission, but it went through and the Reconstruction Finance Corporation was induced to loan $2,500,000 for operating expenses of the company. The Maritime Commission loaned another $2,000,000 for reconditioning the aging vessels which made up the company's fleet.

In the next 4 years, from 1938 to 1942, according to the report, the company enjoyed Federal operating subsidies totaling $7,919,-119, along with benefits flowing from income tax deferments and exemptions in respect to statutory funds established from earnings and capital gains.

These statutory funds were established on the basis of supposed agreements for replacement of obsolete vessels, according to the report, but such agreements did not exist and had never, in fact, been required by the Commission.

ACQUIRES STEAMSHIPS

When World War No. 2 broke the Maritime Commission acquired for the War Department, for war purposes, three of the old steamships, the *President Cleveland, President Pierce,* and *President Taft,* which had been bought by the Dollar Lines in 1925 from the old Shipping Board for only $3,375,000, although they had cost the Government $19,-118,961 to construct in 1921.

The War Department paid to the Commission for these three vessels $2,400,000, according to the report, but the President Lines demanded more and the War Shipping Administration, headed by Admiral Emory S. Land, who is also Chairman of the Maritime Commission, offered $3,000,000.

Under the plain terms of the Merchant Marine Act of 1936, the report noted, the three vessels are obsolete and have only a scrap value of $477,951.

SEEKING MORE VESSELS

The report added that the Maritime Commission has been acquiring many other vessels for war purposes at prices and values far in excess of those permissible for payment under the law, and that other vessels taken for use in the war effort are under charter at rates far in excess of legitimate earnings. Excessive insurance values have also been fixed on vessels which have been taken and are being used in the national emergency, the report stated.

All these financial deals have enriched the value of the once valueless stock which is now being sought by private interests and the report raises the question whether the new owners of the stock will reap the reward of the funds paid out in operating subsidies and other benefits which the Commission has, in substance, been paying to itself as owner of the majority stock.

Congress has been assured on several occasions by Comptroller General Lindsay C. Warren and other representatives of the General Accounting Office that transactions involving shipping companies, including the American President Lines, are under investigation. But no report has been made to Congress thus far.

Citrus Fruit Prices

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. POULSON. Mr. Speaker, I wish to insert in the RECORD a portion of a letter I received from a very good friend of mine which gives some very interesting facts on citrus fruit prices:

You are aware of the fact that the ceiling price the past navel season was navels $3.43 and on valencias $3.99 f. o. b. As much as we are now shipping valencias, let's talk about that ceiling and put some figures down to illustrate the point.

The legal and law-abiding operator is permitted the following mark-ups, according to the order as written: $3.99 f. o. b. plus freight and refrigeration, and if sold through a broker, 1½ percent may be added providing brokerage is paid. That is your total delivered price to any purchaser, whether it be a wholesaler or service jobber.

Now, to this price if the purchaser is a wholesaler, it is my understanding he can add 9½ percent mark-up, and if he sells to a service jobber, and a service jobber is defined as one who handles less than carload lots, then the service jobber can add another 21 percent mark-up. I could elaborate to a greater extent, but briefly that is the set-up if everyone abides by the order.

Now, taking the delivered price and working it back to an f. o. b. basis, and then breaking it down on a field box basis to the grower, if there isn't any chiseling anywhere along the line and the grower's fruit runs on an average of prevailing crop of valencias, all that anyone can hope to return to the grower is approximately $3.60 per hundredweight, maybe a nickel more or less, depending on the quality. So much for the legal and legitimate operation.

Now, let's get into the black-market angle. It has been common practice for many eastern black-market operators to move into the citrus industry this season and pay as high as 4½ cents per pound on the trees net to the grower. As I understand it, there are many methods being employed to evade the law and enable the purchaser to pay that much more than the ceiling.

I will enumerate a few of them. An eastern operator who had a 21 percent mark-up can move into the picture and say, for instance, go to a broker or any individual in the citrus industry, get him to buy direct from a grower and incidentally, there isn't a ceiling on the grower, it is only applicable to the packer, so the grower is within his rights to sell his fruit at any price he sees fit. Now, if the purchaser goes to the grower with say a 4½-cent offer and gets the fruit, then he can go to a commercial rate of so much per box and then use part of his mark-up of say 21 percent on the legitimate legal ceiling to help offset part of the overpayment made to the grower.

Or, another angle that can be worked is an eastern buyer can take part of his mark-up and give it to a buyer for cars and show it as a service charge for buyer's efforts in securing supplies for him. You can see with the enormous profit available that if the eastern buyer should give an agent on this end of the line as much as $200 or $250 per car, it would be a very attractive deal for both parties concerned. I could elaborate indefinitely on this subject, but I think what I have pointed out gives anyone interested a pretty good idea of how the order can be evaded if one sees fit to do so.

Farm Labor Tight in Missouri

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued by the Missouri Farm Labor Committee:

The farm-labor situation in Missouri is very tight with the loss of every year-around worker from now on meaning a curtailment in food or feed production. This was the opinion of the Missouri Farm Labor Committee at its meeting in Columbia on September 17.

In the southeast part of the State, cotton picking is under way, with some shortage of workers indicated. Several hundred recruited pickers from nearby areas, hard hit by the recent dry weather, have gone into the Cotton Belt to help fill the demands for pickers. Rains have slowed picking considerably.

In the apple-growing areas of the State, picking is moving ahead with growers reporting that they could use more pickers but managing to get most harvesting done without excessive loss. In the apple section near Waverly, a heavy windstorm recently shook off many apples, some of which were entirely lost because not enough pickers could be obtained to move the apples as rapidly as needed.

Northwest Missouri farmers are reporting a relatively good crop of corn and are expecting to need 600 to 800 pickers from outside the area to aid them in shucking the much-needed crop. An effort will be made by the Agricultural Extension Service to secure small groups of workers from Ozark counties where they can possibly be temporarily spared at this period of the year for corn shucking in northwest Missouri.

In northeast Missouri, a big crop of soybeans is expected to increase the need for day-labor workers in that area.

Dairymen in many parts of the State have indicated that they will require helpers soon or they will have to curtail production by selling cows. The shortage of dairy workers is particularly acute around Kansas City, St. Louis, Hannibal, and Springfield.

The committee pointed out the big part taken by farm women, children, and older men and women in aiding agriculture to scrape through the year so far without serious total losses of crops. It was pointed out that some loss had occurred because crops were not harvested or planted at the best time, and that a number of farmers are planning to shift to a less intensive type of farming in the future in order to get by with the labor available. Reports read at the meeting indicated that the already depleted number of hired farm workers on farms had dropped another 16 percent in the past year. A survey made on September 1 showed that farm operators were working an average of 13.7 hours per day.

J. H. Dinwiddie, district supervisor of the Employment Service of the War Manpower Commission, stated that investigation showed there was no hoarding of farm labor in Missouri and that farm laborers who could not be placed immediately on farms were made available for industrial use by the Extension Service. He stated also that the recent rulings of the Commission were to the effect that farm workers no longer could become free agents available for city jobs simply by laying out of work for 30 days.

Scott Meyer, of Hannibal, vice chairman of the State Farm Labor Committee, pointed out that the job of the farmer in this war was to run the food-producing factory and that, to keep this factory going, requires a certain amount of manpower. With the reduced farm-labor supply, the farmers of Missouri can supply food or men but not both. The Federal Government should make the decision as to which is needed most. It should make little difference to farmers from a profit standpoint, since most of them will be lucky to break even now.

The Extension Service announced that during the past 3 months it had made 42,717 placements in Missouri, 3,743 of which were year-around ones and the remainder seasonal.

Members of the committee present included Scott Meyer, Hannibal; Ronnie Greenwell, Hayti; John Plassmeyer, Loose Creek; C. E. Klingner, Sr., Fair Grove; Ernest Wray, Maryville; Charles Peterman, Miami; H. Baxter Hall, Clarence; J. W. Burch, Rocheport; J. D. Monin, Jr., Columbia; Max McNulty and J. H. Dinwiddie, Jefferson City; A. C. Mussman and K. G. Harman, Columbia.

Self Security

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Matthew Adams:

SELF SECURITY

(By George Matthew Adams)

There is a great deal of idealism dealt out in every plan proposed for social security. I have never liked the name, however. I like self security better. That is what has made every successful man or woman and every great nation. Self reliance is a twin brother to it.

If every human being born is assured, as soon as he reaches understanding, that he is to be cared for, from the cradle to the grave, and that he has nothing to worry about, imagine what a race of dependents this world would have! Those who first came to this western world, discovering, inventing, and sacrificing, had no other capital than self security in mind—self security for themselves, and because of this individual independence, to pass on the example to their children.

The weak, ill, and those who have unavoidably been misfortunate, surely deserve all the security possible to comfort and care for them throughout life—but not the able-bodied and the healthy. They have the opportunity to gain self security which should be the pride of every human being given is chance in this world. It's that chance that should be assured him under a free form of government.

Food and comforts that are earned, through work, enter into the very muscles, the brain, the heart, and every stream of blood that courses through one's veins. And the will to live and to be useful inspires such a one with the love of life itself and all its opportunities.

Take incentive away from a human being and you rob him of his greatest asset. You dismantle his dreams. You cheat him out of the fun of achievement. You feed him the substance of which idleness is composed. You take the rudder of life from his sailing craft.

It is so much easier to succeed than it is to fail. But if you hand the tools of success to one, without his having earned them, he is most apt to dull them into uselessness long before he has learned to make them serve him and his fellows.

There is no heritage quite so precious as that of one who feels in his heart that he has been born, not only to enjoy this beautiful world, but so to work and live that he may cause no unhappiness to anyone, and glorify in the fact that he can look after his own life and see it safely through to the journey's end.

Resolution of Lions Club of Endicott, N. Y.

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas conservation of food, gasoline, and critical materials is vitally necessary to the war effort; and

Whereas the rationing program instituted by the United States Government and administered by the local war price and rationing board is the only possible means of conserving these materials and of securing their fair distribution among all; and

Whereas the members of the Western Broome County War Price and Rationing Board are serving our cause, our Nation, and our public in this highly important task, in a manner that should command the praise and appreciation of all their fellow citizens; and

Whereas these men and women are patriotically performing this essential service at great personal sacrifice, for no other motive than contributing toward victory and for no other compensation or reward than the satisfaction of making such contribution: Therefore, be it

Resolved, That the Lions Club of Endicott, N. Y., publicly thank the members of the Western Broome County War Price and Rationing Board for ceaseless and unselfish labors to advance the day of victory, and for our individual and national welfare; be it further

Resolved, That the Lions Club of Endicott, N. Y., hereby pledge its support and cooperation to the Government rationing program and to the Western Brome County War Price and Rationing Board, and urge similar public support and cooperation to the end that the rationing program may be fully successful in its purposes, and its ends speedily achieved.

Child Care

EXTENSION OF REMARKS

OF

HON. B. J. MONKIEWICZ

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. MONKIEWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and schedules submitted by Alonzo G. Grace, commissioner of education, State of Connecticut:

STATE OF CONNECTICUT,
HARTFORD, CONN., *October 6, 1943.*

The Honorable BOLESLAU J. MONKIEWICZ,
The House of Representatives,
Washington, D. C.

DEAR MR. MONKIEWICZ: On September 14 Representative LANHAM, chairman of the House Committee on Public Buildings and Grounds, had printed in the CONGRESSIONAL RECORD a letter from Maj. Gen. Philip B. Fleming, Administrator of the Federal Works Agency, concerning the program of child care under the Lanham Act. General Fleming reported that the program, which for the most part has been in the hands of school systems, has thus far been disappointing. He cites as a reason the fact that the program is not federally operated.

I am transmitting herewith three schedules which indicate our point of view on this matter. These are as follows:

Schedule A. Policies have changed overnight.

Schedule B. Lengthy delays have been encountered.

Schedule C. General Fleming's assertions are misleading.

It is our opinion that the difficulties lie largely in the administration of the program. I sincerely hope when these matters are considered by Congress the trend in legislation will be toward an expression of greater confidence in the capacity of States to do a job. I am transmitting the schedules herein mentioned to each one of the Senators and Representatives from this State.

Sincerely yours,

ALONZO G. GRACE,
Commissioner of Education.

SCHEDULE A. POLICIES OF F. W. A. HAVE CHANGED OVERNIGHT

Every change listed has added to the cumulative total of uncertainty. The people will have no faith in this program for some time even if it should now become stabilized.

The following examples of changes in policies, with the date of notification to this office of each change, indicate what school officials have been up against:

1. PROPORTION OF COSTS TO BE ALLOTTED BY FEDERAL GOVERNMENT

June 13, 1942: To allot net costs (gross costs minus fees).

June 22, 1942: To allot gross costs.

September 16, 1942: To allot net costs.

February 13, 1943: To allot 100 percent of equipment costs plus 50 percent of current costs.

2. LANHAM FUNDS AVAILABLE FOR EQUIPMENT

June 13, 1942: Lanham funds available for 100 percent of equipment costs.

August 31, 1942: No funds except fees for equipment.

December 18, 1942: Lanham funds available for 100 percent of equipment costs.

December 21, 1942: No funds for equipment. Must be purchased with local tax moneys.

December 26, 1942: Lanham funds available for 100 percent of all costs.

February 13, 1943: To allot 100 percent of equipment costs plus 50 percent of current costs.

3. ELIGIBLITY OF TOWNS FOR FUNDS

September 30, 1942: All towns with war need are eligible.

October 23, 1942: Local budgets and tax rate are considered.

December 26, 1942: All communities with war needs are eligible.

4. SPONSORSHIP OF PROGRAM

June 13, 1942: Can be either board of education or department of welfare.

September 11, 1942: Funds available only for boards of education.

December 18, 1942: Funds available for boards of education or departments of welfare.

SCHEDULE B. LENGTHY DELAYS HAVE BEEN ENCOUNTERED

The application of the Windham Board of Education indicates the extent of delays encountered in securing Lanham funds for child care.

Windham began to plan its child-care program early in the spring of 1942, and filed its formal application for funds on September 11, 1942. On September 14, we were informed that the Government had changed the application forms to be used. On September 18, one of our staff members went to Windham with a representative of the Federal Works Agency to fill out the new forms. The Federal representative then insisted that the whole plan be reviewed, this despite the fact that he was not a specialist in nursery schools while our staff of specialists had spent months planning the project (and other projects which eventually received Government approval). On December 15, the application was filed on the new forms. The revised application, planned with a representative of Federal Works Agency, was held up by F. W. A. because costs of the project were too high. The plan was revised. On April 15, the application was filed again by a disillusioned board of education. To insure that the budget would be approved, the budget and all proposed local contributions had been discussed in detail with the regional office of Federal Works Agency. On June 14, the local board of education was notified that a Federal allotment of $4,640 had been granted, but that there had been a complete change in services which could be counted as contributions so the board would have to appropriate local funds to meet 50 percent of operating costs.

The Windham Board of Education decided not to accept the Government offer.

SCHEDULE C. GENERAL FLEMING'S ASSERTIONS ARE SOMEWHAT MISLEADING

1. THE ASSERTION

Only half the centers approved by the President have been put into operation.

The facts

(a) Many W. P. A. nurseries and nursery schools were taken over under the Lanham Act. These did not always provide the most satisfactory and convenient centers for children of working mothers.

(b) The Federal Works Agency has encouraged cities to apply for funds for centers to be located throughout the community before the need in all areas has become acute; the community can then open centers as needed without the months of delay encountered in applying for an allotment.

(c) Communities using Lanham Act funds for child care have been so much discouraged by Federal red tape connected with operating centers that they are hesitant about opening others.

(d) So much delay occurs between application for funds and the actual grant of funds that facilities originally to be used for child care are sometimes used for other purposes by the time the Federal funds become available.

2. THE ASSERTION

Facilities in operation were being used as of August 11, to less than half of capacity.

The facts

(a) On August 11 many children on vacation from school were caring for younger brothers and sisters who would otherwise enroll.

(b) On August 11 many parents were vacationing with their children. Other mothers had quit work for the summer months and were free to care for their children.

(c) The low standards set by F. W. A. have caused parents to withdraw children from centers and not to enroll others.

(d) The threats made by F. W. A. that certain centers would be closed caused parents to make other plans for caring for children.

(e) The draft of fathers will increase the demands for care.

3. THE ASSERTION

Operation, for the most part in the hands of school systems, is deficient.

The facts

(a) F. W. A. refuses to support sufficient staff to carry the program even when the local community agrees to pay its share and meet 50 percent of the operating costs of such program.

(b) F. W. A. refuses to support adequately certain essential phases of the program such as counseling with parents, health services, supervision, and clerical service.

(c) Some school systems are required to carry a W. P. A. staff selected because of relief needs rather than professional ability.

(d) School officials are disgusted with the whole program. The red tape and delays extinguish any enthusiasm.

Are Chickens Coming Home To Roost in Butter Deal?

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. J. LEROY JOHNSON. Mr. Speaker, many months ago dairymen and milk distributors in California warned that certain practices of the O. P. A. and other governmental agencies would result in milk and dairy product shortages. Also, some of my congressional colleagues made the same predictions. Illustrating what the situation is in California I am, by unanimous consent, inserting as part of these remarks an editorial from the Sacramento Bee:

ARE CHICKENS COMING HOME TO ROOST IN BUTTER DEAL?

Commencing next Sunday, the American housewife will have to plunk down a full week's allotment of ration stamps for a pound of butter.

This means butter virtually will disappear from the American dinner table or a large part of the population will go on a vegetable diet, because, obviously, it will be impossible to stretch the coupons to cover both butter and meat.

If this is a war necessity, there will be no griping or grumbling. But so many conflicting statements have been made concerning the butter deal that the average person is not convinced—only confused. And the confusion is not being helped by the lack of any authoritative explanation from Washington.

A short time ago the public heard that butter supplies were at an all-time high, but would be needed in the event of an invasion of Italy.

Now the industry contends the Government has piled up a backlog of butter sufficient to satisfy all requirements until March.

And in San Francisco Francis Carroll, district director of the Office of Price Administration, is quoted as saying: "The 1943 production of dairy products will be even greater than the record 1942 output."

If these facts are true, it is difficult to justify a further restriction of butter consumption by increasing the ration-point requirements.

Irrespective of supplies on hand, and notwithstanding some statements to the contrary, the plausible explanation is that butter production has fallen off to a perilous level and existing stores must be preserved.

This was predicted several months ago when the Government declined to take steps to stabilize the dairyman's production costs while pegging the price of his commodity. Dairymen everywhere, unable to withstand the rising costs of feed and labor, went out of business and slaughtered their cows for beef, thus drying up sources of milk supplies.

And so the chickens are coming home to roost.

Increasing ration-point requirements for butter is no solution to this problem. It will not increase production and may have the corelative effect of inspiring extensive black markets, which will defeat the purpose of curbing consumption.

What seemed so obvious months ago to the industry and the laymen must have been equally plain to Government officials, else they are wilfully blind or inexcusably stupid.

It is too bad these situations arise in the wartime food program because, all in all, the O. P. A. is doing an effective job in holding living costs within bounds. To continue the good work the O. P. A. must have the confidence of the public, and confusion such as exists in the butter situation does not help, whether the O. P. A. or the W. F. A. or some other agency is responsible for it.

A Well-Deserved Rebuff

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. LEFEVRE. Mr. Speaker, under leave to extend my own remarks in the RECORD. I include therein an editorial from this morning's New York Herald Tribune expressing opposition to Secretary Morgenthau's new tax proposals.

The Treasury Department have admitted that the increased income of the country is at least 80 to 90 percent in the hands of the lower income group, but instead of approaching this situation realistically they still seem to feel that if they take anything from labor they must offset this as a political measure by taking a much greater proportion from the higher income group without considering the fact that these groups have had practically no increase in income whatever.

I have always been and still am in favor of a sales tax which, apparently, should be in the form of a retail sales tax to prevent it from pyramiding. Such a tax would not only be spread equitably through all groups but at the same time would to a large degree prevent inflation.

The article referred to above follows:

A WELL-DESERVED REBUFF

When Secretary of the Treasury Henry Morgenthau, Jr., presented his $10,500,000,000 tax program before the Ways and Means Committee last Monday we ventured to suggest that it would bear little resemblance to the 1944 revenue measure that would finally be enacted. We were convinced that the con-

gressional committees in charge of tax legislation had too high a sense of public responsibility to place their stamp of approval on a program so flagrantly political in its approach to the war finance problem.

That confidence has already been abundantly vindicated. The Ways and Means Committee, after listening politely, if coolly, to Mr. Morgenthau and Fred M. Vinson, Director of Economic Stabilization, has let it be known that it means to write its own bill; and on Saturday Senator WALTER F. GEORGE, chairman of the Senate Finance Committee, declared that he would not support a program which released between 9,000,000 and 11,000,000 taxpayers from their obligations in an election year and which bestowed special benefits in the way of rebates on several millions more. The Senate's leading authority on tax matters indicated that if the Victory tax, which was his contribution to the 1942 Revenue Act, was dropped he would urge the enactment of a sales tax in its stead.

The Morgenthau plan has two outstanding defects, both of which carry the unmistakable odor of political opportunism. One of these is that the program, while put forward primarily as an anti-inflation measure, makes no serious attempt to absorb the purchasing power which Mr. Morgenthau himself admits constitutes the chief inflation threat. The other is that it fails completely to distinguish, in its incidence, between persons of fixed incomes, on the one hand, and those who are receiving windfall wages, on the other. While canceling the tax liability of more than 9,000,000 taxpayers through elimination of the Victory tax, it adds enormously to the already heavy burden now carried by the numerical minority in the middle and upper tax brackets. It has been estimated that under Mr. Morgenthau's schedules every taxpayer with a taxable income of more than $6,000 would be called upon to turn over half or more of it to the Government, while tax analysts have demonstrated that many taxpayers in New York State would actually find themselves, what with State and Federal imposts combined, paying out more than 100 percent of their incomes.

Taxation merely for the sake of taxation, even in wartime, cannot justify itself. There is no point at which one can say, without considering carefully the effects of the tax program on individuals and on the economy as a whole, "This measure is not enough," or "This measure is too big." A $10,500,000,000 revenue measure which will really strike at the danger of inflation would not be too large, but a $10,500,000,000 measure which is merely aimed at a redistribution of the national income may well do much more harm than it will good. The tax program presented by Mr. Morgenthau constitutes a striking demonstration of how the progressive income tax, in the hands of an administration which places its own political advantage above a sound national economy, can be employed as an instrument of tyranny over a minority of the people.

Address of Hon. Jan Ciechanowski, Ambassador of Poland

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Jan Ciechanowski, ambassador of Poland to the United States of America at the banquet of the Pulaski memorial committee at the Waldorf Astoria Hotel, New York City, on October 10, 1943:

The war has entered its final phase. Victory is by no means around the corner, but it has become a certainty. The time is ripe for constructive thought on the subject of the future peace. Even if we are not prepared to set up at this time a detailed blueprint for a peace settlement on a world scale, it is essential and urgent at least to clear the decks by exchanging views, by eliminating differences of opinion among the United Nations on that all-important subject of the future peace.

In referring to the United Nations, I mean all the United Nations, not just the four principal powers.

It appears to me that there are several reasons which ought to encourage us at this period of the war to apply ourselves to such a task. However different may be the views and policies of respective nations in time of peace, they are united at present by the one common aim of winning the war, and this community of aim, coupled with an urge for real security, creates the most favorable basis for the planning of a peace system which would ensure their collaboration in peacetime as the logical sequence of their collaboration in war.

In this unprecedented world conflict, we, the United Nations, have come to act collectively. Let us go one better. Let us learn to think and to plan collectively for the common good of mankind. Whatever the differences of opinion between the United Nations may be, there can be no differences regarding the real aim for which they are fighting today. That vital aim is security. All other considerations are subordinate to this one basic aim.

The absolute necessity for security becomes more evident in wartime when security does not exist. In wartime the great advantages of a collective system of security compare favorably with narrow and selfish conceptions of security individually pursued by single nations on a regional scale.

There is also the following reason of a psychological nature for laying the foundations of peace and security while the war is still in progress: It is a remarkable paradox that the purest idealism and the most noble principles have to be invoked to stir up nations to fight a war—that most dreadful and inhuman thing in the world, while history shows that mostly selfish and cynical motives prevail in establishing peace, that most natural and ideal state of human relations. It is therefore advisable to plan the peace which is to follow victory, while we are still inspired by the principles and ideals for which we are fighting.

However, one thing is essential if we are to approach the problem of peace in the right spirit of constructive statesmanship and collaboration. We must learn to think and to plan in terms of really effective security.

In 1910 Lord Haldane, then British Secretary of War, undertook his fateful mission to Kaiser Wilhelm which convinced Great Britain that Germany was preparing a first world war of aggression. That First World War was never fully won by the Allied and Associated Powers, for Germany was not completely defeated or crushed in that war but only temporarily disabled.

Then followed a 20 years' period of insecure peace, made up of idealistic principles, unsupported by realistic means for enforcing their respect. Bold statesmanship was lacking. Appeasement raised its futile head. Wishful thinking became rampant. The forces of good had disarmed, the forces of evil were allowed to rearm. War once more became inevitable and finally broke out. And it has now lasted for 4 years of fighting, of untold suffering, of unprecedented cost and sacrifice in human life and happiness.

This means that since 1910, for the last 33 years, the world has never for one moment enjoyed real security. Events were allowed to outdistance statesmanship. As a logical consequence statesmen have been driven by events to take palliative measures at best calculated to prolong an insecure peace rather than to reestablish the durable foundations of security. Thus, statesmen have become so accustomed to plan in an atmosphere of insecurity that they have difficulty in adjusting their mentality to the requirements of a really secure world. Planning in an atmosphere of insecurity naturally discourages bold thinking and prevents creative and final decisions.

After a war of this magnitude and after such unprecedented suffering, no just and durable peace can be conceived on the basis of timid thinking, of opportunism, of patchwork statesmanship, of attempts at precarious concepts of regional balance of power.

These two last wars, in both of which the United States was forced to participate in defense of its own security, have taught us that in modern times no war can be localized, and that there is no possibility of isolation in times of conflict. It logically follows that peace likewise cannot be localized, that it cannot be regionally secured, that, in fact, peace and war alike are indivisible and therefore collaboration on a world scale is as essential in peacetime as it is inevitable in wartime.

Much has been said and written about restricting the peace settlement to a close alinement of the three or four great powers in a sort of permanent coalition for the preservation of peace. According to this theory, the so-called small nations would become passive satellites of the great powers in respective spheres of special interest.

Not only is such a conception contrary to the principles for which we have declared that we are fighting and which tend to regard all nations as equal before the law, equally entitled to enjoy freedom and independence and to share the responsibility of defending peace, but, apart from these important considerations, such a system could not achieve the desired result of a just and permanent peace. It would be in fact but a somewhat revised form of the Axis conception of a new world order, based on power politics and conducive to imperialism.

Nothing is wider of the mark than to say that differences between small nations are responsible for wars. In the course of the 20 years of the Versailles peace, uncertain and insecure as that period has been, all conflicts or differences of opinion between the smaller states or between small states and great powers were either solved or kept in bounds by the League of Nations, however imperfect might have been the League. On the contrary, it was the great powers, now constituting the Axis, who refused to accept the rulings of the League of Nations and are responsible for this World War. Thus Japan violated Manchuria in 1931, Germany gradually violated all the peace clauses and left the League of Nations, whose rulings she was decided to disregard. Italy, also a great European power and a charter member of the largely advertised Four Power Pact, set out on the conquest of Abyssinia regardless of League of Nations warnings and sanctions.

I would venture to say that the small nations, who suffer most in wartime, have a right to expect that this time the great powers will so adjust and settle the problems dividing them, that their differences, involving basic policies, will be eliminated from international relations as the most likely source of possible future conflicts. No safer way exists to bring this about than collaboration of all the United Nations in a common system of security.

It is heartening to note that there is the prospect that the close collaboration of the two great English-speaking nations in this war will continue after victory for the establishment and safeguarding of peace. There is no other way of building real world security than such a collaboration between the two great western democracies. The alinement of the United States with Great Britain for peace preservation is in fact the only real, tangible basis of world security. Such a British-American association assures the active collaboration of the two most powerful navies, of the two most powerful and most modern armies, of the two most powerful and most modern air forces in the world. It groups together the greatest number of the most effective sea and air bases scattered the world over. It eliminates all conflicting problems existing between these two greatest world powers by uniting them in permanent collaboration as the soundest basis of the system of world security.

With such a basis of world security it would probably never be necessary actually to use force. It would be in the direct interest of all peaceful nations to adhere to such a coalition and actively to support it. No imperialist power could afford to oppose it. To the great aims expressed in the Atlantic Charter and in the President's conception of the four freedoms, it would add the realism indispensable to apply them in practice.

This war is a mortal conflict between the forces of good and evil. We now know that the forces of good are certain of victory. If they are powerful enough to win the war, then they surely are powerful enough to be sufficiently bold to introduce a certain indispensable degree of idealism and respect for human principles in building the peace. It simply means that the realism which has convinced us all that security is the only aim for which we are fighting, must be blended with the principles of basic justice for all nations and peoples regardless of their size.

Only real security on a world scale, based upon the close permanent collaboration of the United States with Great Britain, will inevitably draw other powers and all smaller nations into a system of United Nations collaboration. Only such a system of world security, founded on permanent international collaboration, can eliminate the tendency of some of the great powers to seek the establishment of their individual security by means of territorial annexations, conducive to conflicts and contrary to the principles of the United Nations concept.

Letter to the President

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

LEWISBURG, PA., *May 11, 1943.*

FRANKLIN D. ROOSEVELT,
President of the United States,
White House, Washington, D. C.

MR. PRESIDENT: The writer was on the verge of writing you several months ago, but desired to be absolutely sure of his stand before confronting you with this serious problem.

We have in our Federal penal and correctional institutions many hundreds and perhaps several thousand young men from 18 to 37 years of age. These young men have been confined to the various institutions prior to Pearl Harbor. The offenses of these men, generally speaking, would come under the classification of "depression crimes." They are far from being habitual criminals and are sincere in their love of this country. Real patriots at heart, they desire an opportunity to right a wrong. They ask for the tougher assignments and are willing to undertake the impossible. Before the war is over, our armed forces will have need of men who are willing to pay the supreme sacrifice. Many times I have overheard, "If we could only get a chance to retake Kiska or Attu." Everyone fully realizes that you are the only person able to grant them the privilege of serving their country. You can rest assured that if given the opportunity to fight, they will do everything in their power to be a credit to the United States and repay society a just debt.

A classification committee composed of men really interested in rehabilitation or men of broad experience could readily select these worthy individuals. A "cadre" system could be established to eventually drain off all worthy individuals. By the leadership of the Federal Government, State institutions would naturally follow suit. To begin with, a few months of regular Army routine at one central Federal institution would equip the men for basic service. All prisoners would be paroled into the custody of the United States Army.

If only as many as 3,000 Federal prisoners could be converted into helpful soldiers and citizens, it would make available hospitalization space badly needed for the armed forces.

The men of whom I have spoken are not bad. A good many were meted out severe sentences under the Dyer Act. Others consist of liquor-law violations. Some are of the armed hold-up variety. They committed a crime and are serving their time. Had it not been for the world-wide depression, most of them would have been on the fighting fronts months ago.

Your wife, who recently visited San Quentin, can describe her reaction of the average prisoner today.

The writer is 33 years of age and the father of three children. My wife is a Red Cross nurse instructor. I come from a family of nine living children and was reared in the steel district area of Youngstown, Ohio. My first job at the age of 15 was in a tin mill at Farrell, Pa. During my 4 years of college I was an honor student and a member of the varsity football and track team. For the past 11 years I have been in daily contact with all classes of people in most every walk of life. My judgment of men has always been considered good and my employment records should verify that statement.

I am willing to assist in placing these men on the fighting fronts and would be more than glad to serve with them.

There are many more points involved and I could not attempt to cover them by this letter. The plan for the release of these men definitely would not be harmful to society and if you see fit to consider the matter, I shall only be too willing to render whatever aid I can.

Let us get away from the legalistic conception of this thing and try a plan that takes into consideration the life motives and heart feelings of these men. They want a chance for redemption. Why not give it to them?

Needless to say, this letter is written without the knowledge of any person either in the Bureau of Prisons or any interested inmate of the Lewisburg Federal Penitentiary.

Sincerely yours,

JOHN B. KEATS.

Fire Insurance Immunity

EXTENSION OF REMARKS

OF

HON. HARRY SAUTHOFF

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. SAUTHOFF. Mr. Speaker, on October 6, the Capital Times of Madison, Wis., carried an editorial relative to immunity from prosecution under the Sherman Antitrust Act. The Capital Times has the largest circulation in Wisconsin of any newspaper outside of Milwaukee. The attention of the membership of the House, and especially of the Judiciary Committee is invited to this editorial:

FIRE INSURANCE COMPANIES ASK SPECIAL IMMUNITY

The Capital Times for some time has been carrying on a campaign for an investigation of fire-insurance rates and practices without much success.

During the last legislature this newspaper supported a resolution introduced in the assembly calling for a committee investigation of fire-insurance firms' rates and practices in this State. The reactionary controlled assembly, reinforced by the private insurance lobby, summarily rejected the resolution.

Meanwhile, The Capital Times has been watching with growing interest the activities of the Federal Department of Justice in connection with the fire-insurance companies.

Last year the Justice Department obtained indictments against some 198 fire insurance firms and 27 of their officials in the Federal District Court in Atlanta, Ga.

The litigation there, based upon the Sherman Antitrust Act, revealed monopoly practices by the fire-insurance companies and inordinately high rates charged the public for fire-insurance protection.

We now learn that the Department of Justice is looking into the fire-insurance picture in New York and California with a view toward invoking the antitrust statutes.

It was not to be expected that the fire-insurance companies and their well-organized and well-heeled lobby would remain quiet when the Department of Justice turned on the heat.

The Justice Department's move to get at the facts as to whether the public was being fleeced by high fire-insurance rates brought a Nation-wide counter attack from the fire-insurance corporations. The big insurance lobby is now accusing the Department of Justice of trying to sabotage the fire-insurance business and interfering with State's rights.

The fire-insurance interests are demanding that they be put in a special privilege class, and that legislation be passed in Congress exempting them from the Sherman Antitrust Act. Such a bill has actually been introduced under the authorship of Senators VAN NUYS, of Indiana, and BAILEY, of North Carolina.

Insurance agents all over the country are being circularized by the fire-insurance companies and urged to write thei Congressmen demanding enactment of the Van Nuys-Bailey bill. Newspapers are being flooded with publicity material full of the old scare propaganda that legitimate business is being persecuted.

The Capital Times questions the sincerity of the fire-insurance interests in this controversy.

Why should they expect to be put in a favored class and declared exempt from antitrust statutes which apply to other businesses?

Why are they so indignant at being investigated by competent public agencies—are they afraid of what will be disclosed?

Here in Wisconsin the figures on fire-insurance premiums paid by the public and the losses paid by the companies indicate that the fire-insurance rate structure is away out of line.

During the 6 years, 1936–41 inclusive, fire-insurance companies operating in this State collected more than $128,700,000 in premiums.

During those same 6 years, these fire-insurance companies paid out losses totaling $52,575,000.

The excess, therefore, of premiums collected over losses paid for these 6 years was $76,125,000, a margin so huge that it leaves only one conclusion—the public in this State is being forced to pay millions of dollars in excess premiums and more than is necessary for payment of dependable and adequate insurance protection.

Bringing the figures right down to Madison, the figures for last year show $400,000 was paid out in premiums for fire-insurance protection, and losses paid were less than $80,000.

This happens to be fire-prevention week, an event sponsored by the National Fire Protection Association which in turn is tied in with the National Board of Fire Underwriters.

Fire-prevention week is an educational device calculated to encourage carefulness and the elimination of fire hazards. Everyone, of course, will support these objectives, but we sometimes wonder if these annual fire prevention weeks are altogether altrustic in design.

Have the fire-insurance companies an eye out to make even larger profit margins by reducing fire hazards? We haven't noticed successful fire-prevention drives being followed by rate reductions in fire-insurance policies.

The Capital Times hopes that Congress will not be shanghaied into exempting the fire-insurance business from antitrust legislation, which in effect would leave the public at the mercy of these agencies.

We hope, too, that the Department of Justice will continue its survey of fire-insurance rates and practices on a Nation-wide basis.

There is nothing sacred about fire-insurance companies, any more than there is about banks, investment houses, or other corporations.

Sycophantic Archibald

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. SCOTT. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD, on page A3875, a Member has submitted a criticism in verse of the Members of Congress written by the Librarian of Congress, Archibald MacLeish.

Mr. MacLeish warns us not to offend the poets and particularly reminds us that the poets—presumably including himself—write histories.

There is so much implied praise of Mr. MacLeish and so much criticism of the Members of Congress in Mr. MacLeish's doggerel that one of my constituents has been moved to reply in the same medium. She does not, like Mr. MacLeish, claim eternal glory for her poem, neither does she pretend that her verse transcends his. Nor does she expect that her poetry will have any more effect in subduing Mr. MacLeish than Mr. MacLeish's effusions will have in subduing Congress:

SYCOPHANTIC ARCHIBALD

(By Charlotte C. Starr)

The poets who can take a name,
And make it great, for future's fame,
Are not the poets Archie knows,
For men who write great poems, or prose,
Are not concerned with politics—
The kind that showers stones and sticks,
In verse, or prose, against good men,
Who would preserve their country, then,
As now; from little men like Archie,
And all his would-be poets, starchy
With New Deal artificial power,
Which will not last their shortening hour.
So, Congressmen in either House,
Be not affrighted by a mouse,
Who, by appointment, keeps your books;
You'll find the average voter looks
Not to the poets, but the press,
(The greater oft o'ershades the less).
'Tis no offense to honest rhymers
That one's regard for five-and-dimers
Like sycophantic Archibald
Is somewhat less than none at all.

Pulaski Memorial Day Address

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on October 10, 1943, at the seventh annual Pulaski Memorial Day program, Hotel Waldorf-Astoria, New York City:

In the 167 years of our country's history, we have almost invariably maintained a policy of strict isolationism. That may have been natural since we felt secure behind the broad oceans on either side of us. But what was considered good foreign policy in yesteryear does not hold today. It is interesting to note that had the peoples of other countries maintained the same attitude as ours, we might not be a free and independent Nation today. We received considerable assistance from peoples of other lands in our war for independence. Of all the foreigners who participated in our battle for freedom few were more outstanding and none gave more than Brig. Gen. Casimir Pulaski, whose death we commemorate on this occasion.

The leading motive of General Pulaski's life was his love of liberty. He fought valiantly for the liberation of his native land and, in the course of that struggle, saw his father and his brothers and other near relatives killed and his home and his property destroyed. He himself was finally driven from his native land as an exile. All this pain and suffering and hardship did not quench his thirst for liberty. When he learned of the American struggle for independence, he offered his services, dedicated his talents, and finally his life to the cause of American freedom.

General Pulaski is considered the father of the United States Cavalry. During the first 18 months of the Revolutionary War, our forces had no regular cavalry corps, and there was none until Congress commissioned Pulaski to organize one. He trained the cavalry upon sound military lines, and there is no doubt that the knowledge he brought to the task was passed on to other cavalry leaders. General Pulaski's handbook for cavalrymen is still widely used in military schools. His training of the cavalry was undoubtedly as important to that arm of the service as that of Baron von Steuben's training to the infantry.

General Pulaski used the remnants of his own personal fortune, estimated at about $50,000, in getting additional equipment for the men he led during the Revolutionary War. His untimely death, at the age of 31, from wounds suffered at the Battle of Savannah is known to us all.

Throughout his service in the Continental Army, General Pulaski endured the hardships and deprivations in common with George Washington and his men and in the end gave his all. We can draw a helpful lesson from his life.

General Pulaski was born of noble blood, reared in wealth, and comfort, protected against the hard knocks of life; yet he chose to cast all of these aside and join the forces which fought the battles against oppression and tyranny.

Poland's position today is parallel to what it was in Pulaski's time. Today, as then, she is under the heel of an oppressor. Today, as then, her valiant people are scattered over the globe. Today, as then, the hope for her restoration is strong in the hearts of all liberty-loving men.

Now we are engaged in a global war against a barbaric totalitarian tyranny. Today, for the second time within a generation, the sweat, blood, and tears of our people are being drawn in combat with nations that are imbued with a lust for power and world domination. Will we, or our children, have to endure this hell and torture again within the span of another generation? The decision rests with us.

We are winning this war. We are confident that we will win it, but it is not yet won. To make certain that we shan't have any recurrence of the pain, suffering, and heartaches that go with sacrificing the flower of our manhood, we must defeat our enemy decisively and completely. To hold to a minimum our losses of dear ones, we must bring the war to a victorious conclusion as early as possible. To realize these ends, each and every one of us must be willing to do his part, whether it be in the battle or in the production field. Each and every one of us knows where his duty lies, but no one of us should ever feel that he is doing enough. We should never cease trying to do more and better. We must drive on and on until the day of victory is realized.

A decisive victory over our foes will not only remove the threat of a future attack upon our own shores but will also restore to the enemy-dominated, freedom-loving people their rightful heritage by expelling from their borders the tyrannical and barbaric Axis hordes who have been inflicting upon these peoples sufferings and cruelties more terrible than those experienced in any other era in the history of mankind. No civilian peoples in Europe or anywhere else have been more brutally treated or suffered greater casualties and more heartaches at the hands of the Axis "supermen" than Poland.

It is not sufficient for us, however, to win a victory. That is only half the job. After victory is won we must then make certain that we shall enjoy an enduring peace. Never again should we allow ourselves to withdraw from our responsibilities. Never again should we permit ourselves to be deluded into believing that we can remain at peace when turmoil and unrest exists in other lands.

We are the greatest and most powerful Nation on earth. As Winston Churchill recently stated, greatness and power carry with them definite responsibilities. We have a responsibility to our men engaged in this war to exert our full influence to that end that it shall not happen again. It is our duty and obligation to collaborate with the other freedom-loving peoples of the world to establish and maintain peace for all men of good will. In doing so we shall keep faith with General Pulaski and the other great men who gave their all since the beginning of the history of our country.

Free Enterprise Success Key

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I include a statement entitled "Free Enterprise Success Key," taken from the Humboldt (Tenn.) Courier-Chronicle, and reproduced in the Memphis Commercial Appeal:

FREE ENTERPRISE SUCCESS KEY

The tremendous job, now being successfully accomplished, of equipping and munitioning a great army and the supplying of the armies of other nations associated with our own country in the subduing of outlaw forces seeking to dominate the world, is not just the result of Government orders and Government financing and directives, but rather by the vast foundations laid under our free system of enterprise, which has for 150 years been growing and developing.

America has been able to work industrial miracles because of free enterprise carried on under free competition. It means that free enterprise and free competition have developed both our craftsmanship and our facilities, discoveries, and inventions to a point where we can amaze the world and destroy the puny engines of war that the war-mad nations of the world have been to extremes to produce, and on which they so much depended to carry through their wild scheme of world dictatorship.

Democracies, we were told by the "superior race," could never organize, unify, and work unitedly to one great end. Democracies, said the Axis leadership, have too many fingers in the pie—too many bosses, too many contrary elements, to ever do any job requiring national effort wholly put forth, as it must be in an all-out war. These philosophers of tyranny and regimented people now see and will long remember that freemen, acting in a competitive way, but driven on by their desire to remain free, can work such wonders as to put slave labor, driven on by the lash, to utter confusion.

The United States has produced war goods of every sort faster and more abundantly than even our own people believed possible, and these things of war are turning what appeared as early defeat into the magic of early victory.

We cannot attribute our amazing production to the spur of Government direction and Government spending, though both of these were necessary, but rather to the American way of mass production, and the American spirit which declares that there is no such word as "can't" in our lexicon.

AMERICAN WAY PROVES WORTH

It was necessary to create vast industrial plants, and our engineers and our trained labor built them in record time. Powerful machines to fabricate things in a new and really wonderful way were quickly designed and built. These were built because our men, trained in competitive production, were able to produce them, and to improve upon designs of machines made when business was lighter and our mechanicians had more time in which to think out and to experiment. To these talents the war gave a great impetus, and so many schemes and ingenious contrivances have resulted we are astonished ourselves.

If anything were needed to tell us that our forefathers were right when they set about forming a government which would give opportunity to all men to bring out their best, production tells it. Our free-enterprise system of rewards and incentives continually impels us to develop every talent we have, and, better still, to use it, to the end that we and our children may live better and easier than other peoples throughout the world have ever lived.

To abandon or hog-tie our enterprise and to slow down to the tortoise pace of the older and more backward nations means that we too may soon be among the "have not" nations.

And there is a class in the United States which advocates with fanatical frenzy the aping of the slow and uncertain ways of the poor and backward countries where there must be rationing and doling in order for the under half of the population to exist at all.

We need no European or Asian policy of security or protection. Most every person of even meager gifts of strength or ingenuity cannot only live, but live well and build for old-age competence here, if he wills and works.

With all our abilities and with great examples plentifully about us, we have a constant hue and cry for security and for Government interference in our private lives and business. These folks are scared cats; most of them have not lived in America long enough to get the ichor of beggary and fear out of their blood.

This Nation has abundantly proved its right to live and our constitutional guaranties are sufficient, if we do not allow them to be trampled upon, to insure we will recoup from the waste of this great war and rebuild better and grander than ever before. But to do this, we must continue our free enterprise and continue, also, every incentive necessary for the exertion of our entire strength to build and to develop. We must let it be known that every property right will be sacred, and what a man produces and saves will surely be his to have and to hold.

OUR OPPORTUNITY NOT RESTRICTED

Men do not slave voluntarily day and night to produce for others who may be idle, but rather that he and his may sit in the shade and rock in the old rocking chair.

This is not a country of castes and barons, but one in which the sons and daughters of poor fathers and mothers may achieve to the highest places and the greatest wealth.

We have no classes. We continually build up from the bottom, and sink down from the top.

He preaches wrong who preaches that this is a country of rich and poor, of honored and shackled. No place is too high for the sons of the humblest to aspire and to achieve, and no place is too low that the worthless, though brought up in luxury, may not sink if he fails to make each shining hour shine still more brightly.

This war is to be won by our arms, because we deserve to win, and because we have trained in a system that makes success easy to those who strive to win.

We must fight for a continuance of our American way and our freedom, when we triumph over our enemies. The second fight is as important—may be more so than the fight against totalitarianism and tyranny.

Allowances to Dependents of Servicemen

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. BROOKS. Mr. Speaker, I have caused to have assembled information regarding the matter of allotment and allowances to dependents of men in the armed services. This information has largely been assembled by the Library of Congress and it refers to laws affecting this subject in force in all of the great European countries, both friendly and hostile. As the amendment to the Servicemen's Dependents Allowance Act is set on the calendar to be debated by this House on this coming Wednesday, I believe this matter should be available to every Member of this body as well as the Nation as a whole. I therefore ask that all of this data which has been prepared in memoranda form be printed in this RECORD as a part of the extension of my present remarks:

ALLOWANCES TO DEPENDENTS OF MEN

BELGIUM

(The franc in 1939 was usually converted at 3⅗ cents)

By royal decree of October 27, 1939, allowances to the families of soldiers were established as follows:

Payable for each day of service: 8 francs for a wife, plus 5 francs for each legitimate or recognized child under 16 years of age or incapable of self-support.

If the man is single, widowed, or divorced, with or without children, his father (or in case his father is not living, his legitimate mother) receives an allowance of 8 francs.

The dependents of a man will be eligible for allowances when the net total of their own resources of every kind and origin, plus the actual resources of the soldier for a period of 12 months, is less than the minimum exempt from the tax on earnings increased by the exemptions for family responsibilities. (Monthly Labor Review (U. S. Department of Labor), Washington, December 1939, vol. 49, No. 12; 1362–1363.)

BULGARIA

The families of mobilized men whose total income per month is not above a specified amount (varying according to the locality of their residence and the composition of their families) are entitled to a monthly allowance and, where necessary, to a housing allowance of an amount fixed by the mayor and local

committees. (Monthly Labor Review, Washington, January 1941, vol. 52, No. 1:92.)

CANADA

(The Canadian dollar is now converted at 90.9 United States cents)

On January 1, 1943, various improvements in the provisions for dependents, allowances to Canadian men and women in active military service became effective. Among these revisions were increase in the allowance rate and additional grants for large families.

Allowances are granted to the following dependents of men and women on active duty in Dominion armed forces, irrespective of rank:

(a) A wife, or, in her absence, a woman relative who has the care of his dependent children.

(b) A dependent son under 16 or daughter under 17; the age limits are raised to 19 if the child is undergoing approved instruction, and are waived altogether if the child is infirm.

(c) Other dependent relatives.

It is provided that soldiers shall assign part of their pay to their dependents receiving allowances. The assignment of pay by officers is voluntary. Married officers are eligible for marriage allowances as well as allowances for dependents.

The minimum assignment for a private is $23 per month. The basic rates for children's allowances are the same for all rates of servicemen, but the grants for wives and other relatives vary according to the servicemen's rank. From the beginning of 1943, as many as six children have been made eligible for allowances, the respective monthly rate for the third being raised to $10, and $8 each being allowed for the fourth, the fifth, and sixth child. A relative may earn as much as $40 a month without necessitating a decrease of his or her allowance.

From the beginning of 1943, the allowances for wives and children and the assigned pay are supplemented by a cost-of-living bonus. For childless wives the bonus is in proportion to the rise in the cost of living after October 1941. For wives and children the bonus is 25 cents for each 1 percent rise. (Monthly Labor Review, Washington, June 1943, vol. 56, No. 6: 1114–1116.)

FRANCE

(The franc in 1939 was usually converted at 2½ cents)

A mobilized man is entitled to only one principal allowance for the whole group of persons dependent up him. Such persons are admitted to benefit in the following order: (1) his legal wife, (2) his children, (3) his nearest relative in the ascending line.

The decree fixes the amount of the principal allowance at 12 francs per day in Paris and the Department of the Seine, little less in other departments. For a dependent child under 16 years of age the principal daily allowance is increased by 5½ francs in Paris, 4½ francs elsewhere. (Monthly Labor Review, Washington, December 1939, vol. 49, No. 12: 1363–1364.)

GERMANY

(The mark is usually converted at about 40 cents)

The wife and legitimate children of a mobilized man are unconditionally entitled to an allowance and are not obliged to prove that they are dependent upon him. Another group of beneficiaries includes relatives in the ascending line; this second group of beneficiaries also includes illegitimate children, if paternity has been established.

Family members who apply for these grants must prove that they fulfill the conditions for such allowances.

The amount of the grant is determined on the basic principle that it should enable the family to meet its every-day needs.

Special allowances will also be made in order that mobilized men and their families may maintain their life insurance contracts entered into prior to mobilization. (Monthly Labor Review Washington, December 1939, vol. 49, No. 12: 1364–1365.)

The new system created by order of October 2, 1939, gives the right of option between a grant based upon family responsibilities and cost of living in the applicant's place of residence, and a variable allowance based on the wages last earned by the person called up for service.

In a large town the basic amount accorded to the wife of a mobilized man is 64 marks per month. The grant for a child under 16 years of age is 19.50 marks, and the supplement for rent is 30 marks, making a total of 113.50 marks per month. This sum, however, may be granted in full only when the net monthly wage of the mobilized man was at least 133 marks, the difference of 15 percent being considered necessary for the mobilized man's own expenses.

This method of computing family needs and the allowances to cover them takes into consideration the applicant's income from all sources, especially from wages.

If in the example cited above, the mobilized man's wife was herself earning a monthly wage of 60 marks, one-third of this amount would be exempted from consideration in estimating the family's income. If there is a child under 16 years of age in the family, the nonexempted portion of the worker's earnings would be reduced by one-half.

On the other hand, according to the decree of October 2, 1939, persons eligible for an allowance may ask that such grant be based on the latest monthly earnings of the mobilized man instead of on cost of living and family responsibilities. Under this scheme the allowance is 40 marks per month, when the income was from 100 to 110 marks per month, plus 4 marks for every additional 10 marks of income. In cases where the income was more than 580 marks per month the allowance is fixed at 200 marks. A rent allowance is also granted, as well as a supplement for one or more children under 16 years of age. The children's supplement must be at least 15 marks per month for each child. (Monthly Labor Review, Washington, March 1940, v. 50, no. 3: 602–603.)

GREAT BRITAIN

(The shilling is usually converted at 20 cents and the penny, 1⅔ cents)

The rates of the allowances to the dependents of members of the men's and women's forces in Great Britain have been increased and at the same time the rates of the allotments which members of the forces must make from their pay as a condition for the grant of dependents' allowances have been reduced.

The amount of the allotment is related to total pay and increases as the member of the forces proceeds up the pay scale. Allotments are required from members of both the men's and women's forces claiming allowances, the minimum contribution for men being at present 7s. a week and for women 4s. 8d. It is now proposed to reduce all contributions of 7s. and upwards by 3s. 7d. and contributions of 4s. 8d. by 2s. 4d., the difference being made good by the Exchequer.

The new rates for dependent children will be 8s. 6d. for the first child, 6s. 6d. for the second, and 5s. 6d. for each other child.

Dependents other than wives or children who are eligible for family allowances may claim an allowance varying with the amount contributed to the dependent's support by the member of the forces before joining up. (International Labour Service Review, Montreal, May 1942: 582–583.)

SOUTH AFRICA

(The shilling is usually converted at 20 cents and the penny at 1⅔ cents)

In South Africa dependents of volunteers in the armed forces are provided for by the state, by employers, and by other schemes.

The grants made by the state for the dependents of enlisted men are made possible through general taxation. The volunteer himself, however, must not allot less than half of the pay received in his particular rank. The allowances are on a uniform scale.

Allowances are made to legal wives, separated and divorced wives for whom a court order has decreed maintenance, legitimate and illegitimate children, stepchildren living in the enlisted man's household, and the legal guardian of separated children. The total allowance of 4s. 6d. per day for wives is based on an allowance of 2s. 6d. for quarters, a family allowance of 1s., and an allowance of 1s. for rations.

In order to qualify for such allowances the volunteer must allot not less than half of his basic pay for his rank to his dependents; secondly it is necessary to establish proof that the volunteer contributed to the support of his dependents and the amount of such support; thirdly that he (and, if married, his wife) is unable, under present circumstances, to continue such support; and finally, that the dependent is actually in need of the allowance. The general principle laid down is that the allowance together with the allotment shall not exceed the amount contributed by the volunteer prior to the enlistment.

No married rates of pay are applicable to the members of the Women's Auxiliary Air Force or the Women's Auxiliary Army Service. (Monthly Labor Review, Washington, October 1941, vol. 53, No. 10: 889–892.)

SOVIET UNION

An order, published by the Supreme Soviet of the Soviet Union of October 10, 1939, provides allowances for the families of soldiers in the military service. The rates of allowance are as follows: 80 rubles (1 ruble is 19 cents) per month to a family without self-supporting members; 120 rubles to a family consisting of two persons; 160 rubles to a family consisting of three or more persons. These rates are reduced 50 percent if the family lives in a rural district.

Family members considered as being without support are children up to 16 years of age, or 18 years if attending school without a scholarship and their parents are unable to work; a father over 60 years of age, or a mother over 55 years; a wife and other disabled relatives unable to perform any kind of work. (Monthly Labor Review, Washington, February 1940, vol. 50, No. 2; 328.)

SWEDEN

(The krona is usually converted at 25.8 cents)

An allowance of 2.25 kroner per day is stipulated for an able-bodied mother with 1 child; for an able-bodied mother with 2 or more children 3 kronor; for a less able-bodied mother with 1 child 2.75 kronor. An able-bodied woman without children may also receive aid—the rate is 1 krona per day.

All families receiving the above grants are also entitled to a rent allowance based on the cost of living in the locality in which they reside.

Consideration is to be given only to the income of the person called up, his wife, and his children under 16 years of age during the period of service. (Monthly Labor Review, Washington, December 1939, vol. 49, No. 12: 1367.)

A new system of regulating allowances to families of men called to the colors was inaugurated by a Swedish Royal Order of April 17, 1940. These grants are of four different types: For the maintenance of the members of the mobilized man's family; for the upkeep

of his home; for the carrying on of his business; and aid to members of his family when they are ill.

The allowance for maintaining the members of the mobilized man's family is paid for a wife if the man is living with her, for his dependent children under 16 years of age, and for his father and mother if he is obliged to support them and was actually doing so when he was called to the colors. Under specified circumstances the person in charge of the man's household may also receive allowances.

The grant for maintenance consists of a basic part which is paid in all cases without proof of need, and another part which is granted only if the proper authority judges that the need for it has been proven. The basic part is granted only for a wife and children under 16 years of age, and amounts to 1 crown per day for the former and 0.40 crown per child. The order provides a maximum which must not be exceeded under any conditions. This maximum varies according to the cost of living in the locality in which the beneficiary resides. For a wife the range is from 1.75 to 2.25 crowns per day; for other members of the family, from 1 to 1.50 crowns for persons over 16 and from 0.70 to 0.90 crown for persons under that age.

Housing allowance: Usually the rate of the allowance paid in this connection may not be more than the rental and cost of heating the dwelling.

Allowance of maintenance of individual's business enterprise: A grant is made when it is thought possible that an independent business enterprise carried on by the mobilized man can be maintained by the employment of wage-paid labor. When such grant is made to families of men who were supporting them, the maintenance allowance is not paid. The amount of the allowance may in general not be more than 200 crowns per month.

Sickness allowance: In case of sickness in the family the payment shall cover only the expenses actually incurred on account of sickness. (Monthly Labor Review, Washington, January 1941, vol. 52, No. 1; 91–92.)

SWITZERLAND

(The franc is usually converted at 23.2 cents)

By order of October 17, 1939, provisions were made for assistance for the families of soldiers. In deciding upon the amount of aid to be granted, consideration is given to the capital and income of all persons in the household of the mobilized man during his service period. The earnings of his wife, however, are not taken into account unless they are above 3 francs per day; any earnings above this sum are counted in full when there are no children in the family, but only 50 percent of such earnings when there are children in the household. All of the earnings of any other family members in the household are taken into account, as are also sickness benefits and public or private insurance benefits other than those intended to include the cost of accident or illness.

Among the circumstances under which no allowance is payable are the following: (1) When the mobilized man is in receipt of unemployment benefit from a military insurance fund; (2) when the mobilized man is paid his full wage during his service period; (3) when the combined income of the mobilized man and his family provides sufficiently for the support of the family during his service period, so that state aid is not justifiable; and (4) when the mobilized man was earning nothing previous to his period of military service. In the same way when an unemployed man is called up for service, aid may be granted to his family provided definite proof is available that he would have been able to get a job had he not been called.

Allowances are payable only during the actual service period. In principle, the aid granted is not to be above the amount which the man paid to his family before he was mobilized.

The daily allowance to the family of a married man may not be greater than his average earnings per day after deducting the presumed daily cost of his own maintenance—2 francs. This allowance for maintenance may be cut to 1 franc if the man's earnings are low and his family large.

An unmarried man living with his family is generally treated as a married man, but his maintenance cost is fixed at 3 francs per day. If his earnings are meager and he is the sole support of a large family, that cost may be reduced to 2 francs.

Three-fourths of the expenditure in connection with the aid to families of mobilized men is met by the Swiss Confederation and one-fourth by the cantons. (Monthly Labor Review, Washington, March 1940, v. 50, no. 3: 603–604.)

Flood Situation in the Middle Rio Grande Valley

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. ANDERSON of New Mexico. Mr. Speaker, under leave to revise and extend my remarks, I want to include a resolution of the Albuquerque, (N. Mex.) Chamber of Commerce relating to the flood situation in the Middle Rio Grande Valley. This organization is keenly aware of the danger which exists in that locality.

In the Southwest along the irrigated valleys, water is our greatest friend or our greatest enemy. It can supply the necessary lifeblood to our growing crops, but when it gets out of hand at flood stage it can destroy our farming valleys, our farm homes and the cities that we have built up to serve the farming areas.

The Middle Rio Grande is now in a dangerous condition. Above my home city of Albuquerque, there is a protection dike in the neighborhood of Alameda. When the conservancy district was constructed in 1928, it was felt that this protection work would safeguard the city for all time to come. But in the intervening 15 years there has been such rapid aggradation of the river bed that today the Alameda Channel will carry only half as much flood water as it would have carried when the project was finished.

The effects of this are obvious. If we have a flood which reaches anything near the levels that several previous floods have reached, the water will go over the protection works and down through an old channel which leads through the heart of the city of Albuquerque.

The citizens within the Middle Rio Grande Valley have spent more than $2,000,000 on the construction of flood-protection devices. This is an interstate stream, and it is our belief that the cost of interstate stream control should be a burden of the Federal Government and not of the individual property owners along a flooded section. At the present time three-fourths of every dollar which comes into the treasury of the Middle Rio Grande Conservancy District for the operation and maintenance of that district is used for protection against floods, but it all ought to be used for the cleaning of ditches, the rebuilding of headgates and irrigation structures, and for those agricultural activities which would help to produce food required in the war effort.

If this situation is to be remedied, it must be remedied now. Studies of the river have been and are being made by the Army Corps of Engineers and by the Bureau of Reclamation. Sufficient information is now at hand to permit the Federal Government to outline a course of action which will bring the river under proper control. I hope that such action can be taken by this Congress and taken promptly.

The following is the resolution of the Albuquerque Chamber of Commerce:

Whereas the levee flood-control system along the Rio Grande within the counties of Sandoval, Bernalillo, Valencia, and Socorro, has been severely damaged by floods during the past several years and its present effectiveness so reduced as to be entirely inadequate to control flood waters of this river, and thus seriously menace all property within this valley; and

Whereas this situation has become increasingly grave from year to year, due to rapid aggradation of the river channel, so as to cause said channel to shift continuously and to shift the current of this stream with each succeeding flood, so as seriously to threaten destruction of the entire levee system and other flood protection works along the river within this area; with resultant imminent danger of heavy losses of property, destruction of large areas of highly productive lands, and even loss of lives; and

Whereas present levees and other flood protection works so threatened with destruction constitute the only protection for a modern irrigation and drainage system serving 125,000 acres of highly productive and thickly settled farming areas; the central business district of the city of Albuquerque and a large portion of its residential and suburban area, with a population of approximately 75,000 within a radius of 5 miles of the Albuquerque post office; as well as numerous towns and villages within the area above defined; the population of the counties above named according to the 1940 census being 114,956, or 21.6 percent of the population of the entire State; and

Whereas there pass through this area main lines of the Sante Fe Railroad running east and west and north and south; and also main highways for motor travel, the uninterrupted operation of which is vital to the national safety at this time; and

Whereas there are located in the city of Albuquerque two important air bases, Kirtland Field and Albuquerque Air Depot Training Station, which are dependent upon the above-mentioned railroad and highway traffic lanes for movement of supplies, equipment, and men in the military service; and

Whereas the area above defined is subject not only to seasonal floods in late spring and summer, during the run-off of melting snows in the high mountain areas of the Rio Grande watershed, but also to even more dangerous flash or sudden floods caused by heavy rains or cloudbursts in such mountainous areas; and

Whereas such seasonal flood periods occur every year, always with resultant heavy dam-

age; and such flash floods may occur at any time with grave danger of a disaster of major proportions; and

Whereas the property owners of the counties above named and of the cities and towns therein are without funds adequate to construct permanent flood protection works; and

Whereas existing irrigation, drainage and flood protection works within said area were constructed with funds derived from a bond issue of which more than $8,000,000 are now outstanding; a major portion of which outstanding bond issue is owned by the Reconstruction Finance Corporation; and

Whereas a devastating flood, such as is likely to occur at any time due to the conditions above recited, would not only destroy productive lands, city and town property and transportation systems now vitally needed, but also would destroy the sole security upon which said outstanding bond issue is based; and

Whereas the Rio Grande is an interstate and an international stream, and the Government of the United States is bound, by its approval of treaties between the States of New Mexico, Colorado and Texas; and between the United States of America and the Republic of Mexico to allocate and deliver specific portions of the normal and flood-water flow of said stream to irrigated areas within said States and the Republic of Mexico; and

Whereas, by reason of its interstate and international character and the existence of the treaties above referred to, proper control of the flood waters of this stream is within the power of the Government of the United States to provide: Therefore be it

Resolved by the Albuquerque Chamber of Commerce, That a grave and immediate state of emergency exists within the Rio Grande Valley in the counties of New Mexico above named and that the said Albuquerque Chamber of Commerce is prepared at any time to demonstrate the existence of such danger and present emergency, through reports of competent engineers and other comprehensive data such as will convince any agency of the Federal Government that immediate relief is necessary; and be it further

Resolved, That copies of these resolutions by the Albuquerque Chamber of Commerce, properly certified by their officers be forwarded immediately to the Honorable CARL A HATCH and the Honorable DENNIS CHAVEZ, Members of the United States Senate from New Mexico; and to the Honorable CLINTON P. ANDERSON and the Honorable ANTONIO FERNANDEZ, Members of the House of Representatives from New Mexico, with out urgent request that they present to the Congress the critical situation described in the above resolutions, with the further urgent request that they prepare, introduce, and seek enactment by the Congress, at the earliest possible time, emergency legislation which will provide for the construction of permanent flood protection works within the area herein defined, and that funds for such construction be appropriated in such amount as the Army engineers, the United States Bureau of Reclamation, or such other agency as the Congress may designate, may find necessary.

Are We Yet a Free People?

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. KNUTSON. Mr. Speaker, I recently received a letter from a concern in Minnesota that is engaged in the production of shells for the United States Army that reveals an amazing situation and one that would not be tolerated in any other country under similar circumstances. I am wondering what the President and his advisers are doing about this and similar situations. The letter follows:

We have a contract for the production of shells for the United States Army Ordnance. This contract requires a certain rate of production every week, so that the flow of shells to shell-loading plants will be continuous.

Our production has fallen behind schedule. We have a group of inspectors at that plant, all belonging to a C. I. O. union, who are refusing to work overtime, which is necessary in order for us to meet the schedule. Various reasons are given for their refusal to work overtime; such as, they want more money, they want inspection put on piece work, they are willing to work but the union will not let them, etc.

I wonder what would happen if some of the men on the firing lines at the battle fronts would tell their superior officers that they refuse to work overtime.

We have a contract with the union which expires next December, and which was opened up last December in accordance with the terms of the contract, relative to wages only.

Our case has been heard before conciliators of the Labor Department and is now before the War Labor Board.

The men draw time and a half for overtime, week days; and double time Sundays, providing it is the seventh day of work. Last Sunday they were willing and did work at double time, but we do not propose to operate next Sunday and pay double time, as our production is cut back so far we are already operating at a loss. Just at the moment, we are at a stalemate and are gradually falling further behind.

These matters have all been brought to the attention of the local governmental authorities.

The Aftermath of War

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. HOEVEN. Mr. Speaker, it is time to do some planning in the post-war domestic field. The great aftermath of war is going to be a very critical period in American history, and planning to meet the emergencies of those days cannot be accomplished overnight. It is essential that we get busy now.

The average American today is thinking just as much about the problem of jobs for the next few years as about the problem of mapping out a lasting peace. In a recent survey made by the American Institute of Public Opinion 58 percent of those interviewed named jobs or economic readjustment of the country as the most vital long-range issue ahead for the next few years.

What are we going to do with the millions of men and women returning from the armed forces and the defense plants of the country when the war is over? We want no bread lines in America. These people are all entitled to a job and a living wage.

Ninety-six specific post-war recommendations are made in a Report on Demobilization and Readjustment of Personnel prepared by representatives of various Federal agencies in a report submitted to the President on June 30. The report gives the following six-point program to alleviate hardships for demobilized members of the armed forces:

1. Three months' furlough at regular base pay, not to exceed $100 a month, plus family allowances.

2. Beyond that time, if necessary, unemployment insurance for 26 weeks for those who register with the United States Employment Service.

3. Special aid and counsel regarding readjustment and rehabilitation.

4. Special provision, including tuition and allowances, for those who wish to pick up the broken threads of their education or follow some special course of training.

5. Veteran's credit for old-age and survivor's insurance on the basis of service in the armed forces.

6. Opportunities for agricultural employment and settlement to be provided for a limited number of qualified servicemen.

Regarding war workers in industry and Government, specific recommendations were made for setting up readjustment centers through which counsel, assistance, and retraining may be made available for readjustment to other jobs and for strengthening the existing employment agencies to carry their heavier load. These recommendations are all very good and are most worthy of careful study by this Congress.

It is estimated that some 6,000,000 persons will be released from industry when the war ends. These include youths who would have been in school; persons beyond the normal working age; and women who would customarily be in the home. Some 8,000,000 persons will be demobilized from the armed forces, leaving about 2,500,000 in the services.

A moderate policy with regard to continuation or cancelation of war contracts must also be considered. We must avoid the dumping of millions of workers on an overstocked labor market. This is essential in the orderly process of demobilization and conversion to peacetime pursuits.

Many other problems, too numerous to mention, will confront post-war America. Among them might be mentioned the post-war financial problems of the Government, including the questions of economy, reducing taxes, and paying off the national debt. The public is demanding economy in Government and has done so for a long time and certainly they will demand a lowering of taxes when the war is over. If, after the war, we are fortunate enough to have a financially responsible administration, it may be possible because of the size of the national income to start balancing the budget. Just now that seems to be in the realm of the impossible.

Always at the end of a war there is a public reaction against having so much Government regulation. In fact, such reaction has already gained sizable proportions. After the war this reaction almost certainly will be stronger than usual. The average American citizen does not want to be regulated and regimented. He is a creature of freedom. He resists the domination of Federal Government over his business and his personal affairs and wants to throw off the yoke at the first opportunity.

Post-war freedom of opportunity which is so rapidly disappearing from the American way of life must not be forgotten. What are we fighting for? Isn't it self-preservation? This means protecting our individual freedoms and our way of life against our enemies and also against hostile philosophies that might subvert our established beliefs.

In order for the American people to be happy and contented they must have jobs, fair wages, a high standard of living, and freedom of opportunity. No one will exchange this freedom of opportunity for the dole or into becoming a ward of the state if he can help it. Therefore, in order to retain our constitutional democracy it must be made possible for business and industry to provide jobs, fair wages, and a high standard of living.

Government encroachment during the emergency of war in many instances has proven to be a destructive invasion of our constitutional guaranties of the right to "life, liberty, and the pursuit of happiness." The American people want a Government of laws and not of men. Under the American system of free enterprise we have always had the cooperation of a free people which has expressed itself so magnificently in the days gone by.

I think that we can truly look forward to a greater and prosperous America if the American people will now awaken to the great problems which will confront them in the aftermath of war. The time for action on domestic post-war planning is now, and it is the duty of the representatives of the people in this Congress to get busy and do the job. Responsibility lies on our shoulders.

The New Wagner Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr COLMER. Mr. Speaker, I submit herewith a very timely article by Dr. Felix J. Underwood, executive officer of the Mississippi State Board of Health and also president of the American Public Health Association, on the proposal to socialize medicine. Dr. Underwood is outstanding in the field of medicine and public health, not only in Mississippi and the South, but in the Nation at large. He points out some of the dangers that should be considered by this Congress before embarking into this new field of socialization and regimentation. The article, which appeared in a recent edition of The Mississippi Doctor, is as follows:

ANENT THE NEW WAGNER BILL

(By Felix J. Underwood)

On June 3, 1943, Senator WAGNER (for himself and Senator MURRAY) introduced a bill, S. 1161 (an identical replica of H. R. 2861 was introduced in the House on the same day by Congressman DINGELL), extending the provisions of the Social Security Act and including a section, title 9, setting up a system of Federal medical, hospitalization, and related benefits.

This bill, if enacted, will effect revolutionary change in the practice of medicine and put the Federal Government in virtual control of the practice of medicine and of the practitioners of medicine and also of hospitals.

Every employed person in the country and his dependents would be eligible for the medical benefits of the system. This means, of course, that only the relatively small segment of the population who are self-employers and do not elect to be voluntary participants would remain as potential patients to be cared for in accordance with the present method of rendering medical care. It also means, except for a very few physicians, that the profession in order to obtain a livelihood would be obliged to become a cog in the wheel of the system.

Under the provisions of the bill payments to general practitioners for services shall be made on (a) a fee basis, (b) a per capita basis, (c) a salary basis, and (d) a combination or modification of these bases as the Surgeon General of the United States Public Health Service may approve. Specialists designated by the Surgeon General shall be "entitled to the compensation provided for specialists. * * * The services of specialists shall ordinarily be available only upon the advice of the general practitioner.

The administrator of the program shall be the Surgeon General of the United States Public Health Service, who, under the bill, has virtually dictatorial powers. It is true that the Surgeon General of the Public Health Service will have a national advisory medical and hospital council (referred to as the council). Your attention is directed to the extracts dealing with the composition and appointment of this council. It will be noted that the appointments are made by the Surgeon General. There shall be 16 members "selected from panels of names submitted by the professional and other agencies and organizations concerned with medical services and from among other persons, agencies, or organizations informed on the need for or provision of medical, hospital, or related services and benefits." There is nothing in this section which states that any of these 16 members shall be physicians.

To support the purpose embodied in the whole bill, which is to establish a "unified national social-insurance system" the employer and the employee shall each pay 6 percent of the amount of the employee's salary or wages.

Under this provision, all physicians in private practice shall pay a social insurance contribution equal to 7 percent of the market value of services in self-employment up to $3,000. This means that physicians earning $3,000 or more in any calendar year will pay 7 percent of the $3,000, or $210. If their earnings are less than $3,000 it will be 7 percent of whatever amount they have earned.

The public must be served, it is true. In my considered judgment, this section of the bill introduced by Senators WAGNER and MURRAY and Representative DINGELL is both unwise and unnecessary. It is my honest belief that the setting up of such a system of compulsory medical care would be detrimental to public health and welfare and would result in a lowered quality of medical care throughout the country.

This system if enforced (and I do not take it very seriously because there are so many deductions already that doubtless Congress will hesitate to impose additional ones at this time) will be destructive of the time-honored existing method of medical practices under which have been developed the highest standards of medical care and public health of any large country of the world.

This bill, I think, has been introduced in the turmoil of war without consultation with the official representatives of health and medical professions and related agencies.

I have been president-elect of the American Public Health Association for almost a year and no one consulted me relative to such legislation.

It is my feeling that this is an effort to enforce upon the United States Public Health Service and the Surgeon General of the United States Public Health Service the administration of a law which I do not believe they want any more than the State Board of Health of Mississippi desired that all the charity hospitals of the State, including the mental disease hospitals, be turned over to the State board of health to administer, as advocated by several splendid Mississippi lawmakers during the 1942 session of the Mississippi legislature.

I am sure that the leadership in medicine and public health of this country found out about this bill only after its introduction by its authors.

Personally, I intend to discuss the bill with our Mississippi Senators and Congressmen to the end that everything possible be done to defeat this section of Senator Wagner's bill.

I am also of the opinion that neither the president and secretary of the American Medical Association nor any other officers of that organization, and neither the president and secretary of the American Public Health Association nor any other officers of that organization were consulted at all during the preparation of this bill.

I seriously doubt if the Surgeon General or any member of his staff was consulted by the authors of the bill.

However, it is not too late for physicians and health workers in all of the States and Territories to give their Members of Congress the benefit of their thinking relative to this legislation. The physicians of this State have been unselfish and patriotic in carrying out necessary programs in venereal-disease control and tuberculosis control which constitute sound public-health practices. Most of the hospitals of the State and the majority of the physicians of the State are cooperating in taking care of the wives and infants of privates, corporals, and plain sergeants who are members of the fighting forces of this country and receiving a rate of pay that justifies hospitals and physicians alike to make financial sacrifices, when necessary, for them. The cooperation of the medical profession was expected and received without stint in the previously named programs.

As a physician and as public-health man serving as State health officer and responsible by law for the protection of the public health of this State, I feel that it is my duty to point out the dangers and extreme undesirability of title 9 of Senate bill 1161 (H. R. 2861), which proposes to set up in this country a system of Federal medical, hospitalization, and related benefits.

Mighty influences are at work to effect epochal changes in the complexion of medical practice. We are bravely trying to face

realistically the trends in national and international social and economic structure—trends directionally signaled by already established sign posts, such as social security, sick benefits, unemployment insurance, and old-age compensation.

That we as physicians and health officials are intimately involved with these plans is clearly demonstrated by certain recommendations that the Government in cooperation with the medical profession take action to enable the individual to budget medical expenses over a reasonable period and contribute toward the cost of care according to his ability, and that the Federal aid be extended toward developing an adequate system of regional and local hospitals, maternal and child care, and other measures to insure adequate health care for all, regardless of place of residence or income status.

It is apparent to us all, I think, that the old status of medical practice will be considerably modified. We consider this in line with essential progress, but title 9 of the new Wagner bill is far too revolutionary for the present day.

It would seem that this system has been largely copied from the British system; much of the British system inaugurated by Prime Minister David Lloyd George was copied from the Bismarck system in Germany back in 1870.

It is about time that we become more original in our thinking in this country and quit being copycats of countries which allowed so little freedom in the years past that our forefathers were forced to flee from their shores to preserve for themselves and their descendants liberty of thought, speech, and action—and in many instances their very lives.

Final Message of Department Commander

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. KNUTSON. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I desire to include the final message of Department Commander Glen S. Locker before the twenty-fifth annual department convention of the American Legion, Department of Minnesota, at Faribault, Minn., on August 22, 1943. I commend a reading of this able and timely statement to every loyal American who places country before self:

In these days when loose talk, intemperate and uninformed speech can do so much harm, I believe every American audience has the right to know by what authority any speaker stands before them. During this past year I have served you as department commander and it has been my privilege to do some traveling, and to talk with many different kinds of people. From these experiences I have drawn some conclusions which I would like you to hear at this time, the occasion of my final message, before joining the ranks of the "has beens."

So I come to you today with a message which I feel is pertinent to this hour in our national history, and important because we, as legionnaires, have said that we will preserve the freedoms of this country for those sons of ours who are out there fighting for them.

First of all, I wish to say that industry, after several years of abuse, and after fighting indictments that never went to trial because there was no proof—but merely obtained to get headlines in the papers and the attention and prejudices of unthinking people—finally emerges as at least 50 percent the salvation of America's freedom—the other 50 percent being our sons who use and shoot the weapons that industry makes. This industry of which I speak has been fighting for its life during the past 10 years, through a jungle of opposition consisting mostly of those who, having failed themselves to successfully compete in the rough and tumble of private enterprise; who never met a pay roll; who never borrowed money from a bank and worried about the notes that were going to come due; who have never sold or created or transported or distributed a single thing in their lives; who have never created anything, and hence have wanted to destroy what some one else ha. successfully made; who, under cover of the war activity, where any resistance to it could be made to appear unpatriotic, have attempted to inculcate a curious form of absolute government control of every phase of our business and social life.

Yes; they're already talking about licensing business, and if it ever comes to that, we'll be on our knees, because it means out-and-out political management, and when a politician can take away your license, he can take away your very life.

As I have gone into war plants and seen the enormous transformation that has taken place, I can't help but think of those who have attempted to destroy industry simply because it is big—forgetting that it had become big because it deserved to be—because it had served the American public well—and that only because it was big did we have better and better homes, automobiles, radios, electric refrigerators, washing machines, and heat equipment—not at higher and higher, but at lower and lower prices, which is the history of American industry—constantly improved products at constantly reduced prices. How we wish these politicians, who have attempted to rip American industry apart would just humbly and thankfully follow the example industry has set for them and give us the job American industry has done in converting from peacetime to wartime production, which ranks along with the seven wonders of the world.

For the sake of returning servicemen, after this war, I hope we have learned some things of late. I hope we have learned that there is no substitute for brains, nor for intelligence, which is the use we make of the brains we have. There is no substitute for successful experience. And it does not necessarily mean a man is a rascal just because, when he was young, he spent time in the classroom studying to fit himself for a successful business career, and then got a job and worked long hours to create a value for himself—and learned the business and saved money, invested it in a small enterprise—blew the breath of life into it—held his hands around the flame of that business to protect it until it got a good start, and finally, developed an enterprise locally that provided a pay roll and supported hospitals, schools, and contributed toward the community chest, plus a product that added nationally to the health and happiness of our people. I hope we have learned there is no substitute for creative ability, because if it were not for the things that imagination has brought us, we would still be in log cabins, going to the wood pile for heat and risking our lives every Hallowe'en in our former type of outside facilities.

So In December 1941, we did not have enough arms in all America to resist the attack of 10 armed divisions, if the Japanese had known what they had accomplished at Pearl Harbor and had just kept on coming. You can talk about fighting them with sticks and stones and courage, but that won't work against machine guns and bombs. Yes, we might well ask where we would all be if it were not for the American businessman, with the skill and vision and courage, who, literally speaking, has reversed the Biblical injunction and has beaten our plowshares into weapons. No aviator who brings down enemy planes, and no troop of soldiers with tattered and honored colors has a right to greater pride than these factories which, in less time than anyone could have believed, and in far less time than Germany guessed, have given us mass production in fighting planes and bombers, and ships, and tanks, and ammunition. It was Hitler's and Hirohito's one great miscalculation—they did not believe it could be done.

And so, this war is real to American industry because industry, like a sock, has turned itself inside out and converted itself to war-making. There is no way for business to be better off today because of its country's agony. Today business consists of five classes of men in this country.

First—Those who have already gone out of business—who paid with their business lives, so to speak, and have seen all their work and planning of past years go into the discard—and their families get just as hungry and their insurance policies lapse just as quickly as the worker who loses his job during a depression and then depends upon a Government subsidy. But I hear of no small businessman asking that his normal pre-war business profits be maintained out of the Government treasury.

Second—Those who are going out of business this coming year, sitting in the death house, living on the tag ends of inventories that are left—knowing that when that's gone, there will be no more, and they are worried about the education of their children and how they're going to get along.

Third. Those who are staying in business and losing money, and can stand it for a while out of surpluses and reserves of past years in order to maintain their identities and be here when the war is over.

Fourth. Those who stay in business and manage to break even.

Fifth. The "top crust" that make money, as far as the gross profit is concerned, and then pay back 80 to 90 percent in taxes. Yes; this war is real enough to business. But it still is not real to many millions of Americans. Sure we hear the news broadcasts that contain every favorable item. We see the headlines in the paper. We get the idea that not a single Russian soldier is losing his life in the present offensive. We don't hear about our losses until long afterward—our cities have not yet been bombed—we have not as yet dragged the bodies of American men and women out of the debris of destroyed cities. We have not as yet sustained any of the agony of this war, not unless you have already suffered the loss of a son.

This war is not real to the point of being a personal war as long as farm organizations and their political leaders are still thinking in terms of the highest possible price, instead of how much food they can raise to feed our armies and our people. It is not real as long as labor leaders think in terms of getting the highest possible wage rates and premiums paid for every single hour of overtime, instead of the weapons they can make. It is not real as long as any business or industry puts profit above production, nor as long as politicians think first in terms of getting elected. This war cannot be real to people who think in terms of what they can get out of it.

I'll tell you where this war is real. Just 5 minutes ago, in the Solomon Islands or in Sicily, there was an American boy alive. He's hardly yet tasted the joys of living. He's there where he is and had no choice in the matter. He got his induction papers from the draft board. He didn't say, "Now just wait a minute, Uncle Sam—the hell with you. What kind of a deal are you going to make? How much are you going to pay me? How

many hours am I going to be on duty? What! Twenty-four hours! Well, how much extra am I going to get for every hour I fight? Do I have to fight on Saturday? What about Sunday? What about my comforts? What about my privileges? What about my standard of living? What about my education?"

He's there, away from home and relatives and friends; his education interrupted, his job impeded. He's there in the filth, blood, and strangeness. And for $50 a month. And because he's thinking about that thrill-packed moment when he will get off that train and, in that milling crowd, finally pick out his dad and mother—and his sweetheart, and go home, arm in arm, for good old American fried chicken dinner where they can be proud of him and at last hear of his experiences. Every day and every night, he keeps thinking of home—and what he's going to do when he gets back there. That was 5 minutes ago, when I started talking about him. And right now, he's dead. Right now. How I wish every American could see the reality of it. He's dead, his body torn by a shell, or burned in the crash of a plane; some Jap has plunged a bayonet through his lungs, or he drowned, a cold, lonesome death.

And if you could be there where he is—not here, comfortable, with a good lunch under your belts—be there and see that boy die and witness his courage before death releases him from his agony, and then be home with his father and mother weeks later, when they get the news from the War Department—by the Eternal God, you'd know where war is real. And for nothing he got out of it—for no premium paid—he didn't spell patriotism—p-a-y.

In spite of all the effort of this American Legion, during the past 25 years, to develop and teach the true spirit of patriotism, we have some rather superficial ideas about it even today, in the midst of this war. It is not enough to stand up when they play the Star Spangled Banner, repeat the pledge of allegiance to the flag, and to applaud it in the news real. That is not enough. Patriotism now means pain and sacrifice, and that's the word that American people do not yet know the meaning of. Let's not confuse inconvenience with sacrifice. We must omit from our minds any thought at all of what we might hope to get out of this war and think only in terms of what we can give and do.

We made a fundamental mistake at the beginning of this war. We thought it would be like the last one. Well, that's natural because that was the only war we knew much about. We thought it would be fought by our armies and navies, away off somewhere, and we would cheer them on and buy some bonds. But, in the meantime, in the mind of the farmer, "$2.20 a bushel for wheat again"—in the mind of the labor leader, "We've got the country over a barrel now and we'll make advances both in wages and personal power that we never could get in peacetime." And in the mind of the businessman. "Too bad, but I didn't start this war. I made some money out of the last one and maybe I can make more out of this one." You know very well that's the way a lot of fellows felt. Well, this war is not like the last one. This is the war of an indulgent, luxury-loving, soft and unprepared America against a lean, hard-hitting, well-trained and still powerful Germany, the overlord and master of all Europe, with slave labor of all its conquered millions making weapons for its master, and, as far as the over-all military situation is concerned, up to now, an almost completely victorious Japan. We are facing, too, an entirely new and different type of enemy—an enemy with horrible, bestial, and utterly soul-destroying ideas—an enemy backed 100 percent of the time by every man, woman, and child, and every pound of materials, for just one single purpose, namely, the waging of war and the destruction of every decent thing. It is certain that the defeat of this enemy can be brought about only if we are willing to work and fight as hard as he, and do without with as much fortitude. This is no part-time war. But that's the way we have fought it up to now.

Not for one moment would I take out of your minds the hope and encouragement that came out of Guadalcanal, north Africa, and Sicily, together with Russia's successful offensive. We must have hope. And yet, we must restrain our optimism until a hopeful beginning has actually become a successful finish.

The most dangerous thing that can happen to America today is the relaxation that would come about—the return to selfish thinking and planning, the increased absenteeism, altogether too prevalent among war workers—if we permit ourselves to regard a German collapse as imminent and that, with Germany out of the way, it would take only a few weeks to finish off Japan. We need to understand just how badly we've been defeated and to get away from that comfortable feeling that, while we may lose at the start, we're bound to win in the end. We've lost every round of this fight so far, and I'm not forgetting Coral Sea and Midway and Guadalcanal. Those blows were good ones, and they brought blood, but they were not rounds, not decisive victories, because, while we were striking with some devastating power at Japan's Navy, that selfsame Japan was gaining still more ground on land in China, entrenching herself in Burma and capitalizing on all of the enormous raw material conquest in the Dutch East Indies and the South Pacific. And so, we have lost every round of this fight and we still comfort ourselves that it doesn't greatly matter because, of course, we're going to win the war anyway. You don't win fights by continuing to lose them. If you lose enough of the early rounds, you can lose the last one, too. A few hard, successful punches have brought us 300 miles nearer to Tokyo, in the South Pacific, but it is still 3,000 miles to Tokyo.

There's no referee to judge this fight. There will be no draw decision. This is for keeps. It's just a matter of win or lose. The sobering thought is that, although Germany, Japan, and Italy started this war, positive that they could not lose, since they knew more about our resources than we knew about theirs, they miscalculated on one point—and it will be their undoing. They failed to judge correctly the unconquerable spirit of united America that thinks in terms of giving and not in terms of getting, and to take into account what America can do when America once knows what it must do.

Every man, woman, and child is a soldier in this fight, some in uniform, in danger, suffering and dying, and the rest of us supplying the food and weapons and dollars. No war in history has ever been fought that carried such high stakes and such fearful penalties to the loser. The dearest possessions of mankind, freedom, home, safety, liberty, religion for us, if we win, and degradation and slavery, and a blacked-out God for us, if we lose. Losing is something that no American can contemplate, and we won't, but any effort comprising less than all we've got may not be enough. If we lose, it won't be a matter of settling by indemnities, or giving up Hawaii and the Philippines—not this time. We'll be absolute and literal slaves of that enemy just as sure as France, Poland, Greece, Denmark, Holland, Burma, and the islands of the Pacific are today. What a bitter yoke that would be for America.

There were two letters in the bulky envelope marked "Passed by naval censor," which Mr. and Mrs. Henry A. Glorch of Chicago opened with trembling fingers. The first was in the familiar handwriting of their son, Henry, aboard a ship in the South Pacific. The second was in an unfamiliar script. Naturally they first read the letter from their son. The other letter was from Henry's buddy, John Demarsky, who said he was carrying out instructions in mailing the letter. "I don't know just what to write," Demarsky said to the family. "You've lost a very fine son and I've lost a very fine buddy."

Well, what price is the life of a boy like that? That courage, that heart, that mind? What price? What is it worth? Did he bargain with his country for his services? Did he put it on the basis of time and a half and double time? Any labor leader who calls men off work, making arms to protect boys like that sells out his country just as sure as Judas took the 30 pieces of silver.

Well, what's this all about, this appeal I'm making today? Just one thing. It's for this thing we call America. Have you ever thought of what it really is, this America you have taken so much for granted, that you read about in the papers, hear about over the radio, talk about, and ask God to bless, in Irving Berlin's song? Let me bid you goodbye, officially, as Commander of the Department of Minnesota, and thank you all for the wonderful cooperation given to me, by telling you what I think America is—and I mingle the words of H. I. Phillips with my own.

America is the sleeping giant of nations—suddenly transformed by a bomb at Hawaii into a smashing colossus. It's joy-rider turned Paul Revere. It's the jazz band becoming the fife and drum corps. It's Hollywood and Broadway suddenly warmed by the spirit of Bunker Hill and Lexington. It's the night club and the country club discarding the play clothes for uniforms and jumpers, and the sign of the Red Cross. It's waltz music and the rhumba shifting to the blare of the bugles; it's all the trivial ditties of Tin Pan Alley welling into "Mine eyes hath seen the glory of the coming of the Lord" and "Oh, say can you see by the dawn's early light." It's the soda clerk dying for democracy; the youth on the tennis court flashing through the air to bomb a hostile battleship—a Colin Kelly. It's the cry of "Gimme, gimme" changing to "Up and at 'em" and the slogan "Every man for himself" and "What do I get out of it" becoming again, "Don't shoot until you see the whites of their eyes." It's the Stork Club playboy turned parachutist; the grimy coal-town laborer leading a suicide squad to retake Manila; the village ne'er-do-well on a mine sweeper in a raging sea; the tap dancer, stripped to the waist, in a blazing gun turret; the ex-gangster suddenly finding his soul in the emulation of Ethan Allen and Sergeant York. It's a club car turned into a jeep car, the deluxe Pullman into an ammunition train, and the porter into Gunga Din; the street idler winning a citation for valor; the boy who "wasn't much use" sticking to the guns of a flaming cruiser, taking one last defiant shot before a cold and pitiless ocean closes over him to strangle out his life. It's the three-hours-for-lunch fellow turned minute man.

It's Bossy Gillis and Bill Knutson, Alfalfa Bill Murray and Sergeant York, Colonel Lindbergh and General Pershing, Louie the Lugg, Jimmie Durante and Bishop Manning. It's Carrie Nation and Hiram Walker, Israel Putnam and Fibber McGee, George Washington and Jack Benny, Benny Goodman and Alexander Hamilton, Ulysses S. Grant and Robert E. Lee, Henry Ford, Bill Green, Tom Girdler, Al Smith and Herbert Hoover, Franklin Roosevelt and Wendell Willkie. It's the messenger with a singing telegram, delivering instead, the 1943 message to Garcia.

It's self-interest become self-sacrifice. It's the spirit of indifference become again the

spirit of '76. It's the homestead turned cathedral because of the prayers of mothers there; the dingy town become a flaming symbol because it has given birth to heroes; the prophecies of Holy Writ become events . . . the moment and the human heart turned torch and beacon to light the way to freedom and liberty for all of the oppressed peoples of the world.

That is America, for whom we give up something we might like to own or wish to sell; for whom we work—and pray—and fight! And unto whom—and I have done it, too—we surrender up our sons!

God bless America, the members of this great organization, the American Legion, and may you serve her now, even better, with your efforts, your influence, and your dollars.

Some Candid Comments by Upton Close

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. MUNDT. Mr. Speaker, on Sunday October 3, Upton Close, noted commentator on foreign relations, made the following broadcast over the Mutual radio network. Last night Mr. Close supplemented this broadcast with some equally thought-provoking reports. It is hoped that those both in and out of our Government who seemingly are ashamed to call themselves Americans and to defend the independence and integrity of this Republic will ponder the observations of Upton Close most carefully.

If the United States is to emerge from this war relatively as great a Nation as it was when it went in, somebody soon is going to have to devote some attention to the protection and promotion of American interests. With other Nations proudly and rightfully putting their own concerns first and with our country placing the interests of others ahead of our own, there is real danger that in the post war era the United States may find itself divested of its logical position at the head of the parade.

The broadcast by Upton Close follows:

I had prepared for you for today a presentation of the views of Harold Laski and other influential British radical leaders, and of the growing Canadian Commonwealth Federation, the party which is likely to bring socialist government to our neighboring country in the next elections.

I'm going to put off all but a touch of this material because of the ominous drift of our relations with Russia through the past week. The government in exile of Czechoslovakia and the patriots of Yugoslavia have shown indications of leading a parade from London to Moscow of the very nations we are fighting to free. The billing on the British-American conference with Stalin has slipped during the week from an all-star performance of state heads in Moscow to a road performance of military men in London. But the most important news of the week, no matter whom one loves or mistrusts, was this—"the State Department has been informed that Russia is not interested in a separate peace with Germany, but that the picture can change unless another front is opened." This pregnant little dispatch was carried by Associated Press, reporting Ambassador Admiral Standley's return and report to the President. It was dropped from the wire services like a hot potato and buried by a press, more inclined to editorialize over national newspaper week and the theory of free speech than to get into the realities of contemporary history.

This gloved ultimatum highlights our precarious situation with our ally, Russia, beyond carp, cavil, or sentiment. It released, as from the State Department, something men have betimes been threatened with being put off the air for reporting.

The friends of the Soviet and probably Moscow authorities now see Russia in for a very hard winter which they insist could have been spared Russia had we opened our western European front in time. For the delay they chiefly blame British First Minister Winston Churchill. They assume that without Churchill's restraint, our Chief of Staff Marshall would have crossed the channel. In consequence, they reserve for Russia the possibility of formal or informal cessation of hostilities with the German army. They do not go into the question of whether an invasion of western Europe would have been disastrous or not. Nor do they ask, as Churchill and Hull must ask, whether Britain and the United States, in the absence of true good faith or any written agreement worthy of the name could trust Stalin not to unload the Germans on us as soon as we were on the Continent in force. Friends of the Soviet do not ask these questions because they are for Russia first, with Britain and the United States getting what is left of their loyalty after Russia, whatever program or aim, is taken care of.

Now comes Communist Browder with the impudent warning in his Gary speech of last Tuesday that it is an illusion for the United States to expect Russia to fight Japan, and harmful nonsense to expect the Soviets to furnish us with Siberian bases, although contrariwise they furnish Japan with weather stations. This was reinforced from official Russia by the finding of a bald announcement that a number of our expensive bombers and a large number of highly-trained airmen who were on the sadly ineffective raids on Japan's Kurile bases had been interned in Siberia. Both we and Russia have, of course, ignored niceties of international law when we really wanted to help our friends.

It happens that what Browder said with an innuendo of impertinence this week, is what I reported in an entirely friendly and reportorial way after interviewing Maxim Litvinov for my network as he stepped from a trans-Pacific plane on December 6, 1941. I made my comment on the following day, December 7, and stated that my impression was that if Japan suddenly attacked us in the Pacific, Russia would follow her own political advantage. A few minutes after I said this came the flash that Pearl Harbor had been attacked. Then came an attempt to put me off the air for daring to suggest that Russia would not march right by our side in the Pacific * * * but then, I'm not a Communist. Probably I couldn't even get a penitentiary sentence commuted, if I should land in the clink!

After Litvinov arrived in Washington and was installed as a member of the United Nations steering committee, he showed himself afraid to give us confidence. Our diplomats and military experts in Russia were treated with such galling lack of official trust and warmth that cooperation with the Kremlin, beyond the one-sided lend-lease, became impossible. We are now about to enter the crucial stage of discovering whether or not such a confidence ever can be developed. As we enter this stage we and the British and the Chinese and the French and the little nations find ourselves very much in Russia's power. We got there under our own steam, following British leadership.

There is no use to dim our vision with blind rage about it. We must now face the fact firstly that Russia holds the balance of power between rival nations and races in both Europe and Asia. That goes for rivals lined up against one another in the present wars and rivals who for the moment are on the same side in these wars. We must face the further fact that the Soviet leaders hold the balance of power not only between mutually resentful races and rival empires, but they hold the balance of power between rival class interests in our own American society and British society and Chinese society and many other societies. They hold this through organized Communist parties which act virtually as Moscow's agents and through sympathetic organized labor groups such as the Amalgamated Clothing Workers and the C. I. O. and Maritime Union, whose sympathies are dominantly with Soviet Russia in any situation. Russia has a further hold on Anglo-Saxondom through Socialist political parties which are non-Communist, such as the Canadian Commonwealth Federation in Canada, but which would never support war against the Soviets. Russia has yet a further hold through a vast network of organized cultural groups from writers' groups to the Russian Chamber of Commerce. In addition, there are large Russia-sympathetic motion-picture and publishing interests among us, and last but not least, there exists a vast, unorganized, pro-radical, and pro-Russian sentiment in the English-speaking world and among the United Nations generally.

Pro-British influences within Britain and the United States, not to mention in the other United Nations, are sufficient to make any thought of use of force against Russia utterly unrealistic, unless in cooperation with Germany, and a war against Russia under any circumstances now foreseeable is beyond the ability of any British or American Government to prosecute. Russia's position is so strong that even an Anglo-American military alliance is pathetically inadequate to counterbalance her. Open expression of that alliance would only make Russia relatively stronger, by scaring into Moscow's arms the Chinese and French and many other peoples who don't want an English-speaking world at all.

The attempt of a bullheaded faction or simple-minded statesman to handle Russia by war or threat, would tear Anglo-Saxondom to shreds before a single American regiment could ferry across one of the two wide oceans to open a front against the nation which stopped Napoleon and Hitler. The now modernized and machine-powered Russia has a larger population than the United States and the white population of the British Empire together and sprawls across two continents over a rapidly developing area more than three times the size of continental United States. When we consider these things we may understand a little of the robustious quality of Joseph Stalin's humor. He and his people have paid well for their laugh—the last laugh in the three-cornered duel of Europe of this century which our internationalists entered so cocksurely. Now, our internationalism and anglophilism have played into the hands of Russian imperialism and world socialism, and we must decide what next.

First, in the name of sanity, let's call a halt to the silly talk going through our services and business circles that we'll "have to fight Russia next!" You will not hear such talk in British circles. The British have been as negligent as we are at getting themselves in a jam but once in it you always find them setting their minds rationally toward getting out, and making best use of friend and foe to do so.

That's why Churchill, proposing a British-American union, eyes Moscow not Washington

to see the result. That's why British diehards such as Beaverbrook, the arch capitalist, and Hoare, who counterplotted against Russia in Spain, have told Churchill point-blank that regardless of what else, understanding must be had with Russia. At the radical end of English thought, the ex-pacifist Bertrand Lord Russell, mathematician, friend of the radical Laski, writes in the October issue of the New Deal magazine Common Sense, that if a compromise by negotiation is not reached with Russia, war between Russia and the United States will occur, and that Britain under a Labor Government might line up with Russia against the United States. He says everyone else would, of course. I'm wondering what it is we have to compromise with Russia—in the view of British radicals. I'll give you more of this next week if possible, but buy the magazine Common Sense and read it for yourself.

Last night George Bernard Shaw capped the climax by repeating in effect what Churchill said after the last war—that our whole moral and historical conception of the European contest is wrong and that our part in it is idiotic. Also the British censor allowed this court jester of the Empire, who, however, is no fool, to be the first Britisher to say to the world that Britain would have to preserve and build up Germany again. George Bernard Shaw, Lord Russell and their kind, of course, count on our ever remaining international fools, spending our substance getting ourselves tangled up in world rivalries, dissipating our men and wealth over the globe in a fashion beyond Alexander the Great, or the old Spanish Empire, although without their practical purpose, instead of doing as Russia does, that is, making herself impregnable in her own sphere and challenging enemy or friend to come—if he dare. Perhaps it is time our internationalists took a lesson from the Russia they but recently so admired. Some of them, of course, planned it this way to take the world to state socialism by making us as well as the Tory British helpless in the hands of Stalin. Professor Laski and Henry Wallace bank on Socialist conquest of Britain and the Dominions after the war. The Horoscope, English magazine of astrology, prized by Mr. Wallace, says that Socialist revolution is in the stars for Britain, and Churchill will pass. It will be "a case of the man and the moment."

In view of this, the leftists will bear with Mr. Roosevelt's present rightism like martyrs and try to elect him again. When Britain goes left, they can take him back home with them. If he is now no longer the man of the moment in their minds, he is the best available man to lead up to that man.

But there is a vast, paying and bleeding American citizenry in and out of uniform who are neither Rightists nor Leftists—neither pledged to the British Empire nor baptized to Moscow. And they still have an entire war to fight in the Pacific. This paying and dying, rather than planning, public wonders if Americans may not, at long last, take hold of themselves and become as much masters of their own destiny as, before their eyes, the Russians have become sole masters of their destiny.

United We Win

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. FISHER. Mr. Speaker, the Auxiliary of the Veterans of Foreign Wars recently conducted a timely and spirited Nation wide essay contest on the subject of United We Conquer. Young people from every State in the Union participated. I take pride in learning that 2 weeks ago the national winner was announced as 15-year-old E. E. (Pat) Murphy, Jr., of my home town of San Angelo, Tex.

For that signal honor and accomplishment young Murphy was awarded the first prize of $1,000, which he immediately invested in a war bond. The essay is timely and thought provoking. I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

UNITED WE WIN

(By E. E. (Pat) Murphy, Jr.)

Hitler's most sinister weapon is not his Luftwaffe, his Panzer divisions, or his shock troops; the power behind his Munichs as well as his Dunkirks is the insidious and insatiable theory of divide and conquer. If the Axis Powers had faced unified opposition they could have goose-stepped through no conquered capitals. If there had been unity of purpose and action among the peaceful nations of the earth the dictators' troops could have never marched. But they did march, and before they marched their victim was weakened by rumor, doubt, disunity, and confusion. Just as fleeing civilians clogged the vital roadways of France, hampering their defenders, so did political disunity, diplomatic impediments, and blind isolation check opposition to the Axis.

At the outset of this struggle we were a divided people—divided in politics, race, social standing, and ambition. But as the four horsemen began to ride over the whole of Europe, Asia, and Africa a spirit greater than the military cohesion of the Axis grew in the minds of liberty-loving peoples. A common cause and a common enemy gave us our strongest weapon—unity.

With the roots of our tradition deep in the Magna Carta, the Petition of Rights, the Mayflower Compact, the Declaration of Independence, and our Federal Constitution, it was only natural that we should unite to further the cause of liberty. And so we did. The Atlantic Charter of August 1941 proclaimed the joint desire of America and England "to bring about the fullest collaboration between all nations."

On January 1, 1942—a few days after the Japanese blow had made America fighting mad—representatives of 26 nations pledged cooperation and a unified command. January 3, 1942, saw President Roosevelt and Winston Churchill planning a joint military strategy, with the British general, Wavell, in command of the southwest Pacific and Generalissimo Chiang Kai-shek commanding the Chinese area. On March 30, 1942, a permanent Pacific War Council was established in Washington, with members from the United States, Australia, New Zealand, China, the Netherlands, Canada, and Great Britain conferring together for the common cause. Looking ahead, Vice President HENRY WALLACE has proposed a world council after the war.

These, and the events which grow out of them, are great strides toward unity among the United Nations. They directly reflect the spirit of the citizens of the nations, who realize that England's fight is America's, that Russia's loss hurts every member nation, that defeat of the totalitarian principle is a victory for all of us. Inside our own borders our perspective has changed. Even through the haze of confusion and distrust the Axis carefully prepared, we have begun to see the truth. We see who are our friends and who are our enemies; we see the great task ahead; we see that each of us must work tirelessly if we all are to win. We have found our weapon—unity. Not chained together by artificial links of race hatred and greed, but with our hearts welded into one, with common aims, against a common enemy, we have armor that is proof against the theory of divide and conquer.

Although this Nation has taken a lead in the equality and mutual understanding which promote unity, the movement has hardly begun. In America we have a complication of racial, social, and economic problems which handicap us in our search for national and international unity. Eleanor Roosevelt said in The Moral Basis of Democracy:

"First of all we are a great Nation of 130,000,000 people. We cover about 3,700,000 square miles * * *. Our people stem from every nation in the world. We include Orientals, Negroes, Europeans, Latin-Americans. We are in truth the melting pot of the world. Our solidarity and unity can never be a geographical unity or a political unity. It must be a unity growing out of a common idea and a devotion to that idea."

We have a foreign-born population of 13,000,000, a first-generation population of 25,000,000 and an alien population of 5,000,000. These people came to the United States largely for freedom, security, and equality, just as the first settlers did. We must guarantee them that which they seek. We have 12,800,000 Negroes in America. We must support their freedom. We have 4,000,000 Jews. We must give them security here, although the Nazis would slaughter them. We must treat all races as equals. Our national achievements are products of the ages and of the world; America is vibrant while other countries are decadent, because of our influx of new ideas and new blood. All our people have a common idea in this war; victory and a just peace. We can achieve unity by common devotion to that idea.

History did not end with Napoleon, and it will not end with Hitler. We must plan for a better world after the war. As Americans we must perfect our national solidarity, then extend our horizons to include the nations which will help us win the war and perpetuate the peace. We must assume our responsibilities as a democratic nation. As citizens we must do all we can to win the war; we must buy bonds, join in the conservation program, cheerfully give up rationed luxuries, and give our time to war work. We must be tolerant and sympathetic with the ideas of others. We must study carefully to understand the issues of the war and the peace to follow. We must make ourselves useful citizens, for in strengthening the home front and by uniting with our neighbors and our allies we can hasten the day of peace and justice for all the world. Divided, we can be conquered; united, we win.

An Interesting Contrast in Government Publications

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. BENNETT of Missouri. Mr. Speaker, Members of Congress have, without regard to party lines, joined in support of all appropriations needed to win the war. These appropriations have properly gone not alone for weapons of war but also for things which will make

life easier and more certain for the soldier. Into this latter category falls a Government publication which has just come to my attention. Its title is "Jungle, Desert, and Arctic Emergencies." It is an interesting contrast to a booklet just issued by the O. P. A. and entitled "Uncle Sam Keeps Your Rent Down. You Must Keep Your Home Up." The latter booklet contains many helpful suggestions but, I fear, goes beyond the purposes of government as defined in the Constitution of the United States. It is a booklet which should not be published at public expense.

In these days when the administration is calling for more and higher taxes it behooves us to examine closely the spending activities of all Government agencies. Those activities which are not directly related to the war effort must be curtailed. They will be curtailed before I will vote to levy additional taxes on the already tax-burdened American citizen.

With permission of the House to extend my remarks in the RECORD, I include the following paragraphs taken from a column I write and which is published each week by some 30 newspapers in my congressional district.

LIFE IN THE ROUGH

Jungle, Desert, and Arctic Emergencies is the title of a fascinating 150 page booklet now being placed in the emergency kits of all Army aviators. The booklet might well be entitled "Every Man a Crusoe." It harks back to the Boy Scout Manual and contains helpful suggestions on countless subjects. The cover of the book is vermilion so it can be readily seen against jungle or desert background if lost. The binding glue contains insect-repellent powder and pages are water resistant. The type face and illustrations are especially designed for reading under adverse lighting conditions. The book itself fits easily into the hip pocket.

Ingenious instructions, compactly presented, tell how to turn a parachute into a tent, a cistern, or a fish net. Flyers are told not to be afraid of wild animals which will generally be as much afraid as the man. Much more to be feared than serpents or leopards are insects. It is pointed out men can benefit from watching monkeys. A man can eat anything a monkey eats. Also, man can eat the monkey. Those who are lost in the jungle are told they can't see through or over it but by getting down can see under it. They are told how to make fires without matches, snare small birds and animals, and to eat the entrails to obtain vitamins. They are told that termites, beetle grubs, grasshoppers, and crickets are considered a rare delicacy by jungle natives and taste like roasted chestnuts.

Aviators lost in the desert are told their chances of rescue are good but not to eat the contaminated food offered by friendly Arabs. In the Arctic it is pointed out that the cardinal principles of survival are to get plenty of sleep and rest, avoid tight clothing, eat plenty of fat and to keep dry. Also polar bear livers are said to be poisonous and a continued diet of rabbit will produce sure starvation.

SUPERGOVERNMENT

The home front is not being neglected by the booklet makers in Washington, though it can hardly be said that booklets available to civilians are as useful or justified as the one described above. The O. P. A. gave birth to a new booklet last week at the Government Printing Office. It is entitled, "Uncle Sam Keeps Your Rent Down. You Must Keep Your Home Up." Did I say a booklet? Two million of these booklets have been printed at a cost to the taxpayers of $8,000. These booklets are being distributed to tenant groups, labor unions, civic groups, etc., in regions where there is rent control, and all distribution is "at the local level" in Washington double talk.

The booklet has 15 pages and contains approximately 80 suggestions to the householder. Some of the recommendations from Uncle Sam are: Keep children from writing on your walls; do not throw paper or debris where it will plug drains; curb your dog; don't use an ice pick to hurry in defrosting the refrigerator; food should always be stored in sanitary vermin-proof manner; lighted cigarettes must not be thrown out of windows; oil your squeaking hinges; mop up spilled water; be sure you know where you want to hang the picture before driving the nail in the wall; turn water faucets off fully each time they are used; if the toilet clogs up clear it with a plunger.

I don't know how we ever managed to get along before the Office of Price Administration was created to regulate our daily lives and tell us how to behave with regard to the complexities of life. It's a good thing most people can read even though this new O. P. A. booklet is profusely illustrated for those who may have difficulty in turning off faucets a la Washington.

Concrete Ship Venture Ends

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. JONES. Mr. Speaker, during the recess, on September 6, there was an article appeared in the Washington Times-Herald which I think ought to have the attention of Congress and I, therefore, am inserting it in the RECORD in the hope that a comprehensive investigation and report may be made by an appropriate committee:

CONCRETE SHIP VENTURE ENDS—ILL-STARRED PROJECT HAS MYSTERY WIND-UP

(By Willard Edwards)

Quietly, almost furtively, the United States Maritime Commission is folding up a $150,000,000 concrete-ship program which was initiated under mysterious circumstances and accompanied by scandal in the performance of contracts.

The figure of Harry Hopkins, No. 1 White House adviser, hovers in the background of developments concerning this ill-starred venture which became known for the first time yesterday.

CANCEL CONTRACTS

The Maritime Commission has ordered the cancelation of contracts for the building of 32 concrete vessels, leaving 33 still to be completed. The program last February called for the construction of a total of 115 ships of this type.

The program was authorized despite the demonstrated "utter inefficiency and failure" of concrete ships during and near the close of World War No. 1 and the statement of Admiral Emory S. Land, chairman of the Commission, that he had "no enthusiasm" for concrete-ship construction, that they were being built purely as "a matter of insurance for people that could build them but could not build steel ships."

REMARK SIGNIFICANT

Admiral Land's statement becomes highly significant in view of developments to be revealed in this article.

A contract with the MacEvoy Shipbuilding Corporation, of Savannah, Ga., for the construction of 23 concrete barges was revised by the Commission to 7.

The Truman committee early this year exposed the MacEvoy deal, revealing that the contract had been issued to a corporation with no assets, that the Government had spent $7,000,000 on the project without receiving even one barge, and that MacEvoy was the type of man who rented a $447 station wagon to the Government at the Savannah shipyards at the rate of $2,400 a year.

ACTION "RELUCTANT"

A contract for the building of 20 barges with McCloskey & Co., at Houston, Tex., was slashed to 4 ships. No cut was made in the 22-ship contract with Concrete Ship Constructors, of National City, Calif., which has delivered only 7 ships.

The Commission, in making these cancelations, noted that the original contracts were awarded "reluctantly" during the summer of 1941 when the east coast war faced with a severe oil shortage. Additional steel now has been made available, along with sufficient propulsion machinery, to make construction of steel tankers advisable instead of concrete barges, it added. Furthermore, the Commission's decision to convert 102 Liberty ships into tankers had "helped the general situation."

"The question of greatly increased costs over original estimates, serious delays in construction, together with engineering and material difficulties, plant facilities, etc., were fully considered by the Commission in canceling contracts," it was reported.

HOPKINS ACTIVE

The part played by Harry Hopkins in the concrete ship program may be deduced from the following set of circumstances, uncovered by an investigation.

On July 26, 1941, Hugh E. MacBeth, chairman of the Negro National Concrete Ship Construction Committee, Los Angeles, Calif., addressed a lengthy telegram to the White House, of which portions follow:

"We earnestly petition you [President Roosevelt] to give necessary orders for the immediate creation of a Nation-wide defense project for construction of hundreds of concrete ships. Unemployed, experienced colored American concrete workers are ready to rush into construction of concrete ships for national defense the very moment you give the green light.

"By this project you will take from the totalitarian enemies of democracy one of their strongest and most effective weapons of propaganda in the outer world, to wit, that this democracy does not live up to its Declaration of Independence and its Constitution as witness the treatment of racial minorities, that democracies are as racially intolerant as they are, but the democracies are not as honest as they are.

"In this respect alone your immediate creation of this defense project will take the sting of hypocrisy from our Nation's claim to true democracy. It will particularly hearten our Latin American neighbors to the south of us, millions of whom are of the some racial admixture as your native colored citizens."

REMARKABLE TELEGRAM

What happened in the White House as a result of this remarkable telegram is not known, but 15 days later, on August 11, 1941, Admiral Land notified the board of harbor commissioners at Long Beach, Calif., that a conference to consider the building of concrete ships would be held, noting, however, that "the commission is fully aware of the lack of efficiency of this type of vessel due to its great weight."

The Concrete Ship Constructors, of National City, Calif., got its contract, the only one which has not been slashed under recent

orders, despite the expressed distrust of concrete ship efficiency by Admiral Land.

On April 9, 1942, the Assistant Director of the United States Office of Education, on official stationery, wrote to Harry Hopkins:

"Probably due to your efforts, the Maritime Commission authorized the construction of 100 concrete barges of 8,000 tons deadweight capacity some months ago."

This train of events is also said to explain the somewhat irritated report of James L. Bates, Director, Technical Division of the Maritime Commission, on October 15, 1941, that—

"A surprising amount of interest has developed in this (concrete ship) program. This has shown itself in hearty cooperation from a number of strong companies, but it has also developed a somewhat embarrassing interest from regional and political sources."

The General Accounting Office, it was learned, conducted a thorough examination of the Commission's concrete-ship program and investigators recommended that funds be withheld as the ships were not suitable for conversion to the needs, requirements, and uses of the Navy as required by law.

WARREN OPPOSED

Comptroller General Lindsay C. Warren ruled against these recommendations, however, asserting that it would be an invasion of the administrative field.

As for the concrete barges delivered, Admiral Land is on record as to their eventual use. Questioned by the House Appropriations Committee in executive session about the program, after it had been noted that the British would not spend taxpayers' money on concrete vessels, Land asserted:

"If you have no other use in the world for these barges after the war, they are splendid portable storage tanks."

Nevada Leads the Nation in Rapid Growth

EXTENSION OF REMARKS

OF

HON. MAURICE J. SULLIVAN

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Nevada State Journal, Reno, of October 1, 1943, disclosing that Nevada leads the Nation in rapid growth:

NEVADA LEADS THE NATION IN RAPID GROWTH—POPULATION TOTALS 144,000, SURVEY REVEALS

Nevada's population has been increasing more rapidly than the population of any other State.

That was revealed at Carson City yesterday when Henry S. Coleman, inspector of the Nevada liquor tax department, released population estimates of civilian population compiled by the Allied Liquor Industries.

Those figures showed that Nevada now has a population of at least 144,000—an increase of more than 34,000 since the 1940 census.

While not a single State exceeded Nevada's rapid growth, placed by the figures Coleman released at 22.4 percent, the District of Columbia where the Government's huge war machine is centered did show a slightly more rapid increase, or 27.5 percent.

Neighboring Western States, while increasing in population, were far from matching the growth shown in Nevada. Arizona came the closest to equalling Nevada's record with a jump in population of 15.5 percent. California's increase was only 7.7 percent; Washington's, 7.2 percent; Utah's, 6.2 percent, and Oregon's, 4.9 percent.

Aside from the increase since 1940 when the last official census was taken, Nevada's population increased in the last year by more than 14,000, it was shown. The report indicated that in 1942 the State had a population of 130,000.

Nevada's jump in civilian population came in the face of a national trend which saw a decrease of 2.4 percent between the 1940 census and April 1 of this year.

The population estimates released by Coleman were based on registrations for war ration books in the various States, it was explained.

The increasing population estimates were further indicated by the increase in automobiles in Nevada—an increase which it was indicated would give the State its largest motor-vehicle registration in history in 1943.

The registration of automobiles in the State also went counter to the national trend, which had followed the national civilian population decrease.

During the first 8 months of this year the number of automobiles in the State was more than 1,500 greater than it was for the first 8 months of 1942.

Right of Citizenship and Protection of Minor Citizens of the United States—House Joint Resolution 61

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I am very glad to include herewith an article which recently appeared in the Los Angeles Daily Journal. The article is by William L. Chitty, who collaborated with me in preparing House Joint Resolution 61. His discussion of the principles underlying that measure is, I believe, sound and worthy of the attention of Members and readers of the RECORD:

THE UNGUARDED DOOR OF DEMOCRACY

(By William L. Chitty, of the Los Angeles Bar)

There is much talk, from day to day, of "the post-war world" and of preparation for it, of changes in the old and of new things, of readjustments; and plans more or less comprehensive and elaborate are exploited, particularly in economic life.

We cannot look into the future and see, with clearness, through the vaporings over the boiling cauldron of the present, what then, in that post-war world may be the conditions in economic or social or political life, and undertake to lay down rules and regulations therefor.

We should, however, contemplate and study the past, intelligently and carefully, and, like Patrick Henry, by the light of experience learn what therein was wrong and what right, that we may "hold fast to that which is good" and "do the right as God gives us to see the right."

The subject of first importance is not economic but social and political, and particularly the democratic character and foundation of the Government as one "of, by, and for" free people, governing themselves, and, still more particularly, that large and important segment of the body politic, the minor citizenry, upon the democratic integrity of which the perpetuity of Government and of democracy depends.

This is not a pure democracy, a government operated by the people directly, but a representative democracy, a government operated by those whom the people choose to act for them for that purpose, each of the several States, and the people of each, acting as, at the same time, a separate entity and a part of a national entity, constituting a republic, and each separate entity and the national entity acting under powers and limitations specified in a Constitution adopted by the people of the several separate entities, respectively, and in a Constitution adopted by the people of all of the separate entities acting as such. This is a trite statement of our system of democratic government

Such formulation of Government is necessitated by the extent of territory and the number of people therein; which, however, does not alter the democratic character of these Governments, State and National, as based upon the principle of the common equal right of each and every member of a society of free people, and of free States to govern and to be governed by themselves under laws established by themselves in their free exercise of such right.

Such Government of ours, through social and economic activity, has developed from its original simplicity into an intensive and extensive complexity and a maze of bureaucracy in administration, largely due to a competitive and overreaching individualism in economic life, and largely due also, in the past 30 years, to the exigencies of two world wars, necessitating the concentration of governmental power which war brings, for defectiveness, in prosecution and defense.

Much alarm is expressed, in Congress and out, over this bureaucratic development, as confusing and opposing, if not threatening, the democratic character and life of our Government and of democracy, and this is no light threat.

It is not the purpose now to consider that large problem, except as this important social segment of our minor citizenry may be involved in its development and in its solution.

The fourteenth amendment declares that all persons "born * * * in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside."

Without considering the question when a person is subject to the jurisdiction of the United States within the meaning of this amendment, it is sufficient for the present purpose to assume that such jurisdiction exists.

It may be taken as natural law that minor citizens are wards of the people and of the people's Government, in democratically organized society, and are entitled as such wards to the care and protection of the Government during the years of their more or less irresponsible minority, and such is the people's and the Government's correlative responsibility and duty.

To this inviting land of opportunity flock thousands of the opportunityless the world over, all kinds of people, good and bad, virtuous and vicious, with all kinds of ideas and customs, alike varied, and many of which are antagonistic to, if not incompatible with, our democratic ideology.

Youth, susceptible and responsive, is open and alert to this great new thing called life, into which it has been born, and, if not prone to evil, is often attracted by it in its designedly attractive form, assumed for its own evil ends, to which evil influences youth is oftentimes more receptive than to good influ-

ences in life. And unprepared democracy is "open field" for political faginism.

The totalitarian powers, now arrayed against democracy, have shown the "wisdom of the serpent" in their care and training of their youth, for many years past, now their strength, threatening democracy's ruin if not combatted with all the strength which democracy can muster, presently and decisively.

In the absence of any law in our constitutional government designed and calculated for the full protection and care of our minor citizenry, such citizenry has grown up, subjected to all the viciousness of totalitarian influences, existing and propagated for many years past in our country, until it attained its responsible maturity of citizenship, and entered the framework and substance of the governmental structure, either as new unseasoned timber or timber infected with political termites, threatening the stability and permanency of the structure, and the demoralization and ruin of democracy.

And such totalitarian influences cannot be said not to have entered into our economic life and problems.

In our form of government, the protection and care of youth is a social responsibility and duty, particularly, of the State and a political responsibility and duty, particularly, of the National Government, to the end that a State itself and the people thereof may have adequate sanction and guaranty against evils, common to all of the States, which a State alone may not adequately control.

While, doubtless, power of legislation to deal with this evil has existed in Congress for all these years, Congress has not undertaken to exercise such power; and there is no definite authoritative declaration of our democratic citizenship, or the principle thereof, upon which to base such pertinent and adequate legislation.

There is now pending in Congress, before the House Judiciary Committee, a joint resolution (H. J. Res. 61), proposing a constitutional amendment declaring that "citizenship in the United States and the several States thereof is exclusive of that in any other nation and imports a common equal right of each and every citizen thereof, as free people, to govern themselves under laws established by themselves in their free exercise of such right."

The exclusiveness of our citizenship may be a question in the far-off post-war world, but it is not a present or imminent one. This declaration is not one of isolationism but of independence. The fraternity of nations and peoples of the earth is yet to be developed. Civilization grows by stages, as does life, and both expand by time into eternity and perfection.

Applying to our minor citizenry, the democratic principle of citizenship stated, the proposed law declares further that "no person shall inculcate, teach, or induce any minor citizen of the United States in derogation or contravention of such citizenship, or conspire thereto, or participate in any such inculcating, teaching, or inducting," saving other application of said principle and full exercise of religious liberty, and leaving to Congress enforcement of the law, under its general powers, by appropriate legislation.

Such law will not, it is believed, conflict with freedom of speech in academic or cultural instruction or in discussion for the sake of knowledge of the nature and form, merits and demerits, of different kinds of government.

Freedom of speech or action is not absolute or a license, and there is a reserved power of the state "to insure orderly living, without which the constitutional guaranties of civil liberties would be a mockery."

When speech or action, of citizen or alien, transcends a decent respect for the law of the people among whom one lives and enjoys the advantages and hospitalities of such association, and such speech or action is so directed as, or necessarily tends, to pervert or destroy the political character and virtue of a minor citizen in derogation or contravention of the sound principle of democratic citizenship stated, it is, in its nature, treasonable, and the person guilty thereof, even the minor citizen himself, of legal reason and judgment, should be subject to prosecution and punishment, as Congress may prescribe.

This minor citizen segment of the body politic is the constant, perpetual vital element thereof, renewing itself day after day, and day after day merging into the responsible citizenry of the State and Nation.

No part of such citizenry of State or Nation is more important or of more concern to either or more vital to the existence and the permanency of either or, for these reasons, more commanding of constitutional sanction and guaranty of protection and care, than this minor citizenry of the body politic.

Its fundamental character and importance in democratic government demands its inclusion in the Constitution.

As a part of the Constitution such law will have weight and force, domestically and internationally, a national pledge in the development of the minor citizenry, stabilizing the Government, as an enduring structure, in base and framework and substance, against which time or crime shall not prevail.

Subject to improvement in form, perhaps by such amendment as the committee may determine, the law is sound in substance. It is of present importance as indicating what we are fighting for and of importance to the post-war world of democracy as closing the door to totalitarian influence and activity.

Calls Republicans Anti-isolationist

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include an editorial appearing in the New York Times of October 9 by the Honorable William Allen White, as follows:

CALLS REPUBLICANS ANTI-ISOLATIONIST—WILLIAM ALLEN WHITE DECLARES PARTY HAS DEFINITELY DRIFTED TOWARD WORLD COLLABORATION—AIDING WILLKIE OR DEWEY—EDITOR DOUBTS ISOLATIONISTS COULD NOMINATE MACARTHUR, THINKS BRICKER IS WEAK

(By William Allen White)

EMPORIA, KANS., October 9.—Within 5 months the Republicans in State primaries and in State conventions will begin choosing delegates to the national convention where they will write a platform and choose a candidate for President. Only one thing is settled—the drift toward collaboration with the United Nations will be manifest in the Republican platform.

Naturally there will be face-saving denunciations of President Roosevelt and a chloroforming phrase stressing "constitutional methods" and "no loss of sovereignty" to appease the isolationists. But it will be a collaborationist platform. Otherwise it is fairly certain that the two candidates most likely to win at the polls, Wendell L. Willkie and Gov. Thomas E. Dewey, will not run on the platform.

Governor Dewey, who has shown such signal independence in demanding an alliance with Great Britain, and Mr. Willkie, who has said that he will only take the nomination if the platform is liberal, certainly are not anxious enough to lead a forlorn hope on a straddling platform.

The Republican Party has been coming to its view on collaboration since before Pearl Harbor. The Republican National Committee nearly 2 years ago adopted a resolution pledging the party to participate after the war in maintaining and establishing peace. After that every avowed Presidential candidate, except Gov. John W. Bricker, declared strongly for collaboration.

USUAL SOOTHING SIRUP

Last month at Mackinac Island the Republican platform committee set up by Harrison E. Spangler, chairman of the National Republican Committee, made a strong commitment for collaboration with the United Nations, with the usual soothing sirup dropped by "constitutional procedure" and "without loss of sovereignty" for the isolationists. After that JOSEPH W. MARTIN, Jr., Republican leader of the House of Representatives, led an overwhelming majority of the Republican Members of the House in voting for the Fulbright resolution, which is also a commitment for collaboration.

Therefore, it seems certain that the collaborationists will take the platform and the isolationists the pain-killing phrases instead of the other way around.

Under those circumstances it is easy to see why Messrs. Dewey and Willkie lead in numerical strength in the polls as Republican Presidential favorites. It was inevitable that Governor Bricker's star should begin to wane. Yet, the isolationists' strength in the Republican convention which will come from the Middle States around the Great Lakes will be a powerful, well-organized minority. Even though they have lost hope and faith in Mr. Bricker, the isolationist group is holding Senator ROBERT A. TAFT in reserve and, after Mr. TAFT, their real ace in the hole is Gen. Douglas MacArthur.

No one knows exactly what General MacArthur believes on any subject, but he would run as a military hero and, of course, would be a shouting supernationalist who would subtly and persistently poke knives into the ribs of the British and take up the fight where George Washington dropped it at Yorktown.

MAC ARTHUR MOVE DOUBTED

But unless the war is over, that line of strategy would be fatal. To get on the ticket as the isolationist white hope, General MacArthur would have to conquer and annihilate Japan and be the savior of the Philippines. At this time, it seems a rather remote possibility that within the next 9 months before June 1944, Japan and Germany both will have accepted unconditional surrender.

It seems likely, therefore, that either Mr. Willkie or Governor Dewey will win in the convention. Mr. Willkie must win in the first four ballots, if at all. His strength is in New England and the Eastern Seaboard States. His friends are working hard. They have an organization now in more than half the States. They have an office in New York from which workers are going out and campaign literature is being prepared. They are trying, and with some success apparently, to crystallize into delegates a strong popular feeling for Mr. Willkie that is manifest across the country.

By the same token, the enmity of the Republican isolationist group from Col. Robert R. McCormick, of the Chicago Tribune, to Representative FISH is concentrated on Mr. Willkie. Mr. Willkie's friends say that he has with him considerably more than half the Republican National Committee. But a

minority group of politically active and competent members of the committee are against Mr. Willkie. They will try to control the southern delegates, as that group has controlled the southern delegates in most Republican conventions. It was the southern delegates who formed the nucleus of President William Howard Taft's strength in 1912, when he defeated Theodore Roosevelt in the convention.

WILLKIE INFLUENCE IN SOUTH

But here the parallel between Theodore Roosevelt and Wendell Willkie ends. Mr. Willkie, as head of the Commonwealth and Southern Public Utilities Co., has done business in the South. Mr. Willkie knows the southern Republican politicians. He is as competent as his enemies on the National Committee, and there is some reason to believe that Mr. Willkie will show up with his full share of the southern delegates. If he can control a majority of them plus a solid eastern seaboard strength, with scattering parts of delegations across the country, he will have a strong bandwagon lead in the convention.

At least that is his hope today, and the position of Governor Dewey is both a strength and a weakness to the Willkie candidacy. Mr. Dewey's position weakens Mr. Willkie because too many of his friends who are interested in Mr. Willkie's position on foreign policy hold Mr. Dewey as their second choice. In politics, when a man has a second choice, he has no real first choice, which is not so good for Mr. Willkie. But Mr. Willkie's strength lies in the fact that Mr. Dewey's declaration that he will not be a candidate makes it impossible for Mr. Dewey to go into the States looking for delegates where Mr. Willkie will have a clear field. Mr. Dewey's nomination must come after the fourth ballot as a compromise.

So the Presidential situation boils down to this in the Republican party: The isolationists cannot expect a bandwagon nomination. The drift of the times is the other way. Every public manifestation of American opinion for 2 years has been steadily anti-isolationist. The irony of the isolationists in this situation is that they are regular Republicans. They never bolt. That is their boast. They would accept Mr. Dewey grudgingly and Mr. Willkie with agony, but in the end they would swallow him rather than vote for President Roosevelt or for any other Democrat.

Nevada Is Leader in Collection of Fats and Greases

EXTENSION OF REMARKS

OF

HON. MAURICE J. SULLIVAN

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Nevada State Journal, Reno, of October 3, 1943, disclosing that Nevada leads in the collection of fats and greases:

NEVADA IS LEADER IN COLLECTION OF FATS AND GREASES

Nevada led the Nation in collection of waste fats and greases in August, Bernard Hartung, executive secretary of the State salvage committee announced today.

Data received by Hartung from W. P. B. headquarters showed Nevada collected an average of nearly one-half pound of grease for each of the occupied dwellings in the State.

Total fat and grease collections were said to be in excess of 15,000 pounds for the State.

Smaller War Plants Corporation Protests Cancelation of Pacific Coast Contracts and Gives Reasons

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1943

Mr. VOORHIS of California. Mr. Speaker, I have asked permission to include with my remarks a resolution passed by the Board of Governors of the Fourteenth Regional Office of the Smaller War Plants Corporation concerning the alleged critical manpower shortage of the Pacific coast and the threatened and to some degree actual cancelation of contracts in that area.

I need not reemphasize here the points brought out by the Board of Governors of the Smaller War Plants Corporation, except to say that I am in hearty agreement with every one of them. I cannot refrain from adding, however, that I have a veritable mountain of testimony from people who are employed in some of the shipyards and aircraft factories of southern California to the effect that some of these companies, particularly where they are operated on a cost-plus-fixed-fee basis, do not make effective use of the labor force they now have, and that there are many of their employees who are dissatisfied because they are not given more vital and continuous work to do. On the other hand, many of the smaller plants producing things no less vital to the war than ships and planes may be shut down as a result of these rulings unless some modification is made. And by and large these small plants, many of which I have personally visited, have made excellent use of such labor as they had and every man has been working right up to his capacity.

It, therefore, seems manifestly unfair to put into effect for the benefit of those who have not made efficient use of labor, a ruling which will penalize employers and workers alike in industries which have been working at top efficiency.

Furthermore, the time will come when the emphasis of this war will shift to the Pacific area. Does it make sense to cancel or fail to renew contracts on the Pacific coast, possibly put a good many small companies out of business, make necessary the provision of substitute facilities in other parts of the country, and then have to ship long distances over terribly congested rail lines many of the things that will be absolutely necessary to the fighting of that Pacific war?

Finally, those of us who represent Pacific coast districts want to do everything in our power to prevent our communities from becoming one-industry towns, the bad consequence of which in the post-war period is too obvious to require discussion.

All of this is said without the slightest intention of detracting from the great credit due to the aircraft and shipbuilding industries of the west coast for the remarkable production they have achieved. The resolution of the Board of Governors of the S. W. P. C., fourteenth region, follows:

Whereas it is said that additional labor is required for the immediate production of aircraft and ships for the successful prosecution of the war; and

Whereas the Office of War Mobilization is said to be considering drastic curtailment and cancelation of contracts in Pacific-coast factories that are now producing other materials for war and goods for essential civilian use, in an attempt to provide additional workers for aircraft factories and shipyards; and

Whereas the full operation of a regulation providing that all contracts should be placed east of the Rocky Mountains and not in the Pacific coast regions would tend to close our smaller plants, perhaps for all time, thereby destroying the basic economy of this region both as to investment of capital and as to the means of livelihood of thousands of workers;

The Board of Governors of the fourteenth region, Smaller War Plants Corporation, meeting today at Los Angeles, presents to the Office of War Mobilization, the War Production Board, the War Manpower Commission, the Small Business Committees of the United States Senate and the House of Representatives, the procurements agencies of the armed services, and the Smaller War Plants Corporation, Washington, D. C., the following pertinent facts:

1. The fourteenth region, Smaller War Plants Corporation, comprising southern California, Arizona, and Clark County, Nev., is predominantly a region of small industries. Eighty-five percent of its skilled craftsmen are employed in small plants, and it is doubtful if they could be transferred to the assembly lines of wartime shipyards and aircraft factories.

2. Through the efforts of the Smaller War Plants Corporation many hundreds of small manufacturing plants in the region have been put to work on highly essential war materials at a time, during the past year, when they were faced with shut-downs and probable extinction.

3. These smaller war plants are today making a valued contribution to the war effort in the production of many critical items for the offensive action of our armed forces throughout the world.

4. Many of these smaller plants are now working on contracts for the Army, the Navy, the Maritime Commission and other procurement agencies, and they should, for the success of the war effort, be permitted to complete these contracts without interruption.

5. Many of these small plants, being especially well equipped by facilities and skilled manpower for the war work they are now doing, and being highly desirable to the procurement agencies, should, we believe, be permitted to obtain new or continuation contracts for the same sort of work they are now engaged in.

6. Many of these small plants are performing valuable and valiant service as subcontractors, making parts and assemblies for big prime contractors, and this contribution to the war effort should be encouraged and not interrupted.

7. Many other small plants have peculiar adaptability to the manufacture of civilian items which are necessary to the proper maintenance of morale on the part of all workers, and such small plants should be

encouraged, as a vital part of the war effort, to engage in, or continue in, the production of these essential civilian items.

Therefore, the Board of Governors of the fourteenth region, Smaller War Plants Corporation, representing both large and small business in southern California and Arizona, believing that the small plants of this region should be permitted to continue in those lines of business at which they are most proficiently contributing to the war effort, both for the present and for the post-war period when soldiers will be returning to civilian employment in small industries, and

Believing that not only the future of this region but also its immediate present will be seriously threatened by any drastic abolition of its varied industry and the attempted herding of all workers into the two wartime industries of aircraft manufacture and shipbuilding and further

Believing that all reasonable means of exhausting the local labor market should be thoroughly explored before the present operation of the smaller plants is in any way interfered with:

Resolved, That the Office of War Mobilization, the War Production Board, the War Manpower Commission, the Small Business Committees of the United States Senate and the House of Representatives, the Procurement Agencies of the Armed Forces, and the Smaller War Plants Corporation, Washington, D. C. be earnestly requested to give due consideration to the war necessity of continuing these small plants in their present lines of production, rather than permit them to be closed in the unproved and uncertain belief that their workers, skilled in other lines, can be shifted to employment in the shipyards and aircraft factories; and

Resolved, That the Smaller War Plants Corporation, both nationally and in each of the affected Pacific-coast regions, be represented by adequate membership on the Committee on Urgency and the Committee on Manpower to defend the interests of the smaller manufacturers in the alleged manpower crisis; and

Resolved, That these facts and resolutions be spread upon its minutes and presented forthwith for the consideration of the Office of War Mobilization, the War Production Board, the War Manpower Commission, the Small Business Committees of the United States Senate and House of Representatives, and the Smaller War Plants Corporation, Washington, D. C., before any further action is taken.

Plan for the New World Order

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. WHITE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following plan for world order:

No supergovernment and the retention of complete sovereignty of every nation;

Establish a world court to be composed of proportionate representatives of the several nations, with an international world commission with power to settle international grievances and prevent aggression and invasion of any nation, implemented with an international army and navy, each country to have proportionate representation on the commission and supply a relative quota of the policing force;

The nationals of any country not to be permitted to serve in the country from which they came;

The commission to maintain freedom of the air and seas with universal disarmament;

No nation to be permitted to maintain a navy or armed force above its domestic policing requirements; and

All international disputes to be settled by the commission under the rules of judicial procedure with right of appeal to the world court, whose decision shall be final and enforced by the international commission.

B'nai B'rith Marks Century of Service

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "B'nai B'rith Marks Century of Service," which appeared in the Washington Post of Sunday, October 10, 1943:

B'NAI B'RITH MARKS CENTURY OF SERVICE—BORN IN AN ERA OF NATIONAL CRISIS, IT WAS PREPARED FOR THIS ONE

It was 1843, the sixty-seventh year of American independence. John Tyler was in the White House, shaping the destiny of the Union grown to 26 States and 19,000,000 people, including some 50,000 Jews, descendants of those who had helped build the Nation.

A mild boom was under way in the wake of the panic of 1837 as the growing country spread westward in the lee of the first great wave of European immigrants that brought the record total of 104,000 newcomers to these shores in 1843.

These immigrants were deeply moved by the excitement over the dedication of Bunker Hill Monument and the opening of the first telegraph line, linking Washington and Baltimore, both of which occurred in 1843.

Public mourning in 1843 over the death of Francis Scott Key and Noah Webster introduced these newcomers to great names in the American tradition.

Everywhere the immigrants heard talk of the proposed annexation of Texas, which in 2 years was to lead to war with Mexico, and saw signs of the irrepressible conflict over slavery that was to end in the War between the States 18 years later.

B'NAI B'RITH IS FOUNDED

In that atmosphere of patriotic fervor, growth, progress, and imminent crisis, 12 young newcomers to America, inspired by the vision of American democracy, met in a gas-lit coffee shop in New York City on October 13, 1843, and made a covenant with the land in which they had found a sanctuary from the tyrannies of the Old World.

These men were the founders of B'nai B'rith (Hebrew for Sons of the Covenant), oldest and largest national Jewish service organization in the United States.

October 13 B'nai B'rith marks its one-hundredth year, proud that the pledge of its founding fathers, binding themselves and their heirs to serve the best interest of America, humanity, and the Jewish people, has been faithfully redeemed by every generation of B'nai B'rith, which, in the words of President Roosevelt, "effectively served the well-being * * * of the Nation" with a program that "fortifies the effort to keep America safe for democracy."

ITS WAR SERVICE

Appearing on the American scene 2 years before the War with Mexico in 1845, B'nai B'rith, during the dark days of the War between the States, acquired a reputation for war service that has been sustained uninterruptedly through the Spanish-American War, World War No. 1 and World War No. 2.

When B'nai B'rith swung into speedy action for war service a few hours after Pearl Harbor, it did so with a smooth efficiency born not only out of more than a year of activity in national defense but out of a century of experience in mobilizing its manpower and resources in every national emergency.

In the months since Pearl Harbor B'nai B'rith has converted into deeds of service the pledge of its president, Henry Monsky, of Omaha, Nebr., made to President Roosevelt on December 8, 1941, that B'nai B'rith would "spare neither toil, blood, nor treasure" in prosecuting the war to victory.

The record proves how well that pledge has been kept. More than 17,500 members of B'nai B'rith and its youth affiliates are in the armed forces, 101 have died in service or are missing in action, 17 are prisoners of war, and 67 have been decorated for bravery.

RECREATIONAL WORK

Over 38,000 B'nai B'rith members have given blood to the Red Cross; nearly 50,000 are actively engaged in civilian-defense services; B'nai B'rith groups have sold $150,000,000 worth of war bonds; 18,000 B'nai B'rith women and girls are working in Red Cross production units and have turned out 3,750,000 surgical dressings and knitted and sewn garments.

More than 550 recreational facilities have been equipped by B'nai B'rith for the armed forces; 47 ships of the Navy are being provided with recreational equipment; over 1,000,000 servicemen have been guests at B'nai B'rith functions; hundreds of thousands of gift packages and 5,000,000 packages of cigarettes have been sent abroad to fighting men; 39 pieces of mobile equipment have been contributed to the Red Cross, and more than $700,000 has been given to the Red Cross and other war-relief agencies.

These figures represent but a few of the ways in which B'nai B'rith has been fighting for democracy.

By keeping pace with the kaleidoscopic social, cultural, and political changes in the century between 1843 and 1943, B'nai B'rith has grown to a family of 175,000 men, women, and young people, organized in 1,500 groups in every city and virtually every town of any size in the United States and Canada.

FIVE MILLION DOLLARS FOR RELIEF

Representing a cross-section of American Jewry, B'nai B'rith has played a decisive role in the history of the American Jewish community and has contributed much to the welfare of the Nation as a whole.

Its hospitals, orphanages, old folks' homes, and community welfare services, on which B'nai B'rith has spent some $20,000,000 in the past century, bless humanity in every corner of the land.

Its projects in support of education, Americanism, and youth welfare, for which it has given another $10,000,000, have made it an integral part of the fabric of every community where a B'nai B'rith unit functions.

Long allied with the Red Cross (one of whose founders was a B'nai B'rith leader)

and antedating it in extending help to oppressed and stricken peoples regardless of race or creed, B'nai B'rith has contributed more than $5,000,000 for the relief of distressed humanity in every corner of the globe.

In furthering the cultural advancement of the Jewish people, B'nai B'rith has established a network of 124 Hillel foundations and counselorships to care for the spiritual and welfare needs of Jewish college students on the American campus and to provide similar services for Jewish student Army and Navy trainees; created the Aleph Zadik Aleph, the B'nai B'rith youth organization, with its program of community service, patriotism, and educational activities for youth between 14 and 21; conceived a far-reaching vocational service program for youth and adults, and contributed largely to the growth of libraries and educational institutions.

NO FORMAL CELEBRATION

Through its Anti-Defamation League, B'nai B'rith has fought not only against prejudice, intolerance, and mistaken ideas about the Jewish people but has made a major contribution to American unity by exposing alien-minded forces of hate and stimulating efforts toward interfaith amity and brotherhood.

The famous statue to religious liberty, which stands in Fairmount Park, Philadelphia, a stone's throw from Independence Hall, was the gift of B'nai B'rith to the people of the United States in 1876 on the centennial of American independence.

B'nai B'rith had looked forward to a Nation-wide celebration in observance of its one-hundredth anniversary. But instead of any formal or public celebration of its centennial, B'nai B'rith is commemorating this landmark in its history by a reaffirmation of the ideals which it has practiced and preached for 10 decades and by an even greater mobilization of its strength and resources to help bring closer the inevitable day of victory.

Contributing mightily to the preservation of what all Americans cherish as their way of life, B'nai B'rith enters its second century of service rededicated to the welfare of the Nation and the Jewish people, which it has served since 1843.

Activities of the A. A. A. Committee in Pennsylvania

EXTENSION OF REMARKS

OF

HON. DANIEL K. HOCH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. HOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a letter from the Agricultural Adjustment Agency of Pennsylvania, and an editorial from the Potter County Journal.

Some time ago I was led to believe from the remarks of one of my colleagues that the potato crop in Potter County, Pa., would be negligible because of failure of the Federal Agricultural Administration to furnish machinery to the farmers in that county.

Now that the potato crop has been harvested, I made inquiry of the A. A. A. committee in Pennsylvania, and received the following reply:

HARRISBURG, PA., *October 6, 1943.*

DANIEL K. HOCH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I am happy indeed to have a Member of the Congress make inquiry of the program operations of the A. A. A. Committee in Pennsylvania. These programs were authorized and financed by Congress, and it is not only wise but entirely appropriate that Congressmen make inquiry from time to time to determine if and how the will of Congress is being administered and interpreted.

It is true that the Potter County potato program was given every material aid, not by, but through, the instrumentalities of our office and the various related offices and agencies of the United States Department of Agriculture. In fact, the Potter County potato program is an outstanding example of perfect coordination by the many agencies created and financed by the Congress.

It is also true that the A. A. A. Committee of Pennsylvania carried the food goals message of the Secretary of Agriculture to the farmers in Pennsylvania to enlist their best efforts toward reaching unprecedented goals for 1943. The A. A. A. committeemen of Potter County heard that appeal from a member of our State committee at a conference in Lock Haven early last spring and they decided to organize the farmers of their county to reach or even overshoot the goals set up for them.

The members of the A. A. A. Committee of Potter County enlisted every agency and activity within their jurisdiction to accomplish their purpose. The county agent has been a live wire in agricultural promotion for many years. They called on him to set up production districts and surround service centers with efficient producers so that the minimum amount of critical material would be needed for maximum production. They called community committeemen together to develop community groups for potato production and then they used the Production Credit Association of Potter County and the Farm Security Administration personnel to develop a program of finance for the orderly and equitable retirement of debt loads for individuals and communities.

A member of the board of directors of the Pennsylvania Cooperative Potato Growers Association took on their responsibility of locating machinery available and partly assembled for a group of cooperative spray rings and the farmer fieldman for the State A. A. A. committee carried the application for priorities to the U. S. D. A. War Board of Pennsylvania for approval before having it submitted to the War Production Board for final action. All of these things were done in February.

This remarkable program was immediately approved by the Pennsylvania War Board. It called for 13 large-sized rubber-tired tractors. Rubber tires were required because these tractors had to cover many miles in moving from farm to farm as a community farm implement. Thirteen double-tank, 10-row sprayers to be mounted on tractors to provide a short-wheel-base unit adapted to Potter County hillsides. Ten thousand bushels of certified seed potatoes to replace native seed potatoes blighted and diseased by unfavorable crop conditions in 1942 in Potter County. One hundred and two thousand dollars in Regional Agricultural Credit Corporation loans to provide machinery, seed, fertilizer, and labor for the 1943 crop.

The military demands of the Nation early this year cut into the steel supply normally used for the manufacture of agricultural implements. The failure of the British to stop the Rommel advance in Africa was redeemed only by the arrival of the General Grant tanks from the United States. The urgent demands for General Grants as a military necessity called for the maximum of sacrifice by American farmers to forego the purchase of a new tractor so that another tank should be provided to win the ultimate victory of Tunisia. The War Production Board had to study every application for machinery with utmost care so that every agricultural unit might be used in the most efficient and far-reaching manner to get maximum results in food production.

An application is not a very convincing document. Answers to a questionnaire carry no particular character or personality. The Potter County farmers are not questionnaire farmers. They put heart and soul into the things they do. Consequently when I visited Coudersport early in March these ingenious go-getters were fretting for action. They wanted those tractors so that they could use the balance of their long winter to equip them in their heated garages and farm shops. They wanted to know how they might persuade the War Production Board that they had the formula for the greatest combined use for machinery to get the maximum of results. In other words, they wanted to go to Washington to prove that they had the answer to the thing Washington wanted next to military victory—food.

On the following day these rugged mountaineers carried me to Washington. A delegation consisting of A. A. A. Chairman Roselle Leete, County Agent Bert Straw, Potato Farmer Ed Fisher, and A. A. A. Farmer Fieldman Lloyd Olewine completed the delegation. We got to Washington on Saturday morning, March 13, and arranged to see ex-Gov. M. Clifford Townsend, of Indiana, then Deputy Food Administrator.

Governor Townsend is a good student of human nature. He was slightly startled when the delegation was announced as a group ready to deliver a million bushels of potatoes. In answer to every question, the farmers had a direct and plausible answer. They showed that they were organized, knew what they wanted, and knew how to get it. They further showed that they know how to do the job they set out to do. Governor Townsend believed in those farmers. He faced the responsibility of being accused of discriminating against farmers elsewhere when he allocated 13 rubber-tired tractors to one small county in Pennsylvania because rubber was a very vital and precious article in March 1943 with steel and assembled machinery as vital and precious to machinery hungry farmers. But these farmers were not dreamers, they were not faddists, and they were not rich men who evaded the draft nor possessed with sudden zeal to accomplish wonders in a field of uncharted experience. They were dirt farmers with a realistic understanding and they got the equipment.

Today, as you infer in your letter of inquiry, these Potter County farmers have completely vindicated the faith of Governor Townsend. They have come through as is indicated in the attached editorial from the Potter County Journal. The 13 tractors were assigned to 13 cooperative operators whose duty it was to circulate from farm to farm and spray and in some cases cultivate between 150 and 200 acres of potatoes. These 13 "spray rings" made it possible to put 2,000 new acres of Potter County land into production of potatoes and every acre was sprayed every seventh or eighth day during the growing season.

The remarkable thing about this potato crop is the growth and culture of them in the short growing season. The tractors arrived April 22 on the day of the last snowfall on the Alleghenies but potatoes were not planted until June 10. The first killing frost on these mountainsides was September 10 so it must be understood that this crop was produced in 3 months of summer weather.

Last year's crop of potatoes in Potter County was under 400,000 bushels. The season was unfavorable and their equipment was below standard. This year's crop will exceed

2,000,000 bushels because of favorable growing weather, a will to do things and the tools of victory. Congress should feel congratulated that the tools they authorized were effectively allocated and used in our food-for-freedom campaign. I am proud to report to you the accomplishments of those who worked with the A. A. A. committee in achieving this goal.

Sincerely yours,

JOHN A. SMITH,
Secretary, State A. A. A. Committee.

MILLION BUSHELS OF POTATOES HARVESTED IN POTTER COUNTY BY END OF WEEK—BIGGER YIELD PER ACRE THAN ESTIMATED EARLIER—IDEAL WEATHER CONDITIONS UP TO PRESENT TIME—LABOR EQUALS DEMAND AND PROVES SATISFACTORY—SOME SHIPMENTS ARE MADE AT $1.05 FOR RUN OF FIELD

The potato harvest is in full swing in Potter County.

Given good weather the remainder of the week and 1,000,000 bushels will have been dug, picked up, and placed in storage. This is estimated to be half of the acreage.

Earlier estimates placed the season's crop at 1,600,000 bushels, but as the harvest has progressed the estimate is boosted to 2,000,000 bushels.

The yield per acre is greater all through the county than experts guessed a few weeks ago, and this is cheering news.

With imported help, boys and girls from various schools, and many non-potato-growing farmers assisting in gathering the crop, the labor situation is sufficient, with everybody busy and everybody happy.

Outside help in the potato harvest has proved very satisfactory as a whole. Occasionally a worthless worker was found, but that is to be expected. The ruling price paid is 8 cents per bushel, and that surely means splendid wages for the man, woman, boy or girl who really digs in and picks up the tubers.

Some potatoes are being sold, run-of-the-field, at $1.05 per bushel, but the big bulk of the yield is going into storehouses, to be properly graded and packaged later for the market.

New storehouses are going up at several points. One being erected at Gold is being built by 10 growers each with certain compartments for their individual use.

The season of planting this year was very late and the outlook to produce a record crop was a gloomy one. Thirteen heavy new tractors were released for planting, cultivating, spraying, and harvesting. To this force were added nine tractors not new. Nearly all of the operators have proven themselves efficient and willing workers, and blight has been controlled almost 100 percent.

The rainfall was copious and well spaced and there were no storms of deluge proportions. Old Man Gloom has been banished and there is joy in the potato fields, a joy reflected to all Potter Countians.

Southwest Washington Is Fighting Hard With Bonds

EXTENSION OF REMARKS

OF

HON. FRED NORMAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. NORMAN. Mr. Speaker, under leave to extend my remarks, I would like to call attention to the bond buying performance of my congressional district, the nine counties of southwest Washington, during the recent third War loan drive. The Third Washington District purchased a remarkable total of war bonds and again demonstrated that, individually and collectively, its people are fighting mad and fighting hard to win this war.

As an example of what I mean, I want to tell you about what I believe is the bond-buyingest logging crew in the whole country. The October 2 issue of the Aberdeen (Wash.) Daily World carries a front-page picture of 6 husky, grinning loggers standing beside their trucks, which are loaded with huge spruce logs that will be converted into plywood fighting planes for the United Nations. The trucks have paused on a hand-made log bridge across the upper Queets River in the wilds of the great Olympic Peninsula. The picture shows Mr. Joe Zderich, a logging rigger, receiving a check for $6,400 from Mr. Werner Mayr. Others in the picture are W. M. Carlyle, Harry Blinkman, Roy Talley, and Harry Fry, all loggers or log truck drivers among the 30 men employed in this operation by Mayr Brothers, of Grays Harbor.

All told these 30 men earn about $8,000 each month. Please note that figure. During the bond drive they bought a total of $6,400 worth of War bonds, or 80 percent of their aggregate income for the month. I challenge anyone to cite a finer example of home-front patriotism than these loggers have shown. But they are not alone in their efforts. The front page of this same paper carries another story that the Schafer mill crew in Aberdeen signed up 100 percent to purchase 1 or more War bonds during the drive. I could cite scores of other instances in my district where all groups of people—loggers and mill workers, farmers, businessmen, clerks, truck drivers, aluminum plant workers, and virtually every other employment type—put their hearts and their dollars into making Uncle Sam's third War loan drive a smashing success. Believe me I am proud of the way the people of southwest Washington came through. And I know that they will not stop buying bonds merely because the formal drive is over. You will find southwest Washington in there fighting every minute of every day until the Axis is whipped to a frazzle.

Crop Insurance, Basic and War Crops—H. R. 3364

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. FULMER. Mr. Speaker, I have introduced H. R. 3364 to amend the present Federal Crop Insurance Act, so as to broaden and extend its provisions. I am firmly of the opinion that the present program should not only be revived, but should be made to benefit a much larger proportion of our American farmers. The benefits under the present program have been limited to the growers of wheat and cotton and a majority of these have failed to avail themselves of the protection afforded because of the high rates involved. The amendments which I am suggesting in the proposed legislation would bring about the desired result because 12 crops instead of 2 would be included, and the premium rates on the basic crops would be reduced 50 percent, while no premiums would be collected on war crops.

In these amendments provision is made for insurance of field corn and tobacco as well as wheat and cotton, which are now provided for. These four crops would be called basic crops. In addition, provision would be made for the insurance of Irish potatoes, sweetpotatoes, peanuts, soybeans, dry beans, dry peas, flax, and hemp as war crops. With insurance on these 12 crops, insurance would be available to a very large proportion of the farmers in the country. The experience gained on wheat and cotton insurance would in large measure be applicable to these other crops.

The amendments I have proposed would use the experience gained in crop insurance during the past 5 years to increase agricultural production to meet wartime needs. Crop insurance should be tied in with the other war food programs of the Department of Agriculture. For the farmer's cooperation in these war programs, he would be given free insurance on war crops and a credit of 50 percent toward payment of his insurance premiums on basic crops. Producers of war crops are entitled to this protection free. I am not asking for a guaranty of profits such as is given to war contractors, those engaged in producing implements of war, manufactured products for the Army and Navy and for lend-lease. For instance, those operating under war contracts are guaranteed full prices paid for raw materials, high wages, including waste, millions for advertising, and in a great many instances expenses for entertainment, with a profit. I am only asking that the farmer producing war crops, which are just as necessary in winning this war as an army and implements of war, be guaranteed on his actual investment. Basic crops are also needed. They are essential. Many farmers have not been able to afford crop-insurance protection on wheat and cotton because of high premiums. If the Government carries half of the premium cost, nearly every farmer should be able to afford insurance protection.

Because of the need of expanding acreage and production during the war period, insurance of investment in the crop has been suggested in these amendments. It is believed that the acreage planted would be increased if the farmer were guaranteed his investment in the crop. Under the present insurance the grower is guaranteed 50 or 75 percent of the average yield of wheat or cotton for his farm. Under the proposed amendment he would be paid 75 percent of any loss on his investment as reflected by the cost of producing the crop. It is believed

that the insured should carry part of the loss in order to provide an incentive for him to produce a crop whether that be a basic crop or a war crop rather than to collect an indemnity.

With the expanded program the authorized capital would be increased from $100,000,000 to $300,000,000. Authorization would be made for appropriations to cover indemnities on war crops and for half of the premiums on basic crops. However, I believe that the Government would be justified in making this increased expenditure of money in view of the benefits to be realized, especially as they relate to obtaining an expanded acreage and the desired production of food and other products of the farm, so essential to the winning of the war. I have offered this proposed legislation with that thought in mind in the hope that its adoption and enactment into law would be helpful in the present emergency.

I regret exceedingly that the Congress saw fit to cancel the insurance program after 1943, regardless of any losses in connection with the operations of the insurance program up to this date. As a matter of fact, prior to the insurance program, Congress, in the way of relief because of destruction of various crops in various sections of the country, expended considerably more relief money than the losses under the operations of the insurance program. This insurance program should be extended over a period of years, with the hope that out of the experience of the operations of the program, we may be able, and I am sure that we will be able, to work out a successful program whereby the various basic crops will be fully covered by insurance. By so doing, I am sure that the premium rate would be so small that all farmers would be glad to operate under such a program and it could be carried on without any losses to the Government.

America's Conscience Sounds a Warning

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I am inserting in the RECORD herewith a broadcast delivered by Norman Thomas, last night. Mr. Thomas has frequently been referred to as the conscience of America. By inserting this talk, No Peace by Alliances, in the RECORD I do not necessarily imply that I agree with all of the points made by Norman Thomas, but I do feel that his arguments contain real food for thought and that they should either be answered or considered by those engaged in global planning for the world of tomorrow. It follows:

There is now on exhibit in New York City at 457 Madison Avenue, a brilliant and terrible description of the war in pictures. It is the work of that artist with the camera, Therese Bonney. There is in the exhibit no picture of a gun or marching army. The war it celebrates is seen through the sufferings of mothers and children in Spain, in France, in Finland, everywhere in Europe. This, it says, is the glory of war—heartbroken mothers and starving children.

In World War No. 1 a world's generosity, through the Hoover committee and later the International Red Cross, saved 10,000,000 lives. There has been no equivalent work of mercy in this war. We face the building of the new Europe with those who must build it broken by hunger and hate.

It is idle to say, "but think of what we soon will do in that new world we're building!" In the first place, if the war in Europe continues as long as our leaders are now warning us that we must expect, and if the English and American Governments, led by Mr. Churchill, still refuse to let the governments in exile do with their own funds for their children what by agreement with the Germans they have inadequately permitted to the Greeks, hundreds of thousands of children and refugees will not live to greet the dawn of a bright tomorrow. In the second place, our callousness to the suffering of the children is just one evidence that gradually we are ceasing to dream of any brave new world, but are getting ready to content ourselves with the kind of victory which makes new war inevitable.

Of this the greatest proof is the sudden outbreak in high quarters of talk, not of some cooperation of free peoples, but of power politics alliances between the United States and Great Britain, or of the United States, Great Britain, and Russia. Men and women who preached intervention to us before Pearl Harbor as the one way which would bring us not only victory but the end of militarism and war, now seem willing to settle for one more try at the age-old scheme of alliances which has always nurtured war.

The great enthusiasm of the preachers of alliances is for some kind of degree of Anglo-American unity. Forrest Davis, writing in the Saturday Evening Post under the title "The British Get Out of the Doghouse," clearly indicates that the growing support of this sort of alliance is directed to the post-war restraint of the Soviet Union. What Mr. Davis says is important not merely because of the circulation of the magazine for which he writes, but because, on one or two previous occasions, he has been presumed to speak semiofficially for the administration. Most of the preachers of alliances, however, with more or less emphasis, favor the inclusion of Russia. Some would add China, now or a little later. Most of them follow Walter Lippmann, at least nominally, in hoping that the alliance, in some way that they cannot describe, will ultimately become the nucleus of a world order. This, for instance, seems to be the idea of one of Henry Luce's mouthpieces, John K. Jessup, who, using the magazine Life for his pulpit, went just a little further than Mr. Lippmann in suggesting very indefinitely some more inclusive cooperative arrangements to supplement an alliance of the Big Four.

When Winston Churchill talks about alliances he knows exactly what he means. He means that he wants the United States permanently to underwrite the British Empire and the rule of London over many times as many people in that Empire as there are English speaking peoples in the whole world. He means to take America in as partners—a very junior partner—because otherwise England cannot hold what he calls her own. (I doubt if she can do it for many decades with our help.) Mr. Churchill also hopes to get at least the acquiescence of Russia in guaranteeing the British Empire. Other peoples less versed than he in the history of power politics and less skilled in its practice may honestly believe that alliances can be the beginning of a larger world cooperation. Actually they can only be a substitute for it. Their life's span will not be long, but they will not die before they have brought forth new war.

I say this confidently because this is one lesson overwhelmingly taught by history and sound logic. I challenge any believer in post-war alliances, particularly in the Anglo-American alliance, to show me one example in history, from the times of the shifting alliances of the Greek city-states against one another, clear down to our own day, of any alliance which fostered a just and lasting peace. The glory that was Greece perished in the wars these alliances bred and her orators were as eloquent in rationalizing them as any of our modern statesmen to whom the radio has given the world for an audience.

Two facts stand out in all the history of alliances. They are impermanent and shifting, they are designed not for peace but war. To give examples from within the memory of living men, Japan and Italy were our allies in the First World War. The Anglo-Japanese alliance lasted down to the Washington Disarmament Conference. France and Britain, close allies in the First World War, worked at such cross purposes between two wars as to encourage the rise of Hitler to military power. Stalin was the quasi-ally of Hitler until the latter attacked him, and Italy was Hitler's ally until popular Italian opposition to the war and the signs of impending German defeat made those completely unprincipled Italian rulers, the King and Marshal Badoglio change sides.

Walter Lippmann argues that the Monroe Doctrine was tacitly an Anglo-American alliance and as such long and successfully dominated our foreign policy. He either ignores or mistakes the facts which were that Great Britain herself far oftener than the rest of Europe put together broke or threatened to break the Monroe Doctrine by territorial demands on Guatemala, Argentina, and Venezuela, by her support, for a time, of Maximilian's venture in Mexico, and her very considerable aid to the secessionist movement during our Civil War. Insofar as the Monroe Doctrine did work out as an Anglo-American alliance, it was for Great Britain as a line of defense for Canada and a bulwark against the expansion of her European rivals.

It was, like all alliances, directed against some actual or potential enemy.

That is why alliances can never work positively for peace. They are based, often very cynically, on a temporary common interest, usually a common hatred, which in a mutable world is subject to change almost without notice. Even in the midst of this war it is notorious that there are sharp differences of opinion and interest among the major allies. If I refer to those differences it is not because I think they cannot be dealt with and certainly not because I attribute perfection to my own country. But the facts must be faced. Britain wants at all costs to her allies to keep and perhaps increase her empire. Stalin has a sounder and more realistic approach to the German problem than Messrs. Churchill and Roosevelt, but thus far he is opposed not only to a United States of Europe but to any strong regional federation of his neighbors such as most Americans favor. Russia also has many latent or not so latent territorial quarrels with Poland and Finland in Europe and China in Asia. It is not likely, moreover, that Stalin has ever forgiven Chiang Kai-shek for his defection from Russian overlordship and his slaughter of Chinese Communists.

Out of this situation, especially after the removal of the German and Japanese menace, there will scarcely grow any enduring alliance, much less a nuclear alliance which will automatically develop into a world order.

What alliances there will be will be of the power politics variety between allies who will protect each other's imperial interests as far as possible at the expense of outsiders, and, failing that, by maneuvering against each other for power and advantage. If America plays this game, she will be the goat because we Americans have nothing to gain except fool's gold by our own imperialism let alone by underwriting British dominion over India, Malaya, Burma, Hong Kong, and most of Africa, or Stalin's new boundaries at the expense of Finland and China. Our prosperity lies in the development of our own economy here at home and a normal, peaceful trade with our neighbors. Our best service to the world lies in the development of our own democracy as proof that democracy will work. And that's an impossible task if we are to play the ugly game of international power politics with our money and resources, and most of all with our conscript sons as pawns for ambitious rulers.

Probably, if we play that game at all, we shall tend to approximate Clarence Budington Kelland's appalling scheme for a series of alliances as additional protection to an America which will make the Pacific Ocean its lake, acquire Dakar and Casablanca in Africa, and set up a five-ocean navy and other armaments that would probably cost us $25,000,000,000 a year. Our allies would not allow us to make the Pacific our lake. Having annexed Dakar to protect America, we should then have to annex Africa to protect Dakar. Mr. Kelland's scheme would involve such armaments that we should crush ourselves much as the ancient dinosaurs sacrificed brains to toughness of hide and skull. Yet this preposterous plan has been praised as marking the conversion of a former isolationist.

But some of you will say, that in this judgment of an Anglo-American or other alliance, I am overlooking the solemn protestations of our leaders concerning their faith in the "four freedoms" and the Atlantic Charter for the whole world. Well, other alliances have had equally noble—and equally sincere—professions. Listen to these words from the articles of an older alliance: "The precepts of justice, Christian charity and peace * * * must have an immediate influence on the councils of princes, and guide all their steps." That the monarchs who signed the document would accordingly "remain united by the bonds of a true and indissoluble fraternity," and "on all occasions and in all places lend each other aid and assistance" while "regarding themselves toward their subjects and armies as fathers of families" and as "members of one and the same Christian nation."

Perhaps you have already guessed or remembered that I am quoting from the articles of the famous Holy Alliance of 1816 between the Czar of Russia, the King of Prussia, and the Emperor of Austria. This alliance also was nuclear. It was signed in the end by every European sovereign except the Pope, the Sultan of Turkey, and the Prince Regent of Great Britain. As a diplomatic alliance it never really became effective, but it had moral force as an agency of tyranny and oppression against rising liberal movements for almost a half century. No words chosen by Messrs. Churchill, Stalin, and Roosevelt will be more effective than the eloquence of the monarchs in removing the curse from the principles of alliances.

One thing and one thing only would have made Winston Churchill's strong hint of alliance in his Harvard speech acceptable. That would have been a solemn guaranty, first, of true freedom to all colonial peoples with the setting up of machinery to give effect to the promise; and, second, a pledge that to the benefits of this Anglo-American alliance every people would be admitted who would accept the economic and political conditions necessary for lasting peace. No such guaranties were in Mr. Churchill's speech or his mind.

I do not minimize the difficulties of working out a world confederation, not based on vengeance or imperialism, which will avoid the dangers of a police force alliance on one hand, and a highly centralized world state on the other. But such a confederation offers fewer difficulties and infinitely more advantages than any scheme of alliances. If the basic principle of cooperation for peace with all peoples can be adopted, a way can be found. That way will never be the way of power politics alliances which will be a literal sentence of death to our children and their children unto the third and fourth generations.

The test of peace will be the emergence of enough cooperation between nations to permit them to abolish universal military conscription and heavy aggressive armaments, and, in harmony, turn what have been instruments of death to the enrichment of life by the universal destruction of poverty. For this, America should work. And if her efforts should fail, she should at the very least refuse to underwrite any imperial deal while she develops her own democracy in friendship toward all races and peoples.

Ten Points of Political Principle

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. HOBBS. Mr. Speaker, under leave granted me, I invite your attention to an important but little known speech made by Hon. William Jennings Bryan, the Great Commoner, to the new voters in Baltimore, Md., on April 24, 1915.

The political wars in which he had led partisan armies had long been finished. The heat of the many battles had been cooled by the passing winters, and he viewed the issues with a poise and objectivity achieved only in the test tubes of the laboratory of memory. So we have here the distillation of his political philosophy on the subject under discussion. And who is better qualified to have or to enunciate such political philosophy? It was born of his great heart and mind, tested in the fires of long adverse experience, and tempered by the perspective attained with years.

If ever a man had reason to doubt the wisdom of the voters, that man was the speaker. Few have ever had so much cause to question the expressed will of the majority: none other, three times, when the issue was the Presidency of the United States. Yet he stresses the necessity of "absolute acquiescence in the decision of the majority" and declares "The man who raises his hand against the carrying out of the will of the majority is a traitor of the institution of free government."

So, not only because of intrinsic wisdom, beauty and clarity of expression, and timelessness of the subject, but also because of the brain, the character, the experience, and the example of him who made the utterance, do we well to "read, mark, and inwardly digest" the philosophy set forth in the speech from which I quote:

We need, in a country like ours, to have brought home to the citizens the fact, the important and impressive fact, that citizenship carries obligations as well as privileges. And at no time can the lessons needed be stated with more propriety than when one speaks to those upon the very threshold of a citizen's career.

I would describe political success as the conjunction of preparedness and opportunity. The preparedness is wholly in the hands of the citizen; the opportunity is a thing about which many have to be consulted. But in the smaller areas the question of politics does not have full control. As we come to the questions nearer home we are less and less disposed to be governed by a man's position on national questions.

A century and a third ago certain truths were presented which were self-evident. They were not always accepted then, even when proof was given. They can be repeated today with even greater confidence. Popular government is making its majestic march around the world. Some of you here may think that the nations of the world are not moving toward that ideal. If there are any of you who think that there is an interruption now I would say to you that the march of humanity is not an uninterrupted march. We do not march off so many miles a day. There may be times when we may seem to be marching backward.

We are told that a monarchial government is the strongest; that an aristocracy is the wisest, and that a democracy is the most just. If this were true, I would still prefer the democracy, for what is wiser or stronger than justice? The democracy is the strongest because it dares, discarding the instruments of terror, to build its citadel in the hearts of men.

Popular government is growing. Take your stand on the side of it, young man. If necessary, wait. Tomorrow is yours.

Absolute acquiescence in the decisions of the majority is, as Jefferson declares, the vital principle of republics, from which there is no appeal but to force, the vital principle an immediate parent of despotism. New voters, let me urge upon you to remember this vital principle of republics—acquiescence in the will of the majority. The man who raises his hand against the carrying out of the will of the majority is a traitor of the institution of free government. And the man who engages in conspiracies to prevent the free exercise of the people's will is a near relative to the man who resists the will of the people when it is expressed.

There is no doctrine of a political character that needs more to be emphasized in a country like ours than respect for the will of the majority. Does it mean that the majority is always right? I could not admit that. For right does not vacillate as majorities sometimes do. I could not admit that the majority is always right without admitting that that which is right today may be wrong tomorrow.

No; I do not say that the majority is always right. I do not say that the majority will make no mistakes. But the theory of free government is that the majority have a right to make mistakes and that no few have a God-given right to make mistakes for the rest of the people. You cannot escape mistakes by departing from the theory of popular government. In monarchies, unlimited monarchies, the king makes mistakes for the rest of the people, and history shows that kings have lived fully up to their opportunities. In aristocracies the few make mistakes for the rest of the people, and sometimes the few find it so profitable to make mistakes for the rest of the people that it is

difficult to get them to correct the mistakes they have made. But the people will never intentionally make a mistake, for it never pays the people to make a mistake, and when they find they have made one, they correct it as soon as possible.

The Baltimore Sun, in its article that appeared the next day, says of the speech:

He condemned the idea that politics is contaminating, condemned those who advise young men to avoid politics, and condemned those who, holding to the right, hesitate to battle for it.

In this article Mr. Bryan is quoted as having said:

You say that you will not go into a caucus and fight for the right because you will be voted down. I say to you that you lack faith. If you have the faith you should have, you would dare to put to the test the power of one honest man among dishonest men.

In the course of his address Mr. Bryan gave these 10 points of political principle:

1. The social ideal toward which the world is moving requires that human institutions shall approximate toward the divine measure of rewards, and this can only be realized when each individual is able to draw from society a reward proportionate to his contribution to society.

2. The form of government which gives the best assurance of attaining to this ideal is the form in which the people rule—a government deriving its just powers from the consent of the governed.

3. The chief duty of governments, insofar as they are coercive, is to restrain those who would interfere with the inalienable rights of the individual, among which are the right to life, the right to liberty, the right to the pursuit of happiness and the right to worship God according to the dictates of one's conscience.

4. Insofar as governments are cooperative, they approach perfection in proportion as they adjust with justice the joint burdens which it is necessary to impose and distribute with equity the incidental benefits which come from the disbursement of the money raised by taxation.

5. Absolute acquiescence in the decision of the majority is, as Jefferson declares, "The vital principle of republics, from which is no appeal but to force, the vital principle and immediate parent of despotism."

6. As acquiescence in the existence of a wrong is not to be expected among an intelligent people entrusted with participation in government, it is the duty of every citizen to exert himself to the utmost to reform every abuse of government and to eradicate every evil in government, remembering that abuses and evils are more easily corrected in their beginning than when they have become fully established.

7. In his incomparable speech at Gettysburg President Lincoln appealed to his countrymen to consecrate themselves to the unfinished task that lay before them; that a "government of the people, by the people, and for the people might not perish from the earth." That task is still unfinished, and it is the duty of every citizen to carefully study the principles of government, the methods of government, and issues as they arise, and then give to his country the benefit of his judgment and his conscience. To this end he should not only express himself at elections but faithfully attend primaries and conventions where candidates are chosen and policies enunciated.

8. The government being the people's business, it necessarily follows that its operations should be at all times open to the public view. Publicity is therefore as essential to honest administration as freedom of speech is to representative government. "Equal rights to all and special privileges to none" is the maxim which should control in all departments of government.

9. Each individual finds his greatest security in the intelligence and happiness of his fellows, the welfare of each being the concern of all, and he should, therefore, exert himself to the utmost to improve conditions and to elevate the level upon which all stand.

10. While scrupulously careful to live up to his responsibilities, the citizen should never forget that the larger part of every human life is lived outside of the domain of government, and that he renders the largest service to others when he brings himself into harmony with the law of God, who has made service the measure of greatness.

Social Security

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix an excellent series of four articles by Mr. Robert Lasch entitled, "Towards Security," analyzing S. 1161, introduced by the Senator from Montana [Mr. MURRAY] and myself in the Senate and by Representative DINGELL in the House of Representatives. The articles appeared on the editorial page of the Chicago Sun, October 1–4.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

TOWARD SECURITY

(By Robert Lasch)

I

A single social insurance system, with a single set of books and a single pay-roll tax, broadened as to the number of persons covered and expanded as to the kind of protection offered—this is the objective of the Wagner-Dingell bill, loosely called the "American Beveridge plan," now before Congress. The bill is based upon recommendations by the Social Security Board. It may become a major issue in Congress this winter. So let's have a look at it.

Under present legislation, about 2,000,000 needy persons over 65 receive public assistance, or "pensions," the cost of which is borne about 50-50 by the Federal Government and the States out of general tax revenues. These payments range from an average of $8.30 a month in Arkansas to $36.47 in California ($26.42 in Illinois). The national average for 1942 worked out at $21.83.

SIX HUNDRED AND EIGHTY-SIX THOUSAND GET PAYMENTS

That's not much to keep the wolf from the door. Public aid of this sort was an emergency measure, born of the great depression. The Social Security Act of 1935, while providing this immediate aid, undertook also to set up a long-range plan of old age retirement benefits which, once it got going, might eliminate the need for much public assistance of the charity type.

The act established the social insurance principle that workers and employers together should contribute to a fund from which the worker, after retiring at 65, would be paid an annuity sufficient to keep him and his wife during their last years. Amendments to the act in 1939 provided that at some future date the Federal Government should become a third contributor to the fund.

Annuities now being paid are relatively small, for the system is still young. Last June, monthly payments totaling $13,600,000 went to 686,000 beneficiaries. Almost that many other persons were eligible to receive benefits, but had gone on working because of the war. When these people retire they, too, will receive monthly checks, the amount depending upon average wages and the length of time each person worked in covered employment.

Today the worker pays for his retirement benefits a tax of 1 percent on wages under $3,000 a year (none on wages over that amount). The employer pays a like sum. For a man earning $35 a week, the tax in each case is 35 cents a week. A man earning more than $57 a week pays 1 percent of his wages until he has received $3,000 for the year, when the tax stops. Nobody's tax averages more than 57 cents a week at present.

EIGHTY-FIVE DOLLARS A MONTH LIMIT

Under existing legislation the tax will go to 2 percent next January 1. Senator WAGNER proposes to raise it, instead, to 6 percent. Thus a man earning $35 a week would pay $2.10 a week. The maximum payable by anybody would be $180 a year, or an average of $3.46 a week. Employers would duplicate these payments, and the resulting fund, to which the Government would also contribute eventually, would finance not only retirement annuities, but also unemployment compensation, disability and maternity benefits, and a complete system of medical care—all in one basket.

As the law now stands, retirement benefits are limited to a maximum of $85 a month. The Wagner bill would increase them all along the line from $5 to $20 a month, setting a minimum of $20 a month ($30 for a man and a wife), and a maximum of $120 or 80 percent of the person's average monthly wage. It has been estimated that a man who averaged $40 a week for 20 years would earn a life annuity after 65 of $72 a month, or $108 if his wife were living. Almost everybody who had worked steadily through his best years could count on a reasonable retirement income.

Moreover, the bill would bring into the fold some 15,000,000 persons now excluded from coverage—farm workers, domestic servants, employees of nonprofit institutions, and self-employed farmers, professional men, and small businessmen. The original act excluded these people mainly because of difficulties in collecting their contributions and maintaining their records. Seven years of experience have convinced the Social Security Board that they can now be brought within the system.

II

Forty-eight States, the District of Columbia, Alaska, and Hawaii now have unemployment compensation systems under the Social Security Act. Senator WAGNER's bill for expansion of the social security system would merge all of these into a single national fund, paying more benefits longer to more workers.

The idea of unemployment compensation is to provide a continued, though reduced, income for a limited period when a worker loses his job. Under present legislation, employers pay a State tax averaging 2.1 percent of each worker's wages under $3,000 a year. (In Illinois, the tax this year is 1.2 percent.) The money goes into a State fund from which are paid benefits to those insured workers who lose their jobs. Illinois benefits now average $15.55, and are paid for a maximum of 15 weeks.

WHAT OF POSTWAR ERA?

So far most of the State funds have worked out all right, but they have had to face no widespread, major unemployment crisis. At the peak, in June 1940, benefits of more than $53,000,000 a month were being paid throughout the country to 1,200,000 workers. In June of this year payments had dropped to $6,000,000 for 100,000 of the 40,000,000 covered workers. Because of high employment, reserve funds for future benefits are well heeled at the moment.

But what of the post-war period, when millions will be changing jobs or unemployed while plants shift over to peacetime production? The Social Security Board says the best way to meet that situation is to consolidate the 51 separate funds, with a uniform tax and more satisfactory benefits. Since the risk of unemployment varied widely by States, some funds may now be excessive and others inadequate. Although the fund as a whole is increasing rapidly, says the Board, "the reserves of some States would be threatened with insolvency under strains which must be anticipated in post-war years."

To the worker, a single system would guarantee uniformity of benefits, whereas he now might receive $11 a week in one State and $17 in another. To the employer, federalization would guarantee equality of compensation costs between himself and competitors in other States. As with many forms of labor legislation, competition among the States to attract industries exerts a downward pressure on compensation standards.

BETTER PROTECTION

Instead of paying an average of 2.1 percent of his pay rolls below $3,000, plus 1 percent for old-age retirement—which becomes 2 percent next January—the employer under the Wagner bill would pay a blanket tax of 6 percent. The worker would pay the same amount, compared with the 1 percent he now pays for retirement, which becomes 2 percent in January. Thus the employer's tax would be raised an average of 1.9 percent, the worker's 4 percent, beyond levels provided by existing legislation.

In addition to higher retirement benefits, disability benefits, maternity benefits, and medical care, the worker would get for his money better protection against unemployment. For example, benefits for a $35-a-week man with a wife and three children would run $28 a week, and continue for a maximum of 26 weeks, or 52 weeks if funds are found to be sufficient.

The worker would also get the help of a national employment service in finding a job. He would be required to register with the service, report regularly, and accept suitable work if found. As a condition of receiving prolonged benefits the board might require him to undergo retraining for a new type of job.

As with old-age insurance, the bill extends the coverage of unemployment compensation to large groups now excluded, such as seamen, farm workers, domestic servants, employees of nonprofit institutions. All employers of one or more persons would be brought into the system, whereas many States now cover only employers of eight or more (in Illinois, six or more).

III

On the assumption that good health and loss of income through poor health are the proper concern of a Social Security program, the Wagner-Dingell bill goes far beyond present legislation in the sphere of medical care. You will hear a lot about socialized medicine when the measure comes up for debate.

In addition to increasing and extending benefits for retirement and unemployment, the bill provides new benefits for temporary and permanent disability and maternity leave.

MEDICAL, HOSPITAL AID

If an insured worker became permanently disabled and unable to work, he would be entitled to benefits substantially the same as those received on retirement at 65. If he suffered a temporary disability, he would draw benefits for a limited period comparable to those paid during unemployment. A married woman worker would receive benefits at the same rate for 12 weeks while having a baby. All these payments would come from the same fund, to which the worker and employer would each contribute 6 percent of annual wages under $3,000.

A more drastic departure from familiar forms is the bill's broad program of medical and hospital insurance, to be set up by the United States Surgeon General and the Social Security Board in consultation with an advisory council of 16 doctors nominated by professional societies.

This plan calls for establishment of social-security medical panels in each community, individual doctors being free to join the panels or not. When an insured worker needed medical care for himself or family, he could go to any doctor on the panel, and the Social Security Board would pay his bill.

Panel doctors would have the right to accept or refuse individual patients, to choose whether to be paid by fee or salary, and to carry on regular private practice in addition to their work for the Board. Specialists would be supplied by the Board on recommendation of the general practitioner, the patient in this case being required to accept the Board's choice. In case of hospitalization, the Board would pay $3 to $6 a day hospital expense, up to a maximum of 30 days.

FEE FOR FIRST CALL

Necessarily, the bill sketches only the broad outlines of the plan, giving the Board power to modify and adapt it as experience indicated. To prevent abuses, for example, the Board is authorized to require payment of a fee by the worker for the doctor's first call or to limit the number of calls a worker might receive "on the cuff." No payment is included for home medicines, private hospital rooms, or any care receivable under workmen's compensation laws. Dental and nursing care are also excluded; but the bill provides that these subjects be studied by the Board and legislation recommended within two years.

Senator WAGNER emphasizes his intention to safeguard freedom of medical practice. He says the scheme does not disturb existing arrangements for choosing a doctor and obtaining medical care except to provide for payment from the insurance system. In practice, many doctors would probably combine work for the social-security panels with care of their own patients, while others, particularly young men not yet established, might choose to do all of their work for the panels on salary. The general intention is not to displace the present system, but to guarantee every insured worker and his family of a certain minimum of medical care financed by contributions to the social-security fund.

One-fourth of the entire social-security contributions would be set aside to meet costs of medical-hospital insurance, the remaining three-fourths financing retirement, unemployment, disability, and maternity benefits.

IV

What would it cost? That question is frequently asked about the expanded Social Security System proposed by the Wagner-Dingell bill. Many reactionaries do not stay for an answer; they are sure the cost would be too much, no matter what it were.

Looked at from the individual's point of view, costs are best measured by the pay-roll taxes to be paid. Under existing legislation these taxes, beginning next January, will average 4.1 percent for the employer and 2 percent for the worker, levied against that portion of each man's wages below $3,000. The Wagner-Dingell bill raises the contribution rate to 6 percent for both the employer and the worker.

THREE DOLLARS AND FORTY-SIX CENTS MAXIMUM

Thus a worker earning $35 a week will pay 60 cents a week next year under existing legislation; under the Wagner-Dingell bill he would pay $1.80 a week. A man earning $50 a week now pays $1; under this bill, $3. Anybody earning more than $57 a week now pays $1.15; under this bill he would pay an average of $3.46, the maximum. Employers would pay a like amount for each worker. Self-employed persons would pay 7 percent of the fair value of their services below $3,000.

Anybody who has studied the benefits which this tax buys—retirement, unemployment, disability, and medical care—will agree that at this price they are a bargain.

At some time in the future, Government contributions may be required in addition to those made by workers and employers. That holds true of existing legislation, not only of the Wagner-Dingell bill. Senator WAGNER declares that the Government contribution, payable from general taxation, would not begin for 10 or perhaps 15 years and would never amount to more than one-third of the total cost.

And what about total cost? The best way to figure it is to estimate future obligations on the basis of reasonable forecasts of population and employment trends. R. Clyde White, professor of social service administration at the University of Chicago, has made such an estimate for the Chicago Sun. Assuming full employment with an effective labor force of 57,000,000 (compared with 52,000,000 in 1940) and making various other fair assumptions as to population trends, Professor White estimates that in 1955 the probable costs of the Wagner bill would be as follows:

Old-age and permanent-disability benefits	$2,859,503,000
Unemployment compensation and temporary disability benefits	1,466,300,000
Medical care	2,535,000,000
Public assistance	1,049,760,000
Administration	537,556,000
Total	8,448,119,000

These figures may be high, for Professor White has tried to hit upon a maximum rather than a minimum estimate. Assuming fairly full employment in 1955, his figures show that the entire cost of benefits in that year would be met from pay-roll contributions, with something like $1,800,000,000 left over to meet future obligations. The only possible deficit, says Professor White, would be in the medical care budget; he suggests as a remedy an amendment providing a direct Government contribution for medical care.

WE CAN STAND THE COST

So it looks as if the Wagner-Dingell bill will be perfectly feasible for a period going well beyond 1955. Costs will vary as incomes, employment, and other factors vary, but a reasonable estimate on the basis of figures supplied by Professor White and Senator Wagner is that the maximum cost in any foreseeable year (some time after 1955) would be around $12,000,000,000.

Can we stand a social security cost beginning at, say, one billion immediately after the war, rising to perhaps seven or eight billion in 1955 and to a maximum of twelve billion at some date beyond that? The plain answer is that we can. For social security costs are not net deductions from the national product. They do not represent a dead weight on the national income, as so

many short-sighted conservatives pretend, because they themselves represent income to the beneficiaries.

Five or eight or twelve billion dollars collected from the working population means five or eight or twelve billion dollars distributed to those who for some reason are not working; it is spent by them to buy the sustenance whose creation keeps the working population at work. In short, social security does not reduce the national income; it does affect its distribution. A national income of 120 billion after the war can well support a redistribution of five or six billion, particularly when this five or six billion helps to keep the total up there at 120.

Conservative estimates show that 10 years of depression in the 30's cost America $282,000,000,000 in lost income—income which would have been produced had our men and plants been fully employed. The cost of social security can be fully met by preventing the scandalous social waste of unemployment and social security benefits will play a large part in preventing it.

Address by Leon Todd at National Food Conference

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short speech delivered by Mr. Leon Todd, of the National Poultry Defense Committee, Trenton, N. J., before the National Food Conference of Consumers and Producers, held at Chicago, Ill., on September 16–17, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Poultry and egg producers of the United States have been asked to take an important part in our war food program through increasing production of these products for greater civilian consumption, for our armed forces and for lend-lease. This industry has grown up to become a $2,000,000,000 enterprise, second only to dairy products in national importance.

This industry has been commercialized on many farms, and in addition, the poultry flock has been given a more important place on our vast number of general farms. Egg and poultry meat producers have met every production goal established for them. This has been done under difficult circumstances as to feed supplies, labor shortages and price interferences.

It is fully recognized by egg and poultry producers that some government regulation would be necessary to carry out the war efforts; however, it has been disappointing that this industry, like most others, was not given the job of helping to plan these regulations in a rational manner. We have served on Government advisory committees which were not taken seriously as shown by regulations which followed the assembly of such committees.

We are pleased to have in the making, however, a national organization which, when perfected, will include all major poultry and egg groups of the country, from producer to and including distributors.

We believe such over-all bodies are essential to speak for an entire food-producing industry. This becomes all the more important when we study one of the proposed 1944 farm and food programs which has never been announced in its entirety. It included—

1. Complete Government contracts covering everything the farmer produces.
2. Complete Government purchase of these products.
3. Resale of those products at lower than cost prices.
4. Advance loans up to 90 percent of the value of the products to be produced.

This is not an accumulation of impressions; we saw the document and we have a deep conviction that such a plan has no place in American agriculture.

FEED SUPPLIES

The present rates of production of eggs and poultry meat cannot be maintained because of the policy on feed prices and distribution. The ceiling of $1.06 Chicago base for corn actually increases the cost of producing eggs, poultry meat, and milk, etc.

The fundamental fact is that low ceilings keep the feedstuffs near the vicinity of production and therefore many thousands of producers have had to use substitute ingredients which are both higher in price and less efficient. All of this can lead to decreased production for 1944.

The poultry industry has offered to assume its reasonable share of any necessary liquidation, provided a sound and equitable national policy on feed supplies is established. A disorderly liquidation of our farm animals would be disastrous to the war food program. It would jeopardize the supply of foods which are of critical importance in maintaining a balanced diet.

There are those who would have the Government parcel out all feedstuffs. This would create complete regimentation of the feed industry and we believe many of our producing plants throughout the country would not be in full operation.

This industry has approached both governmental officials and Congress for:

1. Adjustments in corn prices and the price relationships associated therewith.
2. That larger quantities of animal proteins be imported from South America. We have used vegetable protein feeds, much of which will not move away from livestock feeding areas.
3. That boat space be allotted for the movement of substitute grains from Canada. This requires fast action before lake shipments are curtailed for the winter.
4. That the feed industry be permitted to retain its present manpower.
5. It is extremely important that programs and policies for our industry be developed and announced as soon as possible.

PRICE CONTROL

Let us first analyze the food situation from the egg and poultry meat producers viewpoint.

The consumer is our customer. We have spent much time, effort, and money in the past 25 years to give the consumer a better product through breeding, care of the product on the farm, and through more efficient distribution. Unfortunately, and quite beyond our ability to understand, there are some persons who would blame the farmer for shortages and for creating so-called inflation.

The actual figures do not accuse the farmer of causing inflation. From 1939 to 1942 the rise in the national income was $49,000,000,000.

	Total rise (billions)	Percent of total rise
Going to agriculture	5.8	12
Going to nonagriculture	43.2	88
Total	49.0	100

These data substantiate the fact a given quantity of food today takes a smaller proportion of the pay check of the average consumer than at any time since records became available. We are anxious that our producers and the consumer have a better understanding on this point.

At present retail prices the cost of a standard food budget takes 16 percent of the average per capita income, the lowest figure for any period in the last 30 years for which data are available, and substantially lower than the range of 24 to 31 percent during World War No. 1.

This industry had one roll-back on several classes of poultry meat and one on eggs. In spite of this, it is often proposed to give producers a subsidy payment.

As a solution of our industry problems as well as of the inflation problem subsidies fail for several reasons.

1. There would be utter confusion because it would be impossible for the Government to purchase the eggs and poultry meat from 6,000,000 producers as stipulated in the unannounced 1944 farm program, and equally impossible to pay direct subsidies to that number of producers. The cost and manpower required in either program would detract from the war effort. In actual practice, a portion of these commodities would by-pass the subsidy and thus be more expensive to consumers.
2. Consumers would have more spending power to exert pressure on black markets operations and on commodities not covered by price control.
3. The official price index would be held down by the use of subsidies, but the index would mean just that much less. It would be just the same as changing the price figures issued by the Bureau of Labor Standards, and then claiming inflation had been prevented.

Therefore, the poultry industry which has met all goals, does not see any justification for subsidies to producers and because of the present relationship between food prices and incomes, there seems to be no need for subsidies in the future.

We do know, however, that small groups of farmers whose political philosophy is contrary to those of us who believe in and work for a democratic America, have also asked for subsidies.

Many of our well-established distributors have suffered from a lack of even an operating margin. We need these agencies and so do consumers, as evidenced by several periods of scarcity of poultry meat in our larger cities.

MANPOWER

We believe in the judgment of our military staffs to determine the needs of our armed forces to win this war. It is our duty to point out that any further drafting of men from our farms, processing plants, and many food distribution channels will interfere with our food program. Even though the eggs and the chickens are produced, they must be processed and distributed, and we have reached the point where any further drain on the manpower in this industry will prove costly.

In conclusion, let us look at the average poultry farmer. On his farm of 2,500 to 3,000 laying birds, he had one hired man before the war. Today he works longer hours, his wife and children have really "pitched in" and as a family, without the services of a hired man, they have maintained the flock without

overtime pay, but with a lot of other restrictions. He has been blamed for helping to cause inflation which the figures disprove; he has heard and read statements that the prices of his products are out of line, while a given amount of food takes a lower percentage of the average pay check than at any time on record; he cannot make new and better feeds for his birds but uses inferior substitutes.

But he and his family will keep doing their utmost because he has a profound faith in the freedom of American soil and in his fellow farmers to accomplish the most critical job they have ever tackled.

Rift Among Poles Denied

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and article from the New York Times:

RIFT AMONG POLES DENIED—NATIONALS SAID TO BE FIRMLY UNITED IN OPPOSITION TO GERMANY

To the EDITOR OF THE NEW YORK TIMES:

Your London correspondent's cable published in the Times of October 1, under the heading "Rift among Poles beclouds parley" unfortunately creates a false picture of the situation in Poland. Your correspondent justifies the conclusion given in the heading on the basis of the following allegations:

1. That the Poles in eastern Poland are divided in two factions: One, the so-called Partisans supporting Russia, and the other the organized Polish underground forces opposing Russia.

2. That the pro-Communist Polish Partisans have a radio station called Kosciuszko.

3. That these Partisans are fighting the Germans, while the "Polish military underground is known to have saved arms," in order to oppose Russia.

OPPOSED TO GERMANS

All these allegations may succeed in befuddling American public opinion. In reality the following is the true situation as it exists in Poland:

1. The Poles in eastern Poland are not divided but constitute, as the rest of Poland, one compact force of 4-year-long unyielding opposition to the Germans.

2. The so-called Kosciuszko Radio Station, the alleged organ of the Polish Partisans, is located in Moscow. Its chief aim is to interfere with the Polish station in London, and counteract the instructions sent to underground Poland by the Polish Government and the Allies. The instructions of the Polish Government directing the organization of planned sabotage and the preparation of a general uprising when the hour strikes are sabotaged by the Kosciuszko station, which calls for unorganized revolutionary incidents calculated to produce general disorder and chaos. One must bear in mind that all the great acts of sabotage, such as destruction of munition supplies, railroad trains, and blowing up of bridges and locomotives are exclusively the work of the Polish military underground action.

3. The statement that the Polish underground forces are saving arms instead of fighting Germans is contradicted by two outstanding and universally accepted aspects of Poland's stand in this war.

SUPPORTING UNITED NATIONS

First, the Polish Nation is the only one of the occupied nations that has rejected and still rejects all German proposals for cooperation, the last one being the proposal made in 1943 that a Polish army be created to oppose Russia. Second, Poland's losses in her 4 years' struggle against Germany amount to 3,200,000, according to Polish official figures. This figure represents 10 percent of Polish population, whereas the war losses in the eastern theater of war of the three largest Allied Nations, including Russia, amount to 4,000,000, which represents barely one-half of 1 percent of their population.

In spite of the crimes suffered by the Poles at the hands of Soviet Russia—a million and a half deported and suffering in destitution, tens of thousands shot—the Polish Nation, which before the war rejected Hitler's proposal for a joint attack on Russia and thus exposed itself to the horror of war, has risen to its greatest self-sacrifice, and has done everything within its power, barring the loss of honor and its territory, to further the good-neighbor policy with Russia and thus to serve the supreme war aims of the United Nations.

M. F. WEGRZYNEK,
President, National Committee of Americans of Polish Descent.

NEW YORK, *October 2, 1943.*

RIFT AMONG POLES BECLOUDS PARLEY—BRITISH ASSERT FACTIONS MAY INTERFERE WITH SUCCESS OF MOSCOW TALKS—EUROPEANS EYE FUTURE—OBSERVERS IN WASHINGTON SAY SMALLER NATIONS NOW FEAR DOMINATION FROM OUTSIDE

LONDON, September 30.—The scene of the proposed tripower conference was still Moscow late tonight. It may be changed to London in the interests of United States Secretary of State Cordell Hull's health, but so far the Russians have not agreed to our proposals on this score. Meanwhile questions are arising for the three powers which are more urgent and important than the venue and the personnel of the conference itself.

One of these questions concerns the reaction of Poles when the Germans reach the line that divided Poland and Russia at the outbreak of the war in September 1939. The headlong rush of the Russian Armies and the retreat of Germans to within about 120 miles of the old Polish frontiers have brought up this question quicker than had been expected.

Ever since Germany and Russia divided Polish territory in 1939 the Poles in the east of that unhappy country have been divided into at least two factions: Those favoring Russians, the so-called Partisans; and the Polish military underground, which has opposed the Russians.

Each of these two factions has been increasing its organization and military supplies for more than a year now; each has its own radio station, "Koscivscko" for the Partisans; and "Swit" for the military underground.

POLISH FACTIONS WATCHED

Ever since Russia broke off diplomatic relations with the Poles these two stations have spent most of their time not condemning Germans but condemning each other, and the feud between the two factions has now reached a point where it has attracted the interest of officials here in London.

While the Polish Partisans have apparently spent most of their resistance against the Germans in the last 4 years, the military underground is known to have saved arms, and the fear here is that they plan to use them or threaten for diplomatic reasons to use them when and if the Russians cross the Polish boundary set at Versailles.

Such an act on the part of the Poles would not stop the Russian advance or German retreat. The Polish military underground is not that strong, according to what little objective information there is about the Poles these days. But it would not take much resistance on their part to infuriate the Russians and make the settlement of the problems in eastern Europe even more difficult than they now are.

PARLEY GROWS IN IMPORTANCE

The more one studies the problems to be discussed at the forthcoming conference of foreign ministers the more important the conference appears. Among the questions to be discussed are not only such questions as the future of Poland, Czechoslovakia, the Baltic States, and the Balkans, but what to do if Germany offers to make peace and how to deal with her after she makes peace.

The only thing that equals the importance of the conference is the fear that the three great powers will not be able to take advantage of the opportunity presented by the meeting of foreign ministers to outline the basis of the coming peace. These hopes and fears were well expressed in a remarkable editorial in this week's Economist, which says:

"There is a time when the great flood of human affairs, after moving slowly for a space through familiar country, gathers speed and plunges forward on a new and unknown course. Such times are full of tremendous possibilities. The new direction of the flood can be canalized or left to work destruction. A few right or a few wrong decisions taken in these times can mold the history of a century in such a crisis as is upon us now. * * * The next weeks, the next days, may decide whether this tide, taken at the flood, will lead on to the future or whether through distrust or plain incompetence it will be allowed to sweep forward, carrying on it boulders and wreckage to break down any possible peace."

Washington News Letter

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

WHAT ARE CARTELS?

Mr. MASON. Mr. Speaker, we are going to hear a lot about cartels in the days ahead. We are told that cartels will be an issue in next year's campaign. Vice President WALLACE has raised this cartel straw-man issue and is already charging upon it with his lance. In fact, he has started out on a crusade against cartels. To the average man a cartel is some form of European monopoly. We have fought out the issue of monopolies time and again during the past 40 years. Now the same old chestnut bobs up again under a new name, "cartels." Monopolies are illegal in this country. They are outlawed by the Sherman Act. We "busted the trusts" under Teddy Roosevelt. Later we outlawed monopolies by the passage of the Sherman Act. Now we have WALLACE, the modern Don Quixote, tilting his lance against cartels.

The A. A. A. is a cartel to control agricultural output and maintain prices. It was established under Government authority and is Government-operated. WALLACE had a great deal to do with its establishment and its operation. I suppose the A. A. A. is a good cartel because it is his brain child. Raymond Moley, an original new dealer—now a repentant and reformed man—and a former ghost writer for Franklin D. Roosevelt, holds up this straw man that WALLACE is fighting and points out how foolish the WALLACE crusade against cartels is. Moley sums up the danger from cartels in these words:

Experience would probably show that even the wisest bureaucrat would not be able to protect American interests (from cartels) better than our big companies have done in recent years.

OUR POST-WAR FUTURE

There are two schools of thought in Washington concerning our post-war future. The first is the socialistic school, headed by Frankfurter, Wallace, Hopkins, and their followers. Their entire program for our post-war future is based upon government control of all business and industry. This school of thought advocates a government program of made work—another boondoggling era—to tide us over the slack period they expect after the war. They believe we should tax away all the profits of industry and renegotiate or cancel all war contracts in order to get the money to pay for the proposed boondoggling program. The other school of thought is headed by Jesse Jones, Jimmy Byrnes, Fred Vinson, Cordell Hull, and others. They believe we should preserve the American system of free enterprise, should look to and expect American industry to reconvert from wartime production to peacetime production with the least possible loss of time, and while doing so keep employment at a high level.

This reconversion of industry would be made possible by reserves that industry had been permitted to build up during peaktime production for that very purpose. This school of thought bases its program upon a huge reservoir of consumer demand that has been dammed up during the war period; an immense buying power that will be accumulated as a result of high wages and forced savings to implement that consumer demand; and industrial reserves that should be allowed to accumulate large enough to tide over the industrial reconversion period. To which school of thought do you belong?

THE A. F. OF L. ATTITUDE

The executive council of the A. F. of L. went on record recently at a meeting in Chicago in favor of a definite post-war program and against another boondoggling era. The executive council declared that private industry when the war is over must provide the jobs to take care of the returning soldiers and must also be ready to give peacetime jobs to the millions now engaged in wartime work. The council was equally insistent that capital be encouraged to bring about an industrial expansion in order to create these jobs. In expressing this view, it used these very significant words:

The Government should not only permit but it should stimulate opportunities to make a reasonable and fair profit for business firms that are willing to increase production and employment. These business firms must be given assurances that they will not be taxed to death.

When American business and American labor team up and insist that the Government should encourage and not discourage business expansion; that the Government should permit a fair profit to capital, and that the Government must not tax business to death, then the post-war outlook can be considered encouraging, indeed. The executive council of the A. F. of L. is to be congratulated upon its constructive pronouncement covering the post-war future.

A Letter From Somewhere in North Africa

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. LUDLOW. Mr. Speaker, some of our boys "over yonder" who are up against the stern and stark realities of war, looking death in the face every day of their lives, are sending letters home that will rank as the great human documents of this global war.

I have received such a letter, which I regard as a classic. It comes from "somewhere in north Africa." The writer is Master Sgt. C. Arnold Ray, of Indianapolis:

Mr. Ray, one of our very capable young Indianapolis men, gave up a future of great promise in the business world when he entered the service of our country as a private.

I do not recall when I have ever read a better or more meaningful letter than the one he has written to me. With clarity and vision it points out the necessity of self-sacrifice to preserve all we hold dear.

I believe Sergeant Ray's letter could be read with profit by everybody in America, and I have obtained unanimous consent to insert it in the CONGRESSIONAL RECORD. It is as follows:

DEAR MR. LUDLOW: Thinking that perhaps you would be interested in hearing from someone from Indianapolis serving here in north Africa and also perhaps interested in knowing what the average soldier thinks and believes about this war, I write not as an individual but as representative of the whole. Since leaving the air base at Richmond, Va., much has transpired and many new experiences have been gained.

At the moment, with the north African victory fresh and under the stimulus of a hard job completed, we rest for a moment to count the score and decide the future strategy. But, in counting this score and reviewing our accomplishments, we find our thoughts wandering back home. I find myself in a strange position of a self-critic. I find myself taking a new and more definite view of many things that during peacetime seemed so trivial and unimportant. I remember the much overworked phrase "life, liberty, and the pursuit of happiness" in every speech or in every editorial, and how much of an accepted fact it was. Now that's all changed. It has taken on a very certain, serious meaning, driven home by the most brutal of all teachers—war in all its grim reality. For we, who are thousands of miles from our homes and country, find life a matter of one sunrise to the next; liberty, the ultimate prize of all our efforts (even to the cost of life), something that we must, of necessity, forego to attain our goal; and last "the pursuit of happiness," something, at the present, almost a mockery. It is something that we had but failed to appreciate its full meaning Yet we are quite willing to accept the unpleasant and grim task to have again the opportunity to return to a country blessed with all the rich endowments of a generous God and a bountiful nature, that have been spread before our very eyes, yet apparently unseen.

No; we are not complaining of our job. We realize that we must carry on. We are proud that it has fallen to us, this responsibility. We realize that we must not only combat the enemy but loneliness, homesickness, disease, and the temptation to quit when fatigue becomes almost unbearable. Full well we know that we are constantly menaced by sudden death, but the work must go on and the job be well done.

There is one question on the lips of many over here. Do our folks at home truly realize the meaning of being an American? We wonder if they understand the real seriousness of the loss of life, liberty, or the pursuit of their own free will: praying to their God as they choose, seeking a home where they will, in any part of a land that will provide them with comforts and luxuries that are unknown in other parts of the world.

Those who cry out against excessive hours of labor; those who would falsify the necessity of sacrifice; and those who would profit by war as a business should, by actual experience, know the meaning of sleepless nights; to eat or sleep on mud, dust, or sand; to fight malaria-carrying mosquitos, scorpions, snakes. They should feel the pangs of thirst or pain or see the horror of seeing beautiful homes and buildings blown to bits. And by contrast they should see the joy of people freed of such bondage. If all this were possible, Mr. LUDLOW, I assure you that the safety and security of the Bill of Rights and the Constitution will never be endangered, nor shall our Nation again close its eyes to the opportunities that are ours, and America shall always be as it always has been—God's incomparable gift to mankind.

My very best wishes for your good health and kindest regards.

C. A. RAY.

The Alaska Highway

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. DIMOND. Mr. Speaker, after having been virtually ignored for many years the northwestern part of the North American continent is coming more and more to the attention of the people of the United States and Canada. In the

past, the region has been practically unknown by reason of the lack of facilities and transportation in all that vast area. That lack is now being overcome by the development of air transport and by the construction of the Alaska Highway. The effect of what has been done and the promise of the future have nowhere been better stated than in an address made on September 26, 1943, by Brig. Gen. James A. O'Connor, of the United States Army, commander of the Northwest Service Command, broadcast over Station CBR, Vancouver, British Columbia. General O'Connor's address follows:

The men and women of Canada have shown an interest and pride in the Alaska Highway which we of the American Army greatly appreciate. To my desk come many letters—from your maritime provinces, from the prairie, from British Columbia's uplands. These letters inquire about what we have done, what we hope to do, what we are doing.

Through the courtesy of the Canadian Broadcasting Corporation, I had an opportunity 10 months ago to tell you something about the construction of the Alaska Highway. Now, the pioneering phase of our task is ended. The first land route in history to Alaska has been built. You will want to know how the highway is being operated and what kind of a line of supply it really is.

Let me begin by telling you that the Alaska Highway is 1,630 miles in length. This is more than half the width of our vast continent. Twelve hundred and ninety of those miles are on the soil of Canada. The wilderness of British Columbia and the Yukon is the land bridge which ties the United States to its largest territorial possession.

The 1,000-mile stretch between Dawson Creek, British Columbia, and Whitehorse in the Yukon is the first extended portion of the Alaska Highway to be placed in actual and practical use. Traffic is rolling through the mountain and forest solitudes between these far-flung points.

Along the highway we have built garages, barracks, repair shops, and similar facilities. No road 1,630 miles in length could be operated unless it were "nailed down" with points where trucks could be serviced and fueled, where drivers could sleep and eat, where cargo could be transferred and accidents repaired.

Approximately every 100 miles the United States Army has permanent camps. At these camps drivers are fed and rested, and in the evening they can see movies in the camp theaters. Control stations guard the highway at such points, and military police are constantly checking to see that the road is put to the essential military use for which it was built.

This unique chain of supply requires many subsidiary details. There are 10 large post exchanges on the road and 45 branch exchanges. These exchanges sell our soldiers everything from toothbrushes to presents for the folks at home. The most popular items with our soldiers are cigarettes, candy, soft drinks, and—believe it or not—gold nuggets.

Along the highway, the special service branch of the Northwest Service Command operates one of the longest movie circuits in existence. A motion picture shown at the Muncho Lake camp one night is sent by truck to the camp at Cold River, 89 miles north, the next night.

Last week mail service was started between Dawson Creek and Whitehorse. Busses now cover this distance in 48 hours. Alongside the highway is a telephone line, the longest open-circuit telephone system anywhere in the world. Within a few months this line will reach all the way to Fairbanks. For the first time there will be telephone communication by land between Alaska and the United States.

These developments emphasize the fact that the Alaska Highway is more than merely a road. It is an artery of transportation and communication in the same sense as such natural arteries as the Mohawk Valley, the Columbia River Gorge, and your own Fraser River Canyon. The highway consists of many separate features. Primarily, there is the road itself. Then, there are the telephone system and the distributing gasoline pipe lines which extend from Whitehorse to Watson Lake and Fairbanks. Dotting the road at scattered intervals are strategically situated airports. In fact, there airfields determined the location of the road. All these features combined make up the Alaska Highway system.

This system has been developed for two vital military reasons. One is to anchor, supplement, and supply the air route to Alaska and the north Pacific theater of war. The other is to provide an alternative line of supply to Alaska in case control of the sea lanes should be imperiled.

That this undertaking has been completed so rapidly is merely one more demonstration of the everlasting friendship between Canada and the United States. Where else on earth would one nation be allowed to construct a vital military road for 1,290 miles on its neighbor's soil and be given such outstanding cooperation? We of the American Army are deeply indebted to the people and government of the Dominion of Canada for their willing help and assistance.

Last week the Northwest Service Command was privileged to be the host to His Excellency the Governor General of Canada and his official party. This was an outstanding event. The Governor General traveled on the narrow gauge White Pass & Yukon Railway, which is now operated by an American military railway battalion. He was our guest at a luncheon, where toasts of Yukon River water were drunk to the President of the United States and to the King. He exchanged swagger sticks with Colonel Bush, our chief of staff, and he was kind enough to present me with autographed portraits of himself and Her Royal Highness Princess Alice.

The episode was a happy symbol of the good will which has characterized this task.

Development of transportation has invariably resulted in progress. The history of mankind is studded with the names of great arteries of travel—the Roman road, the Oregon Trail, the Union Pacific, the Burma Road, the Khyber Pass, the Cariboo Road, the Trans-Siberian. Men in both your country and mine opposed construction of the first transcontinental railways. A famous New Englander said he would not give a silver dollar for all of Oregon. Yet these skeptics lived to see a vast migration, the forerunner of empire, follow the line of steel toward the setting sun.

When roads and railways have been blazed, adventurous men have used them. That has been the story of civilization. The first railroads in Canada and the United States were constructed through bleak solitudes. But farms began to dot the countryside. Then villages and settlements appeared beside the rivers. Soon sprawling towns occupied the entrances to valleys and the hills above harbors. By and by, these towns became great cities, and the countries which you and I know began to take shape.

In the far North—in Alaska and the Canadian Northwest—transportation is in its pioneering phase. The Alaska Highway is a pioneering project. Yet who can prophesy what lies ahead, in the distant years when we must turn to peaceful reconstruction after final victory has been won? Men will be seeking new opportunities. Their eyes will be on the horizon, turned toward the frontiers. Perhaps the most important frontier of our time will be in the North.

I was brought up in the white pine region of Michigan, not far from the Ontario border. I first visited the great Canadian West in 1910, more than 3 decades ago. In fact, that visit took place right here in Vancouver. I remember an eager, enthusiastic spirit and hopes for an extensive metropolis which appear to have been realized to a welcome degree. This same spirit has been evident in the men—soldiers and civilians alike—who have built the Alaska Highway. The job has been a universal one, a product of a cross-section of America's people.

I have come to Vancouver on this occasion with several members of my staff at the kind invitation of the Vancouver Board of Trade, and to present to the city of Vancouver and to the Province of British Columbia certain historic documents symbolic of the long-enduring friendship between Canada and the United States.

Protestants, Catholics, and Jews—Negroes, Indians, and whites—boys from the great cities of the East and from the lonely farms of the West—men who had been blacksmiths and men who had been clerks—all toiled together to hack a road through the wilderness to Alaska. Negro soldiers built a timber bridge across the Sikanni Chief River in 84 hours. Lt. Roland Small, a Jewish engineer officer from New York, lost his life on the northern sector of the road and his comrades spontaneously dedicated a bridge to his memory.

The people of our two Nations have always been bold pioneers. No continent has been settled as rapidly as North America. It is difficult to realize that less than a century ago a young captain in the United States cavalry was writing to General Phil Sheridan that all the land west of Kansas was a barren wilderness. Now, in that land we have such great American centers as Salt Lake City, Los Angeles, and Seattle; and such Canadian metropolises as Vancouver, Edmonton, and Calgary. America has indeed come of age in a hurry.

The Alaska Highway is a product of this pioneer spirit. Despite the hundreds of bulldozers, the countless steam shovels, the many pile drivers, the innumerable trucks, the job could not have been accomplished without the resolute will and genuine enthusiasm of the men engaged in the task.

This pioneering still goes on. Other roads are being built as cut-offs and feeders for the Alaska Highway. As I speak to you tonight, American workmen are toiling on the lofty peaks of the Chilkat and Three Guardsmen Passes. Across those alpine summits will stretch the Haines Military Road, a 165-mile cut-off connecting the Alaska Highway with the Inside Passage. This link between the highway and salt water is of great significance to southeastern Alaska and to your Pacific coast seaports of Prince Rupert, Victoria, and Vancouver.

And I might add that the Haines Military Road taps some of the loveliest scenery on the North American Continent, scenery which veteran mountaineers compare with the Columbia River Gorge and Banff and Jasper Park.

When this war is ended and the despots have been crushed, there will undoubtedly be other roads and routes in the north country. Perhaps the Alaska Highway will be only the beginning. During the last century the men and women of the United States and Canada faced west. There the new frontiers lay. Now, they may look toward the north. Perhaps this is the frontier of the future.

The Alaska Highway is an affirmation of the determination of our people to be free. At the time the road was commenced, a critical situation confronted us all. The

American Fleet had suffered heavy losses at Pearl Harbor. The Japanese barbarians were sweeping triumphantly across the Pacific. The waters of Alaska were in danger. The inception of the highway was a bold step, even in time of war. An alternative route to Alaska was imperative. A few months delay in its completion might have been fatal. Under these circumstances, the commanding general of the Army Service Forces, Lt. Gen. Brehon B. Somervell, authorized the project and engineer troops began the task.

We may thank Almighty God that the grave crisis looming in the north Pacific was averted. Today, the combined might of Canadian and United States troops has driven the last invader from American soil. We must stand firm now against further attack and we must organize our far-flung resources for assault on the enemy. The construction of the Alaska Highway and its allied projects has demonstrated again our capacity for joint effort and effective cooperation. In a war-torn world, the two great lands of North America are privileged to hold before mankind a shining example of neighborliness and understanding.

I thank you and good night.

Parity Prices of Agricultural Products

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas every item of expense in agricultural production for 1943 is the highest in any year in the past 20 years; and

Whereas the ceiling price on all manufactured products has been set high enough to give said manufacturers and distributors a handsome profit after paying the highest wages in the Nation's history: Therefore be it

Resolved, That we urge the National Congress to pass legislation for parity prices which will include all labor cost in agricultural production; be it further

Resolved, That a copy of these resolutions be sent to the Secretary of Agriculture and each member of the Oklahoma delegation in Congress.

Passed by the Kiowa County convention of the Farmers Union without a dissenting vote.

W. G. BOWMAN, *President.*
CHARLES W. HOLMAN, *Secretary.*
W. G. BOWMAN, Mountain Park, Okla.,
BYRON DACUS, Gotebo, Okla.,
TOM SMITH, Gotebo, Okla.,
Resolutions Committee.

Trucks and Trailers to Deliver the Goods

EXTENSION OF REMARKS

OF

HON. CALVIN D. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. CALVIN D. JOHNSON. Mr. Speaker, several months ago I took occasion to call the attention of my colleagues in the House to the fate that was fast approaching for our vital highway transportation. At the time I suggested an investigation (H. Res. 232) to look into the situation and determine the facts. Today the facts are available in abundance and while I still urge the investigation it can only ascertain who was responsible for the highway transportation break-down that is upon us.

Farm, trade, business, and daily papers are constantly referring to the lack of trucks and trailers to move the cattle, hogs, and grain from the farms and the manufactured products from the mills and factories.

America has the greatest improved highway system the world has ever seen. To fail to make the maximum use of these roads to help move the food and machines necessary to supply the war effort and the civilians on the home front is gross negligence. But the rolling equipment in the form of trucks and trailers must be provided.

There was an adequate supply of trucks and trailers to meet the demands for highway transport at the time of the infamous Japanese attack on Pearl Harbor. But, while wartime demands for the movement of goods have multiplied, the actual supply of trucks and trailers has dwindled. Perhaps 20 percent of those operating on December 7, 1941, have worn out and been scrapped.

Manufacture of trucks and trailers stopped shortly after Pearl Harbor and except for some few specifically authorized there has been no manufacture of same for civilian use since. The stock pile on hand has been doled out to those showing exceptional need—but the stock pile was wholly inadequate and now is all but exhausted.

In some respects it is wrong to refer to these trucks and trailers as for civilian use because, while operated by civilians, they play a vital part in the war effort. Practically all factories are turning out implements of war, yet the transfer of parts and materials is mostly accomplished by the so-called civilian truck or trailer. The civilian highway transportation is so interwoven with the war effort and the civilian economy which is supporting the farmer, that we might well refer to it as war transport.

Today we are confronted with a war transport system that is creaking. Trucks and trailers are forced to operate longer hours without overhauling in order to move the maximum amount of production. The units are wearing out more rapidly than in normal times. And in normal times we annually added 375,000 new trucks and trailers as replacements. For 2 years now, except for the doling out of the stock pile and the manufacture of a few special units, nothing has been added to the fleet.

ONE MILLION TRUCKS AND TRAILERS

To catch up with the loss the past 2 years and to adequately provide for the war transport there should be manufactured and made available in 1944 a minimum of 1,000,000 trucks and trailers. That may sound fantastic to some but please remember highway transport is the very lifeblood of the American commercial and civic world just as much as war transport is the lifeline of a military operation.

With the railroads taxed to capacity there is only one avenue of increasing the amount of goods transported, and that is by additional use of the highways. It is penny-wise and pound-foolish not to provide the rolling stock essential to its use. With adequate trucks and trailers the United States could truly say that there was no such thing as a transportation bottleneck.

Now let us look at what the War Production Board has scheduled to take care of United States war transport for 1944. On September 10, 1943, it announced through press release WPB-4209 as follows:

The War Production Board today announced approval of initial truck and trailer programs for 1944 which will permit production of 22,859 medium and 10,993 heavy trucks, and 14,067 trailers.

Now, gentlemen, that is just like digging the Panama Canal with hand shovels, or building Boulder Dam with wheelbarrows. My State alone could utilize all of the production of trucks and trailers thus authorized and yet not rehabilitate its highway transport system.

In this connection I wish to call your attention to an editorial which appears in the October 1943 issue of the Farm Journal, under the title "Farm Trucking Crisis." It reads:

Last week the National Agricultural Transportation Committee met in Washington with representatives of O. D. T., W. P. B., W. F. A., and O. P. A. It wasn't a cheerful meeting. Those present took a good look at farm-transportation facilities, and didn't like what they saw. They pretty well agreed that a break-down will have to be reckoned with next year unless steps are taken soon to prevent it. Working together, the Committee and O. D. T. will soon undertake a survey of various sections of the country, similar to the survey made last spring of farm machinery and equipment, which resulted in an increase in manufacture. This survey is intended to develop facts about the condition of farm trucks and trucks used by those who serve farmers. From these facts recommendations will be made for a new and greatly expanded production. Only a few big trucks are being made now for civilian use. Some medium trucks are scheduled for later in the year, but no light ones (1½ tons or less).

The farmer's interest in this situation is as plain as the nose on your face. Practically every pound of farm products must be moved by truck at one point or another. Farm supplies reach the farm in most instances by truck.

First to turn the light on the seriousness of the farm-truck situation was the Studebaker Corporation, which called attention several months ago to a crisis in farm transportation, and proposed a plan for effective use of farm trucks. The Studebaker plan urged pooling of trucks; avoidance of part loads, cross hauling, and duplication; location of used trucks by dealers, for sale to farmers needing them; enlisting the owners of nonfarm trucks for emergency farm needs; better care of trucks already in use, to make them give better service and last longer.

Only a few weeks ago the Chicago Daily Drovers Journal carried reports from farmers in different States, indicating that the trucking situation is rapidly nearing the desperate stage. "The real crisis," said one Iowa farmer, "will come this fall when soybeans

are being combined." Said a Kansas farmer, "We can't get our stock to market when we want to move it. The trucks can't handle smaller shipments—too busy with the larger shippers. We just have to wait and wait."

Mr. Speaker, certainly this problem of highway transport is of sufficient importance to warrant the personal attention of War Production Board Chief Donald Nelson and Office of Defense Director Joseph Eastman. Between them they should be able to place the problem in the hands of some reliable and responsible personage who could smash the bottlenecks and get an adequate truck- and trailer-production program under way.

Agriculture at the Peace Table—Crawford County (Pa.) Pomona Grange Adopts Resolution

EXTENSION OF REMARKS

OF

HON. ROBERT L. RODGERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. RODGERS of Pennsylvania. Mr. Speaker, adequate production and equitable distribution of foodstuffs will continue to demand attention for an indefinite period after peace is restored. In addition to agriculture, there will be many other interests which will demand and will receive earnest consideration as plans are made for the post-war period. But agriculture, which is the basis of our food and clothing supply, is definitely of prime importance. A seat for American agriculture at the peace table is not only perfectly in order, but highly desirable.

While it is hoped that eventually the living standards of all the people of the world will be brought more nearly into harmony, yet, at the same time, such should be accomplished by raising other standards without lowering ours. In order to maintain American standards of living, and proper wage scale of American labor, American agriculture must have the benefit of the American market within its ability to supply. Our surplus should then be exchanged in the markets of the world for those things which either we cannot produce at home or which we cannot produce as economically as we can purchase from abroad.

The following resolution of the Crawford County (Pa.) Pomona Grange is timely and no doubt representative of much agricultural sentiment Nationwide and is worthy of fullest consideration:

AGRICULTURAL PEACE RESOLUTION

"Whereas all agriculture realizes the need of agriculture being represented at the peace table, and that its representative should be one thoroughly acquainted with the problems of agriculture and devoted to its interest; and

"Whereas the one man on whom all agriculture can rely, and in whom they have explicit faith, through his proven efforts in the best interest of not only agriculture but the Nation and the world, is Albert Goss, master of the National Grange: Therefore be it

"*Resolved*, That the legislative committee of Crawford County (Pa.) Pomona Grange, working on the authorization of Pomona, urge the Pennsylvania State Grange to take the lead in being certain that agriculture is represented at the peace table, and in presenting the name of Albert Goss, master of the National Grange, to the proper authorities as being agriculture's representative; and further be it

"*Resolved*, That we ask all other granges of Crawford County to add their approval by adopting this resolution within their own subordinate grange; and also, that copies of this resolution be sent to the master and secretary of the Pennsylvania State Grange, the master and secretary of the National Grange, and to the President of the United States, Franklin D. Roosevelt."

Respectfully presented to the 1943 sessions of the Pennsylvania State Grange, asking their action and support.

Signed by the legislative committee of Crawford County Pomona Grange.

W. S. WISE, *Chairman*.
Mrs. C. R. ST. JOHN.
ARDEN DEAN.

Adopted this 5th day of October 1943.

Best Soldier of His Division

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. LUDLOW. Mr. Speaker, out at Fort Huachuca, Ariz., a few days ago a contest was held to decide who is the best soldier of the Ninety-second Infantry Division.

Corp. Andrew R. Johnson, a constituent of mine, of Indianapolis, Ind., won the contest and he is being widely acclaimed as the division's best soldier. A recent issue of the Buffalo, official organ of the Ninety-second Division, presented a picture of Corporal Johnson on its front page and with it in large letters the caption "Best soldier."

In announcing the award the Buffalo says:

Happiest soldier in the division this week—and he has reason to be—is Corp. Andrew R. Johnson, whose picture appears on the front page of this week's Buffalo. Corporal Johnson was adjudged as the best soldier in the Ninety-second Infantry Division for the second cycle.

Corporal Johnson is a member of the Ninety-second Division Reconnaissance Troop, a Negro unit.

Indianapolis is proud of Corporal Johnson. During his career in the Army I have watched with constant admiration his zealous, earnest, and determined efforts to rise to the highest standards of military excellence. As he once said in a letter to me:

My ambition is to be a true, hard-working soldier, who gives his all and all.

A very distinguished and outstanding honor has been conferred upon Corporal Johnson in being adjudged the best soldier in his entire division.

Railroad Employees of America

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. VURSELL. Mr. Speaker, I want to call the attention of the Members of this Congress today to a matter that should have consideration which affects one of the finest groups of laboring men in the Nation who have backed the war effort to the limit and who have not cost their Government the loss of 1 hour's time during this war by calling a strike. They need our moral support now.

I refer to the railroad employees of America.

There is probably no group of laboring men in the Nation who have rendered a greater service to the people of the Nation and to the war effort than have the men who belong to the various railway brotherhoods and nonoperating organizations who, by their long hours and constant effort, have delivered the greatest amount of freight and passenger traffic over our American railway systems that the world has ever known.

During World War No. 1, at the peak of business in 1918, railroads almost broke down in handling 405,000,000,000 ton-miles of freight and 43,000,000,000 passenger-miles.

With 35 percent fewer locomotives and 26 percent fewer freight cars, last year in 1942, the American railway men put over the road 638,000,000,000 ton-miles of freight, an increase of 58 percent over the 1918 movement. In the same year they moved 54,000,000,000 miles of passenger traffic, extending the 1918 volume by 26 percent.

It is estimated that in 1943 our freight traffic will reach 725,000,000,000 ton-miles, representing an increase of 80 percent over the business handled under Government operations during World War No. 1. The passenger increase is even greater.

Mr. Speaker, had it not been for over 1,000,000 employees of the railroads who are known as the nonoperating class, this outstanding record could not have been accomplished. This class of railroad men start with the maintenance men, some of whom are known as section hands, and continues on into the railroad yards and shops with the boilermakers, boilermaker helpers, machinists, and machinist helpers, car repairers, blacksmiths, and so forth. They are the men who have kept the roadbeds in shape, who have repaired and kept the rolling stock in such condition as to get this transportation over the road.

It may surprise you to know that a great amount of this unskilled labor during these war times and during these high prices start as low as 36 cents an hour and that the top pay for machinists in railroad work, which represent a body of the finest mechanics in America, is only 95 cents an hour.

These men are subject to the same taxes and are up against the same high cost of living as are the more fortunate millions of workers in the war factories of the Nation, who, in most instances, draw twice those amounts in salaries. You know the type of men I am referring to. There are thousands of them in my district who are among our most conservative and respected laboring men. In my district they make up a part of the citizenry of Centralia, Salem, Mount Vernon, Effingham, Palestine, Mount Carmel, Bluford, and other cities. You have them throughout your districts throughout the Nation. They are among our best citizens, they support the schools, the churches, and the bond drives.

These men are underpaid and have been since war was declared. They are asking for more money now and their plea has been almost utterly disregarded up to the present time in the face of the fact that the railroad companies, due to their heavy volume of business, are making more money than in the many years past, because of such increase in business and in increases granted them in rates.

The railroad men of this Nation have given the country little trouble with regard to work stoppages. There has not been a major railroad strike since 1922, a period of 21 years. Due to the fact that living has increased rapidly since the war began, on September 15, 15 organizations representing 1,000,000 nonoperating employees served notice on the companies that they expected an increase of 20 cents an hour with a minimum hourly wage of 70 cents. This request was denied by the management and later referred to the local mediation board. This board failed to agree and the President, by Executive order, appointed an Emergency Board to take the matter under advisement.

On May 24, 1943, this Board recommended an increase of 8 cents an hour. On June 22, 1943, Mr. Vinson, who was appointed recently by the President as Economic Stabilization Director, denied the increase as recommended by the Emergency Board. On August 7, the railroad management and representatives of the various crafts negotiated an agreement based on the findings of this Emergency Board. Mr. Vinson, the President's right-hand man, who apparently is following the dictates of the President, has consistently refused to approve this small raise, and the railroad men have been refused the meager sum of 8 cents an hour increase.

Every fair-minded citizen who will give any thought to the situation knows that the price of living, within the past 2 years, has increased to a greater extent than the 8 cents an hour raise now refused to the railroad men. The pay of this great group of our citizens is below the average standard pay for the class of work they do and it is hard to understand why Mr. Vinson, who speaks for the President, continues to turn his back against this great group of men who have contributed patiently and loyally to the enormous task of railway transportation in this country.

It is to be hoped that the President and Mr. Vinson will take note of the unjust treatment these men are receiving and grant this meager raise in salary. If they do not the blame should be placed where it belongs. The President and Mr. Vinson, and no one else, must be held responsible.

Investigating the Federal Communications Commission

EXTENSION OF REMARKS

OF

HON. ARTHUR WINSTEAD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. WINSTEAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Moley, from the Wall Street Journal of October 5, 1943:

INVESTIGATING THE F. C. C.—THE COMMUNICATIONS COMMISSION NEEDS A CONTINUATION OF THE AIRING BEGUN BY REPRESENTATIVE COX

(By Raymond Moley)

The resignation of Representative EUGENE Cox as chairman of the Select Committee to Investigate the Federal Communications Commission presents to the House and its leaders one of the hottest issues since its election last year. If the leaders want the confidence of the country, they must provide for the pursuit of this inquiry to the end. The faintest suggestion of whitewashing will carry the activities of the F. C. C. into the only forum left, which will be the 1944 campaign. For the F. C. C.'s activities, as revealed to date, include some of the most serious threats to freedom of expression which have appeared in years.

The attack upon Mr. Cox involved a question of official conduct entirely unrelated to the subject of the inquiry. But public opinion is most definitely interested in find-out out why, after recommendations by all the high authorities of the Army and Navy, including the Secretaries of War and of the Navy, the activities and personnel of the F. C. C. engaged in confidential war activities were not transferred. It is still more concerned with the question of whether the F. C. C. in its methods of licensing radio stations, has so intimidated the companies that freedom of expression on the air is, in fact, limited by a Government bureau beyond fair and lawful considerations of taste or morals.

The vigor of Mr. Cox and of the committee counsel, Mr. Eugene Garey, in conducting the inquiry was appropriate to the inquiry's gravity and to the well-known capacity of certain Government agencies to resist legitimate public inquiry into their activities. Mr. Fly and members of his staff have complained bitterly, but this complaint must be discounted in light of the fact that administration agencies have shown similar vigor in investigating private persons, companies, and associations. As this column has mentioned before, this is no tea party. It is an inquiry into a matter involving the liberties of the people of this country.

As to the charges made against Mr. Cox, the matter comes down to a judgment of the propriety of official conduct. The House makes laws to cover that and, where law does not apply, the House applies its own disciplinary measures. Speaker RAYBURN said, with reference to Mr. Cox, that "his friendship, his love, and confidence remain." Of even more significance was Majority Leader MCCORMACK'S tribute to Mr. Cox's truthfulness, honesty, and integrity.

The charge against Mr. Cox has been in the Department of Justice for some time, and no definite action has been taken by it. Instead, a newspaper, magazine, and letter-writing persecution has been carried on. This is hardly a sound way to get at the facts.

The temper of the House of Representatives is very warm with respect to the doings of the F. C. C. It will insist upon an investigation which goes to the very heart of it. This will put upon the new chairman the duty of carrying to a finish the work begun by Mr. Cox.

Shall the People of Italy Rule?

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio speech delivered by me over Station WWDC, on the subject Shall the People of Italy Rule?

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Fortunately the question as to the key problem in Italy is perfectly clear and simple. It is simply a question of whether the new government to be organized there shall concern itself with the basic needs of the Italian people as a whole or whether such government is to be another tool for insuring special privileges to the few. To repeat, this is again the centuries' old struggle of the basic needs of the many versus special privileges for the few.

All realize how tremendously enormous and complex are the operations involved in the conduct of a global war. I am afraid that very few people understand that the problems of victory are even greater and more complex which will demand of us even greater vigilance and greater thoroughness of preparation and understanding if the military victory we have won shall not be turned into plowshares for burying still deeper the very causes for which we have fought and for which we have paid so dearly in "blood, sweat, and tears."

The way the Allied Nations handle the victory in Italy will undoubtedly show to a large measure whether they have the capacity to cope with the complex social, economic, political, and military problems that inevitably follow the conclusion of a world war. It is well at this time to remind ourselves that the First World War was lost following the military victory and it is not beyond the realm of possibility that the Second World War is merely a prelude to a third world slaughter.

As to Italy, this country is unique among the Fascist nations. In that country lives also the traditions of Matteotti and Garibaldi. There is, therefore, no need to force democracy on the Italians. They are already a liberty-loving people. Our task will rather be one of making it possible for the Italian people to choose their own representatives and their own government. We must help the Italians to salvage their own economy and to clean the Fascists and any other predatory group from their long-held roosts.

We cannot temporize in this lest we lose the faith and confidence of a world so eagerly begging for liberal leadership.

Our responsibility is plain. We know the direction we must travel.

Where do we stand now? Italians, wherever or whenever they can, are cooperating—even to the Fascist. Obviously the Fascists hope to retrieve some of their power on the spoils of their collaboration. We must not become so beholden to them that we protect them from justice at the hands of those they have bled so long.

As for the Italian people themselves. Remember how unwillingly they fought. Badoglio, a professional soldier and Fascist hireling, carried the surrender to our generals. Well and good. Labeled poor soldiers by Nazis and United Nations alike, the Italian people have given testimony that they have never had any stomach for the system oppressing them. While bearing arms against us they were our unwilling enemies. There were popular demonstrations against the Fascisti even before the capitulation. Note that I said popular demonstrations. Note also that unlike Germany there existed in Italy at all times a weak but articulate opposition to fascism.

As to the Italian situation so far, this can be said. The allies have in the space of a year turned what appeared to be imminent defeat in Africa into an amazing victory not only in Africa but in the Mediterranean. We are still fighting a war in Italy. There is still time in which to make policy.

If the Allied Nations are sincere in their expressed determination that a better world shall follow the military victory, it is up to the allied people to decide now just what kind of world they want to live in. This is your world and what will be done with it is up to you. Most emphatically, your responsibility does not end with the building of planes and tanks or the provision of money. Vast and costly as these contributions are, they are merely preliminaries—the first attack, so to speak.

If government of the people, for the people, and by the people shall not perish from the earth, every man and woman who understands the significance of this challenge must dedicate all they are and all they have.

America's Salvation

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "America's Salvation," delivered by me at the annual conference of the Ohio Federation of Republican Women's Organizations, Columbus, Ohio, October 6, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA'S SALVATION

America's salvation is in deep faith in her people. Lincoln had that faith. It was the key to his greatness. The present national administration lacks it. That is the key to its weakness.

For 10 years the present administration has placed less and less faith in the people. For 10 years the present administration has been assuming more and more direction over the people. The time has come for the people of America to throw off such government and to resume governing themselves.

The founders of our Nation intended that it be governed by laws rather than men. Yet if the newly styled directives now being issued with little or no notice by appointed Federal administrators after private conferences, are to be substituted to an increasing degree for laws enacted by the elected representatives of the people after public hearings, we must recognize what is taking place for what it really is. To the extent that such administrative directives are substituted for constitutional legislation, a government of men is being substituted for one of laws. A republic whose policies are made by directors appointed by its chief executive rather than by legislators elected by the people to that extent takes on the character of a dictatorship. The degree of dictatorship increases with the degree to which the chief executive can dictate his own party renomination, and then by use of governmental funds and employment bring about his own continuance in office.

LINCOLN'S DEFINITION OF DEMOCRACY

When Lincoln was asked to define democracy he wrote this statement: "As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference, is no democracy." In effect what he said was, "As I would not be a slave, so I would not be a master of someone else to be my slave." He believed neither in slavery nor in dictatorship. He believed in the free man and in the free man's ability to govern himself.

Lincoln's statement answers equally the false philosophy of communism and the false philosophy of fascism. It declines to accept either the shackles of slavery or the scepter of sovereignty. It combines the spirit of personal independence with that of the Golden Rule. It is the creed of the free man and the pioneer. It is typically American and typically Republican. It is needed today.

THE THIRD AND FOURTH TERMS

One of the most obvious illustrations of the present administration's lack of faith in the people was the insistence of the Chief Executive upon renomination and reelection to a third term in office. When President Washington completed his second term in 1797, the Nation was in a critical situation calling for its utmost strength and its best leadership. Washington, as the father of the Republic, was, however, more interested in the permanent strength and stability of the Republic than in any temporary improvisations of policy. He had faith in the Republic and in the ability of its people to govern themselves if they were given that opportunity and that responsibility. He knew the dangers of extended executive control. He refused a third term. He established a precedent that gave strength to the Nation for over 140 years. His example did wonders to strengthen the faith of the people in their own ability to govern themselves.

Similar action in 1940 would have done more for our country and for the cause of democracy than could any possible improvisations of personal policy. Time is making this clear. The tragedies of over-extended bureaucracy appear on every hand.

The obvious ease by which an administration in office can dictate a third or fourth term candidacy for itself is the best evidence that such an extended term in office conflicts with free self-government. It is the essence of self-government that the people themselves shall have the opportunity to direct it and therefore shall have the responsibility for it. It is only thus that they can develop the leadership and the strength to carry it forward from generation to generation without dependence upon any one man or set of men. This is the policy expressed in our Declaration of Independence.

BUREAUCRACY

A second illustration flows naturally from the first. It is bureaucracy. The long continuance of one administration produces the inherent vices of bureaucracy. It leads to overloading the pay rolls, inefficiency in service, wastefulness in expenditures, arbitrariness, favoritism, nepotism, political use of the civil service, and ease in concealment of frauds.

The appointive power reaches not only throughout the executive branch of the Government, but with even deeper effect into the Federal judiciary. Already seven of the nine justices of the Supreme Court of the United States and great numbers of the judges of the lower Federal Courts have been appointed for life by the present administration. This influence of one man upon the character of our courts of final jurisdiction already is contrary to the best interests of the system.

The civilian personnel in Federal employment has risen to 3,000,000 employees. This is 5 times the number when this administration took office 10 years ago. This administration shows every indication of increasing rather than reducing this number.

It is hard for any administration, even if it wishes to do so, to get rid of incompetents appointed by it. This administration moreover has become particularly infamous for its unwillingness to drop from Federal employment anyone whom it has once put into Federal service. The Nation also has suffered recently from extraordinary administrative ineffectiveness due to overlapping jurisdictions within the continually increasing hastily improvised bureaucracy, to say nothing of the personal controversies between bureaucratic officials themselves. The effect of this excessive pay roll is not only to waste the taxpayer's money but also to promote political support of the administration at the taxpayer's expense. The only sure cure for these ills is the election of a new administration dedicated to economy and efficiency and free from the obligations of the present administration to its own appointees. Here is the opportunity of the Republican Party.

EXTRAVAGANT PLANNING

As a third example, we have the extravagant planning of the National Resources Planning Board. This board had a congressional appropriation of about $3,000,000, but it spent twice that amount by obtaining special funds from the President's unallocated funds. It then produced programs not only at an expense greatly in excess of that contemplated but programs neither requested nor desired by Congress as the constitutional policy-making body of the Government. The plans of the Board call for practically unlimited Federal expenditures carrying forward a program of ever-increasing Federal control over the lives of the public at the taxpayer's expense.

Instead of representing a policy of faith in the people to govern their own lives and to establish their own policies, these programs of the National Resources Planning Board are evidence of a lack of faith in the people and tend to encourage dependence on public funds. The cost of the program apparently is not seriously regarded. The program minimizes the value of initiative and exaggerates the value of unearned governmental payments. The program is a typical symptom of the domination of an administrative government over its people and the use of that domination to distribute benefits among certain members of the public paid for out of the funds of other members of the public. It is advertised as a form of social security but it leads to the financial instability of the Government and the personal bankruptcy of the taxpaying producers. Living on borrowed capital is

easy while it lasts but it leads to ruin. We need more of a policy of fair return for work done and less of a policy of getting something for nothing. Whenever someone receives more than he earns someone else retains less than he earns so as to make up for it. A square deal is the only deal that is good for everyone.

A genuine government by the people for the people will promote economic and social gains for the benefit of the whole people as long as those gains are consistent with the ultimate welfare of the whole. The people, as distinguished from a bureaucracy, will hesitate to sacrifice the long-term future of the whole in order to improvise temporary and unearned benefits for the present. It was typical of arbitrary power to coin the phrase "After me comes the deluge." When people as a whole actually govern themselves they do so not only for themselves but for their children and their children's children. They build carefully for permanent stability as well as for temporary gain. That should be the policy of the Republican Party.

A REPUBLICAN PROGRAM PROPOSED

What program is recommended? The answer is that the Republican Party should dedicate itself to a government based upon faith in the people as a whole. The Republicans, therefore, should—

1. Fight the war with even greater vigor, efficiency, and unity than has been shown, and create a greater determination by everyone to bring it to the most complete and quickest victory possible.

2. Oppose a fourth term for this administration with every vigor they can command.

3. Demonstrate determination to administer public funds with economy and efficiency, and eliminate unnecessary Federal interference, agencies, and employees.

4. Outline a program of post-war policies for the encouragement of increased production in industry and in agriculture that will represent the views of industry, labor, and agriculture working in full cooperation with each other and their Government.

5. Develop a positive foreign policy to insure peace and stability for many years ahead.

POST-WAR INTERNAL RECOVERY

While recognizing the need for Federal or local aid to communities or individuals that may face post-war emergencies and hardships, the Republicans should direct their constructive program primarily toward eliminating the cause of such emergencies and hardships. Prevention of disease is better than any treatment for its ravages. A program for increased industrial and agricultural production is the only program that will enable the public to carry the post-war burdens of debt and taxation. The Republicans should encourage especially the development of new fields of production which have been opened through the scientific advances of the past decade, but which have not yet been permitted to feel the benefits of private initiative coupled with a reasonable assurance of peace and stability.

I am speaking in terms of aviation, radio, electric power, Diesel power, automotive power, possibly atomic power, chemistry, chemurgy, plastics, wood, light metals, glass, electric welding, improved housing, soybeans, improved agricultural equipment, sulfa drugs, and many other "acres of diamonds" near at hand.

Following the war America will face her greatest crisis. It will be the supreme test of self-government to reestablish the internal stability and prosperity of America. It will involve not only the stability of America, it will stand as an example to the world of the practical application of the principles we preach.

We shall be returning from the governmentally controlled and financed economy of total war to what should be the far freer privately financed economy of established peace. In America we shall face this test under unusual handicaps. We shall be obliged to carry the greatest burden of taxation in our history. Our national debt will be ten times greater than before the war. It will be absolutely essential that we carry these burdens and take them in our stride. We must pay the interest on these bonds and pay enough of them at maturity to enable us to refund the rest for many years to come. These bonds are held by every church, trustee, bank, and practically every family in America. They are the best evidence of the credit of our country. To pay the carrying charges on them, it will be necessary for us to develop a national income greater than any we knew before the war. If we fail to do this we shall be unable to carry the tax load and the bonds. We will find ourselves faced with a financial depression that will make the last one seem like comparative prosperity. We must not fail to produce an increased national income if we are to escape a regimentation of scarcity in this country which will make us wonder whether we won or lost the great war against totalitarianism.

I believe we can do this. During this war we have discovered within ourselves a capacity for greater production than we dreamed we had. Coupled with the opportunities for the development of new real wealth along the lines previously indicated, America can well meet the post-war emergency, provided there is peace, stability, and reasonable assurance of stability for many years to come.

This places upon the Nation the responsibility of securing international peace, stability, and a reasonable prospect of stability not merely for the benefit of the world but as the very foundation for America's own internal stability.

FOREIGN POLICY

Here, then, is an opportunity for the Republican Party to serve the best interests of the Nation and of the world by putting forward and supporting a constructive commonsense foreign policy. It must be worthy of such outstanding Republican leaders of foreign policy as Presidents William McKinley and Theodore Roosevelt and such outstanding Secretaries of State as James G. Blaine, William R. Day, John Hay, Elihu Root, and Charles Evans Hughes. It must recognize the conditions which have reduced the world substantially to a neighborhood and made every part of it dependent upon every other from the points of view of safety, economics, and human welfare. The people of the United States are entitled to have a foreign policy that is understandable and consistent with the needs and principles of this Nation. They should not be required to rely upon the improvisation of policies from time to time to meet the needs of the moment.

The Republican Party, on behalf of the people, should call upon the Chief Executive of the United States, to develop a foreign policy for the United States in the manner contemplated by the Constitution; namely, with the advice and consent of the United States Senate and in appropriate features with the help of both Houses of Congress. While under the Constitution it is recognized that the Chief Executive shall conduct negotiations on behalf of the United States Government with foreign nations, it is equally clear that treaties so negotiated shall not be binding upon this Nation without the advice and consent of two-thirds of our Senators present when the vote is taken. This provision assumes that the Chief Executive, at all times, will feel a faith in the people of his country and a faith in the elected representatives of those people. Any failure on his part to work with the Senate as the policy is being developed handicaps America. The world knows only too well from its experience following World War No. 1, that a President of the United States who does not cooperate with his Senate in the development of his foreign policy cannot be depended upon to make good on his proposals.

While the Republican Party, therefore, need not anticipate the details of the negotiations, it should require cooperation between the executive and legislative branches of our own Government and also cooperation among the United Nations with whom we are winning the war. A policy of world-wide stability is needed. It should be a strong, cordial, restrained, and common-sense policy. It should be far short of global boondoggling but as positively constructive and as fully up to date as are flying fortresses, transoceanic clippers, and world-wide radio broadcasts.

UNITY AMONG THE UNITED NATIONS

The Republican Party will do well to make it clear that it recognizes that continued unity among the United Nations in peace, as well as in war, is the very foundation for the peace of the world. In the words of its Post-War Advisory Council, the Republican Party looks forward to "responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world." This looks to an understanding among the United Nations.

They will adapt its form in the years to come to the needs of those times. To be binding upon the United States of America treaties on this, or any other issue, will require constitutional approval by two-thirds of the Senators present. Whoever, therefore, is to bear the responsibility of our Government must be prepared to act on this issue.

We should seek an orderly means of adjustment of international disagreements and policies without war, and we should retain at least such a unity of military strength among the United Nations as is comparable to the unity which has demonstrated its priceless value during the fighting of this war. We should say so. Failure to preserve that degree of military unity among the United Nations would be a serious mistake. While such a failure would not mean immediate war among the United Nations, it would introduce a substantial and unnecessary uncertainty at once into their future relations. This uncertainty would force each nation to offset its possible dangers. It would lead to military armaments and economic measures otherwise unnecessary. At the very time when each nation would need most to reduce its taxes it would be forced to increase them. The taxes not only would be burdensome to us, they might even stop our chance of internal recovery. The tragic experience of two wars in one generation should be enough to convince the world that some policy different from that followed after the First World War must be followed now, not only by the United States but by all of the United Nations, so as to give greater assurance of continued peace. The need for an up-to-date constructive foreign policy that will make our victory worth the high price paid for it is a need that must be met by the Republican Party. We should not hesitate to meet it. The men and women in the service have a right to expect this and we should lead the way toward it.

The Republican Party can meet its obligation to the country and to the young men returning from the war if it will dedicate itself to taking a leadership both in internal and external affairs that will promote internal peace and stability and will give reasonable assurance of international peace and stability for years to come. This policy already has been stated, but I summarize it here again:

1. A square deal to everyone, big or small, industrialist or laborer, farmer or consumer, regardless of race, color, and creed.

2. A record-breaking recovery of private industry based upon carefully planned reconversion of plants, the development of new products, a freer economy, a positive regard for the public welfare, and cooperation between industry, labor, agriculture, and government.

3. A determined unity of the United Nations to insure the continuance of peace and of our common right to the freedom we shall have won.

Thus can the Republican Party save for all the people of America the land of freedom and of opportunity of which our soldiers dream and for which our soldiers fight.

Address by Hon. Howard Leonard, Director of Agriculture for the State of Illinois, at National Food Conference

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief address by Hon. Howard Leonard, director of agriculture for the State of Illinois, delivered at the National Food Conference of Consumers and Producers, held at Chicago, Ill., on September 16, 17, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have often wondered why there should be any discussion as to the place that food has in our economy. Certainly it is clear to any thinking person that food is the first prerequisite of life. The first effort of all animals after birth is to find something to eat; babies cry for food, and so it is throughout life. There is a constant struggle for food in order that we may live and fulfill our mission here on earth.

The producers of food are fully aware of the hazards inherent in their occupation, they know that farming is no longer a simple process of seeding and harvesting but has become a very skilled vocation. The individual farm must be studied and its possibilities appraised in order that the maximum production may be secured. They know that it takes long-time planning because it takes 3 years to produce a dairy animal or a choice steak, and that it takes at least 18 months to produce pork chops for the table. They know that it takes a year to produce a crop of wheat which then must have additional time for processing into flour before it can appear on the table in the form of a loaf of bread or pastry.

After listening to radio broadcasts and reading various propaganda press releases, I am convinced that the great consuming public does not thoroughly understand what is necessary as to time and effort in the production and merchandising of food. It is certainly fitting that here in the great Middle West there should be held a conference whose primary object should be to present to the public not only the necessity for food, but to present authentic information concerning its production and distribution.

This area is comprised of 12 States, and, collectively, they are frequently referred to as the Grain Belt. They extend from Ohio to Kansas, Nebraska, and the Dakotas. That area of 750,000 square miles is larger than any country in Europe, except Russia. In fact it is larger than Germany, France, Spain, and Italy combined.

These 12 Grain Belt States comprise about 25 percent of the total land area of the United States but have 38 percent of all the farm land and 49 percent of all the crop land. The value of their farm land and buildings represents 51 percent of the United States total.

Last year these 12 Grain Belt States produced 59 percent of the total wheat crop, 76 percent of the total corn crop, 82 percent of the total oats crop, and 91 percent of the total soybean crop. No wonder it is called the Grain Belt of the United States. The value of all cereals grown in these 12 States represents about 66 percent or two-thirds of the value of all cereals grown in the United States.

This area also makes an impressive showing in livestock and livestock products. At the beginning of this year of 1943 it had 47 percent of all the cattle of the country as well as 47 percent of all the milk cows; 53 percent of all the horses; and 68 percent of all the hogs; however, it had only 31 percent of all the sheep. The chickens in this area were 48 percent of the United States total.

According to the census of 1940, the sales of cattle in this area represented 51 percent of the United States total sales, and sales of hogs represented 76 percent of the total. Thus, this area might also be called the Hog Belt of the United States as well as the Grain Belt.

Production of milk in these States, according to the census, comprised 52 percent of the total sold in the United States; and sales of cream or butterfat, 75 percent of total United States farm sales of cream or butterfat.

	United States	12 States	Percent, 12 States
Wheat produced in 1942.....bushels..	981, 327, 000	588, 682, 000	59.2
Corn produced in 1942.....bushels..	3, 175, 154, 000	2, 424, 916, 000	76.3
Oats produced in 1942.....bushels..	1, 358, 730, 000	1, 122, 823, 000	82.6
Soybeans produced in 1942...bushels..	209, 559, 000	190, 864, 000	91.1
Total acres harvested...bushels..	339, 848, 000	184, 581, 000	54.3

Illinois, because of its location and because it is one of the largest exporters of food grains, is particularly interested in a more complete understanding of the farmer's problems.

The urban housewife has been accustomed through the years to find on the shelves of the grocery stores row upon row of canned goods, an assortment of fresh vegetables, and the various cuts of meat from which she can make her selection.

Now, under the stress of war conditions, many of these items that were available are not there, and I find that it is the tendency of these urban buyers to criticize the farmer and ascribe to him various selfish motives because the articles she wants are not available.

Before criticism of food producers becomes too severe, it might be well for us to refresh our memory on the number of tillable crop acres available in the United States and what has happened in the last 40 years. The harvested crop acreage for 1943 will be only 6 percent more than acres harvested in the period 1910–14. At the same time our domestic population has increased 42 percent over the same period.

Before the present war the United States for several years had been a net importer of agricultural products, so that any loose statements that the United States can feed itself, contribute substantially to the food requirements of the Allies, and provide food for the conquered nations is not borne out by the facts.

This country has developed and grown strong because its citizens were well fed with an adequate amount of meat and cereals. A slack in our domestic food supply or any radical change of eating habits would be disastrous to the Nation.

Farmers and livestock men of the United States will plan to produce in 1944 every pound of meat and grain that is possible with the facilities available. Given adequate labor, the necessary farm machinery, a reasonable supply of fertilizer, assurance of an equitable share of the national income, and with the aid of a favorable growing season they will produce the greatest volume of food products this country has ever known.

I regret that Governor Green is prevented, by prior engagement, from being here and giving you the address of welcome. I esteem it a privilege to welcome you in behalf of Governor Green to the city of Chicago and the State of Illinois, and trust that out of this meeting and others of similar character there may come much that is beneficial and a better understanding can be reached in the solution of our food problems.

Political and Economic Disintegration in Nazi-Occupied Countries

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. REYNOLDS. Mr. President, in my opinion one of the great features of the Washington Evening Star is a column written daily by Mr. Constantine Brown, who comments most intelligently upon national and international affairs. In the issue of the Star of October 9 I read one of his most interesting articles. His articles appear under the heading "This changing world."

I wish to read to the Members of the Senate the concluding paragraph of the article:

Under these circumstances it is obvious that the restoration of Europe on a sound basis will offer a problem at least as delicate as the defeat of Hitler.

Mr. Brown there refers to the differences existing today in many of the countries which have been subjugated by the Axis Powers, and in some of the countries which have been or are about to be liberated. For instance, we know in Italy at this hour a deadly controversy exists between the black-shirt Fascists and the Communists, which is having a serious effect on the country. We likewise know that in Yugoslavia there are factions which are fighting one another for ultimate power in Yugoslavia when at a later date she will be lifted from beneath the heel of the Axis oppressor. I recommend

a reading of the article by Members of the Senate, and respectfully ask that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS CHANGING WORLD

(By Constantine Brown)

So long as the fighting to defeat the Germans continues in full swing little attention is paid to the political and economic disintegration in the Nazi-occupied countries.

The general impression in the United States is that there is only one thing that matters to the people of Europe—to get rid of Hitler and his gang and start life afresh.

The true picture is quite different, however. Even now, when the enemy has not yet been defeated and appears to have a good deal of fighting power left, there is a "dog eats dog" attitude in all the conquered territories.

Important capitalists in the Western European countries are of two minds about a victory of the Allies. In France, for instance, the big industrialists, bankers, and businessmen are living in fear that an Allied victory would mean the domination of Europe by the Communists who are supported by the Moscow Government.

According to reliable reports, the rest of the working classes in France and the Lowlands have been won over completely by the communistic ideology and hope the doom of Hitler will permit them to establish a system of government on the pattern of the original Lenin ideology.

LEAN TOWARD COMMUNISM

Even the peasantry, generally regarded as a strong conservative class, is inclined to lean toward the Communist doctrine. Thus while western Europe appears divided between a pro-Nazi totalitarian and Communist philosophy there is little feeling for the type of democracy America and Britain are standing for.

A French underground leader who escaped from France only 3 weeks ago and managed to reach the United States says reports are being spread by antagonistic underground elements among the French population that the Americans and British will be far more harsh and overbearing when they enter their country than the Nazis themselves.

This group tells the people, "The Nazis have taken your food and your possessions, the Americans will take your hide."

The underground movement in western Europe is divided into two groups—the most important being anti-Ally. These groups are fighting each other.

In southern and eastern Europe, from the Adriatic to the Russian border, there are nationalistic, communistic, liberal, and loyalist trends.

INTERNAL DISSENSION

In Yugoslavia, for instance, Drug Tito, leader of the partisans, and General Mihailovich, chief of the Chetniks, until recently, considered it more important to destroy each other's forces than to fight the enemy.

Strongly supported with war materials and a good publicity campaign by the Soviet Government, the partisans now hold the advantage. General Mihailovich's men, who represent the legitimists—the official government of King Peter in Cairo—are now at a disadvantage. They hope, however, to receive larger quantities of supplies soon and start their push against the Nazis.

But the principal object of General Mihailovich and Drug Tito, appears to be reciprocal extermination.

The Yugoslav people are divided among themselves, and there are groups led by politicians in that heterogeneous territory who see their salvation in a continuation of cooperation with the Nazis.

A DELICATE PROBLEM

So far as the United States and Great Britain are concerned these groups stand far behind in the hearts and the minds of those people. The Chetniks feel that we in this country have let them down because some official agencies such as the Office of War Information have made themselves the spokesmen for anti-Mihailovich propaganda while the Partisans resent the alleged partiality of the Government itself for the Chetniks and the official Yugoslav Government in exile.

A similar schism exists in Greece where the Communist-sponsored Republican Party is now in the ascendance. Moreover, King George's government is accused of imperialistic views by its neighbors, the Albanians.

The situation is said to be equally as bad in Poland, where a number of political groups have been formed. Only few have any use for the Government in exile and its official supporters—American and Britain.

Under these circumstances it is obvious that the restoration of Europe on a sound basis will offer a problem at least as delicate as the defeat of Hitler.

Address by Hon. C. Wayland Brooks, of Illinois, at National Food Conference

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short speech delivered by me at the National Food Conference of Consumers and Producers, held at Chicago, Ill., on September 16–17, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Gannett and fellow Americans, I am delighted, indeed, to have the opportunity to follow the distinguished agricultural leader from our State in helping to welcome you to the city of Chicago and the State of Illinois, because all of us who were born and reared and still live in Illinois think it's God's country. I am very happy to have you call this conference in our State, and I am happy to welcome you and the distinguished Members of the Senate who are here to address you. These men have been working constantly and devotedly and faithfully in the interests of our national welfare, devoting their efforts constantly to the agricultural problem. I want to congratulate you on this meeting. I see it has already had results, for the President called in representatives of the four leading farm organizations yesterday, and, so far as I know, it is the first time that the directors of our stabilization and war mobilization and food production have been in conference with the real farm leaders of this country thus far in the war. So you can feel proud that you have already obtained results.

Senator THOMAS will bear me out, when we were concerned in the early days in the raising of this vast and unprecedented Army in the United States, with the effect it was having on agriculture, and in studying the manpower problem, we called before the subcommittee of the Appropriations Committee, upon which I had the honor to serve with him, the heads of all the departments that had to do with the war. We had the Assistant Chief of Staff of the Army, of the Navy; we had the head of the Lend-Lease Administration, Mr. Stettinius; we had Mr. Lehmann; and everyone of them testified that at no time during the entire consideration of the mobilization of the effort of this country for war did they once have the representatives of agriculture in the discussion.

Apparently they felt that agriculture would muddle through, and we called to their attention at that time the danger of the shortage that would come in this, the most vital weapon of freedom-loving people of adequate supply. We learned then that in the first move into Africa one ton out of every six of food was required to feed the people of that depleted area, and that was the least depleted area in which our armies must move, and we impressed them then with the necessity of providing more metal for machinery, more fertilizer, less drafting of the men and draining of the men from the farms by the high prices paid in industry. When you consider that the American farmer has been subjected to all these restrictions and restraints and draining influences, never in the history of the world has any group of men and women been more patriotic and devoted and measured up to a finer degree than those who maintain the farms of the United States of America. We were told then that it would be our requirement in this country to raise more than we did in 1942, which was represented as being the bumper year of our Nation's history. Then when we pointed out that there were men in every county selling their herds because they couldn't maintain them, many of them were closing their farms because they couldn't hire the help, and they themselves were going into the industrial world at unprecedented high wages, their lack of machinery, and the millions of bushels of grain that were not to be harvested and other food that could not be canned, finally they decided that they would yield a bit and give us some help from the armed services, but that was only a token of what I think is going to have to be done.

You can count on these men; I vouch for them who come here from the Senate; I have watched them; I am proud to be a part of their effort; they are guarding the interest of the farm, as such; also they are guarding the interest of the liberty-loving people of the world, for food is the No. 1 weapon of free men fighting the tyrants who would take their liberties and food from the people of the world to bring them into submission. You are doing a splendid job in this conference; I am glad to have this moment, and I would be glad to have the final report and then go into conference with these other Senators to see what we can do to help you uphold the hands of those God-fearing men and women who do not strike, who do not sit down, who do not idle, who from early morning until way in the night till the soil and handle the crops and the stock that is the hope of the future happiness of a freedom-loving people everywhere.

Address by J. E. McDonald at National Food Conference

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an

address delivered by Mr. J. E. McDonald, Texas Commissioner of Agriculture, before the National Food Conference, Chicago, Ill., on September 16, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Apparently, the general public does not realize the gravity of the food situation. The public does not understand that American agriculture is being called upon to produce not only food for America's civilian population but also for our armed forces, our war allies, Allied war prisoners, and peoples of conquered nations presently controlled by the armies of the United Nations.

This places responsibility not only upon the American farmer but on the American people as a whole, necessitating a spirit of cooperation and unity of all the American people, if hunger is to be averted.

The calling of this conference in the great city of Chicago by the Honorable Frank E. Gannett is timely and worthy and has possibilities of rendering a constructive service at a critical time both nationally and internationally. Therefore, I express my sincere appreciation to Mr. Gannett for his untiring efforts in making possible this food conference.

The accomplishments of our soldiers are a source of pride to every American citizen. Our armies have been under the direction of officers who were trained in the most skillful war tactics known to man. The war has been conducted in a manner which has achieved the maximum results with the minimum loss of life. Our armies have conclusively proven to the world that true Jeffersonian democracy and the American way of life are worth fighting for.

The three essentials of war are men, implements of war, and food. It is the last of these essentials that brings us together today.

We who are attending this conference, as well as the millions at home, want to cooperate with the farmers, with War Food Administrator Marvin Jones, and with the United States Department of Agriculture in outlining an agricultural program which, in 1944, will give the maximum production.

Given the proper Government cooperation and assistance, and left to use his own initiative, the farmer has demonstrated time and again that he is capable of meeting the emergency. This is evidenced by the fact that in normal times the farmer has American warehouses bursting with food and fiber and, in peacetime, the main concern is to hold him back so he will not smother himself in his own overproduction.

The farmer knows his job. He is patriotic. He is not a miracle man and cannot do the impossible. He must have the necessary essentials, such as farm implements, repair parts, competent farm labor and an abundance of finances if he is to meet the critical food situation with production so vitally needed in our war effort.

The farmer does not want exorbitant prices for his products. He does not want subsidies or incentive payments. These are offensive to him. What he does want is stability for his business and true parity prices for the crops he produces, that is, parity prices which include labor costs and all the expenses incidental to efficient farm management and production. These the farmer is entitled to, in either peacetime or wartime, and in wartime, it is imperative that the Government give the farmer every assistance possible in providing him with the manpower, machinery, and farm implements necessary to produce for wartime needs.

Not only is food vitally necessary in winning the war and writing the peace but it must and will play an important part in post-war reconstruction and rehabilitation of nations who have been ruthlessly torn asunder by the invading armies of bloodthirsty dictators.

God intended that agriculture should be the fundamental and basic industry of all nations and all peoples. It is the farmer who annually creates new wealth which is turned over to transportation for delivery to processing plants, there to be processed and packaged and given back to commerce for distribution to meet the needs of mankind.

Agriculture is the only indispensable vocation of man. It is agriculture that produces food and fiber with which we fill our stomachs and clothe our backs. Tilling the soil is a vocation which enables man to more nearly provide the essential things of life than any other vocation known to man. Agriculture, of course, includes farming, horticulture, dairying, livestock and poultry raising, etc.

When agriculture is prosperous and happy and the farmer has purchasing power with which to support other essential American industries, we have very few financial, social, and economic problems.

When the fighting ceases and war plants are closed we will have a homecoming of soldiers and war workers, the true conception of which staggers the average mind. Millions will be in this homecoming and when the "howdy" and "howdy-dos" are over, these millions will want homes and employment.

Agriculture can and must absorb a great portion of these homecomers. Now is the time to prepare for this great homecoming, beyond the waving of banners, blowing of whistles and throwing of confetti. We must not allow our soldiers to return and find that while they were on the battlefronts, fighting for their country and our American way of life, we failed to provide for their rehabilitation and future.

It is imperative for the Congress of the United States at once to take steps to provide for the maximum number of homes for families on the land. Placing the maximum number of families in farm and ranch homes reduces the ranks of the unemployed and lessens the competition for industrial jobs.

Families established in farm homes and given the proper Government assistance and protection become valuable assets to their community, State, and Nation. Such families, in the improvement and maintenance of their homes and farms, would provide a continuous market for industrial products, and also furnish employment to those skilled in nonagriculture, such as carpenters, plumbers, mechanics, and professional men and women.

It is true that huge sums of money will be needed for rehabilitation and the placing of the maximum number of families in farm and ranch homes. This money will have to be provided by or through the Government but will be far less expensive to the taxpayers than maintaining relief rolls and other forms of doles.

I suggest that the Congress appropriate a sum of money, adequate in amount, which would be used as a revolving fund for establishing properly approved families on properly approved farms and ranches. Such loans should be of long tenure and a low rate of interest.

Establishing these families on farms and ranches is not enough. Provision must be made that they receive true parity prices for that portion of their crops domestically consumed and then be left free to produce any amount in excess of their allotments to be sold in foreign markets at world-market prices. This would be extending to agriculture the protection and benefits comparable to those the tariffs provide for the manufacturer. In other words, a two-price system for marketing agricultural crops similar to the two-price system which the tariff provides for the manufacturer in marketing his goods.

Parity prices was one of the five major agricultural objectives of the present administration and are generally accepted as being practical, fair, and equitable. In meeting this parity price objective it is imperative that the Congress provide a Government formula to be used by the administrative branch of the Government in determining parity prices. This Government formula should be so simple and understandable that a sixth-grade pupil could take the formula and figure parity prices.

In calling this food conference, we have accepted a responsibility and, at the same time, have provided an opportunity to render a constructive service. Our boys are presenting a united front on the battlefields of the world, and we on the home front should be equally as diligent in presenting a united front. Let's let the world know that we are an undivided America.

New Process Keeps Milk Powder Fresh

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. MUNDT. Mr. Speaker, of interest to the scientific world, to food processors, to our allies who look to us for foodstuffs, and to everybody concerned with the impact of war stimulated new food developments upon peacetime eating habits is the announcement in the October 9 issue of Science News Letter of findings recently made by the MacDonald College Laboratories in Ste. Anne de Bellevue, Quebec. These findings indicate that whole milk powder containing small amounts of wheat germ oil and edible acids will stay fresh approximately twice as long as untreated milk. The ramifications of this new process, if this new method is expanded fully, may have far-reaching effects not only in our shipments of foodstuffs to hungry people overseas, but on the whole business of milk distribution in this country after the war.

In fact, it is no longer unreasonable to envision the day when people in our larger cities will be able to buy their milk at greatly reduced prices in compressed packs of powdered milk which will keep without refrigeration and which will dispense with the present costly and inconvenient methods of distributing milk to the individual consumers.

Members of the House may recall that on last June 6 and again on May 7 I addressed the House on the subject of new food developments and elaborated on some of the steps which had been taken and on those which should be taken so that the processes of food compression and food dehydration might make their full contribution to winning the battle of shipping in this war. At that time I mentioned the new development whereby the addition of wheat germ oil was employed to protect the freshness in whole milk powder. It is gratifying now to see a confirmation of this fact come from these famous Quebec laboratories and to read about it in Science News Letter.

At some later date, Mr. Speaker, I expect again to address the House on these

new type foods which are now proving themselves so valuable in this war. Remarkable progress has been made since early this spring in the expanded use of these new type foods. Many are now being supplied Great Britain. The Russians have recently requested that henceforth vegetable shipments destined for the Soviet Republic be sent in compressed form. New compression units are being established in dehydrating plants throughout the country and the science of new food development has made great headway during the past 6 months in meeting the challenges provided not alone by shipping but by warehousing needs, by internal shipping problems, and by shortages in critical wrapping materials.

The article in the Science News Letter on whole milk powder follows herewith:

KEEPS MILK FRESH—ADDITION OF WHEAT GERM OIL AND EDIBLE ACIDS KEEPS WHOLE MILK POWDER FRESH TWICE AS LONG—WOULD EXTEND USEFULNESS OF SUPPLIES FOR OVERSEAS

Whole milk powder containing minute amounts of wheat-germ oil and edible acids will stay fresh about twice as long as untreated milk, research at MacDonald College laboratories, Ste. Anne de Bellevue, Quebec, shows. If the simple, inexpensive method proves out, it could be employed to extend the usable life of the quantities of dried milk being shipped to war zones from the United States.

Dried milk is so light as to offer striking military advantages, but its use has always been limited by danger that the butterfat would turn rancid. For this reason, the Canadian Research Council asked Dr. W. D. McFarlane of MacDonald College, McGill University, to study natural food materials which gave promise of delaying rancidity in milk powder. Dr. McFarlane now reports that "very striking results" were obtained by adding wheat-germ-oil formula to the milk equivalent to 0.1 percent of the butterfat content. The oil is extracted at low temperatures and combined with minute amounts of edible hydroxy acids producing a formula more effective than wheat-germ oil alone, which has long been known to improve the keeping quality of less stable fats.

The wheat-germ-oil formula is simply homogenized into a small amount of skim milk, which in turn is poured into the liquid whole milk to be dried. So slight an amount is used that no change can be detected in the color or taste of the milk powder. The wheat-germ oil harmlessly oxidizes instead of the butterfat, delaying rancidity and helping to retain the vitamin A content. Dr. McFarlane found that this doubled the life of milk powder, and even before these findings could be published, the Canadian Navy began to use the formula in milk powder tablets for emergency rations.

The immediate military significance of this discovery stems from the fact that so little wheat-germ oil is used that our entire dried milk output could be protected with it from existing supplies of the oil. Besides, no new machinery is needed to mix it with the liquid milk. Dried milk would still be packed for export in vacuum cans, but the wheat-germ oil would give added protection. This would be especially valuable after cans are opened, and in warm climates.

United States production of dried milk in 1943 is expected to reach 150,000,000 pounds, breaking all records, emphasizing the importance of keeping qualities.

Dr. P. H. Tracy, authority on milk powder at the University of Illinois, has also been working on the problem, and confirms that "wheat-germ oil was found to retard the development of an oxidized flavor in powdered whole milk." Dr. Tracy emphasizes that wheat-germ oil cannot substitute for fine quality in milk powder—that it is simply an added protection.

In connection with this improvement in milk powder, officials of the Food and Drug Administration have pointed out that they know of no barrier to the addition of so slight an amount of pure food materials to milk powder, since no standard for dried whole milk has been set up under the 1938 law.

My Victory Garden

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "My Victory Garden," prepared by Mr. F. Hiner Dale, a distinguished jurist residing at Guymon, Okla.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Your chairman has asked me to talk to you tonight on gardening.

He told you that I was an expert on the subject. To save him the trouble of trying to prove it, I will admit it. All my life, I have often wondered what I was fit for. Now I know. In court we have three classes of witnesses: Liars, damn liars, and experts. I am glad that I qualify as an expert.

For more than 50 years, I have been gardening, and each year I have had as good a garden as I now have, but no one ever saw anything unusual or extraordinary about my garden until our chairman made me a visit and I gave him a tomato and he immediately discovered that I was a great gardener. He ranks with Christopher Columbus and Admiral Byrd in making discoveries. Guymon, no doubt, has many eminent men, who have never been discovered. We are not appreciated by our neighbors. A prophet is not without honor save in his own country.

I work in my garden to relax the muscles of my body, while I make talks to Lions Clubs to rest my mind.

I am glad this is a stag party. Women are so much superior to men that I never feel at ease in their company. Their minds are cleaner, they change them oftener. There are no marriages in heaven, that is why it is heaven.

When our chairman came here from Texas, I told him to get into all the organizations in town before they became acquainted with him. I told him to join the Lions Club. He did. He told me recently that some of the Lions wanted him to resign, and that one Lion had offered him $50 to resign. I told him not to do it, he could get more money.

Gardening is an ancient and honorable profession. Our forefather Adam was a gardener. He raised fruits and vegetables and got along fine until Eve came along and got him to eat the forbidden fruit. If you hope to succeed in gardening, keep your wife out of the garden until it comes time to gather the vegetables for the table.

You don't have to have much intelligence to be a good gardener. In fact the less sense you have the better gardener you will make. I can think of no good reason why you Lions would not make good gardeners. In fact most of you ought to be experts at it. Most of what I know about gardening I learned from a person who has served a term in the insane asylum at Fort Supply, Okla., and who gardened while there.

Gardening is a spare time job. When you have nothing to do, you garden. Two or 3 hours in the morning and 3 or 4 hours in the evening is all it takes to have a good garden. Be sure to quit work in the evening in time to hear the 10 o'clock broadcast. The best time to work in the garden is in the morning. I prefer the time from daylight until sun-up. You have all seen a sunset and know how beautiful it is. I don't suppose many of you have seen a sunrise. A sunrise is far more beautiful and gorgeous than a sunset and you should see one, so go into your garden at daylight and work until the sun comes up and you will see a sight that you will long remember and never forget.

I may lose my garden. It has been hinted that the War Department is planning to take it over to have a place to train the soldiers in jungle warfare.

Our soil is as rich as the valley of the Nile. However, it is not rich enough to grow vegetables, such as you would like to produce. When you plan to start a garden, the first thing you should do is to get a load of well rotted fertilizer; and spread it over your garden plot an inch deep. Don't go to a feedstore to get your fertilizer; go to a cow lot. Then plow or spade your ground as deep as you can, the deeper the better. After you plant and your crop comes up add more fertilizer. As your crop grows pile it on higher and deeper. Vegetables make an enormous demand on the fertility of the soil, and it is hard to get your soil too rich. We have no garden soils in this country but what will benefit by the application of a fertilizer.

After you have your garden fertilized and plowed or spaded good and deep, the next thing to do is to lay it off in straight rows 3 feet apart. While it is true that more garden sass will and does grow in crooked rows, the men who judge gardens seem to prefer straight rows. A yardstick and a string are the tools you will need in laying off your garden in straight rows. You next make a furrow or trench under the string deep enough to convey the water from one end of the row to the other. I use a furrow or trench about a foot deep as it will tend to fill up as the season advances. Soak your seed 24 hours and plant them in the bottom of your furrow or trench and cover your seed lightly and then firm the ground over the seed. Turn on your water from the hose and let it run slowly down the furrow until it reaches the other end of the row. Cover your seed again lightly with dry earth. You won't need to water again until after your seed come up and it may rain in the meantime.

If you will put the hose in a gallon bucket laid on its side, before you turn the water on slightly, the bucket will prevent the force of the water washing a hole in the ground. The slower the water runs down the row, the deeper it will sink into the ground. Once a week ought to be often enough to water your garden even in dry times.

To spray your garden with the nozzle of a hose is the height of folly and failure will follow in your footsteps if you do it that way.

Planting seeds of vegetables in furrows or trenches is a new idea to town gardeners. Our farmers have been listing their ground for row crops and planting their wheat with deep furrow drills, since the time that the memory of man runneth not to the contrary. Our farmers are no fools and have learned by

trial and error and bitter experience what it takes to grow crops in this country. They taught me to plant my vegetables in furrows, and if you don't learn how, your cupboard, like Mother Hubbard's will be bare. Don't flat plant or plant on the ridges, but plant your seed in furrows or trenches and your table will groan with the products of your garden. I am not a prophet, nor the son of a prophet, but I will make this solemn prediction—within 3 years every garden in Guymon will be planted in furrows or trenches.

There are three vegetables, not generally grown here, that I can recommend for you to try.

1. Edible soybeans (a garden plant) produces enormously. One plant produces enough beans for one meal for one entire family. We now have them every day for dinner. You pick the beans off and they come on again. The hotter the weather, the better the beans set on. By all means plant a package of edible soybeans. They taste good.

2. Brussels sprouts are like little heads of cabbage. They sell at the grocery stores at a fancy price, when the stores can get them for their customers. What celery hearts are to celery, brussel sprouts are to cabbage. They are easy to raise and 12 plants will supply a family from now on until real cold weather. They grow 3 to 4 feet tall and will stand light freezes, which helps their flavor. The people of England are eating brussel sprouts three times a day now, and more than any other plant, it is keeping them from starvation and making them physically fit.

3. Kohlrabi is another member of the cabbage family that we have liked so well that we have eaten all that we planted. That is why I have no sample to show you. You won't have any of this plant to give away to your neighbors, because you will eat them all yourself.

Some gardeners are bothered with worms and insects. I am not. Every year, I raise a brood of young turkeys in my garden. If you hatch your turkeys with a hen, keep her up and let the little turkeys run in the garden; they will pick off the worms and insects as soon as they are hatched from the garden plants. They go up one row and down the next and work for you from daylight until dark ridding you of sharecroppers in your garden. A turkey will not taste bad at Thanksgiving and Christmas.

Tomatoes are the best vegetable grown. We now get one-half bushel off of two rows, every other day in our garden. Don't buy your tomato seed, get them from someone in your community, who has made a success growing tomatoes. Plant the seeds early in a window box. When danger of frost has past, dig holes three feet apart, in the furrow, where you have prepared to transplant them. Before you set your plants in the holes, drop a handful of fishing worms in each hole and set your plant on top of them. I raise my own fishing worms to plant with my tomato plants, however, you can get them by the gallon by going to the sewer ditch north of town in the early spring. Fishing worms dig tunnels four to five feet deep under your tomato plants, which lets the water down to the subsoil. They keep your soil aerated and pay big dividends.

Now is the time to start a fall garden. The moon is right and what is more important the soil is soaked. There are a dozen kinds of vegetables that you can plant now and harvest before frost.

Eat all you can out of your garden and can all you can't eat.

Our Government is planning to feed a starving world and it is up to you and me to feed ourselves out of our gardens.

Maj. Gen. James A. Ulio

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. REYNOLDS. Mr. President, I do not think a finer man is to be found in America today than Maj. Gen. James A. Ulio, The Adjutant General, United States Army. He is aggressive and active, and extremely popular, I believe, with all Members of Congress, and certainly with the American people. He has made a brilliant record for himself.

I read with interest in last Sunday's Washington Star an article penned by Mr. Bernard Godwin under the heading "America's war leaders." It is a character sketch of General Ulio. I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S WAR LEADERS

(By Bernard Godwin)

Rowing-race fans, accustomed to seeing tall, muscular youths come from the State of Washington to pull shells in the Poughkeepsie intercollegiates would spot General Ulio at sight as another native of the land where mountains reach to the sky and fruit grows luscious. And they would hit the nail squarely, for the tall, powerfully built adjutant general first looked upon the joys of this world at Walla Walla 61 years ago.

Early in life he set his mind on a military career, and, even without a West Point training, worked his way from a private at Fort Brady, Mich., to today's top ranking. Thirty-nine years of intelligent and diligent application to every job to which he was assigned bore the fruit and steady advancement and distinction. For his leadership in the success of the Fourth Army Corps in the battles of St. Mihiel sector of World War No. 1 and his service in evacuating French civilians in territory occupied by the enemy, he received a Distinguished Service Medal. Other awards bestowed upon him include the French Legion of Honor, Montenegrin Order of Prince Danilo, Panamanian Medal of La Solidaridad, Serbian Order of the White Eagle With Swords, and the Greek Order of the Redeemer.

Face to face, General Ulio is a striking, attractive man with an imposing head covered with steel grey hair. His hands are those of a musician, exceptionally well formed and shapely. To me they appeared sensitive and highly trained. His expressive countenance changes with his moods from cold sternness to warming smile in a jiffy.

There is an intriguing character to his personality, especially appealing to me, his practical self attempting to hide his esthetic instincts.

He is most particular concerning his dress and grooming, and always looks dressed-up.

The general's own simple formula explains clearly how he achieved by the hard way a really phenomenal military career: "My intense interest in my work regardless of the rank and the desires to give a little more than was expected of me and in the best way I knew how, was my creed." It's a creed for every youth to keep in mind in whatever he may undertake.

During the Army's campaign in the Philippines, 1906 to 1908, young Ulio served as a second lieutenant with great credit. Some years later he served with the 1st Infantry in Hawaii and in 1917 joined the 23d Infantry at El Paso, Tex., going to France in March 1918. Among his important posts over there was chief of the statistical division and in charge of the central records office.

He spent 6 months in Athens, Greece, in 1923 as chief, administrative division, American Red Cross, and later was assigned to headquarters, Second Corps Area, New York. For a time he was aide at Honolulu. After a period as chief of staff, Hawaiian Department, he returned to this country and by 1938 was executive officer in the Adjutant General's Office. Designation as brigadier general came in 1939 and on March 1 he became a major general and The Adjutant General of the Army.

Address by Hon. Claude Pepper, of Florida, to Young Democratic Clubs of West Virginia

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from an address delivered by me before the Young Democratic Clubs of West Virginia, at Wheeling, on September 12, 1941.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

I am glad to be in West Virginia, because, as in other crises, people of West Virginia are standing by the President, the flag, and the country.

When the history of this era is written it will record not what the arguments were, not why we did it so much, but whether, when the very foundations of America were being assaulted from every side, and undermined, too, whether we helped our President or whether we stood in his way and added to his load.

Neither the Revolutionary War, which established our freedom, nor the Civil War, which made us a single Nation dedicated to freedom, meant more to America than does this earthquake which the evil Hitler has brought upon the world. If this upheaval can be stopped, if its mighty rumble can be silenced, it will remain the kind of a world in which America, as Washington and Lincoln gave it to us, can continue to live.

If these destructive forces continue to gain momentum and might, America as we know it will be as dead as Pompeii smothered in the convulsions of Vesuvius.

The things for which we struggle, therefore, are no less than the right of our people to retain this, their native land; to worship their ancient God; to speak and to write the sentiments of their heads and hearts; to work as freemen and to work together with other freemen; to be not the servants of the state but to be "the captains of their fates," "the masters of their souls."

What a moving sight it is to see America rising from its lethargy, stirring itself like an awakening giant, beginning to stand up in the world like the Olympian figure she is.

America has quit running from tyrants and bullies. She has quit quaking before the threats of dictators. America is standing her ground. Those magnificent words of the President last night came out of his own eloquent mouth and brave heart, but they also were the words of Washington and Jefferson and Jackson and Lincoln and Wilson. They came as well out of the mouth and heart of America.

While it is sad to march in the valley of shadows, yet it is those great experiences which ennoble the souls of men; it is from such valleys that both men and nations rise to mountaintops. The eyes of the world, the eyes of history, are upon America as she gathers to her side under the banner of her leadership oppressed men and women everywhere, as she lifts up those who are stricken down, as she heals the wounds of the afflicted, as she rallies the sinking hearts of the discouraged, and begins the long journey toward one of the mountaintops of history.

America is keeping her rendezvous with destiny. Those who follow her shall see the promised land.

Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter received by me from Mr. Tully Williams, of Hankinson, N. Dak., dealing with the matter of old-age pensions.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HANKINSON, N. DAK., *October 4, 1943.*

Hon. WILLIAM LANGER,

United States Senate, Washington, D. C.

DEAR SENATOR: We have just received your letter informing us of the status of the old-age pension cause—for which accept our thanks. And we will lose no time in complying with your request for our views on same. So will offer a few suggestions that we believe fairly convey the consensus of thought on the subject among the people here.

The Townsend movement is organized in every State, and in practically every county in the Union, so we suggest all minor efforts get behind the Townsend plan—"In union is strength," and another thing that should be brought to the attention of Congress.

Perhaps you remember some years back we circulated an old-age pension petition for you, and practically everyone approached signed gladly, and from that fact and their general attitude, we cannot escape the conclusion that the number of people that believe in the old-age pension principle far exceed those that have declared themselves in its favor.

As to the age pensions should start and about husband and wife drawing pensions, and the amount, perhaps any suggestions we could make would only confuse the issue and we believe those details can safely be left to the deliberations of Congress, but one point we would not overlook on a bet—that is the proposition of the pauper's oath and especially liens on property.

As regards the first—right off the bat, old-age pensions were not conceived as charity, but as the inalienable rights of all citizenship, and the lien and pauper's oath idea was inserted by the plan's enemies, to discredit the plan and humiliate and discourage applicants, and furthermore the lien on property is a step in the direction of socialism, pure and simple; establishing the principle of the right of the State to levy on and confiscate private property. Every transfer would leave the people poorer and the State richer.

Look at our own North Dakota; the State bank has taken ownership of untold thousands of acres of privately owned tax-paying land, and transferred the taxes they should yield to the burden of other poor devils. A process that will hasten the day when they will, in their turn, be dispossessed. So I would as soon see the movement fall flat as go in with the pauper's oath and lien features.

No presentation of the case can be complete without envisioning the economic conditions that will prevail at the end of the war. No economic crisis in all history will even approach it in extent and severity, as the entire world will be involved; with millions in war industries out of employment, and more millions discharged from military service all the world around at once, it will undoubtedly be the greatest economic crisis in the world's history. All statesmen sense that—as evidence, the proposed farmers' subsidy and the $100 a month pay to discharged soldiers and countless other schemes, but the only one that offers any permanent solution or has any sort of financial basis is the Townsend plan.

With all good wishes, as ever,

TULLY WILLIAMS.

The Contribution of the American Businessman to America's Production Effort

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. HOLMAN. Mr. President, without the pay-roll makers there would be no jobs for the pay-roll workers, and without the producers, there would be no war industry, no food, clothing, housing, or other essential industry.

There was a time in this country when the farmer and the businessman were respected in American political expression and by the Federal administration for their abilities, patriotism, integrity, and the great contribution which they make to the public welfare and the safety of the Nation.

I still hold to that ancient faith of the horse-and-buggy days, and therefore I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a letter which an American businessman in Utah recently addressed to me.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE AMALGAMATED SUGAR CO.,

Ogden, Utah, October 7, 1943.

Hon. RUFUS HOLMAN,

Senate Office Building,

Washington, D. C.

DEAR SENATOR HOLMAN: I hesitate to write you at this time from the viewpoint of an American businessman. However, I feel so strongly that there are important matters to which we have to turn our thinking, and for that reason am doing so. Victory, of course, is the primary object of all American thinking and activity. Victory should not be the end of our thinking, nor is it a single aim which excludes or should exclude all other considerations. We are told by our leaders and asked to believe that victory is essential to preservation of democracy as a way of life. Belief in this concept is the motive power behind all of our present activity. To preserve is to maintain something possessed as distinguished from the acquisition of something new and never before possessed.

We have possessed and enjoyed the advantages of democracy. We are not struggling to preserve that way of life against substitution of a new way of life dictated by our enemies. We have permitted the democratic processes to be temporarily in suspension in the interest of the war effort. This we have done willingly and in full good nature. But, to those of us who believe we are fighting for the preservation of democracy, it is plain that plans must now be afoot for the projection of democracy, saved by victory, into the post-war years.

Meantime the fight goes on and irresistibly the pressure of our armed might brings nearer the destruction of our enemies. There is ample credit for all. There is no need to belittle the efforts of any group to magnify the importance of another. Chief credit must go to the officers and men of the armed forces. But is is because those men are fortified by the superior productive power of our people as a whole that they and our allies will prove themselves invincible.

Without intending any slight to any other group in our society we press the claim that the American businessman is a prodigious contributor to the success of our production effort. Large and small, business has shown a magnificent resourcefulness and genius for teamwork. It is the genius and resourcefulness of American business which largely measures the difference in capacity to produce between ourselves and our enemies when both are put to the test of the long pull and the grand struggle.

That genius and resourcefulness is quite properly one of the main hopes for the continuation of the democratic way of life in the post-war years. Business must make the same contribution to the ways of peace that it has been and is doing to the production of the necessities of war. It will not fail in that duty but it must have and is entitled to some encouragement. It asks for an attitude which is not hostile and it requires sufficient freedom from unreasonable restraints and interference to permit the play of its great capacity.

Business, as we commonly accept the term in this country, embraces the production, transportation, and exchange of goods with all of the numerous activities dependent upon and necessary to that work. Business requires to be relieved of unwarranted and hurtful criticism. It is not an evil or predatory thing. It should not be dangled before the populace as something to be feared and hated. It should good-naturedly accept necessary and reasonable restraints, but it should not be continued in existence as a whipping boy for the satisfaction of the whims of any group.

It should, as soon as the war is over, be freed from the invasion of countless government agencies bent upon the imposition of endless rules and regulations so involved and confusing, and oftentimes so complicated, as to make compliance on the one hand, and continued operation on the other, almost impossible. To this end there should be an orderly but rapidly closing out and dissolution of all but genuinely essential regulatory agencies and bureaus. The power

of the bureau has grown so great as to seriously challenge the best intelligence and the highest fortitude of Congress; but Congress will not demand victory by the armed forces in the field and then on the home front succumb to the pressure of the ever-multiplying bureaucrats.

This would relieve business of useless and hampering interference and at the same time separate hundreds of thousands of unnecessary persons from the public pay roll. It would accomplish the break-down of a power great enough to challenge and ultimately dominate the will of Congress. It would, at the same time, result in a great cut in the cost of government and the corresponding relief to business in its effort to take the place of government in the establishment and maintenance of pay rolls.

Business must continue to be the principal financial support of government through the payment of taxes, and at the same time it must be the source of those great pay rolls, without which there can be no happy and prosperous people, and without which government steps in and the democratic way of life expires. These demands upon business can be met only if business has the resources and earnings with which to meet them. Allow business only its operating expenses, siphoning off nearly all revenues in excess of expenses in the way of taxes, and shortly there will be neither pay rolls nor taxes.

Taxes are essential for the servicing and reduction of the public debt and the current cost of government. A sound economy requires that both must be reduced. Reduction can be accomplished only through economy and taxation, but tax levies upon business must be tempered to the necessities of a thriving business. Business, made anemic by excessive taxes, will not, in the long run, yield sufficient revenues, no matter how severe the tax levies may be. Business must accumulate reserves to enable it to take up the slack resulting from the cessation of war activities. The change-over will require vast capital and the demands of the Government should harmonize with that necessity.

Any increase in the normal tax rate on business at this time will be detrimental to the post-war program, and it is questionable whether it will return a substantial increase in revenue in the long run. The present normal tax rate of 40 percent plus the excess-profits levy allows no more than enough, in most instances, to pay a small return on legitimate capital investments.

The challenge to business to keep the wheels humming during the reconstruction period is already heard throughout the land. Business will take up the challenge and make the fight to the bitter end because it knows that the alternative is Government enterprise in the place of private enterprise. Call Government enterprise what you will—socialism, communism, or fascism—it is not democracy and it is democracy that business, including management and labor alike, is committed to preserve.

Business, like all other elements in our society, is and has been essentially honest and it should not, in the interests of the total welfare, longer suffer unwarranted and unfair criticism. It is unfortunate that, in the minds of so many, groups of citizens are set off and classified one against the other as if their interests were fundamentally hostile, one to the other.

I am sure that you are mindful of the thoughts expressed herein and I am confident that you appreciate the seriousness of the situation our economy is confronted with. I am hopeful that Congress will accept its responsibility in connection therewith.

Yours very truly,

H. A. BENNING, *President.*

Treasury Tax Proposals

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. HOLMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Frank R. Kent, in his column, The Great Game of Politics. The article, which was published in the Washington Evening Star of October 11, 1943, deals with the new Treasury tax proposals.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREAT GAME OF POLITICS

(By Frank R. Kent)

Two strong indictments have been made against the new Treasury tax proposals, to neither of which has any adequate answer been given. They have been made in both Democratic and Republican papers, by both Democratic and Republican Members of Congress and by nonpartisan and disinterested economists.

It is beginning to seem that there is no answer, and the absence of any is practically a confession of guilt. At any rate, the charges are sufficiently sustained by the facts as to justify resentment and shake confidence in the high-mindedness of the administration.

The first charge is that the Treasury's proposals are clearly political, in that they calculatingly relieve of taxes a total of 23,000,000 people, in whose hands are four-fifths of the dangerous money, the absorption of which—if inflation is to be averted—the Treasury itself asserts to be essential. It is pointed out that the manner in which the Treasury would relieve these 23,000,000 taxpayers is, first, through abolition of the Victory tax and, second, by its new device of a refundable tax.

It is further pointed out that this relief would come just before the 1944 convention in which Mr. Roosevelt will be nominated for a fourth term, and that the 23,000,000 are voters.

SMALL GROUP HIT HARDEST

Still further, while relieving this vast body of voters who have most of the "dangerous money," the Treasury proposes to soak still harder the small body of voters already taxed pretty close to the limit. All of which would enable the fourth termers to make their usual demagogic appeal in the campaign.

On its face, this is one of the most brazen pieces of politics anyone can recall.

The second charge is that, while the Treasury correctly states that $10,000,000,000 additional revenue is needed to prosecute the war and keep the Federal financial structure from sagging, both the Treasury and the White House, paradoxically, set their faces firmly against the two simplest, soundest, and most obvious methods of raising this revenue. One of these is the general sales tax, the other is economy in expenditures.

A great many years ago one of the great Greek philosophers said, "Men do not realize how great a revenue economy is." Certainly that is true of the men in this administration. Now, asking for $10,000,000,000 more revenue, they make no calculation whatever of how much of this might be raised by curtailing waste, and will make no effort along that line.

It is an attitude that cannot be defended. It ought to be understood by the citizens sweating under the tax burden now—and who are going to sweat a lot more next year—that while there have been some governmental economies since Pearl Harbor, none was due to executive initiative. On the contrary, all were made either through congressional action or forced by congressional pressure.

Such was the case with the liquidation of the W. P. A., the C. C. C., and the N. Y. A. Such also was the case with the domestic branch of the O. W. I., and such will be the case with the O. C. D.

So far from the national interests having suffered by curtailment of these agencies, the national interests have been distinctly served. The thing to be regretted is that the cut did not go deep enough—and was not made sooner. This question of "revenue in economy" soon will be brought again to the front in Congress. Senator BYRD is determined to get light upon the reason for the holding in the Treasury of $23,000,000,000 of unexpended balances—enough to finance the war for 2 years without the appropriation of another dollar. And members of the Ways and Means Committee propose to call Army and Navy officials to see whether much of this huge sum cannot be saved.

SALES TAX FAVORED

Sentiment, in Congress and outside, grows both for the sales tax and economy. Despite Executive opposition, the first may be incorporated in the bill and progress may be made in the second. It does seem that a courageous and nonpolitical administration would be urging these things instead of trying to block them.

It is not likely the Treasury proposals will be accepted, but the danger is that, the politics of the executive branch begetting politics in Congress, the result will be another compromised and confused law, which will wholly avoid realities.

The sad truth is that the administration's wartime financial leadership is political, hypocritical, hollow, unsound, and inadequate. It reflects credit upon neither the President nor Mr. Morgenthau. It would be fine if Congress could measure up to the situation in this vital business, but the chances are not very good.

Budget Bureau Questionnaire 49–R112

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. SCOTT. Mr. Speaker, a distinguished citizen of Lancaster, Pa., Mr. H. W. Prentis, Jr., president of the Armstrong Cork Co., has written me a most interesting letter regarding some of the unnecessary burdens which are placed on business in requiring the filling out of innumerable questionnaires. Mr. Prentis' letter is most illuminating and I quote it as a part of my remarks:

ARMSTRONG CORK CO.,
Lancaster, Pa., September 21, 1943.

The Honorable HUGH D. SCOTT, JR.,
The House of Representatives,
Washington, D. C.

DEAR MR. SCOTT: As I understand that a subcommittee of the Ways and Means Committee are now studying proposed amendments to the renegotiation act, I wish to call your attention to a questionnaire approved by

the Budget Bureau—Form No. 49-R112—and particularly to section R, on page 5.

The form includes 145 questions. Many of them have no bearing on renegotiation problems and to answer them would require a stupendous amount of work on the part of our already overburdened accounting staff. Here are some that are included under section R:

Question 124: Principal stockholders, either individuals or corporations, indicating percentage of ownership if over 10 percent. Set out separately the ownership by managing officers.

Question 126: Brief description of important plants, including locations, type of construction, square feet of floor area, products manufactured, percent of output on war business. Also for the entire company give average number of employees now and in peacetime.

Question 127: List of major customers and approximate dollar value of products purchased from company during the latest closed fiscal period.

Question 128: List of major companies for which company is a subcontractor, and dollar value of such sales by company.

Question 129: Dollar value and list of your principal subcontractors, method and extent of your handling them with reference to materials, supervision, inspection, and financing.

Question 131: Labor relations, union or closed shop, wage increases, number of shifts run, stated as X percent for second shift and X percent for third shift, with statement as to increased executive personnel to handle extra shifts. Piecework and bonuses for the same.

Question 132: Significant contracts or orders received on competitive-bidding basis, extent of competition, and how company's low costs and efficient operation offset territorial and freight differentials. Comparison of important high- and low-cost producers in same line.

Question 133: Dollar value for latest fiscal period of significant raw materials and subassemblies, and from whom purchased.

Our company manufactures approximately 360 regular products, exclusive of the many munitions items that we are now making for military purposes. We have 16 factories in the United States. One of them covers more than 50 acres. To answer question 126, having to do with the "type of construction, square feet of floor area, etc.," would require a small book. Again, what earthly bearing on renegotiation has question 127 which asks for a list of our major customers and the approximate dollar value of products purchased? We have thousands of customers and why we should be asked to pick out the major ones and supply information of this kind, which would be of value to our competitors but which has no bearing on renegotiation, is beyond my comprehension.

The manufacturers of the United States are being urged to speed up military production. Our company certainly is doing everything in its power to do so. We had 10,000 employees in 1940, we have lost 3,000 to the armed services, and have almost 18,000 today, the increase being due entirely to the operations of our munitions division. Our supervisory, engineering, production, and accounting resources are stretched to the limit. It will take weeks and months of valuable time to go through the renegotiation process anyway even though this year on total business aggregating $100,000,000 we are not likely to earn net after taxes much more than $3,000,000 against average earnings of about $5,000,000 on $40,000,000 or $50,000,000 worth of business before the war. So why, I ask you, should this company and other American manufacturers similarly situated be burdened with the necessity of answering a questionnaire of this description?

Anything that you can do to have this questionnaire modified and simplified would be deeply appreciated.

Yours very truly,

H. W. PRENTIS, Jr.,
President.

Look Who Is Talking

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD I include a recent editorial from the Marion (Ohio) Star. This editorial is most timely. It recognizes the need of combatting the great organized movement directed by those who do not believe in constitutional government and free enterprise. It is a demonstration of opposition to the foul means that are being used to destroy the Congress. So long as the Congress remains the people can, through frequent elections, have hope of restoring liberty in the United States and preventing our country from going the way of the totalitarian dictatorships of Europe.

I congratulate the writer of this editorial for his timely and valuable contribution.

LOOK WHO'S TALKING

Whenever it questions an administration position Congress is accused of playing politics, a charge that will be made frequently as next year's national election comes closer.

It will be pointed out—and with good cause—that Congressmen are building political fences with an eye to next year's votes.

But since when has it been a political misdemeanor for Congressmen to square accounts with voters? That is the way representative democracy works. That is the way a government responsible to the people it governs is supposed to work.

Before the accusation that Congressmen are running for office and devil take the hindmost is taken too seriously it is important to know who's talking. Who is blaming the representatives of the people for trying to decide what the majority of the people want and trying to give it to them?

The accusers are found in two classes. In the first class are those who know exactly what they are saying and intend to keep right on saying it. Their aim is to discredit Congress with the people. They want to develop a strong executive government at the expense of anything that happens to stand in the way—the judicial branch or the legislative branch. They are the bitter-ending new dealers who once exulted in a campaign to make Congress a "rubber stamp." They are the minority in the United States that needs watching—the minority that claims it alone knows what is good for the people and what they should get.

In the second class are Americans who have fallen into the bad habit of copycatting slanders on Congress without realizing what they are doing. Instead of being grateful for a chance to be represented in legislative debate and action, they betray their own interests by criticizing their representatives—accusing them of playing politics as though the only politics played in the United States Government was by Congressmen. Everything about Government is politics of one kind or another, and it is time right now to dispense with the vicious propaganda that it is wrong for Congress to perform its duty in the system of checks and balances that keeps the Republic from turning into an autocracy.

Department of National Defense and Permanent Peace Resolution

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials published in the Raleigh News and Observer of October 2, 1943, from the pen of its distinguished editor, former Secretary of the Navy and former Ambassador to Mexico, Hon. Josephus Daniels. One editorial, entitled "Seeing the Light," ably discusses the question of a Department of National Defense. The other is a timely editorial entitled "Will Santa Claus Fill It?", dealing with the subject of a permanent peace resolution, and action now.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

SEEING THE LIGHT

Upon their return from a visit to all fronts the four Senators, who were eyes and ears for the legislative bodies, have made report of what they saw in courage and also in the need for changes to advance toward victory. In an address in the Senate, Mr. LODGE told his associates that "there is a surprising amount of sentiment among the older men for a single Department of War, with autonomous land, sea and air services."

For more than a dozen years the News and Observer has been advocating the abolition of the offices of Secretary of War and Secretary of the Navy, to be replaced by a Secretary of National Defense under whom air, land, and sea operations would constitute a single and perfect direction of preparedness in peace and operation in war. At present we have half a dozen or more navies and branches of aviation and separate land forces. It is expensive and prevents training together in peace, which is essential for the best cooperation and highest efficiency in war. They do not work together in getting ready for war and when war comes it takes time to secure united action. One glaring example of disunity and defeat was emphasized at Pearl Harbor when the Japanese swooped down and wrought destruction and brought us into the war The land forces and the Army air forces were under the direction of a general and the sea and naval air forces were under the direction of an admiral. They did not even confer, much less coordinate, and they were not on the alert when the situation demanded alertness and readiness to meet any attack. Both officers were removed but still there is lacking unified command of all forces. In the stress of war, after much talk and time wasted in conferences. these forces work together efficiently.

But it takes time for two separate branches to be brought together as a unit.

In the early days of the Wilson administration the Secretary of the Navy worked out what he thought were good plans to promote economy and secure perfect cooperation between the Army and the Navy. When he presented his plan to the Secretary of War, that able and distinguished militarist said: "I don't care a damn about the Navy and you don't care a damn about the Army. You run your shop and I'll run mine." That sentiment was expressive of what most high-ranking Army and Navy officers felt. And nothing was done for unity until a cooperative Secretary of War was named who saw the necessity of close cooperation. When the World War began there was a division of marines trained and equipped, ready to go. But some Army officers thought land fighting was an exclusive Army function and didn't welcome sending the marines among the first fighting troops in the American Expeditionary Force. However, the Secretary of War and other officers welcomed the marines as a part of the land forces and they went early to France and proved themselves worthy comrades of the men in the Army.

It is gratifying, after the long and almost perfect separation and some jealousy, to learn from Senator LODGE that on the fighting fronts "there is a surprising amount of sentiment among the older men for a single department of war."

They are beginning to see the light!

WILL SANTA CLAUS FILL IT?

A Republican Senator is quoted as saying that the Senate will have ready a permanent peace resolution by Christmas. Evidently hoping that Santa Claus will bring a resolution that will be "clear, forcible, and to the point, but perfectly noncommittal" in line with the Mackinac Island deliverance, these Senators depend upon Santa's reindeers to fill their stockings with a resolution the committee seems unwilling to draft or bring into the open Senate.

Other Senators predict that no action will be taken by that body, that it will not concur in the Fulbright resolution, but will draft one of its own. There have been half a dozen or more resolutions pledging participation in a world organization to prevent future wars. They seem to have been placed in cold storage while the world wonders if the Senate will repeat its attitude of a quarter of a century ago, declaring for a League of Nations but demanding reservations that would nullify the peace they claimed to favor.

The people of America, including the armed forces, are tired of delaying and shilly-shallying. They demand action in the shape of a forthright declaration that this country will make such full contribution to prevent war as may be necessary to prevent a recurrence of the present holocaust.

Some Senators are jealous of the Senate's prerogative as a treaty-making body and resent the desire of the House to have a voice in international affairs. The Constitution ought to be amended so that treaties that obtain a majority of both legislative bodies could be ratified. The ability of one-third of the Senators plus one to defeat the will of the people, as was done 25 years ago, is a deterrent to securing peace. That veto of the will of a majority by a small minority of Senators should not exist in a republic based upon majority rule.

If the Senate is unwilling to accept the Ball-Hatch-Hill-Burton measure which has been before that body for months, the least it can do is concur in the Fulbright resolution which commits us to an international organization for world peace. It could then later settle upon the details. But a solemn pledge to attain the goal of lasting peace should be made by both legislative bodies without further delay.

Fly's Fresh Talk

EXTENSION OF REMARKS

OF

HON. SAM M. RUSSELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. RUSSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop:

FLY'S FRESH TALK

(By Frank C. Waldrop)

The radio broadcasting industry is just about the timidest and most chicken-hearted that ever developed in this country. Otherwise, it would stand up and swap punches with James Lawrence Fly, chairman of the Federal Communications Commission, while it still has a chance to save itself from full governmental domination.

True, Mr. Fly and his six fellow commissioners have the power of life and death over radio already. That is, they have it because radio let them take it.

The law of Congress says the F. C. C. may grant or take away broadcasting licenses according to its own judgment of public interest, necessity, and/or convenience.

That phrase "public interest, necessity, and/or convenience," is so broad and meaningless that it can be, and is, used to alibi just about anything the Commission wants to do.

And radio just continues to go around making beautiful noises and hoping to appease. People like Chairman Fly of the F. C. C. don't appease. Mr. Fly is out to control the traffic that goes over the radio waves, and he knows just how he intends to do it.

An excellent sample of his method was freely given at a luncheon before the Radio Executives Club in New York City October 7.

He there and then told the radio operators that he ominously disapproves of their refusal to sell radio time to people wishing to solicit memberships and support for political and economic causes. And he raked them over the coals because they edit and regulate the programs of the stations' and networks' hired commentators.

Of course, radio gives time to cause-expounders, but Fly wants such time sold over the counter. He says the present system is undemocratic. He said:

"Here in the United States today we have freedom to an almost absolute degree. Our radio receivers have free-turning dials and band switches, and there is no law which hinders listeners from tuning-in the program of their choice—or from turning off the radio altogether.

"The listeners, however, are shackled by a few outmoded conventions which in reality the (radio) industry should never have inflicted on its audiences. Radio is the greatest medium thus far created for the dissemination of information. Those entrusted with the facilities of radio cannot impair the freedom to listen by restrictions imposed at the transmitter end."

Now you need to be only a little familiar with the double talk of such witch burners as Fly to know what he means by all this. Turn it upside down, sideways, look it up in Webster's, or consult your nearest dealer—it remains as follows in plain English:

"It is true that people in this country can switch off or on any program they like. But, by cracky, you broadcasters haven't equal freedom to broadcast what you think you can best get them to listen to. You've got to make up your traffic according to F. C. C. ideas. Or else!"

That's all it is. It isn't any more. Or less.

Here is a Government agent telling an institution of free speech—the most powerful in man's history—that he doesn't like the way it is using its freedom.

Well, he has a right to do that. He even has a right to try to put the muzzle on radio and control its traffic according to his ideas. He has a right to try.

But the radio broadcasters also have a right to tell him to mind his own business—which he certainly is not doing today. The real job of the F. C. C. is to hand out broadcasting licenses to American citizens in such a way that one program does not jam another at the listener's loudspeaker, and to protect all parties from one another as they battle out their place in life over the airways.

Its job is not to meddle with the composition of radio broadcast traffic. That is between the broadcaster and the listener.

Radio should tell Fly to shut up and stick to his job, which isn't so much when you consider what it really comes to.

But will radio do that? Radio has always shown a chicken heart in its meetings with the F. C. C.

So we may now expect Mr. Fly & Co., progressively, to move in and start editing radio to suit their own little plans. Said plans being—Government boss everybody, all the time.

Threat of Socialized Medicine

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. PLOESER. Mr. Speaker, I extend an editorial from the St. Louis Globe-Democrat, Thursday, October 7, 1943, which is a most constructive contribution, and is a sound, logical analysis of portions of the Wagner-Murray bill:

THREAT OF SOCIALIZED MEDICINE

The Wagner-Murray bill to broaden the Social Security Act was introduced in the Senate last June. It is known as bill 1161. Among its numerous proposals to regulate us from the cradle to the grave, in accord with the recommendations of the National Resources Planning Board's "American Beveridge Plan," is the particularly insidious one that would abolish private medical practice and turn the medical profession over to the Government. Here is dangerous socialization, entailing a centralization of authority in the hands of a single person—the Surgeon General of the United States—who would have the power to do these things:

To hire doctors and establish rates of pay—possibly for all doctors;

To establish fee schedules for services;

To establish qualifications for specialists;

To determine the number of individuals for whom any physician may provide service; and

To determine arbitrarily what hospitals or clinics may provide service for patients.

Under the guise of furnishing free general medical, special medical, laboratory, and hospitalization benefits for an estimated 110,000,000 Americans, the bill, if adopted, would virtually wipe out the private practice of medicine and turn over to the Surgeon General of the Public Health Service the vast sum of $3,000,000,000 annually with which to exercise personal control over the Nation's

doctors. This is a preposterous undertaking, but this is what the Wagner-Murray bill contemplates.

The measure calls for increased social-security taxes by both employer and employee. Wages up to $3,000 would be subject to a 6-percent tax imposed on both employer and employee. Every self-employed individual would pay a 7-percent tax on the market value of his services up to $3,000 per year; and Federal, State, and municipal employees, under certain conditions, would pay a tax of 3½ percent. It is estimated that the total revenue under the bill would be $12,000,000,000. Of this sum the medical care and hospitalization account would be allocated one-fourth, or approximately $3,000,000,000.

The national physicians committee for the extension of medical care, which is fighting the bill, says the Surgeon General could break down the fund thus:

Allocate 20 percent for administration costs, or $600,000,000.

Hire every effective physician in the United States at an average annual salary of $5,000, for a total of $600,000,000.

Hire every available bed in every non-Government owned hospital (368,046), 365 days each year $5 per day, at a cost of $671,683,950.

Pay $2.50 per day for each and every Government-owned hospital bed (1,051,781), 365 days each year, at a total cost of $959,750,162.

Spend for drugs and medicines, $168,565,887.

If the Surgeon General is made a dictator in fact in matters concerned with national health, it is obvious that the initiative which has made the medical profession outstanding will be destroyed. What incentive will there be for research? When American doctors are made subservient to political considerations, which is one of the chief dangers of the proposal, what is left except hack service?

The prospect of state medicine is made more threatening because of the war which has called 50,000 physicians to the colors. Dr. Ross T. McIntyre, Surgeon General of the Navy, estimates that at least one-third of this number will remain in the services after the war, because military needs will be great and the life comparatively comfortable.

Today many communities are virtually without a doctor, and the general situation many grow worse before peace comes. This will give the planners of a fantastically regimented America the "in" which they now seek.

The medical profession should be supported in its fight to thwart the considered move to make it a slave to a socialization scheme that masquerades under false colors of humanitarianism.

War Prohibition

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution forwarded me by Miss Lillie Eckard, Bucyrus, Ohio, that was unanimously adopted at the September 27, 1943, rally in the Epworth Methodist Church, Bucyrus, Ohio, relating to enactment of H. R. 2082:

Be it resolved, That we, an assemblage of citizens gathered at a rally meeting in the Epworth Methodist Church of Bucyrus, Ohio, this 27th day of September 1943, declared ourselves in favor of the war prohibition bill, H. R. 2082, introduced by Hon. JOSEPH R. BRYSON, which bill prohibits the manufacture, sale, and transportation of all alcoholic beverages for the duration of the war, and until demobilization is completed.

We petition our representatives to work and vote for the speedy passage of this bill.

R. T. LOWMAN.
E. J. ELLIS.

(This resolution was unanimously adopted by the congregation at this meeting.)

Wheat for Flour, or Alcohol

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. SCRIVNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Iola (Kans.) Register, which is a timely discussion of a situation apropos a threatening shortage of wheat for human consumption—flour:

DOESN'T MAKE SENSE

It is hard to understand why Government does some of the things it does.

Food, as you may have heard, is one of the major shortages confronting the country and the world. Wheat, a rather well-known item of food, is becoming shorter every day, chiefly because so much of it is being used for the manufacture of industrial alcohol for explosives and synthetic rubber.

If, therefore, it were possible to substitute blackstrap molasses for wheat as a basis for industrial alcohol, the high desirability of such a procedure would seem to be self-evident. An effort to do this has just been concluded—in failure—in Washington.

A Cuban delegation had come there in an effort to sell our Government some 180,000,000 gallons of molasses. No sale was made because the Government refused to pay more than 5⅝ cents per gallon and the Cuban producers refused to sell at that price. Last year our Government paid 13 cents a gallon and the O. P. A. ceiling price this year on domestically produced molasses is 18 cents.

Will someone please explain why our Government—in time of war when nothing matters but victory and the saving of human lives—can afford to pay 18 cents a gallon for domestic molasses but can't afford to pay even 6 cents a gallon for Cuban molasses?

On a purely dollar-and-cents basis of what it costs to distill alcohol from wheat, the Government could pay as much as 35 cents a gallon for molasses. But far more important is the fact that every 4 bushels of wheat saved will provide one person with foodstuff for a whole year, or will provide enough feed to produce 35 pounds of pork.

Next year we shall need nearly a half million gallons of industrial alcohol. There will be, according to Government research, enough West Indian molasses available by June 30, 1944, to make 190,000,000 gallons of that quota. If all this could be used, it would save enough wheat to give bread to 13,000,000 people for the entire year.

A couple of months ago the Office of Economic Warfare made a survey of the industrial alcohol situation which stated that the "immediate necessity" of conserving wheat now being used for industrial alcohol called for "prompt and decisive action."

But this "prompt and decisive action" is currently being held up by price haggling over a few cents a gallon. It doesn't make sense to me.

Price of Milk at Denver, Colo.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

DENVER MILK PRODUCERS, INC.,
October 7, 1943.

Hon. MAYOR AND COUNCILMAN
OF THE CITY AND COUNTY OF DENVER,
Denver, Colo.

GENTLEMEN: We are writing to inform you that unless the producers of milk supplying the Denver, Colo., market receive a raise in the price they are being paid for their milk not later than November 1, 1943, we will be forced to divert the major portion of the milk to manufacturing plants. When the transportation is considered, these plants can pay us more than we get in Denver as they are not under the same price control order the fluid distributors are.

Our feed costs have advanced 85 percent in the past year and labor from 35 percent on some farms to 100 percent on others, while the same per quart price (13 cents) has prevailed for 2 years and the Office of Price Administration has refused to recommend to the Director of Economic Stabilization that our price be raised. Our dairy farmers are operating at a loss. We can save some of the loss through diversion to manufacturing plants and this we must do unless we can get more relief than offered us.

The War Food Administration has announced a milk subsidy program that is not satisfactory. If we get the maximum subsidy, it will not be sufficient. We do not know when we will get it or how much it will be and we must have the advance now to pay our increased feed costs, and the subsidy is only temporary.

We have a great deal of milk produced closer to manufacturing plants than Denver. They can handle our milk and net us a higher price than we are now getting.

We respectfully submit this to you with the request that you promulgate an excise tax of 2 cents per quart of milk to be paid milk producers, as has been done in other cities to avoid the catastrophe we now face.

Very truly yours,

W. C. MOORE, *Manager.*

DENVER MILK PRODUCERS, INC.,
Denver, Colo., October 7, 1943.

DR. DENNIS A. FITZGERALD,
Deputy Director Food Production Division, War Food Administration,
Washington, D. C.

DEAR DR. FITZGERALD: We desire to place before you the unusual dairy feed situation facing the Denver, Colo., milk producers at this time.

Under normal conditions the major portion of our dairy feeds are produced on our own farms but that condition does not exist this year.

Our principal roughage crop is alfalfa hay. Some was lost this year through plowing up of some fields due in part to support prices established for potatoes and dry beans which would net the producer more than his hay has been netting him. About 60 percent of the first cutting was lost from greenbug infestation. The second and third cuttings were about normal but more hay is required this year on account of our increase in dairy herds made necessary to take care of the milk needs of an increased civilian population and to supply seven Army camps with milk as well as the largest Army hospital in the United States. Our milk production in April this year was 26 percent above April last year.

All of these factors make it necessary for us to reach out beyond our normal hay production area for the hay required and to get this to our dairy farms it must be baled at a cost of $4.50 per ton and the longer haul adds almost as much more for trucking.

The Army purchased large quantities of the hay in the State to take care of their horses and mules at Camp Carson, Camp Hale, and Camp Fort Robinson. Because of drought in other areas in United States, hay buyers have come into the State and are purchasing hay and shipping it out causing a very large increase in price. Hay that was purchased in the Platte Valley northeast of Denver last year at $6 per ton in the stack cannot be purchased at less than $16 per ton in the stack this year. To this baling and trucking must be added.

Barley is our main dairy grain and we had a large crop of it but at the time of harvest there was no corn in the Missouri River markets and they came into the Denver market and purchased large quantities of our barley at a higher price than we have ever had before. Last year barley was purchased from the combines at 80 cents per hundred. This year it was $1.80 and the market has advanced a great deal since then. The feed dealers in Denver are now charging $2.55 per hundred for whole barley. The following quotations on feed will give you the information as to the comparison between the 2 years:

	1942	1943
Hay.....ton..	$10.00	$26.50
Barley.....per hundredweight..	1.45	2.55
Dairy mix.....do....	2.15	2.95
Yellow corn.....do....	1.75	2.34

In September 1942 our blended price for the Denver market was 63 cents per pound butterfat, while in September 1943 it was 76 cents per pound butterfat. It can be readily seen that our feed prices have advanced way out of proportion with our milk prices, and based on these figures we feel that it is absolutely necessary that this area be granted a full 50 cents per hundred subsidy, and we hope you will approve this amount.

Very truly yours,

DENVER MILK PRODUCERS, INC.,
W. C. MOORE, *Manager*.

Chinese Immigration

EXTENSION OF REMARKS

OF

HON. JOSEPH RIDER FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution 285

Resolution requesting the Congress of the United States of America to amend the immigration and naturalization laws in such manner as to permit the entry of Chinese into the United States of America, and grant to them citizenship privileges

Whereas the Chinese people have earned the undying admiration and gratitude of the United Nations by their heroic resistance to the aggression of the common enemy—Japan; and

Whereas it is the announced policy of the Government of the United States of America that the peace of the world after the war can be maintained only upon the basis of the future harmonious cooperation of the people of the United Nations upon equal terms regardless of race or creed; and

Whereas the immediate removal of racial discrimination in the immigration and naturalization laws would render incalculable aid to the cause of the United Nations by bolstering the fighting morale of our ally—China: Now, therefore, be it

Resolved by the Board of Supervisors of the City and County of Honolulu:

SECTION 1. The Congress of the United States of America is hereby respectfully requested to enact the legislation to amend the immigration and naturalization laws in such manner as to permit the entry of Chinese into the United States of America, and permit them to become citizens of the United States of America.

SEC. 2. Copies of this resolution shall be forwarded to the President of the United States, to the President of the Senate of the United States, to the Speaker of the House of Representatives of the United States, to the Committee on Immigration of the Senate of the United States, to the Committee on Immigration and Naturalization of the House of Representatives of the United States, to the Secretary of the Department of the Interior, and to the Delegate to Congress from the Territory of Hawaii.

Date of introduction September 28, 1943, Honolulu, T. H.

Introduced by M. D. Beamer, J. M. Asing, Chuck Mau, Victor K. Boyd, M. C. Pacheco, N. T. Teves, Philip N. Sing.

Approved September 29, 1943.

LESTER PETRIE,
Mayor, City and County of Honolulu.

Mail That Murders Morale

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. LANE. Mr. Speaker, we know from the men themselves in Australia, Alaska, and Alabama that they wait anxiously for mail from home and rejoice when it is received. We have witnessed in movies or painting the excitement and anticipation that mail call arouses. But from our distance and by our separation, we do not know the scene which follows the opening of the mail. Too often it is one of dismay, disappointment, or disgust. Philip M. Hannan, writing in the Columbia magazine for September unveils the scene and demonstrates that too often the letters should not have been written. The author has been for several months the only Catholic chaplain at an Army Air Force basic-training center in which there were more than 11,000 Catholic men. He has had unusual opportunity to deal with many men whose problems stemmed from imprudent correspondence. Note, then, what he says:

MAIL THAT MURDERS MORALE

(By Philip M. Hannan)

(The author has been for several months the only Catholic chaplain at an Army Air Force Basic Training Center in which there were more than 11,000 Catholic men. He has had occasion to deal with numerous cases where difficulties were caused by imprudent correspondence.)

It has been said that morale should be spelled mail. It should also be added that morale is good or bad accordingly as mail is good or bad. Apparently about 10 percent of the population does not realize that a letter can inspire suicide as well as encouragement, and this article is an attempt to reach at least some portion of that population.

A chaplain's office is a sort of filter for the troubles of the soldier, and every day soldiers come in who are walking apparitions of dejection because of letters they have received from home. These letters can be divided roughly into wife-husband letters and family-son letters.

First there is the letter from the selfish wife who has somehow convinced herself that separation from her husband is a far greater matter than the fate of the Nation. The following is a typical letter of a selfish wife to a husband in the Army just about 7 weeks (a soldier is eligible for a furlough only after 6 months service in the Army):

"I am so terribly disappointed to hear that after all these months you are still not able to get a furlough, I am getting to the point now that I don't believe you want to come home and that you don't care for me or your home.

"Since you left for the Army, our neighbors' sons have been on furloughs twice and each time for over the week and your brother has been home several times. So small wonder, dear, that I am convinced that you are changed and that in a short time the Army will be breaking up our home. We hear so much today about keeping up our morale, but I often wonder if the Army ever considers the morale of the mothers and wives left behind and what it is doing to our home life.

"I most certainly would not like to see our home broken up by the Army, after being so happy together, but unless you make some attempt I'm afraid it shall come to that."

It might be stated that such letters can break up homes; such colossal selfishness disgusts any soldier.

"JUST HAVE A GOOD TIME, DARLING"

Then there is the letter of the sick wife. She knows that the Army grants emergency furloughs to soldiers whose immediate relatives are critically ill. She writes:

"I am glad to hear that you are happy in the Army and interested in your work. So they are going to send you to airplane mechanic's school. I know you'll like it because you always wanted to do it.

"I went to see the doctor yesterday about my illness, and he told me it was just my nerves. He told me that I would be much better off if I got something to do. But you know, darling, that he just can't be right. It's got me now so that I haven't eaten for 2 days and don't care to eat. I just sit and cry and wonder when the war will be over. This morning I thought about committing

suicide. Maybe I shouldn't write this way but I just couldn't help it. Honest, dear, if you don't come back soon I hope I die. That's just the way I feel about it. Can't you speak to your officer or somebody so that they will let you come home?

"But, honest, honey, I don't want to make you feel bad I want you to work your way up in the Army just the way you told me you wanted to do. So go right ahead and don't worry about me. No matter what happens to me I want you to be happy in the Army."

Those who "just can't help writing" such letters can at least help mailing them. Frequently soldiers show me letters that are a quick succession of deathbed farewells and wishes for the happiness of the soldier; after tragically assuring their husbands that they are soon going to die (reason not stated) the wives build up a magnificent act of abnegation and avow that, dead or alive, they only wish their husband's happiness. Unfortunately, the censors can do nothing about deleting such cheerful and encouraging news. After the soldier has consulted the chaplain about his trouble the chaplain sits down and writes a sharp, short note unmasking the crude histrionics of the wife who is only craving sympathy and who is just about as unselfish as a racketeer. The chaplain's note infuriates the wife who suddenly rouses herself from her death torpor and replies in a perfectly menomous letter.

If you don't love your husband, for the sake of your husband, for the sake of the country, for the sake of the chaplain, and for the preservation of your life, don't use the tragedy of war as a convenient opportunity to slip out on him. And never plead such a course on the grounds of honesty to soldier. There is nothing honest about deserting your husband, and don't delude yourself that he will calmly accept it. He will fight the proposal with every means available and at the first opportunit, he will effectively fight the man for whom the wife is being "honest."

As may be expected, there is a very great deal of trouble arising from sudden war marriages. The pattern is the same: Joe is just 19 and to be drafted; he and Susie, still in fourth-year high school, have been seeing each other for a few months, and he, recently rich from a defense job, has delusions of grandeur; they both begin to dramatize their first separation by war—he to go God knows where, she gradually to wither from frustrated love at the advanced age of 17; they get married and 1 month later he goes to the Army.

The aftermath is often not so heroic. The letters they exchange at first are ecstatic, but she can't live on his $50 monthly allowance, and, of course, she gets a defense job. Shop talk and conversation develop with the other workers, some of whom have always worn pants. One of them drives her home: "Why not come with us? It's patriotic to save gas." As the rides increase the ardor of the letters to the husband decreases. The letters decrease in number—she doesn't have time to write, she is too tired. Finally, there is a week or two of no correspondence; the soldier calls frantically by phone She is cold, unresponsive, says she can't tell him by phone, she will write. She writes a blunt, crushing confession. She has found that she no longer loves him. It was all a mistake. She is sorry.

Remember, a young married soldier's whole sustenance is his home tie. Remove his home and you have removed his spirit. Of course, there are not so many broken recent marriages as to constitute a national morale or moral problem, but there are enough to make us take cognizance of the situation.

It must not be thought that because I have treated only of soldier-wife letters that they are the only source of problems. The majority of harassing letters arise from families unloading their problems on the already burdened shoulders of the soldiers. A soldier's pack is generally heavy enough; don't make it heavier.

LETTERS WRITTEN WITH TEARS

Weak-willed parents must be taught to fight the war with their soldier sons. No matter what they feel, they must not write with tears. Imagine how the following letter bolsters the determination of a home-loving boy:

"We certainly hope and pray that you are well. I pray all day that soon you will be able to come home or be sent somewhere in this section. We are glad to hear that you are well and that you have met some nice boys from near home. There are almost no young men left in the neighborhood, and when we go to church we only see old people and women.

"We miss you very much. I feel pretty well, but if you could only see how your father has changed since you left. He doesn't say anything, but I can tell he's always thinking and worrying about you. Sometimes when he goes off to work in the morning he looks as though he ought to be going to bed, he looks that bad.

"The other night your Uncle Frank and Aunt Elsie came to see us and talked about their sons in the war. Uncle Frank says it's going to last 10 years and never expects to see Bill and Jack again. Isn't it awful? As they left they told me I ought to do something about Pa because they think he might die.

"I am so worried now I don't know what to do. If they would only send you near home so you could come home every week end, we'd feel much better. There are a lot of jobs you could do here at the airport. We're always praying and thinking of you."

A constant barrage of such letters may land the soldier in a psychopathic ward. Unloading such worries on a soldier son will no more relieve the mother than infecting her son will relieve her of meningitis. The solution of a mother's problem rests with herself and her determination, and she must realize that she is definitely adding to her son's chances of returning some day by helping to ease his mind.

The climactic example of a soldier harassed by his family was one who received four special delivery letters every day, each one from a different member of his family and one from his wife. Apparently the battle in Europe was a picnic compared to the battle at home and each combatant wrote the soldier every day condemning the actions of the wife or other members of the family. After about 3 weeks of this the soldier didn't know front from back, and began having attacks of hysteria. The soldier asked for a furlough to arrange for ending the war at home; it was refused, the authorities rightly insisting that such a furlough might precipitate countless other domestic troubles in the homes of soldiers. The soldier came to the chaplain, who suggested a telephone call home and suggested a few points that should be put across. The soldier made the telephone call and knocked out the war by an 18-minute verbal barrage that completely silenced everyone. The wife came down in a week and the soldier promptly regained his mental equilibrium.

Of course, a good deal of the hysteria over troubles at home is caused by the feeling of dependents that their plight is simply ignored. Every dependent of a soldier must remember that the Nation is making a sincere and successful effort to help him or her. Of course, the burden of war falls unequally on the citizens and only the good God can fittingly reward them for their sacrifices, but the Government is supporting in a material way those left destitute by the war. When difficulties arise that cannot be met by resources at home, soldiers' dependents should appeal to the local branch of the Red Cross or to the Army Emergenc Relief; or they can have the soldier make the appeal. Acquaint these organizations with your problems, but don't worry the soldier with a burst of hysterics—they are not needed to secure help. If you feel that your case is not receiving proper attention, any chaplain will be glad to help you receive it. One of the pleasures of a chaplain is to help a deserving family secure the help owed to it by the Government.

War is grim and heart-rending; it demands strict discipline. It must not be thought that a chaplain is being cruel when he urges discipline, for it is the greatest guarantee of survival. War cannot be fought with tears, and when strength is needed it is folly to indulge in weak sentiment. The Army goes to extraordinary pains and expense to get the mail to the men; cooperate by sending encouraging letters. In the invasion of Africa we are told that the mail was carried up to the front lines to the men, and some of the soldiers lost their lives in delivering the mail. I often wonder, recalling many of the letters I have seen, what irony of fate it may have been to have soldiers sacrificing their lives to deliver letters that completely unnerved the soldiers receiving it, and may have resulted in the loss of their lives.

A few simple thoughts will help when writing letters. Don't write simply what you feel like writing; write what will help the soldier. The letter is intended primarily to help him, not you; it is intended to encourage him, not relieve you. The difference in letters makes the difference in the remarks I overheard a few days ago after mail-call; one soldier groaned, "There's no sense in my fighting this war," and the other one whooped, "Getting my letter is just like getting a loaded refrigerator."

Are We Ashamed of Americanism?

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wheeling Intelligencer, Monday, October 11, 1943, entitled "Are We Ashamed of Americanism?":

The return of a group of United States Senators from their battle-front tour has served to emphasize a lack in American foreign policy that is becoming increasingly apparent. That is, the absence of vigorous Americanism in our dealings with foreign nations.

The testimony of these men is unanimous on a point which this newspaper, among others, has been insisting upon for a long time. That is, that the policy of every country with which we have any dealings, friend and foe alike, centers in the advancement of national self-interest. The United States alone in the entire family of nations, pursues an official foreign policy of internationalism. Our officials are the only ones in all the world who seem willing to sacrifice the interests of their own people for an international ideal.

The reports of our returning Senators emphasize something else; something less pleasant to talk about in the midst of war. That is, that England in particular is looking

out for the welfare of England, and that official Washington seems to be almost completely under the domination of British influence in the formulation and application of foreign policy. It is unpleasant to talk about this because of the close collaboration between England and the United States in the war, our close natural relationship, the similarity of many of our ideals, etc. There always is the danger that frank discussion of practical statesmanship in the realm of world relations will be construed as a thrust at United Nations solidarity in prosecution of the war That danger, however, must be risked, if we are to avoid the complete submergence of American interest in the post-war period.

Among the things we learn from the Senators referred to are: That the British, in control of most of the means of communication, have been disposed to emphasize the achievements of their own forces and to soft-pedal American accomplishments; that the United States not only has provided 60 percent of the oil used in operation of the war by the United Nations, although possessed of less than 25 percent of the oil resources, but that American oil is being used in areas which British-controlled sources could more easily supply, and that civilians in parts of Asia have more American oil at their disposal than Americans have; that England has removed American identification from supplies received under lease-lend from this country, and sent the goods to Turkey as British goods; that England, even in the midst of waging war, has been vigorously protecting foreign markets and building them up for post-war use.

We have no criticism of this to offer. The British Government is simply doing what we believe it is the duty of any Government to do—protecting and advancing the interests of its own people. Our criticism is of the American Government for failure to do the same thing; for being too preoccupied in the first place with the vision of a world of milk and honey established through some selfless scheme of international collaboration, and for being too susceptible to British influence in the second place.

The power of this British influence over Washington certainly is not to be doubted by any thoughtful American. It made its appearance very early in the Roosevelt era when the economic doctrine of the Keynes school of thought found such favor in official quarters. It mounted steadily in the pre-Pearl Harbor period of the war, and has been even more marked since our active belligerency. It resulted in the strategy of concentrating on Germany while prosecuting a somewhat guerilla type of warfare against Japan, a policy which has found high disfavor among our military leaders in charge of the Pacific phase of the war, and which was the subject of particularly caustic criticism by one of the senatorial tourists, Senator CHANDLER. It is responsible in part at least for the lack of cordiality in American-Russian relations.

And it has manifest itself upon several occasions in the revelation by Mr. Churchill of important decisions or developments involving the United States of which the American people were in ignorance until Mr. Churchill spoke. All of us, no doubt, will recall that the first the American people heard of the international food conference scheduled for and subsequently held at Hot Springs, was when Mr. Churchill told the world about it. And as late as last Thursday, it was London, not Washington, that announced the submission of an American Treasury plan for an international reconstruction bank to operate in the post-war period. Incidentally, it might be observed in passing, that the terms of this proposed scheme are so extreme as to evoke the description "economic imperialism" by respected American financial authorities.

What it all adds up to, in our viewpoint, is the necessity of the American people adopting a sound policy of enlightened nationalism in world affairs, and of placing in charge of that policy men who believe more in the realities of international relationship than in any fuzzy global dream. We need, in short, what Senator BREWSTER, of Maine, one of the battle-front tourists, described to the West Virginia Bar Association at Charleston on Saturday as a "tough all-American team" to protect the Nation's diplomatic and economic interests now and in the future. We can't recruit such a team from those softened up by foreign complexes or obsessed with the notion that there is something crass and ignoble in Americanism.

Here's Mud in Your Eye!

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. REES of Kansas. Mr. Speaker, under unanimous consent granted me by the House, I am including as a part of my remarks an editorial from the Carmie Democrat, of Carmie, Ill., under date of September 23, 1943:

HERE'S MUD IN YOUR EYE

They say oil will win the war, and America's petroleum producers are eager to do their part to supply the fuel to crush the Axis nations. The time has come when some powerful knight errants had better start breaking some lances in behalf of the independent oil producers if we expect to get this bloody job done anyways soon.

Representative JAMES V. HEIDINGER'S bill to prohibit any governmental agency from fixing the price of crude oil at less than $2 a barrel will find lots of backers among reasonable people who know that the largest percentage of new oil fields are found and developed by the independents. These same reasonable people will tell you that the reason for a gasoline shortage is the lack of a profit incentive to get new oil fields.

William Allen White's famous Emporia Gazette stepped forth the past week as a knight errant and broke one of those sorely needed lances for the independents. Here, in part, is what the newspaper said:

"The independent oil producers who have been bumping their heads against a mossy stoned price ceiling for crude wish the O. P. A. chieftains would give them as much profit-motive consideration as for the distillers and distributors of whisky.

"As to the whisky price comparison with oil, an Emporia authority on both offers a few figures:

"1. Whisky, 100-proof bourbon, $3.50 pint.

"2. An oil barrel of 42 gallons equals 336 pints.

"3. Oil barrel full of whisky, $1,176.

"4. Whisky's half water, actual barrel cost, $2,352.

"5. Crude oil, no water in it, average gravity, $1.17 barrel.

"6. Difference between O. P. A. value of oil and whisky, $2,350.83 barrel.

"The independent oil operators also argue convincingly that 90 percent of the war effort depends on oil. They concede that 10 percent of the war effort may depend on whisky after listening any week end to the array of invasion tactics of the uniformed lounge chair generals and admirals in the Kansas City bars.

"Anyway, here's a slush pond mud ball in the O. P. A. boys' eyes."

The Man Who Astonished Washington

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. CASE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Saturday Evening Post of October 9, 1943:

THE MAN WHO ASTONISHED WASHINGTON

(By Robert Humphreys)

MICHIGAN'S CONGRESSMAN ENGEL, SCORNING SWIVEL-CHAIR LEGISLATION, ROAMED FACTORIES, TOURIST CAMPS, AND HAMBURGER JOINTS, GETTING THE FACTS THAT ENABLED HIM TO SAVE MILLIONS IN TAXES

One icy morning last January, Congressman ALBERT JOSEPH ENGEL, of Michigan, Washington's demon one-man investigating committee, climbed into his automobile, after checking the antifreeze mixture, and set a zigzag course across the country on a trip that was to take him into 48 war plants in 44 days. In a paper sack on the seat beside him were an apple and a couple of sandwiches put up by his wife the night before, and near by lay a tattered old briefcase. The briefcase was packed tightly with notes and documents that he had gathered in the Capital. A portable typewriter rode on the floor of the car. The time was 3:30. ENGEL believes in getting up early.

There was no fanfare or advance publicity about his trip, as ENGEL is unorthodox enough to believe that when you are investigating someone it is stupid to tell him when you will come poking around. Early in the war ENGEL got the notion that a lot of extravagance could be stopped in the production of military equipment if somebody would just take the trouble to look into things, instead of swiveling about in a chair in the Capitol. He is a member of the House Military Appropriations Subcommittee and it pained his frugal conscience to vote billions of tax money away without knowing where it was going. And he didn't like the idea of putting guns into the hands of American young men without determining, personally, that the weapons were the best obtainable. As a consequence of his strange passion, he has reformed the light-artillery program, reduced the cost of producing the Springfield rifle and tangled with the War Department over construction of the Pentagon Building. He overturned the contract-letting system for Army cantonments and battled with the industrialists over war profits and pay scales. He has saved the taxpayers millions of dollars and doubtless has helped to save the lives of many men in the armed services.

On the trip, which began in January, ENGEL drove like mad, his squat, 235-pound, 5-feet-7-inch frame wedged tightly under the steering wheel. To keep his quarries from knowing where he would strike next, he followed a policy of putting up in tourist homes and obscure hotels, so that no routine check of

hotel registers would betray his presence in a neighborhood. His car broke down from overwork in Detroit and he left it behind for repairs, bought a new one, and headed into Ohio. He must have been concentrating too hard on his investigative work, for he neglected to watch a railroad grade crossing and a train came along and batted his fine new car into a mass of wreckage.

An ambulance rushed ENGEL to Akron, where he was found to be suffering from shock and lacerations of the scalp. He also had two black eyes. The emergency-room doctor ordered the anesthetist to get to work, so he could do some stitching.

"No anesthetic," ENGEL protested. "I'm in a hell of a hurry."

So the doctor put in the stitches without any anesthetic, while ENGEL, out of the corner of his mouth, kept warning a hospital clerk to have the bill ready as soon as the last stitch was in. An hour later, with 22 stitches in his hide and his head all bandaged up, ENGEL sat up and yelled for his trousers. He paid his bill while sitting on the edge of the operating table. Then he took a taxicab to the railroad station and was on his way once more, with the loss of only one automobile, 3 hours and 28 minutes of his time, and a quantity of blood. Recovering his original car in Detroit, he completed his trip, visiting places like Willow Run, Chrysler, General Motors, Continental Motors, Colt Arms, the Springfield Arsenal, and the Rock Island Arsenal.

When he got back to Washington he turned in a typical ENGEL expense account—a total of $359.42, of which $220 was for 4,400 miles of driving, at the Government allowance of 5 cents a mile. To colleagues who grumble that this made their own expense accounts look bad by comparison, ENGEL explained: "I like $10-a-day hotels as well as anybody, but I've never been able to find out anything in 'em."

When ENGEL took the House floor in June, after spending weeks digesting his notes and analyzing corporation statements, he shocked his colleagues with his findings.

He had discovered war workers making more than the base pay of a lieutenant general, ex-ribbon clerks drawing more than majors, and janitors getting 33 percent more than captains. Naming plants and their locations, he described countless cases where workers had doubled their pre-Pearl Harbor pay and listed instances in which elevator operators were drawing more than highly educated engineers in the same plant. The operators were getting $3,200 a year.

On the corporate side of the picture, he disclosed that one company with a capital investment and paid-in surplus of only $100,000 earned $1,740,839 last year, or 1,700 percent. This after paying $6,000,000 in taxes, charging off $173,680 for depreciation, paying its three top officers $116,000 each, its workers an average of $5,172 each for the year, and distributing Christmas bonuses totaling nearly a million dollars. Another small company, with virtually all the stock in one family at $5 a share, had a return against par value of 7,500 percent; while larger and older corporations showed profits ranging up to 53.88 percent.

As all the plants investigated were handling only Government contracts, ENGEL held that the whole thing, both from a labor and a corporate standpoint, smacked of a gigantic raid on the public till and should be more thoroughly policed.

His goal was a general tightening of the renegotiation law, by which the Government recaptures excessive profits, and the creation of public sentiment to keep the ceiling on wages and the bars up against inflation.

Here is the way ENGEL worked his miracles of investigation. He would drive into a war industries town at dusk, head for a tourist home near the plant which he intended to inspect, and put up for the night. More often than not he found workers from the plant living there. Before they realized it, ENGEL would engage them in a conversation notable chiefly for his casual questions and deep absorption in all that was told him. Midnight would find him in neighborhood hamburger joints to talk to workers coming off the evening shift. Early the next morning the fireworks really would commence.

When ENGEL hit the plant superintendent's door after a few hours of sleep, the element of surprise would offset the fact that his congressional and War Department credentials would give away his identity. Clerks would be sent scurrying for the company's books, its articles of incorporation, its pay roll, and its file of Government orders. Working with a stubby pencil on ruled yellow paper, ENGEL would make voluminous notes, looking up only to ask that copies of this intricate financial statement, or that complex war order, be made for him.

By the following day the superintendent, wondering what the sputtering human dynamo could possibly want next, would find himself accompanying ENGEL through the plant, with such scenes as the following occurring as described in the House in June: "I walked through a plant with the superintendent. I pointed to a young girl welding and the following conversation took place:

" 'Question. How old is that girl?'

" 'Answer. Eighteen years old.'

" 'Question. Where did she come from?'

" 'Answer. Kresge's dime store, selling ribbons.'

" 'Question. How much does she make?'

" 'Answer. Sixty-five dollars a week.'

" 'Question. How much experience does she have to have?'

" 'Answer. From 2 to 6 weeks.' "

Down in ENGEL's notebook went this and hundreds of items like it, to be transcribed late that night on his portable typewriter. So furious was his pace that plant auditors and accountants found themselves required to lunch with him so he could question them without losing so much as a minute.

War has always played an outstanding role in the Engel family. ENGEL's father and mother, natives of Alsace, got married and left for America the day after the Germans marched in, during the Franco-Prussian War. In the First World War there was an Engel fighting on the side of France, one with the Germans, and one—ALBERT JOSEPH, of course—with the Americans. And there's an Engel in this war—Albert Joseph, Jr.

The immigrant Engels settled in New Washington, Ohio, and it was there that the present Representative of Michigan's Ninth District was born, on New Year's Day, 55 years ago. There was nothing particularly precocious about him as a boy save the fact that his mother managed to keep him in long curls until he was 7. He did, however, learn piano, fluent French, and conversational German from his father, a school teacher, who spoke seven languages and taught organ, piano, and violin.

The senior Engel later moved the family to the north woods of Michigan, and young Albert helped clear land which he today owns. The lure of the logging camps caused him to quit school after completion of the eighth grade, and he still bears skull dents indicative of the two-fisted life he led, and scars where the ax took more of his leg than tree.

Eventually he landed in Chicago, and in his desperation to get a job, this tough youngster from the logging camps actually worked behind the cosmetics counter at Marshall Field's. Three years had passed without further schooling, and ENGEL was beginning to regret it. He enrolled in a Y. M. C. A. night school, and made up his high-school credits while working in the auditing departments of an ice house and two Chicago railroads. It was on these jobs that he learned to grasp the meaning of financial statements and to look for the bugs in them.

In 1907 he enrolled at Northwestern, working nights on an express truck and doing auditing jobs on the side. He compressed a 4-year law course into 3, and spent the next few years in Chicago and the Upper Peninsula of Michigan trying to attract clients with an attorney's shingle.

In 1916, having settled in Lake City, Mich., his present home, he found the incumbent prosecutor announcing from billboards that he was seeking reelection "because of the insistent demands of my many friends." This so outraged ENGEL's forthright soul that he at once announced his own candidacy with signs which read: "Nobody asked me to run. I am running because I need the job. Vote for ALBERT J. ENGEL." They did—right into office.

He volunteered for service only 5 weeks after American entrance into World War No. 1, was commissioned a lieutenant and was headed for France in October when someone got the idea he might be pro-German. For a week before his sailing date, he was allowed to wander around New York with a Government agent trailing him. ENGEL—whose own brain was working, too—had conceived the idea that he might be suspect and he quickly spotted the tail. Walking up to him, ENGEL handed him a written chronicle of his life and sympathies, together with his personal schedule for the day, which included a world series baseball game. The tail O. K.'d his personal history and sent it to Washington, and then took ENGEL to the world series at Government expense.

In France he was soon attached to General Pershing's staff and, because he could speak excellent French, frequently was assigned to substitute as speaker for staff generals at minor public events. Promoted to captain by the end of the war, he entered Germany with the Army of Occupation and there conducted his first one-man investigation. The 32d Division had 1,000 men listed as missing. With painstaking thoroughness, ENGEL reduced the list to an even 100.

On his return to the United States, he married Bertha Bielby, a sheriff's daughter, who was to bear him two daughters and a son. In her, ENGEL discovered a companion with tastes as simple as his.

In 1920 he was elected to the Michigan Senate and promptly turned rebel. Although a Republican himself, he fought the policies of the Republican State administration in power and in 1921 blew a prison scandal wide open with the first of his political one-man shows. In Marquette, with a senate committee, ENGEL went out to the prison and demanded to see the books. Digging away for nothing in particular, he found that a trial balance had not been struck in 2 years, and by the time he had taken one a $250,000 "surplus" was discovered actually to be a quarter-million-dollar shortage. Indictments followed.

Three more terms in the State senate found him still fighting the G. O. P. organization and its Detroit and Grand Rapids bosses. The quality of his adding-machine mind was tested in the 193? State convention when, on the final roll call, the chairman in a single breath announced that the organization candidate for the State board of agriculture had "won" and that the convention was adjourned. ENGEL, an opposition delegate, raced to the platform as fast as his thick, short legs would take him, seized the teller sheets, and according to his calculations the organization candidate had actually lost by 30 votes. A protracted legal battle

was terminated only when the Michigan Supreme Court refused to look behind an "adjourned" convention.

ENGEL ran three times for Congress before he finally made the grade, in 1934. His first year in Washington was typical of the average obedient freshman in Congress and his efforts were mainly confined to negotiating the passage of two insignificant private bills.

But Albert Joseph was watching and learning, and before another year had passed he was to attract plenty of attention. Late in 1935, a hurricane struck the Florida Keys, swept 300 persons, mostly war veterans and their families, into the sea, and chalked up a toll of lives that appalled the Nation. The veterans had lost their lives because trains did not arrive in time to remove them from a special project which the New Deal was financing as part of its relief program.

Congressional Republicans sought to pin the disaster on New Deal incompetence. Three separate investigations had been ordered and the issue was rapidly coming to boil in the House, when one day ENGEL suddenly took the floor.

The new Michigan Member began by saying that you cannot hold a government responsible without holding the men who represent the government responsible. Then for the next hour, ENGEL proceeded to detail the performance of each Government official on the keys. With exasperating conclusiveness, he had prepared a 10,000-word chronology of the acts of each official between 5:48 a. m. and 10:30 p. m. on the day of the disaster, recording train speeds, storm warnings, barometer readings, the exact moment of each official telephone call, and the time required to turn locomotives around, switch coaches, and lower drawbridges. When ENGEL had finished his log of events to the House, his conclusion that the catastrophe was an act of God brought whoops of relief from the Democratic side of the aisle and the personal thanks of Speaker Joe Byrns.

A few months later ENGEL again took the floor and once more his passion for facts and figures proved more beneficial to Democrats than Republicans. With the 1936 elections at hand, the Townsend old-age pension plan had the New Deal in a sweat. ENGEL, displaying charming disregard for the political effects of his act, delivered what was probably the most devastating speech ever made against the plan.

Using dollar-velocity charts and simple cross-roads store arithmetic, he showed in elaborate detail just how many times the Townsend transaction tax—which was to finance the Utopia for the aged—would have to be paid in the space of a single day by (a) the farmer, (b) the wage earner, (c) the manufacturer, (d) the retailer, and (e) the Government itself. He placed the cost for the Nation at $24,000,000,000 a year; the cost for his home State of Michigan at $944,000,000, and the cost for a man, wife and four children at $1,440. Democratic Members of Congress, at their own expense, had more than a half million copies of this speech distributed, one Californian alone ordered 100,000, and ENGEL himself nearly went broke trying to meet the mail demand for it.

About this time the Democrats made a major faux pas—they let the Republicans put ENGEL on the Appropriations Committee. ENGEL's first move was to visit every agency of the Government for which he would be expected to vote money. His was no front-office inspection; he went deep into the vast catacombs of bureaucracy. Wizened career clerks told him that in all their years in Government service not a Congressman had ever crossed the thresholds of their vested domains. Before he finished, ENGEL found that investigators for the exalted Bureau of the Budget, which is supposed to sift all money requests down to their irreducible minimum, were not as zealous as they should be and that the bureaucrats, as a consequence, were getting away with fiscal murder.

When a W P A official, relaxing in the luxury of easy-come, easy-go testimony before the Appropriations Committee, attempted to pass off a Government-made propaganda picture as "documentary," ENGEL promptly tripped him by rattling off the names of the professional actors who had been hired to dig into garbage cans for food, and the amounts they were paid for helping convince the nation that people inescapably starved unless immediately put to raking leaves at Government expense. The picture was never released.

When the appropriations for the Post Office Department came up, Big Jim Farley, Postmaster General and major-domo of the Democratic Party, explained an $88,000,000 deficit away by blaming it on free mail for Congressmen and "other nonpostal items," ENGEL who had been working on the subject for weeks, let go with both barrels. "Nonpostal items," he said, were actually "Government-franked mail and propaganda," which amounted to 669,352,068 pieces compared to 29,000,000 pieces franked by Congressmen," or to put it in terms of lost revenue, $32,236,000 against $751,000. Congress thereupon enacted a law forbidding departments to distribute unsolicited pamphlets, booklets, and similar bureaucratic literature.

When the National Labor Relations Board tried to pad its pay envelopes by an extra $50,000 through an old-and-tried bureaucratic trick, ENGEL caught them at it so fast that no other agency has attempted it since. Under Civil Service regulations, jobs are classified, and regular pay increases come automatically as the years of service grow. Thus, when a $3,600-a-year employee quits or dies, the pay scale for his particular job reverts or lapses to its starting point, several hundred dollars lower. The N. L. R. B. had simply passed out in the form of pay increases $50,000 worth of lapses in a single year. Caught cold in the act, N. L. R. B. officials ordered $50,000 worth of pay reductions without even bothering to put up a defense.

In 1940, when the Capitol Architect condemned the sprawling roofs over the Senate and House chambers and ordered a lattice of steel supports to be installed, only the menace which hung over the legislators would have held the headlines had not ENGEL started poking around. With steel workers already a month on the job, Albert Joseph wondered why things weren't progressing faster. Demanding to see the pay roll, he discovered that the agreed wage scale was 33 percent greater than for the same kind of work in other cities, that there was one pusher, or straw boss, for every six workers, and that they were taking turns laying off on Thursday and Friday so they could work on Saturday and Sunday at double overtime. Pay envelopes which in some instances had bulged to the extent of $267.50 in a single week were speedily deflated.

With war in the offing, ENGEL's talents were turned to more far-reaching matters. Naturally, before he could vote to buy a tank or make a gun, ENGEL had to satisfy ENGEL that these weapons would run and shoot, respectively. As a consequence, he was soon touching off 8-inch cannon at Aberdeen in the morning, taking glider flights in the Cumberlands at noon, and caroming like a billiard ball in tough little jeeps at Fort Belvoir toward dusk.

In no time at all he was leading a congressional fight for the Garand rifle, which was to make the Yank the best-armed soldier in the world, and was questioning the Army's program to "modernize" the standard light-artillery piece, the old 75-millimeter gun, at $8,000 per gun. ENGEL, who had watched these guns used in World War I, argued that their size had been dictated by the maximum cannon which horses could draw, and contended that any enemy worthy of the name would have bigger ones on caterpillar tractors.

He was sitting in the lobby of Washington's Willard Hotel one night when a man approached him and started a conversation. "I knew he was Prussian the minute he started talking," ENGEL said. The stranger developed the conversation so cleverly, pumping ENGEL for information which he might conceivably have as a member of the Military Appropriations Subcommittee, that the Congressman quickly became convinced he was dealing with a spy. ENGEL led him on, giving him obscure facts that had already been published in committee hearings. Before long he had egged the stranger into boasting that Germans had abandoned their 77-millimeter guns for 105's.

ENGEL confronted our generals with this information at a subsequent committee hearing and demanded to know what they would do when faced by this gun, which would shoot twice the size shell fired by a 75 and project it almost twice as far. The reply was, "We'll have twice as many 75's."

"Hell," exploded ENGEL, "what you mean is you'll have twice as many casualties."

As a result of his persistence, the Army a few months later abandoned modernization of the 75's and started the production of 105's. Considering that this occurred in 1939, plus the fact that thousands of outmoded guns and tons of useless ammunition would have been accumulated, the savings in costly months of preparation, dollars and lives can scarcely be calculated.

When the Army's cantonment program was launched 3 years ago ENGEL was soon stirred by a suspicion that a lot of money was going into swollen contracts and wage scales instead of cantonments. With a 28-year-old camera, his portable typewriter, and his notebook, he hopped into his car and started visiting camps from Massachusetts to Florida for a first-hand look.

He came back with figures showing that $250,000,000 of the $800,000,000 spent up to that time had been wasted, and his disclosures so rocked Washington that both the Army's contract personnel and its award system suffered a shake-up from top to bottom.

Between more spectacular probes, ENGEL also found time to point out that Army red tape required 43 papers to be filed before a check could be written, and 11 more to be made out in duplicate, triplicate, etc., before the contractor could cash his check. He prodded so many generals about the $60-unit cost of producing a Springfield rifle with its 29 forged and machined parts that the number was reduced to 6 and the stamped parts increased proportionately with the result that the cost per gun dropped to $34.

Where is this man ENGEL going? Well, at present he is content to drive out to his suburban Washington home each night, sleep a few hours, and get up at 4:30, to lay brick. It seems he borrowed some masonry books from the Library of Congress and started building a 6-foot double brick wall around his house. According to the notebook which he habitually carries in his vest pocket, he's laid 14,391 bricks, and he isn't through yet.

In Congress, many of his colleagues believe he is going far. Some think he would be the ideal chairman for that inevitable peacetime probe into war expenditures which follows every conflict. Their one fear is that ENGEL may liquidate the job before he can take it, for at his present rate it's possible he will have investigated the war single-handed before it ends.

Why Butter Is Short

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Ulm Daily Journal (New Ulm, Minn.) issue of Wednesday, October 6, 1943, entitled "Why Butter Is Short":

WHY BUTTER IS SHORT

For more than 2 years this newspaper has been preaching that the present farm policies of the Federal administration were bound to create shortages in foods. Ours was even a lonely voice when the Stassen administration felt the answer was newspaper publicity and pennants. Now we see there will not be many pennants given out this year because farm production generally is slipping.

It did not take a wise man or a farsighted individual to see why shortages were coming. Our troubles were not due alone to the fact that we had to feed millions of soldiers overseas and we had promised a feast to the starving in every land which would embrace the "four freedoms." Our troubles stem from an unwise farm policy framed largely by men down in Washington who did not understand the farm problem. Many of them were economists who never lived on a farm and couldn't tell a hayrack from a statistic.

They took farm boys into the Army and into defense plants who were desperately needed on the farms to raise food. Then they made it almost impossible to buy farm machinery and they kept down the prices on farm products while other prices and wages soared. They scrambled up the natural forces of the marketing place until now the stores haven't any meats although millions of additional cattle roam the ranges.

Butter has been one of the great surplus foods in America. For years the amounts of butter in storage were staggering and for a long time they depressed the butter prices. Now this surplus is being used up and butter ration points have been raised from 12 to 16 points Even then there isn't going to be enough butter to go around and in many stores it isn't going to be possible to buy butter even if you have these points.

Why is there a butter shortage? There are many reasons but the best explanation we have seen was expressed by John Brandt in an advertisement his Land O'Lakes creameries recently published. Here is his illuminating explanation:

"1. Production decrease. Butter production is always off in late summer and fall months because there is less pasture, but this year's decrease is greater than usual. Due to an inequitable relationship between dairy prices and other farm prices, dairying is less profitable to farmers than other farm effort. That fact, plus inability to get adequate manpower and equipment, has discouraged butter production.

2. Government storage holdings are at an all-time high, estimated at 235,000,000 pounds. This butter would normally have been yours, but now it is set aside for our fighting men and allies. Remember, "butter is as important as bullets."

3. Increased buying power has brought about an unprecedented demand for butter. Many people who have never eaten butter regularly are demanding it now.

"4. Unequal distribution. Butter is rationed on red stamps with meats, cheese, cooking fats, lard, and substitutes, and the lowering point values of other foods in this group—or the shortage of some of these foods makes more points for the purchase of butter. This also means that areas nearest the production points buy up the supply before it can be distributed equitably to all parts of the Nation.

"5. Lack of price control of cream for purposes other than making butter. Cream brings a higher price as cream than it does as butter. There is the equivalent of many millions of pounds of butter now being hoarded as cream. This is not available as butter to our armed forces, lend-lease, or you."

John Brandt is not a fault finder. He also suggests the remedies. Here is what this man who has spent his life in the butter and dairying industry believes should be done about it:

"1. Correct the farm manpower situation.

"2. Make farm machinery and equipment available quickly.

"3. Adjust dairying prices—dairying is at the bottom of a list of 10 basic farm products for income per hour expended.

"4. Ration butter separately.

"5. Take off the butter subsidy. Farmers don't want it, and it saves the average American only 60 cents per year—if he can buy his ration allotment of 12 pounds of butter. Why put off paying our national grocery bill? Each of us will pay much more than the cost of the subsidy in years to come—in taxes, interest, and handling charges.

"6. Recognize, in action instead of words, the fact that food is America's No. 1 weapon and encourage rather than discourage its production."

Treasury's Tax Proposal

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. CARLSON of Kansas. Mr. Speaker, under leave to extend my remarks I am including a 4-minute prepared statement that I used last week on the American Forum of the Air over the Mutual Broadcasting System:

There is an old saying that nothing in this world of ours is certain save taxes and death.

Yesterday it was my privilege to hear the Secretary of the Treasury, Mr. Morgenthau, present the administration's proposals for $10,500,000,000 additional taxes. The Secretary mentioned the fact that we need additional taxes for our war effort, but he emphasized the need of levying additional taxes on our people to draw off what he called "excess spending money." This statement and the entire proposal by Mr. Morgenthau convinces me that he has not consulted the average citizen in preparing his recommendations. They seem to have only one preventive and that is taxes and more taxes. There is an all-powerful weapon against inflation—the power to curtail unnecessary spending. It may surprise you, but not once in his prepared statement did the Secretary make this suggestion. We can reduce our Federal expenditures and reduce them in a way that will not interfere with our full prosecution of the war. The Byrd committee recently reported that we could remove 300,000 Federal employees from the Federal pay roll without impairing our war effort. Why not do this and save hundreds of millions of dollars? Then, too, let us remember that a war-conscious and anxious Congress has in the past 3 years voted $200,000,000,000 more for war purposes than has yet been spent. No one would favor restrictions on expenditures that would in any way hinder the war effort, but I am convinced the time has arrived for Congress to demand from our military leaders full justification for the money we have entrusted them to spend.

Every citizen knows there has been altogether too much unnecessary and inexcusable waste of Federal funds in preparation for our war. Another suggestion that would be most helpful in removing our so-called surplus purchasing power is an increase in the supply of civilian consumer goods. The Secretary failed to mention this. The administration's program seems to be one of less and less of civilian goods, but more and more of taxes. Let's have a program that will give the housewife more milk, butter, meat, and other essential food items. Let's give the farmers sufficient farm machinery and equipment to produce those items. These two suggestions would remove any so-called excess spending power. The bureaucrats who are in direct control of our war food administration seem to be more concerned about rigid rationing controls and subsidy payments than increased food surpluses. They are proposing a billion dollars for food subsidies. No one will deny that this is most inflationary. Under this program the Government would be borrowing money to pay our grocery bill at the time of our Nation's highest national income.

Like Chairman DOUGHTON, I am frank to say that I do not see how we can hope to increase taxes much more. Our people are now burdened with the highest taxes in all history and our capita levy is the highest in all the world. This new proposal by the Treasury places the chief burden on those who have the least with which to pay. Do you realize that our personal income taxes will be 2,500 percent higher in 1944 than they were in 1940 if we enact the proposal submitted by the Treasury?

Dead Cows Don't Give Milk

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. CURTIS. Mr. Speaker, in the CONGRESSIONAL RECORD of October 7, on page 8178, can be found a copy of a telegram that I received from Holdrege, Nebr., in reference to their milk situation. The principal dairy there was about to close unless something could be done to raise the price of whole milk to the farmers within 10 days.

I immediately wired the Office of Price Administration at Omaha, Nebr., regarding this matter. The district director at Omaha advised me that a situation such as this was under the jurisdiction of the War Food Administration. I, therefore, immediately turned this telegram over to Mr. Marvin Jones, War

Food Administrator. The 10 days are about up.

If these cattle are sent to slaughter while the bureaus and agencies of the Federal Government do nothing, it will not only distress this fine community, but it will add to the shortage of dairy products in the United States. For more than a year the Office of Price Administration has closed its eyes to the fact that dead cows do not give milk.

Mr. Speaker, I wish to extend my remarks by including a telegram that I have today sent to Mr. Marvin Jones, War Food Administrator.

WASHINGTON, D. C., *October 12, 1943.*
Hon. MARVIN JONES,
War Food Administrator,
Washington, D. C.:

On October 5, 1943, I received a wire from the city of Holdrege, Nebr., advising that within 10 days that city of 3,500 people would be without milk unless they secure some action that will enable their dairies to pay the farmers a higher price for whole milk. The Omaha office of the O. P. A. advised me by wire that this matter was under your jurisdiction. Therefore, I transmitted that Holdrege telegram to you. What are you going to do about it? Do you want this dairy to close? You may be interested in knowing that all six members of the ration board in that county have announced they will resign on the ground that the Federal agencies will take no action to save the milk for the children of their city.

Congressman CARL T. CURTIS.

Do Farmers Get Too Much?

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, October 11, 1943

Mr. STEFAN. Mr. Speaker, for many weeks debate has been raging in Congress, in labor circles, and elsewhere over the relation of farm prices to the cost of living.

I call the attention of the Membership of the House that one authority has made this statement: "If farmers gave away all of their food products the cost of living could not be reduced more than 20 percent." This statement on behalf of farmers and producers was originally made by John Brandt, representing creameries in a Midwest State. This statement has been challenged, and recently that challenge was responded to in a very interesting manner by Mr Brandt as follows:

Farm prices have little to do with the high cost of living. The cost of living is the sum total of things the consumer buys: the food, the clothing, the electric-light bill, transportation, taxes, insurance premiums, and all the other things—necessities and luxuries—for which people spend their money.

Food is an important item in arriving at the cost of living. Yet on the average only 21 percent of the consumer's income in March 1943, according to the 1943 United States Bureau of Agricultural Economics Bulletin, was spent for food. This is an official figure, widely published and readily available to all, including editorial writers who may thus be saved the embarrassment of bad guessing.

Now by no means does all of this 21 cents spent for food go to the farmer. There are retailers and wholesalers, processors and distributors, transportation, packaging costs, license fees, taxes, and wages for labor in addition to other items before the farmer gets his money. As a matter of fact, what the farmer receives is only a little more than half of what the consumer spends for food. The figure is 55 percent, as of July 15, 1943, according to the Bureau of Agricultural Economics. So of the 21 cents from the average consumer's dollar that is spent for food, only 11½ cents is ultimately paid to the farmer.

Therefore, those who have challenged my statement that, if the farmers of America gave away all of their products absolutely free, the cost of living would not be reduced more than 20 percent can readily see that I have erred. My mistake has been in being too conservative.

I recommend the reading of the Brandt argument to the membership of the House in order that once and for all the farmers—the producers of our food—who are making such a gigantic contribution to our war effort will no longer be charged with being solely responsible for the higher cost of living.

Traveling Men's Association Protests Reduction in Gasoline Allotment

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, October 12, 1943

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include a letter received from a traveling men's association at North Platte, Nebr.

Mr. Speaker, the traveling men of America are being forced off the road by the further restrictions in the amount of gasoline they are permitted to use. I have this day written the Office of Price Administration asking the following questions:

Is it your desire to prohibit the traveling men from calling on the merchants of this country?

Is it your desire to liquidate the small businessmen of the country?

Mr. Speaker, the activities thus far of the Office of Price Administration has been one of eliminating many small businesses in the United States. The salesman of America is the merchant's best friend. He not only helps the merchant to get a small amount of goods which may be available but assists him to understand the complicated directives which come from the Office of Price Administration. No honest attempt has been made to give the traveling man any consideration. His work is important and essential. He should be given encouragement and sufficient gasoline to carry on his essential occupation.

Unless the Office of Price Administration can be administered in a more practical manner, then this Congress ought to perform a major surgical operation upon this bureau, and I am sure that no tears would be shed should there be a large funeral for a certain part of their activities.

The letter referred to follows:

SHARE-YOUR-RIDE-CLUB,
North Platte, Nebr., October 8, 1943.
Dr. A. L. MILLER,
Congressman, House of Representatives,
Washington, D. C.

DEAR DR. MILLER: Knowing that as our elected Representative you would and should be genuinely interested in and concerned with the feelings and reactions of the people of this part of the State as regards to recent further restrictions in the use of gas for business purposes, and knowing also that only by honest and sincere expressions from the public can these problems be brought to light, we wish to express our honest opinion on this cockeyed mess. We have on other occasions written letters couched in reserved and diplomatic language expressing our thoughts on these matters and have in turn received many sympathetic replies. At this time, however, and stripped of the verbal niceties commonly used in letters of this type, we wish to state that we are just damned well fed up on this gas mess as applies to salesmen and would at this time like something more than sympathy. We want justice.

We are fed up with the asinine attitude held in high places that the salesman is not essential. Any individual of even average intelligence and with any knowledge of the economics of agricultural States such as ours and an understanding of our problems of distribution should know that salesmen are as much a part of that system as the manufacturer and the carrier.

One cannot pick up a paper today without reading where some Congressman or public official is very much concerned over the plight of the small businessman. Under conditions which he has to operate today the small businessman and merchant would be in a much worse fix than he is if it were not for the salesman. It is only through the conscientious effort of the salesmen that merchandise is distributed evenly over the entire territory and through all the merchants instead of ending up all in one favored community or in the hands of a few rich operators. Today's problem is one of fair distribution of scarce goods over all the country and the only practical way to do this is through the salesmen who know the merchants over all the territory and wants to help keep things going so he will have a job after the war. The salesman today is the merchants' best friend. He spends half of his time trying to get him enough goods to stay in business and the other half of his time explaining ambiguously worded limitations and directives so as to keep the merchant out of jail.

As far as we know there has been no honest effort by Federal agencies to understand our problems. We have simply been lumped off as a group and no study has been given problems as they exist in this part of the country. We want honest consideration given our plight by men who understand our problems in this part of the country.

In short, our work is important and essential and is doing much to keep our strained economic system working, and we are damned tired of trying to do a man's work on a boy's rations. Western Nebraska cannot be covered on a hundred miles of driving a week, and it is essential that this territory be covered. We ask for only what we know is necessary and cannot understand the mental frame of

mind which allows any A card holder two-thirds as much gas for pleasure as a traveling man gets for business. Frankly it seems to us that this last cut has some rather sinister political implications and we definitely do not like it. We don't mind carrying the twenty-thousand-odd Federal employees in this State on our backs, but we do dislike very much being beaten on the head while doing it. Give us just a small fraction of the gas used on Eleanor's recent 23,000-mile jaunt and that wasted on other Federal foolishness, and we can continue to carry on this essential work and make an honest living and still buy our bonds. Otherwise the traveling man is sunk and a lot of small merchants along with him.

Any help you can give us on this urgent matter will be greatly appreciated and not soon forgotten. However, whatever is done must be done soon, as we are going to be forced off of the road by this last cut. The only other alternative is black market gas, and we definitely do not want to be placed in the position where we will either have to be broke or be crooked.

Sincerely yours,

NORTH PLATTE TRAVELING MEN,
RICHARD N. DAVIS, *Secretary*.

Arkansas Valley—T. V. A. Yardstick—Post-War Development

EXTENSION OF REMARKS
OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. RANKIN. Mr. Speaker, we are all looking forward to post-war readjustments, and developments. It is the hope of everyone that in the post-war period we may enjoy an endless era of full employment, full production, peace, and prosperity for all.

If we are to enjoy such conditions in this country, it is going to be necessary to develop the Nation's water-power resources, along with navigation, flood control, and soil conservation, and to distribute that power to the people of this Nation, including every farmer in America, at rates they can afford to pay.

In 1921 the people of the United States used only 40,000,000,000 kilowatt-hours of electricity. At that time the farmers of the country, the people living in the rural districts, used practically no electricity at all; they were entirely outside the picture.

This year, 1943, the American people will use about 200,000,000,000 kilowatt-hours of electricity and there are 230,000,000,000 kilowatt-hours' annual production of undeveloped water power in this country that is absolutely going to waste.

The farmers of the Nation last year used less than 2,000,000,000 kilowatt-hours of electricity, or less than 1 percent of our annual consumption. And yet we are depending upon the farmers, not only to feed and clothe the Nation, but to furnish an extremely large percentage of our fighting forces.

By developing our potential water power, and supplying it to every farm home in America at the T. V. A. yardstick rates, we could make this the richest, the most prosperous, and the most powerful agricultural country in the world, and at the same time the farmers would be using less than 10,000,000,000 kilowatt-hours of electricity a year at a time when the people of the country as a whole will, in all probability, be using 500,000,000,000 kilowatt-hours a year—or less than 2 percent of the total.

One of the areas now crying out for this development is what is known as the Arkansas Valley area, which would reach the States of Arkansas, Colorado, Kansas, Louisiana, Missouri, Oklahoma, and Texas. The development of this great project would supply a yardstick that would force rates down to the T. V. A. levels.

Those yardstick rates are as follows:

T. V. A. yardstick rates

RESIDENTIAL

Rate:

First	50 kw-hrs. consumed per month @ 3c	per kw-hr.
Next	150 kw-hrs. consumed per month @ 2c	per kw-hr.
Next	200 kw-hrs. consumed per month @ 1c	per kw-hr.
Next	1,000 kw-hrs. consumed per month @ 0.4c	per kw-hr.
Excess over	1,400 kw-hrs. consumed per month @ 0.75c	per kw-hr.

Minimum monthly bill: $0.75 per meter.

COMMERCIAL

Rate:

First	250 kw-hrs. per month @ 3c	per kw-hr.
Next	750 kw-hrs. per month @ 2c	per kw-hr.
Next	1,000 kw-hrs. per month @ 1c	per kw-hr.
Excess over	2,000 kw-hrs. per month @ 0.8c	per kw-hr.

INDUSTRIAL

Rate:

Demand charge (based on 30 minutes demand):
$1.00 per kw. of demand per month—first 1,000 kw.
.90 per kw. of demand per month—over 1,000 kw

Energy charge:

First	10,000 kw-hrs. consumed per month @ 10	mills per kw-hr.
Next	25,000 kw-hrs. consumed per month @ 6	mills per kw-hr.
Next	65,000 kw-hrs. consumed per month @ 4	mills per kw-hr.
Next	400,000 kw-hrs. consumed per month @ 3	mills per kw-hr.
Over	500,000 kw-hrs. consumed per month @ 2.5	mills per kw-hr.

Charge for energy in excess of 360 times the demand shall be subject to a reduction of 0.5 mill per kw-hr. from the otherwise applicable rate.

While these rates may seem high compared with the Ontario rates, or the Tacoma, Wash., rates, they are far below the rates imposed on the power consumers of this Nation, as a whole.

If these rates had been in effect in the States I have just mentioned during the year 1942, the people of Arkansas would have saved $7,865,000; the people of Colorado would have saved $10,032,000; the people of Kansas would have saved $14,300,000; the people of Louisiana would have saved $15,300,000; the people of Missouri would have saved $27,200,000; the people of Oklahoma would have saved $14,044,000; and the people of Texas would have saved $42,500,000.

Shall we sit supinely by and permit this condition to continue, not only in the Arkansas Valley region, but in every other section of the United States outside of the Tennessee Valley area, the Columbia River Valley area, and that portion of the far West served by Boulder Dam?

Potentially one of the richest sections in America is that area, which I call the Arkansas Valley, for the want of a better designation. In this area is included the watersheds of the Arkansas, the Red River of Texas, the White River of Arkansas, the St. Francis, and their tributaries.

From the standpoint of minerals it is one of the richest areas in the entire country. It has abundant quantities of petroleum, natural gas, bauxite, zinc, lead, iron, helium, phosphate, coal, clays and lime, as well as precious metals, and the only diamond mine I know of in the New World.

Billions of dollars worth of these raw materials have been shipped out of the area to be processed elsewhere. However, the past extraction of these minerals for shipment has not been efficient. For example, gas has been wasted in sufficient quantities to heat the entire Nation, and only about one-third of the oil has been recovered from the underground pools. It is also rich in forests and agricultural lands. It is one of the garden spots of the world.

POWER RESOURCES

This area is also rich in water power which can and will in the future be developed, along with navigation, soil conservation, and flood control. The White River and its tributaries, and the tributaries of the Arkansas, all of which come from the Ozarks, have abundant power possibilities.

From the reports which have been made on these prospects I offer a very conservative preliminary table. This is offered only as an indication of the possibilities, as it is realized that further detailed surveys are needed before new authorizations are presented.

Projects with excessive overflow costs have been eliminated from compilation at this time.

From such a conservative appraisal of power resources it is evident that at least 400,000 kilowatts of high class or prime hydro power and the same amount of good secondary power can be further obtained in this valley. This is power that can fit into a future load curve when the region is developed up to the sustaining point of its resources. The amount of secondary power can easily be increased by further generator installations after the dams are completed. This secondary, or flood water, power comes in the wintertime, just when it is most needed.

Arkansas value flood control—hydro power possibilities

COMPLETED PROJECTS

River basin	Prime base continuous kilowatts	Installed kilowatts	Additional at load factors	
			30 percent	50 percent
Arkansas (Grand-Neosho)	16,000	60,000	[1] 80,000	[1] 50,000

Total potential	268,000		1,655,000	862,000

[1] 4 wheels installed, 15,000 kilowatts; 2 empty pits, 30,000.

PRESENT POWER INSTALLATION

The present installed dependable electric generating capacity in this area totals 1,800,000 kilowatts in round numbers, of which 6 percent is hydro, 19 percent coal, 5 percent oil and 70 percent gas generation. The present annual peak demand of the same area is 1,600,000 kilowatts, which leaves 11 percent for reserves, a very low figure, in view of the small amount of hydro and the large amount of gas generation included in the total. It is therefore evident, that in 1943, this region will be operating on its power reserves, a situation that cannot long continue in view of the types of equipment used.

The broad distribution of all types of energy sources in this richly endowed area calls for full coordination in the use of hydro and steam power. Because of this favorable situation it is extremely profitable to develop hydro power beyond the limits of firm continuous capacity, and to use such power to take over the peak portions of the load curve, similar to the existing operations of the Susquehanna water-power plants, serving Philadelphia, Baltimore, and Washington.

Therefore, firm hydro capacity is not the economic limit of development, and secondary power has a substantial place in the over-all potential picture. Present costs indicate that 6 percent hydro capacity in such a situation is too small a component. It should initially, at the very minimum, be 20 percent of the total, and increased with the elevation of fuel costs. Such an operation fits the run-off characteristics of the principal streams of the area. It must be realized that in the long-range picture the predominant gas generation will decrease, as this type of fuel is definitely exhaustible. Coal can be mined in the area and delivered to a number of generating plants, at prices economically comparable with gas. Therefore, it is evident that steam generation will always have a large place in meeting energy requirements, but the proportionate part of hydro will greatly increase if this regional development is fully carried out. This presents a situation well adapted to a sound hydro development in connection with flood-control provisions of the 1938 act.

ECONOMIES OF THE REGION

This region has a population of 7,500,000, with a total gainful employment of 2,450,000, with a low proportion of 9 percent engaged in manufacturing. As a result the average income per capita is only half of what is warranted by the region's resources, and is 40 percent below the national average. This unfavorable situation affecting the people of a region so rich in resources is the result of lack of balance between manufacturing, agriculture, forestry, and mining, unnatural barriers, and discrimination in transportation rates. The same general situation applies in other sections of this country, and a careful examination will show that in all such cases this condition prevails where natural resources are shipped out of a region in a raw state. The amount of regional manufacturing is far too low and agricultural production is beyond the point of home consumption. Industrialization must be increased if these people are to become full consumers of the agricultural products; and in order to do that freight-rate discriminations must be eliminated.

There are 450,000 farm families in this region which would be greatly benefited if manufacture is increased, and farm production diversified, such as increasing rice irrigation, which in turn requires large amounts of cheap power. In addition, as a start, the benefits of cheap electricity should be given to every farmer in the area as early as possible.

THE BARRIERS

The main artificial barriers that prevent this great region from developing with its resources, are unfavorable freight and power rates.

The out-bound freight rates on raw materials, and the in-bound rates on finished products are extremely low, whereas in-bound rates on raw products, and out-bound rates on processed products are extremely high. This results in a drain of raw materials, and permits outside processed products to undersell home production. This even prevents local processors or distributors from selling economically in the local markets. It is obvious that a fundamental revision of the region's freight-rate structure is needed.

This Nation cannot continue to exist half slave and half free.

A casual inspection of Federal Power Commission's electric-rate comparisons shows that the region's electric rates are exceedingly high. Domestic electric rates in the Arkansas Valley are 66 to 100 percent higher than in the T. V. A. region, and commercial and industrial power rates are 100 to 150 percent higher. The effect on home processing is apparent. In my opinion the Arkansas Valley area cannot be brought into a developed state of full productivity and full employment and prosperity until existing barriers are removed. The purpose of my remarks today is to offer helpful suggestions in this direction, as I feel that, from my own experience with such a program in the T. V. A. and the Columbia River areas, I can discern what is needed and thereby propose a safe and sound solution.

What I am proposing for the Arkansas Valley area should be done in every other section of the country. We should wipe out all unnecessary discriminations in transportation charges, develop our water-power facilities, and see that electricity is provided to the ultimate consumers at the T. V. A. yardstick rates—or at rates based upon the cost of generation, transmission, and distribution.

We should electrify every farm home in America at these rates, and in that way bring to the people of the entire country, in the post-war period, an era of progress and prosperity surpassing anything the Nation has ever known.

A. F. of L. and C. I. O. Hit O. W. I. as Communist

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Frederick Woltman, staff writer for the New York World-Telegram, published in that newspaper on Monday, October 4, 1943.

This article reveals that the American Federation of Labor and the Congress of Industrial Organizations have for almost a year protested jointly to Mr. Elmer Davis, Director of Office of War Information, that the Overseas Branch of the O. W. I. has been broadcasting daily over its short-wave radio programs Communist propaganda to the people of occupied Europe.

These charges are serious and should be read by every Member of Congress with a view to possible congressional action to prevent Government agencies from becoming nests of Communist propaganda here and abroad. If these charges are true, certainly the facts should be presented to the proper committee of the Congress for immediate action. It is almost unbelievable that the taxpayers' money is being used by Communists and fellow-travelers to broadcast world-wide communism in defiance of our Constitution and our republican form of government and of Congress itself.

I trust every Member of Congress will read this article and determine for himself what action should be taken in the interest of America. It seems to me the time has come when Congress should place the interests of our own country ahead of those of any other, and insist that Communist propaganda, aimed to destroy our own free institutions, should

not be circulated by Federal employees who are holding high-salaried positions on the Government pay roll.

The article follows:

A. F. L., C. I. O. HIT O. W. I. RADIO AS COMMUNIST

(By Frederick Woltman)

The C. I. O. and A. F. L. 10 months ago protested jointly to Elmer Davis, O. W. I. Director, that the O. W. I. Overseas Branch had been regularly broadcasting Communist propaganda in its daily short-wave radio programs to the labor populations of occupied Europe, the World-Telegram learned today.

They charged also in a written list of specifications that many of the O. W. I. labor broadcasts were trivial and showed a strong anti-A. F. L. bias

As a result, after 8 months of futile negotiations, the A. F. L. and C. I. O. liquidated their labor short-wave bureau. The bureau, the first and only joint venture of the two rival labor organizations, had been set up by them to collect nonfactional news about American labor and turn it over to the O. W. I. as broadcast material.

The reason for closing the bureau, they informed Mr. Davis late in August, was that they could reach no basis of cooperation with the O. W. I. in eliminating the alleged Communist influence and that, therefore, Labor Short Wave could no longer perform a useful function.

MAN ASSIGNED

They acted after Joseph Barnes, one of Mr. Davis' top aids who runs the O. W. I. Overseas Branch, assigned a man to the O. W. I. labor broadcast desk whom both the A. F. L. and the C. I. O. considered entirely unacceptable because of his association with the Communist faction in American labor. Previously Mr. Barnes had asked their opinion of the man, which they sent him after an investigation of his labor connections.

Nevertheless, today Mr. Barnes' choice, Travis Hedrick, appears as the official O. W. I. representative at some of the principal labor events in the country.

The protests and consequent negotiations over O. W. I.'s labor broadcast policy were made from the start by Milton Murray, American Newspaper Guild president, acting as personal representative of Philip Murray, and by Matthew Woll, second vice president of the A. F. L. Both headed Labor Short Wave for their respective organizations, the aim being to help arouse European labor to the cause of the United Nations.

SURVEY MADE

Mr. Woll and Mr. Murray first conferred with the O. W. I. Director last November. They handed him a survey, prepared by their staff, of a cross section of the O. W. I. labor broadcasts. They considered the brochure prima facie evidence of their case.

They charged that the O. W. I. labor desk was refusing to cooperate with Labor Short Wave. And they contended the survey proved the O. W. I. broadcasts—

1. Put a disproportionate emphasis on the role of Communist labor leaders in America and the unions they represented;

2. Showed a pronounced bias against the A. F. L.;

3. Until the invasion of Africa, repeatedly represented the C. I. O. as a proponent of the species of the second front agitation which the Communists were demanding at the time. The labor broadcasts continually played up minor second front resolutions passed by left-wing unions;

4. Failed to discuss the real questions of interest to labor, such as manpower, wage stabilization, etc.; and

5. Constantly overemphasized human interest trivia that might appeal to an American audience but not to a European audience listening to their radios under threat of the death penalty.

They also charged that Peter Lyons, head of the labor desk, had past Communist labor associations. Mr. Lyons was eventually taken off the labor desk and put elsewhere in the O. W. I. set-up.

O. W. I. Director Davis was deeply impressed and greatly disturbed by the charges and by the survey presented him. He appointed an O. W. I. committee to investigate.

It developed that the labor broadcast desk under Mr. Barnes had broadcast to Europe songs of the Almanac Singers, who are virtually the official songsters of the American Communist Party.

Before the Nazi invasion of Russia the Almanac Singers were loudly proclaiming the Communists' antidefense doctrines with such tuneful slogans as:

"Plow under every fourth American boy."

MISTAKE ADMITTED

And with reference to selective service:

"It's C for the Congress that passed that goddamned bill."

The O. W. I. subsequently admitted this was all a mistake and took them off the air.

As a solution to the Murray-Woll charges, Mr. Davis proposed that the A. F. of L. and C. I. O. agree on a labor man in whom both had confidence as a non-Communist to head the O. W. I.'s overseas labor output.

Believing fully in Mr. Davis' sincerity and not wishing to injure the O. W. I., Messrs. Woll and Murray decided to work along and not make their charges public. At one point, it is reported, they even turned down overtures by Dies committee representatives who wanted to get the story.

At length they proposed a candidate, an A. F. of L. man who had been in the labor movement for years. (Incidentally, it is the fixed policy of such other agencies as O. P. A., W. M. C., W. P. B., and O. C. D. to sound out the C. I. O., A. F. of L., and the railroad brotherhoods before appointing men to key labor spots in the Government.)

A voluminous exchange of correspondence ensued. After months, the O. W. I. still did not see fit to make the appointment, the chief explanation being that of "budgetary difficulties."

Finally in July Mr. Barnes wrote Mr. Woll and Mr. Murray that he had found just the right man, someone who was already in O. W. I. and had considerable labor experience. He inquired how they felt about it.

Mr. Barnes, who is in charge of the O. W. I.'s vast Overseas Branch, with its headquarters in New York City, is a close adviser of Wendell Willkie and accompanied him on his famous round-the-world flight last year.

NEVER DEVELOPED

He has frequently been accused privately of loading the Overseas Branch with Communists and fellow-travelers, and Mr. Barnes has been investigated at great length by the F. B. I. and the United States Civil Service Commission.

The charges, however, have never developed to a point of public action.

His candidate was Travis Hedrick, who joined O. W. I. this June as news editor in the news and feature bureau.

In their reply the C. I. O. and A. F. of L. representatives wrote their inquiry showed that Mr. Hedrick had worked for the hosiery workers union for 18 months, where he came to be regarded as a Communist fellow-traveler.

They point out that Mr. Hedrick later was employed as publicity director of the Communist-controlled C. I. O. Oil Workers Organizing Committee. Subsequently the C. I. O. high command broke up the Communist domination of the O. W. O. C. and forced out Edwin L. Smith, its director, and Milton Kaufman, his assistant. Mr. Hedrick lost his job also in the shake-up.

Thereafter Mr. Barnes apparently showed the A. F. of L.-C. I. O. letter to Mr. Hedrick, who then tried to get letters of recommendation from labor leaders. He did obtain one from a high hosiery union official who was unaware of the previous protests against the appointment.

ATTENDED MEETINGS

In the meantime Mr. Hedrick appeared last July as O. W. I. labor representative at the conventions of the A. F. of L. International Longshoremen's Association and the C. I. O. National Maritime Union. At the latter he was frequently seen attending conferences of the inside Communist leadership of the N. M. U. from which the newspaper reporters were barred.

Two weeks ago he represented the O. W. I. at the convention of the C. I. O. Industrial Union of Marine and Shipbuilding Workers.

At that time he complained to several persons about the Woll-Murray letter. As a result the entire story came to the attention of this newspaper.

In applying for his O. W. I. job Mr. Hedrick gave as references Len DeCaux and Edwin L. Smith. Mr. DeCaux is publicity director of the C. I. O. and one of the leaders of the minority pro-Communist faction within the C. I. O.

Mr. Smith, whom the C. I. O. ousted as head of the Oil Workers because of the Communist machine built up there, was formerly a member of the National Labor Relations Board.

OFFICES CLOSED

In 1941 President Roosevelt refused to reappoint him to the board in the face of charges that he was a Communist.

He is now executive director of the National Council of American Soviet Friendship.

Labor Short Wave, Inc., meanwhile, has just closed its office at 9 East Forty-sixth Street. During its lifetime it functioned through the national war-relief agencies of the A. F. of L. and the C. I. O.

Israel Moses Sieff, Distinguished Englishman, Replies

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. CELLER. Mr. Speaker, Israel Moses Sieff is the vice chairman and director of the very distinguished company known as Marks & Spencer, Ltd., which operates 236 retail chain stores in Great Britain. He is a man of vast business experience, of the highest integrity of purpose, with the reputation for unquestioned fair dealing. He is a British subject.

His intense patriotism and interest in the war effort of the United Nations are eloquently testified to by the fact that both of his sons are in the British Army. One son, Marcus Sieff, rose from the ranks to become a lieutenant colonel. He has served with General Montgomery's Eighth Army from the beginning of the war and is still with that gallant hero. He has been with him in the African, Sicilian, and Italian campaigns. He has

been recently decorated for bravery beyond the call of duty. His other son, Michael, was also recently promoted from the rank of major to that of lieutenant colonel and is now in the theater of combat operations. The only other male member of Mr. Sieff's family is his son-in-law who is also a member of the British forces.

A man of that stamp and caliber when visiting this country is assuredly entitled to the uttermost respect. He was asked to devote his talents and services to the Office of Price Administration temporarily, particularly with reference to his experience on the working of the grade labeling act in England. Furthermore, while with the Office of Price Administration as an expert in price control, he rendered invaluable service in that bureau in its efforts to curb the inflation spiral.

He was called before the subcommittee of the Committee on Interstate and Foreign Commerce engaged in examining certain practices of the Office of Price Administration. A perusal of the record of his experience before this subcommittee clearly indicates that his treatment was neither hospitable nor friendly. On the contrary, an attitude was assumed by the committee, in whole or in part, that was quite inhospitable and quite unfriendly. If the tables were reversed and a distinguished American were to be similarly treated by a committee of the Members of Parliament, it would deservedly be the subject of much critical remark.

Moses Israel Sieff, at considerable personal sacrifice to himself, traveled from city to city, addressing boards of trade and other interested groups and persons in order to tell America of the British experience with price control, subsidies and parallel items that occupied the attentions of the Office of Price Administration. In the course of his journeys he received letters of highest commendation from various officials of these groups. These warmhearted and highly commendatory communications appear hereinafter.

It is for the purpose of giving Mr. Sieff's reply to certain insinuations and charges that I have asked for permission to put into the RECORD the statement of Israel Moses Sieff which he also filed with the subcommittee of the Committee on Interstate and Foreign Commerce. I also asked permission to put into the RECORD the pamphlet entitled "Planning for Liberty" to which reference had been made in the questions propounded to Mr. Sieff.

I am aware of the fact that members of committees in their zeal and in their desire to render service and in the heat of argument may at times place themselves in the position of a prosecuting attorney. That type of attitude is forgiveable when the one interrogated is represented by counsel and at least is given an opportunity to give appropriate answer. But Mr. Sieff was not privileged with counsel and was not given fair opportunity of reply.

It is not my purpose to criticize unduly the actions of any of my colleagues. My primary purpose is to set forth and highlight the position of Mr. Sieff who is a most worth-while gentleman and entitled to our uttermost respect. My sole purpose is in the interest of equity, so that the reputation of Congress for its dignity of character and traditional open mindedness may not be, in any wise, discredited.

I, therefore, herewith offer the letter of Moses Israel Sieff addressed to me under date of August 10, 1943, the statement of Israel Moses Sieff, dated July 1, 1943, and excerpts from the article Planning for Liberty:

NEW YORK, N. Y., *August 10, 1943.*

Hon. EMANUEL CELLER,
New York, N. Y.

MY DEAR CONGRESSMAN: I attach to this letter my statement which I filed with the secretary of the Lyle Boren committee. I think I ought to mention that I was called to give my testimony on four different occasions. Only on one occasion was I heard. To my surprise, instead of being asked to offer testimony on the workings of the Grade Labeling Act in England, for which purpose I had been told that I was invited to appear before the committee, I was subjected to a personal investigation, which, according to my view and that of my friends, was of a very unfair character.

From my statement you will see that the questions to me were based upon wholly inaccurate and often distorted statements, which were torn out of the context in which they originally appeared. Indeed, insofar as the document which had been placed in the CONGRESSIONAL RECORD in 1934 by Congressman McFadden was concerned, I had never heard of it until the moment when I was questioned by the committee about it.

I do not wish you to infer from this that the chairman of the committee was averse to hearing me, but it does seem odd that I was not asked to reply to the base insinuations of the questions to which I was subjected.

Sincerely,

ISRAEL M. SIEFF.

[Enclosure.]

STATEMENT OF ISRAEL MOSES SIEFF FILED WITH THE HOUSE OF REPRESENTATIVES SUBCOMMITTEE OF THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

When I first appeared before this committee on June 16, 1943, Mr. BOREN, the chairman, asked me whether I had prepared a statement to submit to this committee. Since I was under the impression that I was to be asked to testify on British experience in grade labeling in time of war, I had prepared no statement. I felt that such a statement would be unnecessary, as I expected to answer questions on that subject ex tempore and to the best of my ability. That had been my experience when asked to testify before the Senate Committee on Small Business, who addressed questions to me on British experience in that field of their inquiry.

The questions put to me when I last appeared before this committee were not concerned with British experience with grade labeling, but rather took the form of an implied attack upon me and upon Political and Economic Planning, a British organization of which I now happen to be vice chairman.

As I stated at the last hearing, I am vice chairman and assistant managing director of Marks & Spencer, Ltd., which operates 236 retail stores in Great Britain. In addition to my practical experience as a merchant and distributor, I acted as the chairman of the independent textile retailers committee attached to the Board of Trade in England at the beginning of the war, which helped in framing the first price-of-goods act of Great Britain. It was, therefore, not only as a result of my experience as a merchant in Great Britain but also because of my experience as a large retailer in finding practical solutions to some of the practical problems of price fixing and rationing in Great Britain that I was invited to make myself available to officials in the O. P. A. who might have questions to ask with regard to British experience in these matters.

I may say that it was at considerable sacrifice to my private interests that I gave up the time necessary to make myself available in Washington to answer many inquiries. It was at the cost of personal inconvenience and discomfort for me to travel to many cities in the United States on behalf of the O. P. A. to tell American businessmen of British experience under the impact of war. I may say that many of the business groups which I addressed took occasion to tell me by letter and telegram that they appreciated the insight which I had given them into British experience.

I hope that I may be forgiven reference to several of those letters.

On August 22, 1942, Mr. Edward C. Moomaw, secretary of the Roanoke Merchants Association, of Roanoke, Va., wrote me, saying:

"I want you to know * * * that it was a very real privilege to meet you and hear your interesting and stimulating address."

At the invitation of the Controllers Institute of America, I addressed that organization at their meeting in Chicago in September 1942. On September 25, Mr. J. A. Donaldson, president of the Controllers Institute of America, 1 East Forty-second Street, New York City, wrote me, saying:

"I want to take this opportunity to express my personal appreciation and also that of the Controllers Institute of America for your participation in the program of our eleventh annual national meeting here in Chicago last Tuesday morning. We of the institute feel that you contributed an important part of the success of this meeting.

"It was a happy situation when Mr. Whitaker suggested your name for this program. Your business background, as well as your experience with price control in England, made your appearance on the program one that was eagerly anticipated by our membership. I can assure you that this anticipation was fully justified. I want you to know that I have had complimentary comments on your presentation from many members of the institute."

I was invited to address a convention of the Super Market Institute, Inc., at St. Louis. That institute is an association of supermarkets throughout the whole United States. On October 9, 1942, Mr. M. M. Zimmerman, executive secretary of the Super Market Institute, Inc., wrote me, saying:

"I don't believe it is necessary for me to tell you that when you appeared before our audience at St. Louis, you faced a responsive and sympathetic audience. I can't begin to tell you how deeply appreciative we are for your contribution to the success of our program. Your message was timely and most enlightening, and so important that we had a copy of your speech, as you delivered it before our audience, mimeographed and sent out to every member of our institute."

At the invitation of the Purchasing Agents Association of Chicago, I addressed their convention in Chicago on the ordnance-day program in November 1942. On November 18, 1942, Mr. R. F. Stiles, president of the association, wrote me:

"I am taking this means of advising you, on behalf of the Purchasing Agents Association of Chicago, that we feel our ordnance-day program, in which you so kindly participated, was a great success, due in part to your kind offices in addressing our group.

* * * * *

"I heard any number of favorable comments about your share in the activities, and hope

that sometime in the near future, I will have the privilege of hearing you again."

On December 15, 1942, Mr. Sidney Vlock, chairman of the American Council of Dress Manufacturers, Inc., 152 West Forty-second Street, New York City, wrote me saying:

"Do, please, accept the thanks of the council and my personal appreciation for your presence at our dinner meeting. Your remarks were truly inspirational and helped so much in conveying to those present the urgent need for a unified force in the dress industry of this city."

On March 3, 1943, Mr. Kemp Fuller, manager of market research of the United States Steel Corporation, wrote me saying:

"It was a great pleasure to have you with us at dinner last Thursday at the Duquesne Club. I have just returned from St. Louis and am taking this first opportunity to thank you for your splendid talk which aroused a great deal of interest on subjects of prime importance at this time.

"Your discussion of world markets was quite appropriate for that dinner group of market research and sales promotion men, and I knew from their comments that your efforts were well appreciated."

On March 24, 1943, Mr. G. B. Dealey, chairman of the board of the Dallas Morning News of Dallas, Tex., wrote me saying:

"Just a line to tell you of our sincere appreciation of your visit to Dallas and of the fine work that you did while here. It was a great pleasure personally for me to meet you, and I thank you most sincerely for your cordial reception and for the nice things you had to say about me.

"I hope your visit to Dallas will be repeated at an early date. If our newspaper can aid in any specific way that you can think of, I hope you will let me hear from you."

I would be less than honest if I did not say that the reception which I received at the last hearing before this committee was unexpected and in certain respects seemed to me to be inquisitorial.

I can readily understand and appreciate the point of view of those Americans inside or outside of Congress who view with concern any attempt on the part of a foreigner to shape the policy of a Government department. I can readily realize the hostility which would meet such a foreigner if he or any organization with which he was identified urged any changes in the fundamental Constitution of the United States.

I do not question the good faith of the members of this committee who interrogated me.

I therefore welcome this opportunity to remove any doubt whatever which may be in the minds of Americans regarding my attitude and that of the other members of P. E. P. I want to make it as clear as I can that at no time, either orally or in print, did P. E. P. or any of its members recommend or even suggest any change, or even the need for a change, in the Constitution of the United States. No one can point to a single instance. P. E. P. is, and always has been, concerned only with the solution of British problems.

May I also make it clear that I had nothing whatever to do with shaping the policy of O. P. A., either under Mr. Henderson or under Senator Brown. I wanted nothing to do with preparing policy. Indeed, I was prevailed upon to accept Mr. Henderson's invitation only for the expressly limited purpose of making British experience available to those who desired such information.

The last time I appeared before this committee Mr. HALLECK referred to a document called Freedom and Planning and asked me whether it was not true that in 1932 or 1933 P. E. P. published that document. I had never heard of that document before, and as I said at the last hearing, I was altogether unfamiliar with it. Since the last hearing I have had occasion to read the document, which was inserted in the CONGRESSIONAL RECORD on June 8, 1934, by former Representative McFadden, of Pennsylvania, at pages 10891 to 10896, inclusive. I want to state categorically that the article entitled "Freedom and Planning" was not prepared by me or by any other member of P. E. P. whilst I have been a member of that organization. Mr. McFadden's statement that the article is a "secret document issued from the inner council of the members of Political and Economic Planning, otherwise called P. E. P." is, as far as I know, without any foundation.

Mr. McFadden does not offer any proof whatever of his assertion that this document was published under the auspices of P. E. P. His reference to the article as a secret document is refuted by the fact that all of P. E. P.'s documents were published and made available to all who were willing to pay 1 pound a year for the privilege of receiving approximately 26 broadsheets per annum. Copies of P. E. P. broadsheets are available in many libraries in this country. I have examined all of the broadsheets issued by P. E. P. from the first to the last and find nowhere in the index of articles published during the lifetime of P. E. P. any reference whatever to the article inserted by Mr. McFadden in the CONGRESSIONAL RECORD. The first issue of Planning, the broadsheet issued by P. E. P., is dated April 25, 1933. It would appear from that portion of Mr. McFadden's statement appearing in the second column of page 10898 that the article in question may have been published in Lord Beaverbrook's publication called the Week End Review, with which P. E. P. had absolutely no connection whatever.

Notwithstanding the fact that neither I nor my colleagues in P. E. P. had anything whatever to do with the article referred to by Mr HALLECK, I think that as it has been made the basis of certain questions at the last hearing, it is right to point out that that article deals only with the British economy and does not even remotely concern the politics, economics, or Constitution of the United States. Far from being a Socialist or Fabian document, it is evident even upon a hasty reading that the author of that document is opposed to Socialist ideas, notwithstanding the fact that the document is full of exaggerated language and rhetorical hyperbole.

The writer's opposition to Government interference with business is stated at several places in that essay. Here are several short excerpts from the document, as printed in the CONGRESSIONAL RECORD, which prove this point:

"Economic nationalism is no solution. On the contrary, it is among the main causes of the world's troubles."

"Communism is a tremendous extension of government and consequently a great encroachment on liberty."

In referring to bolshevism and fascism, the author of the essay says:

"Both repudiate the claims of personal and individual freedom. In this country [Great Britain] we hold fast to the concept of freedom as one of absolute validity."

At the last hearing Mr. HALLECK read an excerpt from the document just referred to (S. M. P. 1279), from which it could be inferred that the author of that essay considered the 500,000 or more retail shops as being wasteful. I venture to suggest that an attempt was made to mislead Mr. HALLECK, for it should be said that the excerpt handed to Mr. HALLECK was taken from its context and distorts the very idea which the author presents. The paragraph from which the excerpt was taken and a subsequent paragraph, which appear at page 10893 of the CONGRESSIONAL RECORD of June 8, 1934, read as follows:

"Methods of retailing cannot indeed be left entirely unchanged in the face of twentieth century needs. The multiple shop and the chain store are already bringing about notable modifications. The waste involved in the 500,000 or more retail shops—1 shop for every 20 households—cannot be allowed to continue to block the flow of goods from producer to consumer. And reorganization of retail methods is necessary to achieve adequate organization of production. In general, however, it will probably be found that there is a large place in the business of retailing for the continued play of individualism and personal enterprise. The individualist consumer and his free choice call for some corresponding individuality of outlook in the retailer who caters to him.

"Not so in the sphere of production. The business of production must be planned if it is to possess adequate means of keeping the volume and quality of the goods produced in reasonable relation to demand."

The whole tenor of this section is a plea for mass production by British manufacturers.

Far from preaching or encouraging the destruction of the small farmer or businessman in England, the author of that essay warned against the results that would follow if those small farmers and businessmen permitted themselves to be taken over by Communists or Fascists.

Later in the same essay (CONGRESSIONAL RECORD, June 8, 1934, p. 10896), the author says:

"Indeed, the Socialist or the Communist will condemn our planning as mere tinkering with the outworn machine of capitalism. To him it will appear as a hopelessly conservative and anemic attempt to stave off the red-blooded revolution which alone would satisfy him."

At page 10896 of the CONGRESSIONAL RECORD, Mr. McFadden states, and I quote him:

"This political economic plan, as it is also called, was prepared under the direction of Israel Moses Sieff, an English Jew, the director of a chain-store enterprise in England called Marks & Spencer."

As I have already said, there is no truth whatever in Mr. McFadden's statement that this document was prepared under my direction. I never saw it and knew nothing about it until my attention was called to it last week. Mr. McFadden offers no proof whatever to support his quoted statement. He does not refer to any other document or to any other source of information. We merely have Mr. McFadden's unsupported statement and that, I say, is not true.

Mr. McFadden then goes on to say that my company paid a 40-percent dividend in 1933 because it handled almost exclusively all imports from Soviet Russia, thus being able to undersell established British competitors. The statement that my company dealt in Russian goods is untrue, because we did not purchase a single penny's worth of Russian merchandise. In any case, Mr. McFadden does not offer any evidence to support this statement.

Although Mr. McFadden does not indicate the source of this statement, those who are aware of the propaganda put out by Herr Dr. Joseph Goebbels, the Nazi propaganda minister, will have no difficulty in tracing this statement to its source. From the very beginning of Hitler's ascension to power in Germany, his propaganda minister, Goebbels, launched attacks upon many large companies in Great Britain, including my company. His propaganda was published in English in Great Britain by Oswald Mosley's Blackshirts, the British Fascist organization. As you, of course, know, Mosley is now in prison for treason. But the dissemination of these lies did not cease with the imprisonment of Moseley. Lord Haw-Haw, the British traitor, who broadcasts from Germany, has time and time again repeated the same lies. Within the past 2 weeks the American traitor, Ezra

Pound, broadcast similar stories from Rome. What credit can be given to these untrue propaganda statements which emanate from such sources? Pound has likewise been indicted for treason in Washington, D. C.

Not long ago an organization in this country calling itself the Constitutional Educational League republished these Nazi lies in a pamphlet called Famine in America. I am advised that the chairman of that organization is Joseph P. Kamp, who, to quote a prominent American journalist, is "a professional rabble-rouser, whose organization was named by the Department of Justice as being a mouthpiece for many indicted seditionists—some of whom have been convicted." Within the past few weeks a series of articles appeared in a chain of newspapers throughout the country. All of those articles are complete distortions of easily ascertainable facts. There is no basis in truth for any of the attacks upon me and upon P. E. P.

It is unfortunate that at this late date any journalist or public figure in this country could be taken in by such lying propaganda.

Mr. McFadden inserted in the CONGRESSIONAL RECORD of June 8, 1934, at pages 10896 to 10900, inclusive, a statement which he says he quotes from a Paris publication entitled, "Revue Internationale des Societes Secretes," under date of January 25, 1931. Then follows a report allegedly appearing in the Evening Standard under date of November 1, 1930. The Evening Standard was then and now is owned and published by Lord Beaverbrook. That statement was an attack upon government by Fabians and an attack upon the Fabian Society. Nowhere in that article, however, is there a single reference to me or to P. E. P. There is not the slightest evidence to support Mr. McFadden's conclusion that "The Political Economic Plan group is a branch of the Fabian Society." I said at the last hearing and I repeat now that P. E. P. has had no connection with and indeed is opposed to the principles of the Fabian Society.

Mr. McFadden displays his ignorance of the British scene when he refers on page 10899 of the CONGRESSIONAL RECORD to the fact that "perhaps the first and only publicity the organization has had was in the Daily Herald April 28, 1933, which published an article referring to a private dinner given at the Savoy by the Political Economic Plan on March 29 at which the chairman, Israel Moses Sieff, and the secretary, Kenneth Lindsay, made speeches. The caption in the Daily Herald was 'Mystery group out to replan British industry; P. E. P. at work on new control'." The Daily Herald is the recognized British Labor Party newspaper. If anything, that group would be sympathetic to the ideas of the Fabian Society How, therefore, could anyone expect such a newspaper to attack P. E. P. if it were as Mr. McFadden erroneously states "an outgrowth of the Fabian Society"? In point of fact, many of P. E. P.'s broadsheets and reports have been approved and commended in the editorial columns of such newspapers as the London Times, the Daily Telegraph, and many other prominent British newspapers.

After the article dealing with the Fabian Society, Mr. McFadden again makes the gratuitous unwarranted and unsupported statement that—

"In the fall of 1932 the following people joined the Political Economic Plan: Sir Arthur Salter; Sir Oswald Mosley, the head of the new British Union of Fascists; Lord Eustace Percy; Lord Melchett, the son of the late Alfred Mond; and Sir Christopher Turnor."

The nonsense uttered by Mr. McFadden becomes apparent when he groups together such people as Sir Oswald Mosley, whom he describes as the head of the British Fascists, Lord Melchett, and me. Anyone who read the British newspapers at that time, or who is aware of the facts of life in England, would have known how absurd it was to associate Mosley, with Lord Melchett, and me.

At the last hearing, Mr. Brown asked me (S. M. P. 1325) whether at any time, in answer to inquiries or in giving a statement to members of P. E. P. I said "Let us go slowly for a while and wait until we see how our friends carry out in America." I denied that I had ever made such a statement. The basis for the question is evidently the statement made by Mr. McFadden which appears at page 10899 of the CONGRESSIONAL RECORD, where Mr. McFadden says:

"About 3 months after the passage of the National Recovery Act of the United States, when Israel Moses Sieff was urged by members of his committee to show more activity, he said, 'Let us go slowly for a while and wait until we can see how our plan carries out in America'."

Mr. McFadden does not offer the slightest bit of evidence to support that statement, because there is not one word of truth in it. He does not even indicate its source.

At pages 10899 and 10900 of the CONGRESSIONAL RECORD of June 8, 1934, Mr. McFadden made attacks upon a number of outstanding American personalities. All of you are familiar with the facts and with those personalities and may compare them with the statements made by Mr. McFadden in attacking those Americans.

The members of this committee will know, therefore, what value to place upon any unsupported statements made by Mr. McFadden regarding me and my associates in P. E. P.

The philosophy of P. E. P. is set out in its broadsheet, No. 9, of September 12, 1933, entitled "Planning for Liberty," a photostat of which is annexed hereto, from which the following excerpts are taken:

"Our broadsheet merely seeks to clarify and emphasize the course of action which is made inevitable by powerful forces that will destroy or distort civilization if we fail to take command of them now.

"In all the surviving democratic countries fascism or national socialism is a growing threat to the complacency of static governing groups. Under this threat there is a visible rapprochement between politically alert people of the left and the right, or of no traditional alinement, who wish to set against the pattern of Communist or of Fascist dictatorship a pattern of rapid and businesslike reconstruction achieved through cooperative and democratic means.

"With all these huge exhibits before it (the Blue Eagle campaign of the United States, the second Russian 5-year plan, and the Fascist movement of Italy), public opinion is rapidly outgrowing the assumptions of laissez faire, but laissez faire has meant too much to Great Britain to be abandoned in spirit without the assurance that those of its features which have long held the British imagination—its appeal to enterprise and adventure, its world-wide outlook, its confidence in the ultimate social benefits of a rising standard of life—are preserved in the new model."

At the last hearing Mr. BOREN read an excerpt which was handed to him from the July 2, 1935, issue of Planning, the P. E. P. broadsheet. I indicated at that time, and on rereading the broadsheet I found, that the quotation was torn from its context which distorted its entire meaning. Broadsheet No. 54, entitled "The American New Deal," a photostat of which is annexed hereto, was a review for members of P. E. P. of American experience with the National Industrial Recovery Act. That review was condensed from a survey made by the Brookings Institution of Washington. The fact that the broadsheet is based upon the Brookings Institution survey is stated in the first paragraph on page 6 of the broadsheet.

The digest of the Brookings Institution survey is preceded by a short editorial which critically analyzes the N. R. A. The occasion for the review, indeed, the reason for the publication of the broadsheet dealing with the American New Deal, as stated in the broadsheet itself, was the decision of the United States Supreme Court on May 27, 1935, declaring the N. R. A. to be unconstitutional. In his critical analysis of the N. R. A., the editor, who gathered his facts from the Brookings Institution survey, had these statements to make:

"The act had been from the outset an experiment for a brief and limited period—namely, 2 years. It had served its purpose and as the first-rate survey by the Brookings Institution (on which we have largely relied in this broadsheet) shows, beyond all possibility of dispute, the results have been largely negative. No reasonable person would have wished to renew the N. R. A. as it stood, except perhaps for fear lest worse befall. So far as dispatching the N. R. A. went, the Supreme Court deserved gratitude, not least from those who were committed to trying to continue the experiment.

* * * * *

"All the same, the New Deal is much too big to be killed by any court, however absolute its decree. The N. R. A. formed a stop-gap compromise at a time when there was no basis for anything better. Any attempt at a new structure could only be begun with a certain amount of agreement, and as agreement could not be obtained for sound and well-digested policies it had to be obtained for unsound and undigested policies or not at all. Disappointment inevitably followed, but there are worse things than disappointment, and undoubtedly the N. R. A. has helped, in spite of all its shortcomings, to educate opinion and to build up a nucleus of experience and of seasoned personnel which remain as national assets in spite of the Schechter decision.

"Administratively the scheme was unworkable. * * *

"Economically also the attempt to expand employment and to step up purchasing power with a jerk by abruptly and arbitrarily altering hours of labor, wage rates, and prices, simultaneously was a crude and unsatisfactory experiment. Purchasing power could not be increased in that way, nor did the method help appreciably toward restoring equilibrium. The issue of redistributing the wealth and income of the United States had to be more directly faced, and it remains to be seen whether the American Nation will be able to improve on the method adopted in this country of promoting redistribution by steeply graduated taxation and by a wide range of social services."

"The alarms and excursions of the past 2 years may look serious at the time, but they are negligible in proportion to the issues raised by the New Deal, and in relation to the time that will be needed for working these issues out. Twelve years ago Lord Birkenhead said to American lawyers, 'The decision is premature whether you, and those who agree with you, have been right in trying to control the free will of a free people by judicial authority, or whether we have been right in trusting the free will and a free people to work out their own salvation.' It may well prove that the readjustment of the United States to modern conditions will only be possible after transforming out of all recognition the first American Constitution which has stood for the past century and a half. Yet even the question of keeping or scrapping the Constitution is subsidiary to the main issue, which is what type of society the new America is going to

adopt. Negatively the New Deal has already answered this question. It is never again going to be the type of society which looked so flourishing and immutable as recently as 1929 For a more positive answer we must still wait. Whatever the outcome, the whole world gains by the fact that men have emerged in positions of leadership in America who know what social responsibility means, and who are not afraid to experiment boldly and vigorously in attempting to find permanent expression for it in the new structure which they are beginning to build."

I respectfully submit that the foregoing quotations, which I believe include all of the excerpts quoted at the last hearing, are a fair and considered review by a British editor, for British consumption, of the effect of the Supreme Court decision in the Schechter case. It is obvious in reading the whole context of the last paragraph quoted that its author is asking a number of questions which arise out of the decision of the Supreme Court in the Schechter case and the problems posed by Lord Birkenhead when he addressed American lawyers in 1923, which was 10 years before the enactment of the N. R. A.

There is not one thought in that broadsheet which can support those, both inside and outside of Congress, who point to that broadsheet as evidence of the fact that the modification or undermining of the Constitution of the United States is advocated.

I am sure that with the facts before you, you will revise your notions regarding the desire of any member of P. E. P. to meddle with the United States Constitution. I can sympathize with the position of those members of Congress who are given garbled or incomplete excerpts from documents or speeches which, taken out of their context, distort the author's meaning. When that is done in England, we say that "It isn't cricket." The idea of fair play is also part of the American way of life. Many years ago former President Theodore Roosevelt said "the principles for which we stand are the principles of fair play and a square deal for everyone." I am confident that with the facts before you, P. E. P. and its members will be assured of fair play and a square deal.

Since the attacks upon P. E. P. and upon me are without foundation in fact, they must fall to the ground.

[From Planning, London, England, of September 12, 1943]

PLANNING IS ON THE MAP

WHAT THE WORLD IS SHOWING US

Although it is not yet 5 months since this broadsheet first went out, a substantial change in the British attitude to the idea of planning is already observable. No credit on this account need be claimed for P. E. P.—our broadsheet merely seeks to clarify and emphasize the course of action which is made inevitable by powerful forces that will destroy or distort civilization, if we fail to take command of them now. The dismal failure of the World Economic Conference, due to its inability to face the situation analyzed in our issue of May 23, has helped to convince the hesitant that there can be no more looking backward. The birth of the German totalitarian state, in circumstances which have proved extremely unpalatable to English ideas of fair play and humanity, has shown the risks of drifting until a disillusioned and embittered submerged element in the population gets out of hand. In all the surviving democratic countries fascism or national socialism is a growing threat to the complacency of static governing groups. Under this threat there is a visible rapprochement between politically alert people of the left and the right, or of no traditional alinement, who wish to set against the pattern of Communist or of Fascist dictatorship a pattern of rapid and businesslike reconstruction achieved through cooperative and democratic means. In America the great gamble of the Blue Eagle campaign has captured the imagination of a large number of people, who see in it the bold leadership and vigorous action of which they feel themselves starved by the traditional parliamentary approach. Even ad hoc methods and big blunders on the way will not alienate this moral support which President Roosevelt has won, provided that mistakes can be frankly admitted and changes of direction carried out without the drive and straightforwardness of his experiment being lost. Rather further from the foreground, against immense difficulties, the second Russian 5-year plan goes on. Fascist Italy is in a position to advertise a comparatively successful resistance to the economic blizzard.

With all these huge exhibits before it, public opinion is rapidly outgrowing the assumptions of laissez faire, but laissez faire has meant too much to Great Britain to be abandoned in spirit without the assurance that those of its features which have long held the British imagination—its appeal to enterprise and adventure, its world-wide outlook, its confidence in the ultimate social benefits of a rising standard of life—are preserved in the new model.

LIBERTY PLUS ORDER—THIS IS EVERYONE'S JOB

Forced by events to renounce this particular pattern of British individualism, the Nation is groping for a way of expressing it in a new form compatible with contemporary conditions. Liberty is having to come to terms with order in the economic field as it did long ago in the political field. There is no reason to doubt that a solution will be found. History shows how the English and Scottish Nations have emerged from a state of turbulence and violence which impressed even Renaissance observers as extreme into a reign of law and order which is an example for the world. We have outgrown political anarchy by our own efforts, and we shall outgrow economic and social anarchy as successfully, now that we are compelled to do so. This is a need of the Nation, and it is also a need of the world. Everywhere models are being set up of narrowing regimes of order based on politically immature civilization. It is the plain task of Great Britain to set against these absolutisms a new type of order, springing from free cooperation, which will solve the historic conflict between self-government and effective action. Already more progress has been made along this road than is commonly understood, but time is slipping past, and whether further areas of the continent fall to fascism may be determined by the speed with which a new lead can be given from London to match the leads of Rome, Moscow, and Berlin. Because our task is the reconciliation of the new claims of the community with the old claims of the individual, because we are bound by our tradition to seek a solution through democratic means, every person who is alert and aware must play his part. No one in Whitehall or anywhere else can do our thinking for us if we are to remain our own masters. Let us therefore search our minds and see that we are not holding back the attainment of ordered liberty by clinging to the assumptions of an anarchy which has had its day.

PLANNING FOR LIBERTY

WHY DO THEY HESITATE?

It is unfamiliarity rather than any more positive objection which at the present time is responsible for the hesitation of a large number of people in accepting the case for political and economic planning. The difficulties of foreseeing how a single new measure or institution will react upon others, and upon the people with whom it deals are sufficiently large. It is not surprising that when drastic changes are proposed all along the line they should frequently be resisted simply through a vague fear or suspicion of the consequences of so far-reaching a disturbance. It sometimes happens that while, say, half-a-dozen specialists in different fields may all be convinced of the need for some sort of planning within their own fields, they may at the same time be skeptical about the advantages of living in a community subject to planning over a large part of its activities.

It is most important that this prejudice should be overcome in the only satisfactory way, by focussing discussion upon the actual position of the individual in the planned community, so that all can decide for themselves whether planning necessarily means a curtailment of desirable freedom. In the following article it is proposed to review what has already been put forward in previous issues of the broadsheet, and to indicate how the ordinary individual would be likely to be affected by the adoption of schemes of this type.

THE "SMALL MAN" STOOD FOR LIBERTY

The prejudice against planning, which undoubtedly exists, seems to spring from the fear that the wider and more complex any organization becomes the more it spells something like slavery for those engaged in it. Rightly or wrongly, it is felt that the "small man" stood for liberty—liberty to choose the occupation he liked best, liberty to leave if he wished, liberty—while he was engaged in it—to carry on his business by the methods best suited to his own idiosyncrasies or his own desires. We see the "small man" in almost every walk of life, being overshadowed by the big organization, changing from an owner to an employee, driven to buy from limited resources and to sell through restricted channels; and we fear that any increase in this tendency must necessarily mean a corresponding decrease in individual liberty.

We need not here consider whether or not the unrestricted and uncoordinated liberty of the small man did, in fact, spell happiness, either for himself or for the community. But we believe that the previous issues of this broadsheet will sufficiently demonstrate that we believe in planning precisely because we regard it as the only means of escape from the intolerable restrictions upon individual liberty and freedom of choice which the political and economic developments of recent years have produced.

BUT HE IS LOSING THE BATTLE

At present the small man in industry, in agriculture, in retailing, and so forth, is either fighting a losing battle or is holding his own at the price of accepting sweated conditions. The success of modern transport in bringing into his market competing products from all parts of the world, and the growth of new types of competing or overlapping selling agency have enormously and permanently increased the risk which the small man has to face. At any moment the price of a farm product may be broken by the production of something quite different in a remote part of the world of which the farmer, growing the original product, has never heard. Cutting his loss and turning to the production of something else, he helps to cause a glut in the product which has attracted him and has probably attracted thousands of others for the same reason at the same time. As total consumption is unlikely to expand so fast now that population increase is slowing down, it is almost certain that, even if the depression should miraculously end at once, farmers would be in just as desperate a state the next time that changes of taste or new developments forced any large number of them to go over from one crop or product to another.

COMPETITION HAS BECOME ANARCHY

This same calamitous increase of risk applies in factory production. A small firm engaged in the efficient manufacture of some product may suddenly find its market destroyed by the efforts to gain a foothold of one or more other firms, whose own market has been lost through, say, Japanese competition. So long as world population was steadily multiplying and competition was confined to units of roughly similar type and scale, there was no doubt much to be said for the classical economic view that this process was a healthy one. But now that power equipment, modern economic organization and communications have replaced competition in a number of more or less simple and distinct markets by competition between units of totally different type and scale operating in one vast confused market, the risk for the small man or the small firm has become intolerable. Whether a job is done well or badly has ceased to determine survival, which depends more upon the accident of invasion or of temporary immunity from invasion by new and devastating competition from a producer hitherto operating in a different economy, or in a distinct branch of the same economy.

SAUVE QUI PEUT IN BUSINESS

While communications and technique were poorly developed, definite limits were set to the range of competition, so that its operation was selective. Now that these limits are broken down, their stabilizing influence has disappeared, and we are nearer the position where every product and service competes with every other. The chemical industry needs a very brief period to extend its ramifications into the building industry (through the development of a new product competing with traditional materials), into the fuel industry (through a new process being rendered commercially feasible by Government action), and perhaps into other important industries as well. The falling birth-rate forces manufacturers of goods demanded for babies to strike out into new fields. The Salter report and legislation arising from it throw manufacturers and users of all types of commercial vehicles into confusion, from which emerges a market radically changed by belated and abrupt Government intervention. There is no need to multiply examples. The conclusion is plain. It is no longer a question of planning destroying the nineteenth-century pattern of healthy competition; that pattern is already utterly and irrevocably destroyed, and to look at contemporary conditions in terms of it is an anachronism. Our present problem is to replace not "healthy competition and individual initiative," but the chaos which has destroyed them, by a more stable system which will revive so far as possible their good features within the framework of social responsibility. The contemporary champion of laissez-faire regards himself as a man struggling nobly to hold back the flood of interference. He does not realize that interference has reached saturation point already, and that his efforts only obstruct those who are trying to build a new and sounder structure in order to conserve the liberty which he prizes.

ONLY COOPERATION CAN MAINTAIN LIBERTY

There are two ways of coping with risk. One is to minimize it by appropriate action, and the other is to insure against it. This is what the small producer or distributor should be urged to do. It is by no means an innovation in England. The underwriters who frequented Lloyd's coffee house began generations ago to develop a cooperative organization for the spreading of the risks arising from their own business, for the collection and issue of information, for the inspection of vessels and for many other common purposes which has won world-wide prestige as the corporation of Lloyd's. Here is one example of a spontaneous and successful effort to combine individual liberty of action with high standards and limitation of risk. The individual underwriter preserves his liberty through a cooperative organization, and there is no visible reason why the individual shopkeeper or farmer should not do the same.

THE OLD LIBERTY WITH A NEW BACKGROUND

The small man, therefore, should regard planning not as a menace to his liberty but as, perhaps, the only instrument for preserving it in contemporary circumstances. Undoubtedly he must specialize more in future, but the choice of field must remain his own, and within it he may be more securely his own master than anyone can be at the present time. Only if he loses his spirit of enterprise and fails to fulfill the function he has chosen has he to fear being crowded out by larger organizations. The worst enemy of the small man is the supporter of old methods regardless of the misery which they have brought. The new task is not to eliminate the small man, nor to preserve him as a picturesque anachronism, but to work out and apply methods by which he can hold his own through better serving his function. On the surface, no doubt, his role will appear very different—fundamentally he stands to gain rather than to lose in liberty once the give and take demanded by the new order has become settled practice.

LIBERTY FOR THE EMPLOYEE

There are in the economic field other issues of liberty besides the liberty to produce and sell on one's own account. The liberty of the employee is equally important, and equally menaced by the new increase of risk which undermines the security and peace of mind of millions of families. In the issue of this broadsheet dealing with employment policy it has been urged that the unwanted leisure which has been thrust on many hundreds of thousands of workers might be converted into socially beneficial leisure through pensioning off many elderly or physically unfit members of the labor force, through controlling the intake of young workers by half-time education between 14 and 18, and through shorter working hours. Socially the advantages of such an arrangement as compared with the present system are manifest, but action is blocked by reluctance to face the dislocation and the many new arrangements which would be needed.

ENGLAND UNDERSTANDS GIVE AND TAKE

The most obvious difficulty is that too many different parties are concerned. It is impossible to negotiate separately with every individual employer and every individual employee, while the alternative of a governmentally imposed readjustment supervised by a bureaucracy does not look any more attractive. This difficulty would be minimized if every industry could be persuaded to establish a single representative body capable of concluding binding agreements between employers, employees, and the State, of a much more comprehensive type than the agreements over wages and labor conditions between employers' associations and trade unions which have become a settled part of the British social and economic fabric. Anyone who observes the difficulties which the Roosevelt national recovery experiment has met through the absence of any tradition and machinery for large-scale collective agreements in the United States must recognize that at least in this respect Great Britain is much more favorably placed. Our long experience in this field would enable such organizations to be launched and operated with every chance of success.

THE END OF THE LABOR MARKET

In course of time the individualist view, which regarded labor as a commodity to be bought and sold, has gradually been rejected by the British nation. Great Britain preferred to abandon the gold standard rather than to face the savage reductions in the price of labor which orthodox economics asked of it. Unemployment insurance and many other factors have turned the labor market into a meaningless phrase, so far as it is applied to contemporary Britain. But while the labor force is subject to policies which destroy the effectiveness of old-fashioned adjustments, it is not yet subject to a constructive plan. Mass unemployment is the expression of this refusal to choose either the method of laissez-faire on the one hand or the method of planning on the other.

INSECURITY CAN BE REMOVED—RESPONSIBILITY FOR THE WORKER

In a previous broadsheet we sketched the effect upon industry of a planned employment policy; here we are concerned with its repercussions on the individual. The first and most obvious of these lies in the reduction of risk. Given control over imports and control of the intake and retirement of workers, it is possible to eliminate the risk of unemployment occurring on anything like the scale to which we have grown accustomed. With all its shortcomings, the British experiment in universal unemployment insurance has shown the practicability, even at the present low level of national income, of maintaining the population through full-time productive employment of a minority of its members. It is undoubtedly practicable to reduce very substantially the excessive numbers of the labor force by excluding from it large numbers of the elderly, the unfit, and the young, whose maintenance can be borne through other channels than wage earning. For the individual worker this means removing the atmosphere of insecurity in which he has lately had to live. He enters the labor force with a definite status which cannot be threatened by excessive competition or by the bad organization which certain industries have persisted in using to the detriment of their employees. His risk of being unemployed through no fault of his own can be reduced, and in many cases eliminated. The improvement in the status of the worker resulting from a planned employment policy is one of the most generally beneficial reactions to be anticipated following the creation of a planned economy. The principle of devolving responsibility must not be restricted to executives; all workers or teams of workers by hand or by brain should be free to arrange their own work as they find best, subject to the satisfactory performance of their function insofar as it affects the rest of the organization to which they belong. As the casual worker disappears, and the picked labor force which remains becomes more secure, the rapid improvement of the status of the worker will follow.

THE BRIDGE FOR THE SOCIAL GULF

The trend of industrial civilization has for many years been steadily reducing the importance of ownership in economic affairs, and enhancing the importance of management. In extreme instances the owners of a concern may run into hundreds of thousands, and all initiative has passed to a small number of highly paid executives, whose position, however powerful they may be, is fundamentally more similar to that of the wage earner than to that of the old-fashioned capitalist who could do absolutely as he liked with his own. This managerial class, in its new shape, makes a bridge by which the bad, old, social gulf may be spanned. To ensure, by training and selection, an adequate supply of first-rate executives, to improve the opportunities for recruitment to the higher posts from among those who serve in the ranks, and to reduce

the sense of class distinction in industry, are essential to the working of the new system, which must rely for many of its benefits on its success in making or finding more good organizers and in giving them full scope for their abilities.

HOW ABOUT THE CONSUMER?

Whether he is an employer or independent worker, a manual worker or an executive, a pensioner or a dependent, the individual is closely interested in economic planning from a quite different angle, in his capacity as a consumer. It is on this score that some of the most familiar objections to planning are raised; it is alleged that planning will mean that the consumer will pay more, or that he will find himself at the mercy of a tyranny which will ignore his tastes and force him to take what he is given; or, at any rate, that apathy will set in and the pace of improvement will slow down. It is important to consider what truth, if any, these criticisms contain.

Undoubtedly faulty planning can send costs of production up instead of down, and may, in this way, by reducing income per person employed, offset any other benefits which it may bring. But this danger is only serious where the plan is so enthusiastically directed to some noneconomic end that a rise in costs is considered worth while, or else where there is gross incompetence or dishonesty in its execution. In order to avoid this danger and to insure that planning for planning's sake is not allowed to take the place of planning for a higher standard of life, we consider that the lowering of costs should, in most cases, be one of the chief objects and tests of successful economic planning.

PLANNING CAN GIVE BETTER VALUE

The argument that the consumer will become the victim of tyranny has less substance. In a great many cases competitive business has proved unable or unwilling to undertake the research necessary in order to ascertain what the consumer really wants and how best to supply it. The growing popularity of mass production and mass distribution indicates that value rather than variety at any price is what the consumer wants. No doubt the demand for craftsmen's goods, for specialties and luxuries will continue and even expand, but the individuality or quality of these products will have to be real in order to secure them a market. The large organization, able to pay for research and to make experiments before standardizing its products, will set the pace for the specialist, while through cooperative organization the small producer or distributor will be able to provide himself with equivalent services and information.

PLANNING MEANS MORE COLOR IN LIFE

There is no ground for assuming that the planned economy will be lacking in color or variety; on the contrary, the intelligent use of standardization in the parts will give scope for originality and freshness in the product composed of them which would have been unattainable for all but a privileged few so long as the drudgery of manual repetition and of fetching and carrying in the workshop absorbed a large part of the money which the consumer could afford to pay.

Housing is a good example. It is here that the contradictions of individualism and the possibilities of planning are most evident. The millions have clamored for their houses to look "different," with the result that they all look different in the same way. The cost has been high and the quality is abominable. Mass production has been scorned as something infra dig, although it could have given the average villa dweller a far better designed set of materials at a substantially lower cost, and the saving could have been applied to the creation of a true, instead of a bogus, individuality for his house by having it built to his needs from the standardized materials.

THERE ARE NO MONOPOLIES NOW—THE CONSUMER MUST REIGN

Nor will there be any shortage of incentive. If the consumer does not like a product or a service which happens to be a monopoly he will find those responsible far more sensitive to criticism and more anxious to meet legitimate complaints than a crowd of struggling competitors, none of whom holds himself personally responsible for what is happening. If, on the other hand, the product or service is subject to direct competition, as it usually will be, the consumer will be free to transfer his custom elsewhere. In fact, the competition between different products and services is already so complex that to talk of monopolies is an anachronism. Slackness or lack of enterprise in any activity will soon result in the transference of demand to quarters which might never have been expected to prove competitive; an unsatisfactory hotel service will lose its customers not only to hotels abroad, but to shipping through the cruise, and to the caravan or camp; dear or indifferent beer may permanently reduce the habit of beer drinking and transfer purchasing power to the cinema or dance hall; high-cost railway transport is menaced by road, air, and water competition; everywhere the reaction of one development on another is ample to discourage apathy. Apathy, in fact, is more likely to set in where unrestricted competition robs an industry of the fruits of hard work and enterprise by leaving it at the mercy of preventable dislocations outside its sphere, or where the essential capital of an industry is confiscated through taxation and spent by the Nation as current income as a result of unsound financial policy. The suspicion that the consumer in the planned economy will be too much regimented is unfounded; the mere existence of plenty, which is the basis for planning, makes it inevitable that the planned economy shall take its orders from the consumer and not vice versa.

Planning within the factory has made the reputation of firms which have become famous for the value which they give the consumer. Planning by industries as a whole will enable the consumer to reap even greater advantages through the further elimination of waste. Those who never tire of asserting that every planning scheme is a plot against the consumer ought not to be left unanswered.

PLANNING CAN KILL DRUDGERY

There is one more aspect from which the impact of planned economy on the individual needs to be considered, and that is its effect upon him as a citizen. Even if planning is compatible with freedom in enterprise and with the better satisfaction of the consumer's wants, it may still be argued, and has already been argued, that it will involve a more mechanical and less rich type of civilization. There are always people who regard any invention and any organization as a plot for enslaving mankind, but they are fighting for a lost cause. We have already chosen irrevocably for the world to embark on the experiment of a mechanized civilization based on power instead of on human labor. The better we can organize such a civilization the more opportunity it will afford for escape from the element of drudgery in making a living which has up till now bulked large in the lives of the majority of men. At this stage in the depression the most hardened praiser of times past can hardly look with complacency on the fruits of the traditional system.

ENGLAND MUST PLAN FOR LIBERTY

There is all the same a special problem for England in the creation of a planned community which shall not only preserve but greatly extend the liberty which has been won during hundreds of years of struggle. For us it will not be good enough to adopt a plan, however successful, which shares the narrowing tendencies observable in many contemporary efforts to achieve order. Our plan must be an instrument for enabling people to obtain more leisure and to use it as they please, and in their working time to meet fewer frustrations and less drudgery than they now have to suffer. Let those who are genuinely concerned over the outlook for liberty set to work thinking and discussing how planning can be made the vehicle instead of the enemy of liberty, for planning is inevitable, and it is a special responsibility of Great Britain to set an example to the world of a plan which will broaden the lives of those who participate in it.

NOTES

WHAT LONDON MAKES

Planning depends on knowledge, and it is difficult to find many industries or activities of which we can yet say that the material for any permanent plan exists. That, of course, is no excuse for inaction, but it means that everything now undertaken must be transitional and subject to readjustment in the light of further experience. At the same time, all who are engaged in recording or analyzing the behavior of the social and economic machine should redouble their efforts in the knowledge that the need and appetite for their findings among political and business executives is greater than ever before.

In fact, bad as our present information is, it is a great deal better than anything available 10 or 20 years ago. Great Britain has still no clearing house of information, no statistical authority, nor even a handbook comparable to the American Recent Social Trends, which was reviewed in the sixth issue of Planning. We have, all the same, a growing number of indices and partial or local surveys which supply us with vivid and suggestive, though often tantalizing, glimpses of what is taking place.

During the past few weeks two excellent examples of partial surveys have dealt with industries in the London area. The larger of these is the fifth volume of the great New Survey of London Life and Labour entitled "London Industries II" (P. S. King & Son, 17s. 6d.); the second is a free-lance effort by Dr. Douglas H. Smith called The Industries of Greater London (P. S. King & Son, 10s.). Both these volumes are full of up-to-date information ably presented, and both throw light on some of the live problems which confront the planner. There never has been, and we may hope there never will be again in Europe a mass of swarming population and unplanned development comparable to that which can now be seen on a fine still day from an airplane three or four thousand feet above St. Paul's. This mass, which is still growing every day, has overflowed all the boundaries which have been set to it; the late Victorian County of London appears as a small island in the London passenger transport area which represents the metropolitan district of 1933, and even Greater London of the metroplitan police is obsolete. Neither the New Survey nor Dr. Smith are aole to cope with the entire Wen. The New Survey area does not extend to Dagenham in the east, Croyden in the south, Ealing in the west, or Enfield in the north, so that it only covers the central London of 1933. Dr. Smith begins almost where the New Survey stops, and goes out as far as Hertford, Watford, and Slough, but he has found it necessary to limit himself to a single quadrant of the area—the northwest quadrant between Thames and Lea. The New Survey has the great advantage of constantly being able to make comparisons with nineteenth-century conditions through the pioneer work of Charles Booth.

A static account could not show, as this work does, the living forces which are operating. One of these is the shift of emphasis from production to distribution. In the

scope of this particular volume productive industries have increased their personnel by about 11 percent during the past 10 years, while distribution and personal services have increased by nearly 50 percent. Although half a dozen retail undertakings have more than 2,000 insured employees, the great majority are small units. Mechanization has had the effect of increasing the proportion of females to males, and in many cases of reducing the average age of employees. The food, drink, and tobacco industries which are strong in London are highly mechanized, but the Survey constantly has to draw attention to the survival of the ancient manual methods side by side with the power-driven machine. Particularly in the retail trade the small man shows considerable tenacity. It was recently found that "in a typical Broadway in the suburbs, * * * out of a total of 187 shops, 130 were independent traders' premises, 44 belonged to multiple companies, 11 were local departmental stores of one type or another, and 2 were cooperative stores. This gives 70 percent small shops and 30 percent multiple concerns or stores."

The Survey gives a sketch of the small retailer, which is all the better on account of the neat irony with which it is done. It remarks on the fact that the independent retailer always regards himself as being on the point of being crushed out of existence, but never actually succumbs, and analyzes very acutely the causes of his embarrassments and of his survival in spite of them. Dr. Smith shows reason to believe that the increase of factories and of workers in Greater London is only to an insignificant extent at the expense of other parts of England. It is predominantly an increase of light industries catering for the home market such as have always centered on London. What makes them conspicuous now is that they continue expanding when heavy or export industries are often stationary or actually shrinking. His analysis shows that of firms now manufacturing in the area covered, 243 have migrated outward from London, 20 from the United States of America, and 27 from the Provinces, while 82 have grown up gradually on the spot, and 232 are new companies started during the past decade. Of the 27 immigrants from the Provinces, only 14 come from the Midlands or the North, contrary to a widespread belief.

Out of a total of 135,000 workers in the northwest outer metropolitan area factories, about eighty to ninety thousands are engaged in the 7 groups of manufacturing cars and accessories, chemicals, electrical equipment, foodstuffs, musical instruments, stationery, and office requisites, and furniture. All these are industries in which London has a substantial proportion of the British total, and all are directly linked with the London market. On the other hand, for shirts and collars, hosiery, boots and shoes, stoves and pottery, leather, glass, and rubber goods, and other imported categories, the provinces have in general practically a monopoly.

The separate treatment of the various industrial districts allows significant comparisons to be made between the industries of, say, Slough, Welwyn, Southall, and Park Royal. That most of the recent sporadic growth of factories could easily have been guided by deliberate planning into a more orderly form is clear from the eagerness with which firms have settled where any definite nucleus has been provided for them in advance, as at Wembley Exhibition, Welwyn Garden City, the new arterial road fringes, and the wartime munition factory sites of Slough Trading Estate, the Hyde near Hendon, and Park Royal. In the last case there are two such sites and a bypass; even in the present depression the 130 Park Royal factories employ eighteen to nineteen thousand workers, and Dr. Smith considers that this may ultimately prove to be the largest single center of industrial activity in the southeast of England.

Such surveys are invaluable; they pave the way for action.

BUILDING IN THE DARK

One of the more depressing characteristics of an unplanned world is that no one starts thinking about some of the most obvious and fundamental problems until action upon them is seriously overdue. Then many months have to be spent in factual investigation and thought which could and should have been done years earlier, or the job has to be undertaken in ignorance of its essential bearings. No more conspicuous instance could be found than the housing problem. Interest rates have fallen, public opinion has been roused, posters have been splashed over hundreds of hoardings, a departmental committee has reported, building societies are thirsting for new fields to conquer, and local authorities all over the country are being pressed to produce schemes. In view of all this activity it is surprising to find that no survey has been attempted of minimum requirements as regards number and size of rooms, amenities, etc., of the poorest paid workers; of the amount of land available at various prices per acre; of the average and extreme sizes of holdings in urban and rural land; of the comparative all-in cost of every practical type of housing at different rates of interest; of the past effects of the various subsidies on the State, the municipalities, the tenant, and the building industry; of the effect of maintaining local services out of the proceeds of a house tax called rates; of the incidence of the various items in the final cost of a house and how far possible savings in each of them would reduce economic rent; of the possibility of reducing labor costs without reducing wage rates; of the effects of lack of coordination in the building materials industries, and of many other points which are equally relevant to the formulation of sound policy. It is safe to say that had this necessary work been faced a dozen years ago an immense waste of money, of amenities, and of potential economic values could have been avoided. The P. E. P. group which is working on this subject is fortunate enough to have the active help of several of the younger architects who are currently engaged in housing construction, and of experts in the legal, technical, industrial, commercial, and house property management aspects of the problem. It has access to a certain amount of information not publicly available, yet it finds itself seriously handicapped by ignorance of essential facts. Any readers of the broadsheet who may be able to contribute any useful material from their own experience relating to this subject are invited to get in touch with the secretary of P. E. P. at once.

AGRICULTURE—THE AMERICAN EFFORT

A lot is heard at present about the National Industrial Recovery Act which President Roosevelt is endeavoring to put into force. Much less appears to be known in England about the parallel Agricultural Adjustment Act, although this experiment is of particular significance in view of our own Agricultural Marketing Acts, 1931 and 1933, and of the Russian collectivization campaign, which between them are helping to change the face of the world's agriculture.

It is interesting to observe that the Americans, who are generally supposed to be ruthless innovators, have adopted an ad hoc scheme on a temporary emergency basis, with definite provision for its abandonment when the emergency ends. The British, who are reputed to be shy of whole-hearted reconstruction, have frankly recognized that what is being done amounts to the permanent overthrow of the traditional system.

The United States Act, whose results are now becoming apparent, is officially described as "An act to relieve the existing national economic emergency by increasing agricultural purchasing power, to raise revenue for extraordinary expenses incurred by reason of such emegency, to provide emergency relief with respect to agricultural indebtedness, to provide for the orderly liquidation of joint-stock land banks, and for other purposes."

As we have received a number of requests that we should reproduce in the broadsheet extracts from important documents not currently available, we quote in full the declaration of emergency and declaration of policy which define what the act is intended to do:

"Be it enacted, etc.

"TITLE I—AGRICULTURAL ADJUSTMENT

"Declaration of emergency

"That the present acute economic emergency being in part the consequence of a severe and increasing disparity between the prices of agricultural and other commodities, which disparity has largely destroyed the purchasing power of farmers for industrial products, has broken down the orderly exchange of commodities, and has seriously impaired the agricultural assets supporting the national credit structure, it is hereby declared that these conditions in the basic industry of agriculture have affected transactions in agricultural commodities with a national public interest, have burdened and obstructed the normal currents of commerce in such commodities, and render imperative the immediate enactment of title I of this act.

"Declaration of policy

"SEC. 2. It is hereby declared to be the policy of Congress:

"(1) To establish and maintain such balance between the production and consumption of agricultural commodities, and such marketing conditions therefor, as will reestablish prices to farmers at a level that will give agricultural commodities a purchasing power with respect to articles that farmers buy, equivalent to the purchasing power of agricultural commodities in the base period. The base period in the case of all agricultural commodities except tobacco shall be the prewar period, August 1909–July 1914. In the case of tobacco, the base period shall be the post-war period, August 1919–July 1929.

"(2) To approach such equality of purchasing power by gradual correction of the present inequalities therein at as rapid a rate as is deemed feasible in view of the current consumptive demand in domestic and foreign markets.

"(3) To protect the consumers' interest by readjusting farm production at such level as will not increase the percentage of the consumers' retail expenditures for agricultural commodities or products derived therefrom, which is returned to the farmer, above the percentage which was returned to the farmer in the prewar period, August 1909–July 1914."

The United States, being mainly self-supporting, are not so strongly deterred as the United Kingdom from taking steps likely almost overnight. Scientific forest methods have replaced the old order of things. Fires that were purposely set each year have been fewer and fewer.

HOW IT HAS CHANGED THE LANDSCAPE

"Good telephone lines have been constructed, roads and trails now penetrate the innermost parts of the forest and are carefully maintained. Nurseries have been developed so that the native trees might once more take their place in the forest composition. Bridges have been built, dams constructed, the State parks have been fenced, thousands of acres have had silviculture treatment, and the fire hazards have been removed. Throughout the entire forested area steel fire towers have been erected. Everything has been done to develop the forest and to get it back to its original stage."

WE SHOULD LEARN FROM THE NEW DEAL

It will be observed that in this article little reference has been made to the Tennessee Valley Authority, one of the most significant of all the enterprises undertaken by the New Deal. The reason for this omission is that the T. V. A. raises a number of issues of special importance for Great Britain which we hope to discuss more fully in a later broadsheet. Here we may conclude by suggesting that, while particular aspects of the American New Deal are open to every type of criticism, the New Deal in America has made a great contribution toward bringing to light and helping to solve the problems of the contemporary world. We in Great Britain may doubt how far it would be wise to apply New Deal policies in detail in this country, but there can be no question that the constructive adventurous spirit which is being fostered in America through bold leadership is equally needed on this side.

[From Planning, London, England, of July 2, 1935]

IS THE NEW DEAL FINISHED?

On May 27, nearly 2 years after the passage of the National Industrial Recovery Act, the United States Supreme Court gave a decision which wrecked at a single blow the entire structure of the National Recovery Administration and the hundreds of codes set in operation under its rules. The test case was insignificant in relation to the issues involved; in fact, it had been christened the "sick chicken case" because it hung on the appeal of the Schechter Poultry Corporation from their conviction for violating the poultry industry code by infringing its labor provisions and by various unfair practices which included killing and selling poultry unfit for human consumpton.

On this small issue the N. R. A. crashed. The Supreme Court held that Congress was constitutionally unjustified in delegating legislative power to private individuals, or in delegating that power even to the President without laying down more definitely the principles which it should follow and the circumstances in which it should be used. Further, the Supreme Court held that the Federal Government cannot legislate about wages, hours, prices, production, or other practices of industry except insofar as these practices directly affect interstate commerce. At the same time the Court declared invalid the Farm Mortgage Moratorium Act and a number of important Federal agencies, including the National Resources Board, which had been tackling the problem created by generations of reckless exploitation and neglect of the basic wealth of the United States.

AFTER THE SUPREME COURT DECISION—BLOCKING FUTURE ADJUSTMENT

There was joy among supporters of the old regime and consternation among businessmen and labor leaders who had been trying to work the codes, and who at least thought them better than anarchy. Both sides were inclined to say on the spur of the moment that the New Deal had been suddenly and unexpectedly destroyed. This, it is already clear, was an exaggeration. In the first place, the Recovery Act would in any case have expired within a fortnight, and there was no prospect whatever of its being reenacted in its original form. The act had been from the outset an experiment for a brief and limited period—namely, 2 years. It had served its purpose, and as the first-rate survey by the Brookings Institution (on which we have largely relied in this broadsheet) shows, beyond all possibility of dispute, the results have been largely negative. No reasonable person would have wished to renew the N. R. A. as it stood, except perhaps for fear lest worse befall. So far as despatching the N. R. A. went, the Supreme Court deserved gratitude, not least from those who were committed to trying to continue the experiment. The resulting uncertainty was no doubt troublesome, but the uncertainty existed anyhow, because the act was on the point of expiry without anything having been arranged to take its place. Where the Court wrought havoc was not in terminating the operation of the Recovery Act, which had outstayed its welcome and outlived its usefulness, but in blocking its recasting in any more effective form, and in laying down constitutional principles which forbade for the future any approach to social security or to public supervision of economic activities of any kind.

All the same, the New Deal is much too big to be killed by any court, however absolute its decrees. The N. R. A. formed a stop-gap compromise at a time when there was no basis for anything better. Any attempt at a new structure could only be begun with a certain amount of agreement, and as agreement could not be obtained for sound and well-digested policies, it had to be obtained for unsound and undigested policies or not at all. Disappointment inevitably followed, but there are worse things than disappointment, and undoubtedly the N. R. A. has helped, in spite of all its shortcomings, to educate opinion and to build up a nucleus of experience and of seasoned personnel which remain as national assets in spite of the Schechter decision.

SELF-GOVERNMENT WHILE YOU WAIT

Administratively the scheme was unworkable. However desirable self-government for industry may be as an objective, to try to create it in a period of a few months, without the necessary information, resources, personnel, or experience for its proper operation, is asking for trouble. It is significant that the codes which functioned best were those which had as foundations careful survey work done, information and statistics gathered, and institutions built up before N. R. A. was thought of.

REDISTRIBUTION HAD TO BE FACED

Economically also the attempt to expand employment and to step up purchasing power with a jerk by abruptly and arbitrarily altering hours of labor, wage rates, and prices simultaneously was a crude and unsatisfactory experiment. Purchasing power could not be increased in that way, nor did the method help appreciably toward restoring equilibrium. The issue of redistributing the wealth and income of the United States had to be more directly faced, and it remains to be seen whether the American Nation will be able to improve on the method adopted in this country of promoting redistribution by steeply graduated taxation and by a wide range of social services. In fact, President Roosevelt, in a recent message to Congress, has asked for sharply graduated income and inheritance taxes which, although an innovation in the United States, do not compare in thoroughness with those already in force in the United Kingdom.

WHAT SORT OF AMERICA NEXT?

The alarums and excursions of the past 2 years may look serious at the time, but they are negligible in proportion to the issues raised by the New Deal and in relation to the time that will be needed for working these issues out. Twelve years ago Lord Birkenhead said to American lawyers: "The decision is premature whether you, and those who agree with you, have been right in trying to control the free will of a free people by judicial authority, or whether we have been right in trusting the free will and a free people to work out their own salvation." It may well prove that the readjustment of the United States to modern conditions will only be possible after transforming out of all recognition the first American Constitution which has stood for the past century and a half. Yet even the question of keeping or scrapping the Constitution is subsidiary to the main issue, which is what type of society the new America is going to adopt. Negatively the New Deal has already answered this question. It is never again going to be the type of society which looked so flourishing and immutable as recently as 1929. For a more positive answer we must still wait. Whatever the outcome the whole world gains by the fact that men have emerged in positions of leadership in America who know what social responsibility means and who are not afraid to experiment boldly and vigorously in attempting to find permanent expression for it in the new structure which they are beginning to build.

THE AMERICAN NEW DEAL

INQUEST ON THE NEW DEAL—ATTITUDES FROM THE PAST

Probably it is still too early even to begin to assess the results of the New Deal. In any event an outline of some of the main issues is both possible and necessary. The New Deal sprang spontaneously from American post-war conditions. The immigration which had constantly been bringing in a fresh bottom story for American society suddenly ceased. The physical frontier which generations of Americans had delighted in pushing back could be pushed back no farther. The hectic exploitation of national resources in coal, in minerals, in oil, in timber, and in soil had reached a pitch where retaliation from Nature was bound to make itself felt. The expansion of power equipment, the scale of business undertakings, the credit structure, urban development, and many other sections of American life had reached proportions which were conspicuously beyond the mental and moral capacity of many of those nominally in control of them. Easy accumulation of wealth and automatic increases in population and markets encouraged materialism and the worship of bigness for its own sake. There was a persistence of attitudes carried over from smaller and more primitive communities in which alone they could be indulged without disaster. Well-known instances of such attitudes were the intolerance of internationalism, the refusal to accept the implications of having become a creditor nation, the reliance or a rigid constitution and on constitutional amendment for the curbing of human demands (as in the case of prohibition), and the stubborn individualism which showed itself in industry through refusal of social responsibilities and in social life through open lawlessness. Lack of effective criticism, lack of leadership, and lack of political education left the United States at the mercy of the currents of the moment. There were many sober and constructive minds at work, but in the twenties they could get no real hearing.

By March 1933 when President Roosevelt was inaugurated, 4 years of disillusionment with previously accepted leaders and patterns of thought, of savage credit deflation, of chronic and widespread unemployment, of bankruptcies and foreclosures, of plunging prices and soaring debt burdens had produced an extremely powerful but exceedingly vague demand for relief, recovery, and reform.

RELIEF, RECOVERY, AND REFORM

It was this demand which the Roosevelt New Deal set out to satisfy. Relief was held to be urgent and to justify many sweeping emergency measures, but relief by itself was not nearly enough. Recovery was essential in order to check the spread of panic and the further disintegration of the economic and social structure of the United States, but recovery even accompanied by relief would not have been acceptable without some attempt to prevent the repetition of such a catastrophe. This attempt implied reform. The

three tasks of relief, recovery and reform were all urgent and were all emphasized in varying degrees by different groups. Each in itself was colossal, and the difficulty of pushing through all three together was increased by the fact that they were to a substantial extent incompatible with one another.

The first and most important instrument of relief was devaluation. In April 1933 the gold standard was suspended, and a period opened in which the value of the dollar was deliberately forced down by one expedient after another in order to boost up prices, to relieve the burden of debts and to make production profitable. Further measures for the relief of debtors, including mortgages, were put through Congress. For labor, relief took the form of huge Federal disbursements to the unemployed and of a large-scale public works policy.

AIMS FOR RECOVERY

The main agencies in the drive for recovery were in industry the N. R. A. (National Recovery Administration) and in agriculture the A. A. A. (Agricultural Adjustment Administration). Broadly these aimed at increasing workers' purchasing power by spreading employment through shorter hours without reduction of wage rates and at increasing farmers' purchasing power by crop restriction designed to check overproduction and to force up commodity prices, in order to restore something like the predepression relationship between prices of farm and factory products.

To a certain extent efforts at reform were included in the experiments already mentioned. For instance, the C. C. C. (Civilian Conservation Corps) as a branch of the public-works program took up energetically the neglected task of conserving natural resources, especially forests.

AGENCIES OF REFORM

More specific efforts at reform were represented by such legislation as the Securities Act, which sought to check dishonest practices in finance and investment, and in such newly created agencies as the Tennessee Valley Authority, which set out on a long-term plan to show how cheap power and transport could be made the basis of a new type of rural-urban civilization. Throughout there remained in the background the great issue of redistributing the wealth and income of the United States, which was widely considered to have become concentrated in far too few hands. In discussing at slightly greater length some of the issues of the New Deal the enormous scale of the background and the complexity of the surrounding problems must constantly be borne in mind

The most prominent single agency of the New Deal has undoubtedly been the National Recovery Administration (N. R. A.). In Planning No. 20 we attempted a survey of this part of the New Deal as it stood at the outset of February 1934, but a brief recapitulation is necessary. In what follows we have relied very largely upon the admirable analysis of the N. R. A. recently carried out by the Brookings Institution. This analysis, which has taken years of sustained work to prepare, is one of the most impressive social and economic investigations of which we are aware, and is certain to prove of enduring value. Although highly compressed, it runs to 950 pages, and this gives some measure of the scale and complexity of its subject.

OBJECTS OF THE RECOVERY ACT

The National Industrial Recovery Act, signed by President Roosevelt on June 16, 1933, was put together in a great hurry from a mass of undigested and often indigestible material. Under pressure of the national emergency a compromise was reached between conflicting interests (notably of large and small concerns and of capital and labor) and between rival points of view.

"There was doubtless substantial agreement that the lowest wages were to be raised, that the total wage bill was to be increased, and that available work was to be spread among more workers. Beyond that each person had his own ideas of what should be done."

One of the most potent ideas behind the Recovery Act was that of the destructiveness of unbridled competition. It was argued that a measure of economic planning was needed, and that the state must come to the rescue by checking deflation, by expanding purchasing power and by spreading work over a larger number of workers.

A MAGIC INCANTATION

The act conferred on the President extremely sweeping powers, without indicating at all clearly how far and in what direction they were to be used. Indeed, so broad and vague was the act that it might be read as a magic incantation for restoring confidence. President Roosevelt declared upon signing it:

"It represents a supreme effort to stabilize for all time the many factors which make for the prosperity of the Nation and the preservation of American standards. Its goal is the assurance of a reasonable profit to industry and living wages to labor."

Of the three titles comprising the recovery act, the second, dealing with the public works and construction projects, and the third, dealing with emergency relief, may be disregarded in considering the N. R. A., which arose out of title I. This title declared a national emergency, and conferred upon the President for a maximum period of 2 years extensive powers for setting up new agencies and for enlisting existing agencies in the working out and administration of codes of fair competition which might be approved and made legally binding by the President if he were satisfied:

CONDITIONS OF CODE APPROVAL

(a) That there was no inequitable restriction upon membership of the code.

(b) That the applicants were truly representative of the trades and industries for which they spoke.

(c) That the proposed code was not calculated to promote monopolies or to oppress small enterprises.

And (d) that the proposed code would, in his judgment, tend to effectuate the policy of the law.

N. I. R. A. AN ENABLING MEASURE

Monopolies were prohibited, but the antitrust laws were not to apply to codes. Power was given to impose protection for consumers, workers, and others. If trade groups failed to act the President might prescribe a code for an industry. Fines were laid down for cases of violation of codes. In order to render codes effective, the President was given power to license or limit imports, and for a period of 1 year only to license business undertakings where necessary. Section 4a authorized the President to initiate or legalize voluntary agreements, and produced the famous blanket code; for which the blue eagle was first adopted. The still more famous section 7a obliged all codes to include provisions designed to safeguard labor standards, and to uphold the right of collective bargaining by employees through organizations of their own choosing. The President was given power to cancel or to modify any order made under the act. It was therefore an enabling measure, in the first place for the President, and secondarily for industry. Nothing need be done under it, but almost anything might be.

It soon became obvious that the working out of a new structure of industry under the Recovery Act must at best be a long-term job. In July 1933, therefore, Mr. Roosevelt appealed to employers voluntarily to subscribe to the President's Reemployment Agreement, popularly called the blanket code, under which some two and a third million temporary agreements to maintain wages and employment were entered into, and the working conditions of some 16,000,000 employees were temporarily controlled. This agreement, which was not enforceable at law, marked the first phase before the specific codes could be formulated and approved. The enthusiasm with which businessmen responded to the President's call was largely inspired by the hope of getting around the antitrust laws and of regaining a profitable position by putting up prices.

SOME STATISTICS ABOUT THE N. R. A.

By February 1935, 546 codes of fair competition and 185 supplementary codes had been approved, covering industries with a predepression labor force of some 22,000,000. Amendments and modifications of codes had been approved to the number of 685. Over 11,000 administrative orders had been issued to interpret and grant exemption from individual codes, and 585 code authorities, with several thousand regional and divisional subordinate agencies and with an aggregate authorized budget of some $41,000,000, had been established. The actual staff of N. R. A., which numbered about 400 in August 1933, had grown to 4,500 by the beginning of 1935, and its monthly budget then exceeded a million dollars. The full scope of this colossal machine can be better appreciated when it is borne in mind that the bulk of the orders and rulings under N. R. A. were supposed to have the full force and effect of law, that they touched at many points the daily activities of most businessmen, and that the N. R. A. machine carried on at the same time not only legislative and administrative functions but to a large extent judicial functions in which its own administrative decisions had to come under review.

GENERAL JOHNSON'S TECHNIQUE

Immediately upon signing the Recovery Act the President chose as Administrator Gen. Hugh S. Johnson, who controlled policy, subject only to the President's decisions, until the creation of the National Industrial Recovery Board on September 27, 1934. General Johnson has himself described the technique followed as "working in the dark. * * * We hammered. Sometimes we hit the nail, sometimes the thumb." The difficulties encountered were so many and so huge that space permits nothing beyond a brief mention of a few of them.

BIG CODES AND LITTLE CODES

First it proved impossible to keep down the numbers of codes to the comparatively manageable handful originally contemplated. The retail trade code, the largest of all, covered three and one-half million employees, and a third of the employees under N. R. A. were included under the first 3 codes in point of size. Two-thirds of all the employees affected came under the 21 large codes, each covering a quarter of a million workers or more. At the opposite extreme, 283 codes, each covering less than 5,000 employees, accounted for 54.7 percent of the codes, but only for 2.1 percent of the employees. The insignificance of some of these codes was staggering. The animal soft-hair industry, with only 45 employees, was the extreme case. The numbers of codes would have been far greater had not the N. R. A. refused to negotiate with some 4,000 regional groups putting forward code proposals and with an army of sectional associations. For example, some 30 codes of fair competition were presented by interests purporting to represent the coal-mining industry. Eventually some 550 basic codes emerged, covering almost the whole of the American industry and distribution, apart from certain public utilities and anthracite coal mining.

WHO THE CODE MAKERS WERE

The difficulty of sifting this mass of proposals can be imagined. The parties directly concerned were:

(a) The code committee representing the applicant group.
(b) The Industrial Advisory Board.
(c) The Labor Advisory Board.
(d) The Consumers' Advisory Board.
(e) The Research and Planning Division of N. R. A.
(f) The Legal Division of N. R. A.
(g) The N. R. A. Deputy Administrator responsible for dealing with the code in question.

HOW THE CONSUMER GOT LEFT OUT

Of these parties the 2 with the strongest bargaining power were the Deputy Administrator, who could advise the President for or against approval, and the code committee, who were alone familiar with the industry, and could, moreover, withdraw the proposed code if they felt so inclined. The labor representatives had also a certain amount of bargaining power. The Industrial Advisory Board tended to become a second line of support for applicants, except where diplomacy was called for between rival or neighbor industries. The Consumers' Advisory Board proved weak in bargaining power, partly because most of the affected parties regarded themselves as proprietors or workers first, and only secondarily, if it all, as consumers, partly because it alone had no great organized pressure group behind it, and partly because it had to try to cope with far too many difficult questions at once. The difficulty of collecting and analyzing the necessary data for a calm judgment and for constructive amendments in the consumer's interest can be appreciated from the fact that in one typical week the Consumers' Advisory Board was called upon to express opinions on the provisions of 73 separate codes, including among other subjects, the heavy forging industry, the powder-puff industry, funeral service, chewing-gum manufacturing, sawmill machinery, infants' and children's wear, and outdoor advertising.

SERVING 25 MASTERS

Demarcation between different industries proved an insoluble problem. While the great majority of codes were horizontal in character, covering a single stage of manufacture or distribution, others were vertical, covering a single product, such as petroleum, through a succession of stages, and yet others were circular, covering all products associated with a certain use—e. g., athletic goods or office equipment. Among the numberless difficulties arising from these demarcation problems were multiple coverage of single enterprises, or conflicting treatment of identical functions. Different workers in the same shop might find themselves working under 5 or 6 codes. A chemical manufacturing company might be subject to as many as 25 codes, being liable to help to support 15 code authorities, to operate 20 sets of minimum wage rates, to introduce 14 systems of cost accounting, and to market its products under 25 sets of trade-practice rules. On the other hand, the strict provisions of the trucking (road haulage) code have tended to encourage retailers to take business from trucking firms by operating their own delivery transport, which comes under much less stringent regulations.

ORGANIZATION TROUBLES OF THE NEW DEAL

As the extent of the operations of the N. R. A. was not foreseen in constructing it, the type as well as the scale of its organization proved inadequate and had more than once to be changed. In its early stages the one-man control of N. R. A. and the hurry in which it had to work made any effective and detached thought about policy impossible. Even after the individual Administrator was superseded by the National Industrial Recovery Board, the representation of interests on this supreme body and the overburdening of its members with outside duties reduced its value as an organ of policy and of impartial review. The possibilities of friction arising from the various emergency bodies created under the New Deal have proved immense. Decisions on wages or production might, and in fact did, upset building programs, public works, agricultural programs, etc. The absence of a clearly defined policy, the frequent changes of policy, and the clashes between bodies with large and undefined policy-making powers could only lead to confusion. The shortage of statistical and other data about industry was also a continual handicap.

MACHINERY WHICH DID NOT WORK

The Brookings Institution survey sums up the code situation in the early part of 1935 as follows:

"1. There are codes for which code authorities cannot be organized. These are very few.

"2. There are others which, though organized, lack the money or the will or power to perform their functions at all adequately. These are relatively numerous.

3. Full implementation exists under very few codes.

"4. Most codes contain provisions incapable of implementation or administrative supervision.

"5. The phase of preliminary organization and implementation occupied so long a period for most code authorities that experience in the actual performance of administrative duties is still very limited.

"6. The delays in organization have made subsequent administration much more difficult."

THE BROOKINGS INSTITUTION SUMMING-UP

"Code-making proceeded on a bargaining basis * * *. There has been built up a vast network of code authorities and subordinate authorities which constitute in effect a unique extension of the machinery of the Federal Government. The exact legal status of these bodies is much in doubt." (This has been shown by the Schechter decision to be an understatement.) "The propriety of attempting to administer a new body of law through agencies made up of representatives of the private interests to which the law applies is very questionable. * * * Policing is ill financed. Factional disputes are common. The multiplicity, vagueness and multiformity of the rules make it impossible to apply them reasonably. * * * Individuals learn with difficulty what their rights and obligations under the codes are. * * * Competitive pressures lead to widening circles of noncompliance."

ACTION VERSUS ACADEMIC ANALYSIS

The survey of N. R. A. administration concludes:

"As a case study in administrative law the N. R. A. appears destined to become a classic. As a phenomenon, it offers strong confirmation of the traditional prejudice against extensive delegation of legislative power to the executive arm of Government. The necessity for some degree of such delegation being, however, admitted, the peculiar warning is against following a principle of action unlimited by rational (academic) analysis of processes, clear definition of objectives, careful selection of procedures, and in general the appeal of experience."

THE FLAW IN N. R. A. OBJECTIVES

Whatever permanent mark N. R. A. may leave on the American social and economic structure, the Supreme Court decision undoubtedly brings to a close its palmy days. What is to be said of its results? The Brookings Institution study, after investigating the subject with a thoroughness and a detachment which are beyond praise, finds that far from assisting business recovery in the United States the N. R. A. has substantially retarded it. According to this analysis the basic N. R. A. theory that purchasing power can be increased by spreading work and by bolstering up wage rates was (a) economically unsound, and (b) proved unworkable in practice, because on the average prices rose ahead of wage rates, in spite of all attempts to curb them.

"There was even at the outset little reason to expect that the result would conform to the preconceived design. If the program represented planning, it was planning without any adequate means of execution.

"With real wages per hour averaging higher than in 1929, it is obvious that the decline in the aggregate real income of labor was generally attributable to unemployment, either partial or incomplete, not to low wage rates."

LABOR UNDER THE CODES

The codes stabilized the actual working week in industry and trade at an average of 38–40 hours—perhaps 10 hours a week below predepression levels. The division of work among a larger number of workers is estimated to have led to reemployment of one and three-quarter million workers, but a further 10,000,000 remained unemployed. While different groups met with varying fortunes, the distribution of the national income as between capital and labor has apparently been little changed. The bargaining power of labor has, however, been materially enhanced. Only 45 codes out of 400 examined contained express provisions for the establishment of a labor complaints committee and/or an industrial relations board, while the number of such committees and boards supposedly functioning at the beginning of March 1935 was only 23, with a coverage of some two and one-half million workers. The growth of trade-unionism was more impressive. Average paid-up membership represented by the American Federation of Labor grew from 2,100,000 in 1933 to about 3,000,000 by 1935. In June 1933 there was, for example, not a single union affiliated to the American Federation of Labor in the motor manufacturing industry; by autumn 1934 there were 104 such unions with a membership of possibly 50,000.

As an experiment in politics or as an experiment in economics, N. R. A. may be written down as a failure. We must not, however, overlook the fact that the situation in America in the first half of 1933 was such that hasty and drastic intervention had both been made inevitable and doomed in advance to frustration by the scale of the social and economic maladjustments which had been allowed to arise. No government could have failed to intervene and no government could have intervened in the circumstances with more than limited success. If, as seems probable, sounder leadership would have produced superior short-run results, the fact that leadership was forthcoming of an inspiring type and moved by a high sense of public spirit is a gain not to be ignored.

OUT OF THE LIMELIGHT

While hosts of businessmen and labor leaders raise their voices loudly over every move in the N. R. A. episode, and while farmers and housewives lose no opportunity of saying what they think of the A. A. A. (Agricultural Adjustment Administration) and its policy of raising farm purchasing power through subsidized crop restriction, other and probably, in the long run, more significant work is being done out of the limelight.

SOME LEADING DOCUMENTS

One example is the steady development of a technique of planning, of digested and reliable data on the Nation's resources and performance, and of a body of trained diagnosticians of social and economic maladjustments. This development had already begun during President Hoover's administration, when it produced such a notable experiment in measurement as Recent Social Trends. Since then it has become much more rapid, and the number and length of important American official and semiofficial documents bearing on planning have now reached a stage when it is almost impossible to keep abreast of them. Outstanding among recent publications are the 450-page report of the National Resources Board (dated December 1, 1934), with its many suggestive and informative maps and figures, and its summary of facts and recommendations on planning in general and upon land use, water use, mineral use, and mapping; and the more specific report on similar lines of the Mississippi Valley committee of the Public Works Administration (dated October 1, 1934), which was under the chairmanship of a leading power expert, and which gives some attention to the possibilities of establishing an electric grid on the British model. Another suggestive report has been issued by the New York State Planning Board (Summary Report of Progress, dated January 14, 1935), which brings together in 80 pages of maps, statistics, and narrative the fundamental facts of population, land use, forestry, power, water, minerals, highways, public works, recreation, housing, and planning which govern the future of the State of New York.

Yet other notable examples are the United States Department of Agriculture's Survey of Economic and Social Problems of the Southern Appalachians (January 1935), the report of the Committee on the Upper Monongahela Valley, West Virginia (November 7, 1934) and a number of publications of the Tennessee Valley Authority. In such reports the vast national resources and potentialities of the United States are for the first time systematically and constructively appraised.

A NEW DISCOVERY OF AMERICA

It is almost arguable that these reports, rather than the raids of Eric the Red, Cabot, and Columbus, or the hectic and blind exploitation of the past three centuries, mark the true first discovery of America. Certainly to read them is to find a new landscape opening out, which is quite as strange and as exciting as anything discovered by the primary exploration of countries off the map. Indeed, as the National Resources Board shows, only 25 percent of the United States is adequately mapped, and more than half of it is still not covered by topographic maps at all. It is not to be expected that any considerable advance in social and economic organization can occur before the elementary collection and digestion of data has been done, and before men and women in key positions have learned to understand and act upon them In the long run, therefore, this apparently "academic" survey work may prove of more constructive value than heroic but ill-founded "practical" efforts to find a short cut to prosperity.

It must not, however, be imagined that fundamental and long-term constructive work of a practical type is purely a matter for the future. Although the scale of recent events may have dwarfed them, some important initiatives have already been taken. The clean-up of crime, which is being carried through with ruthless thoroughness by Federal agencies, may seem remotely connected with planning, but, in fact, one of the greatest handicaps to effective organization has been the prevalence of looting and lawlessness, and the apathetic or hostile attitude which these induce toward cooperation for social ends. The lack of discipline and of social standards which has hung over from the frontier period of American history has now become a nuisance rather than the asset which it once was.

THE CIVILIAN CONSERVATION CORPS

On this account the success, for example, of the efforts of the Civilian Conservation Corps may have far-reaching effects. The C. C. C. has a double purpose—first to take off the streets hundreds of thousands of boys and young men without employment who might otherwise become vagrants or criminals; and second, by means of a disciplined force thus created, to tackle many conservation and construction works of public value which would otherwise not be done, especially in connection with forestry, drainage, and prevention of soil erosion. Up to April 1 this year the C. C. C. boys, who number some 375,000 (in future there will be 600,000), were reported to have spent 15,000,000 man-days in fighting forest fires, to have built 50,000 miles of forest roads and tracks, to have planted nearly a quarter of a million acres with tree seedlings, to have made 800,000 erosion dams, and to have performed similar exploits with the sinking of wells and with mosquito control. There are now 1,457 camps, and over a million men have passed through them, mostly between the ages of 18 and 25. The value of work done up to the end of December last is put at about £70,000,000, and it is estimated that so far conservation has been advanced by about 20 years as a result of the C. C. C.'s efforts.

CRITICISMS OF THE C. C. C.

The camps are run by the Army, and this has given rise to accusations of militarism and fascism, for which there seem to be no real grounds. Military drill is forbidden, and the main criticism against the educational side of the C. C. C. is on the ground of its inadequacy in personnel and resources rather than of any marked bias. Although there has been a number of personal differences, and local break-downs of various types, the C. C. C. has on balance undoubtedly been a success. One important indirect effect has been that in order to qualify for C. C. C. help one State after another has greatly increased its publicly owned forest acreage.

To quote a Missouri forest officer reporting in the Forestry News Digest for May 1935:

"Since the coming of the C. C. C. the general forestry policy changed to result in increased costs for food and raw materials. If the attempt to raise farm prices is permanently successful, the immediate effect on world agriculture of the American initiative may be spectacular, but if the British model succeeds in lowering costs by reducing distribution wastes while leaving the farmer free to do his own job properly, its ultimate influence may prove at least as great.

Federal Personnel Statistics

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

UNITED STATES CIVIL SERVICE COMMISSION,
WASHINGTON, D. C., *October 13, 1943.*

Hon. ROBERT RAMSPECK,
House of Representatives,
Washington, D. C.

DEAR MR. RAMSPECK: In accordance with your telephone request of this date, there is presented below a statement indicating the total employment as of December 31, 1942, as compared with May 31, 1943 by (1) War Department, (2) Navy Department, (3) emergency war agencies, and (4) "Old Line" departments and agencies.

We have used the May figures for comparison purposes because in June 1943, the method of employment reporting and the coverage of the reports was revised in an effort to procure more accurate data from the departments and agencies. As a result of this change, the figures for June and subsequent months cannot be used for comparison with statistics for the previous months:

Comparative personnel statistics Dec. 31, 1942, and May 31, 1943

	December 1942	May 1943	Increase
War Department	1,257,014	1,381,890	124,876
Navy Department	559,590	634,530	74,940
Emergency war agencies	168,011	183,733	15,722
Old line departments and agencies	826,256	830,506	4,250
Total	2,810,871	3,030,659	219,788

It is also possible that the following statement may be of some interest or help to you. It is a list of the agencies in which there was a decrease in personnel reported on May 31, 1943, as compared with December 31, 1942:

Statement indicating agencies in which there was a decrease in personnel reported on May 31, 1943, as compared with Dec. 31, 1942

Name of agency	Personnel reported Dec. 31, 1942	Personnel reported May 31, 1943	Amount of decrease
Alien Property Custodian	1,118	1,083	35
War Manpower Commission	62,593	62,029	564
War Production Board	21,628	20,388	1,240
Office of Censorship	12,600	12,086	514
Post Office Department	324,529	315,189	9,340
Interior Department	41,739	40,583	1,156
Board of Investigation and Research	168	160	8
Civil Service Commission	7,349	6,307	1,042
Employees Compensation Commission	514	504	10
Federal Deposit Insurance Corporation	2,427	2,263	164
Federal Power Commission	817	673	144
Federal Trade Commission	585	500	85
Federal Works Agency	26,647	22,834	3,813
Government Printing Office	7,868	7,733	135
Interstate Commerce Commission	2,474	2,273	201
National Archives	446	357	89
National Capital Park and Planning Commission	21	19	2
National Labor Relations Board	890	873	17
Panama Canal	31,673	28,348	3,325
Railroad Retirement Board	1,891	1,658	233
Security and Exchange Commission	1,365	1,302	63
Smithsonian Institution	809	751	58
Tariff Commission	355	306	49
Tax Court of United States	131	125	6
Tennessee Valley Authority	34,878	28,888	5,990
Veterans' Administration	44,549	43,848	701

Sincerely yours,
ARTHUR S. FLEMMING,
Commissioner.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. LAMBERTSON. Mr. Speaker, first things first in the war effort makes the frequent use of "relative urgency."

There are now 3,300,000 persons on the civil-service roll—a good place to start a roll-back.

No doubt confused and bleeding Italy, with her dictator gone, now envies Switzerland and Sweden.

The speeding of Philippine independence by the United States at this time, while on the whole a very serious matter, is not without its funny side.

A new tax bill by Christmas is the promise of the Ways and Means. Next year will not only hold a great deal of interest, but will gather a lot of taxes.

Retired Army officers for bureau directors seems to be more and more the vogue. They know their Commander in Chief and they care little for the reaction from the rank and file.

If the five "fellow travelers" who were all interventionists brought back a report such as they did, what would you think of sending over WHEELER, BENNETT CLARK, ELLENDER, NYE, and BROOKS, for a recheck?

There are now more than 9,000,000 in our armed forces. Early in the week before Pearl Harbor it leaked out here in Washington that they were planning a 10,000,000 Army. The CONGRESSIONAL RECORD is full of it.

There are now nearly 40,000 doctors in the Army, 10,000 in the Navy. The country's total is 173,000. We can thank our lucky stars that no great epidemic has broken out here at home or in our front lines.

Rome again becomes a center of special attention. For about 2,000 years at least, or since Apostle Paul took us there, we have followed her with interest. There will be wars as long as there are Caesars in every important land, pacts or no pacts.

Lend-Lease Administration

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. McKENZIE. Mr. Speaker, the enclosed editorial from the Shreveport Times, Shreveport, La., was published in the issue of October 10, 1943. It most ably expresses the concern and apprehension with which the people of my State view the activities of certain Washington bureaus, all of which is done in the name and under the guise of war necessity. These good people believe that no necessary sacrifice is too great a contribution toward the effort of winning the war as speedily and decisively as possible. They believe that we should support our allies. They believe in the Christian doctrine of "Love thy neighbor." They are liberal minded and charitably inclined. But, above all, they believe that our real interest in this war, the reason we are fighting, is to preserve to America and for Americans the things that are ours; our lives, our homes, our businesses, our God-given natural resources, and our right and duty to develop and conserve them through the American system of free enterprise and individual initiative. They believe that our future is in, or should be in, the hands of patriotic, nationally conscious Americans. In view of this and because of the concern to all of us I submit the above-referred-to editorial:

INVESTIGATE THIS SCANDAL

The shocking and disgraceful mismanagement and incompetency in Lend-Lease Administration of such supplies as trucks, gasoline, and tires, as revealed by members of the special Senate committee returning from inspection of overseas fighting areas, should bring searching Senate investigation of the whole lend-lease set-up and of the gas-rationing confusion and inefficiency under Secretary Ickes.

The revelations of the Senators are flame-producing fuel on lend-lease fires which already have been smoldering in many directions, with obvious indications that Washington bureaucrats are using this war agency to play global Santa Claus for political self-glorification regardless of waste, extravagance, hampering of the war effort, or needless suffering in civilian and business life here at home.

Lend-lease shipping of 30,000 trucks per year to Australia for civilian use there, as reported in the Senate, while permitting only 15,000 to be made available to civilians here at home, is by itself a major scandal. Australia is a country with only 10,000,000 population against our 130,000,000 and our business, agriculture, and commerce are expected to take care of much of the world while Australia fundamentally has little more than its own small self to handle. These truck allotments are entirely for civilian use and not for uniformed forces—and certainly the small handful of United States troops in Australia would not necessitate any such great truck need, by comparison with our own here at home, to haul supplies in Australia for our fighters over there.

In the meantime there are literally thousands of farmers in this Nation whose food production for home and global civilian use and for our own uniformed forces and those of our allies is being hampered by truck shortage. There also are literally thousands of business firms either lacking trucks or operating with makeshift, run-down, rattletrap equipment. On those suffering the shortage here at home rests much of the burden of keeping our own domestic economy going so that our home front can do its share in winning the war and help maintain the economy of the nations fighting with us.

To add to the general incompetency and inefficiency, the senatorial report reveals such muddling as shipping of wrong-size truck tires overseas when our own people often cannot get tires even with a ration certificate showing that they are operating in war essential business. Elsewhere in Washington there are charges that many billions of dollars appropriated by Congress to other purposes have been diverted to lend-lease for its global Santa Claus role without any legalizing action by Congress and in addition to the billions of dollars which were appropriated by Congress for lend-lease.

This whole scandalous situation becomes even more amazing and disgraceful when it is added to the previous senatorial reports that civilians of French Africa have been allotted more gasolihe than is made available under Mr. Ickes' rationing set-up to civilians in some of our own domestic areas of the United States. On top of this comes a recent statement from the head of a British refinery saying his plant could increase gasoline production by a full 60 percent "if it became necessary." Of course, it hasn't been necessary—from the British view—because the blindly groping bureaucrats in Washington would rather take gasoline from our own civilian population and deplete our own national resources and give it away overseas than to even suggest to these foreign nations that they turn to their own resources and production facilities before calling on us.

On top of the senatorial reports come such additional revelations at recent dispatches from Italy describing agents of Washington bureaucracy as tossing chocolate bars to the Italian children along the roadside while our own American children here at home rarely can get a chocolate bar for either food or pleasure—and of shipment by the bureaucrats of long underdrawers to the Arabs, who throughout centuries were quite content with a sheet and a turban until the lend-lease Santa Claus began cavorting around their valleys and deserts. There are many other angles also, such as recent return of millions of cases of food sent to the overseas army, of shipping butter to Russia when it was little known there and we were short, of using our canning and packing factories for special food preparations for foreign civilians with resulting shortages in supplies of our own food for our own people. The same irrational policy, confusion, and incompetency have permeated our whole rationing effort, starting with sugar and coffee. There is plenty of indication also that the Army supply work under Lt. Gen. Brehon Somervell also may have a lot of holes in it in connection with allocating our home production. General Somervell is the man now reportedly backed by the inner clique of new dealers for the Chief of Staff job of Gen. George C. Marshall if a way could be found to promote the latter to a global command.

The picture presented by these various revelations is not only shocking, scandalous, and ridiculous, but it is certain to break home morale and disrupt the whole domestic war front if it continues. There should be searching investigation, now, by the Senate under a policy of letting the chips fall where they may regardless of their size or of what officials may be hit.

As a policy of getting equipment to the fighting forces of our allies and of maintaining war-essential civilian strength overseas, the purposes of lend-lease may be excellent. As a practice of ripping open the welfare of our own American people here at home—the people whose taxes pay the cost of all of it—in order that a few bureaucrats may gain a few cheers from the British, the Arabs, the Australians, or anyone else, the whole thing is shameful and disgraceful.

North American Officials Plan To Step Aside in Stockholders' Interest

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following article from the New York World-Telegram:

NORTH AMERICAN OFFICIALS PLAN TO STEP ASIDE IN STOCKHOLDERS' INTEREST

(By Ralph Hendershot)

If present plans are carried through to completion a few very competent corporate executives will be open for a proposition in the not-too-distant future. They include Edward L. Shea, president, and other top officials of the North American Co.

How come? They propose to kick themselves out of office. Yes; it is rather unusual. Most unusual, in fact. People just do not do that sort of thing. It usually requires a stockholder action, backed by proof that they had carried off the Brooklyn Bridge or something equally bad.

But these people have committed no crime. In fact, they have done an excellent job of management. And they have treated the public well, too. The base rates for electricity charged by the companies they manage are said to be the lowest in the United States.

What, then? Well, it's like this: Some years ago Congress enacted a law which made it mandatory for the public-utility holding companies to break up their properties. And North American is one of the largest of these holding companies.

SOFT BERTHS WERE AVAILABLE

Yes, you're right. It still is unusual that these men should step aside. They could very easily find nice berths for themselves among North American subsidiaries. The jobs would not be as big as those they now hold, but they would be attractive, and they could afford to pay pretty high salaries.

But Mr. Shea thinks that might not be in the best interests of stockholders. He proposes, instead, to split the properties up into four groups, each to be managed by present operating officials. A few properties, such as the building the company owns at 60 Broadway and a coal mine, would be sold and the proceeds turned over to stockholders.

When we heard about the plan we began to wonder whether any of our politicians had ever done anything even remotely comparable. If they have, it has escaped our notice. They usually go to any lengths to stay in office, whether or not to do so is in the interests of voters.

HAS-BEENS ARE PLENTIFUL

Competent as they are, it will not be easy for these North American officials to step into high positions in other corporations. Some of them, to be sure, are men of wealth, but some are not. And the woods are full of men who have never been able to stage a comeback.

We have heard a great deal in the past about princes of privilege and economic barons and a few terms even more derogatory. But we have heard very little of men like Mr. Shea who place their positions of trust as heads of large corporations ahead of their own personal interests. We think such men are entitled to a salute, Mr. Shea, the best.

Are We Again the Prize International Fools?

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial published on October 11, 1943, in the Centralia (Ill.) Evening Sentinel:

ARE WE AGAIN THE PRIZE INTERNATIONAL FOOLS?

This Nation would be doing far less worrying about our post-war future if those who represent it in present and future negotiations adopted a more realistic attitude, one more in keeping with facts as they are and now are so clearly foreshadowed among our principal allies.

The people in general are fed up with this big-hearted Harry stuff so prevalent in top official circles in Washington.

Americans can be, and naturally are, idealistic, and respond to the call of the humanities probably more than any other peoples. We believe they would wish to continue so.

But Americans also are a practical people, and can be canny. They are quite willing that their allies should also reach for the check in their turn and that the dinner should not always be on Uncle Sam because some of our leaders, ever searching for the show's spotlight, imbibe too freely of the heady stuff of egoism with which their glasses are slyly and purposely filled by our canny conference table companions, the British, Russians, and Chinese.

Winston Churchill didn't consider it inappropriate to frankly say that he did not become Prime Minister of Britain to break up the Empire.

Joe Stalin plainly indicates that which Russia gains it proposes to hold, and has already taken into his vast realm the little Baltic countries he is now in the process of retrieving by his armies.

And Chiang's whole fight has been on the basis of getting back, with the help of his allies, the Japanese occupied part of China's vast domain.

France expects us, with our allies, to regain her territory at the cost of many American lives and an unprecedented amount of our treasure. And the Balkan countries, Holland and Belgium, also expect us to do no less, and make good the Roosevelt promises to that effect.

As if the above were a small chore Vice President WALLACE glibly proclaims that it is also our duty to take on the whole world for reclamation, making it over according to the orists and dreamers. And hand you, the American taxpayer and bond buyer, the "check" for another impossible and grandiose experiment. Only Washington seems to be indulging in the platitudes.

Even the American constructed airports and naval bases built with your money all over the world, and which will be gravely needed also for the protection and promotion of post-war American interests seems now to have been airily waved aside by our impractical spenders in charge of these negotiations, according to the five Senators just returned from a wide trip of investigation to the war fronts.

Being realistic and practical is not selfishness. It is just plain common sense, of which it is indicated there seems to be an appalling dearth in high places in Washington.

America does not want more territory, and does not wish mandates. But neither does it wish to make itself again the prize international sucker it did in the last war. If the Presidential lend-lease scheme proves to be neither lend, nor lease, but an unnecessary gift, as seems finally now evident despite first statements to the contrary, the sooner Congress brings these grave facts into the open and does something about it, the more America's future billions will be protected.

To use a typical American expression this country expects not only a run for its money—but much, much more, so to know that American lives have not been sacrificed incidentally to aggrandize other more realistic allies when the debits and credits of the world holocaust have been finally cast up.

To be realistic on the practical side does not detract one whit from the idealistic side which is one reason we are in this war, in addition to the main reason of protecting our own country and our own liberties from European encroachment.

Americans wish to fight this war to the grim victorious finish in the prayerful hope this sacrifice will actually incapacitate and teach the Hun world-wide domination by any one people is impossible. They would not lessen the hitting power of the Allies one shot, but the contrary. To do so does not call for Americans to be fools.

Freedom in the Post-War World

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered in Baltimore, on Freedom in the Post-War World, at the industrial night dinner of the Baltimore Traffic Club, October 5, 1943, by Carroll B. Huntress, New York City, vice president, Republic Coal & Coke Co., of Chicago:

When the dawn came up like thunder 22 months ago, and Hawaii was awakened by the roar of Japanese bombs, another era was born. Then the curtain for the big show went up. Then illusions were shattered. Then we learned the kind of world in which we live. That made us mad. Now we stand on the edge of a new world. Since December 7, 1941, a vast change in the Nation's life and mood has been wrought. We feel our giant strength; we're in our giant stride. Our muscles are flexed; we're in fighting trim, both on the battle front and the production line. What is more, we've learned to work in close unison with our allies, regardless of the fact we may not fully understand them. That's no reason we shouldn't like them. Most men don't understand their wives, but most men love them. It is pretty well established by now that each of our allies has a good many admirable and likable traits and a few traits, we have some ourselves, that are a little irritating to others. Nothing would be so irritating, however, as to have any other people perfect. We should then have nothing to criticize; and it would be a dreary world indeed.

The winning of the war is the subject which has triple-A priority. We cannot afford to lose the keen edge by which a bitter battle is won; and we realize that a hard road lies ahead. However, because, as Winston Churchill says, "The mellow light of victory now begins to play," it is high time to plan for a post-war period in which humanity may advance in social wisdom and maturity. From the disclosures of this war we should immensely profit. We are in a bad hole, but we are determined to get out of it. Babylon and other nations got into bad holes and stayed there because they did not have the capacity to capitalize their blunders and mistakes and ride them back to the road of safety and progress. That is the real strength of a civilization: that is our strength.

There is deep significance in the story of the prodigal son—a meaning beyond the life of the individual. That young man made a fool of himself but he didn't keep on making a fool of himself. When he got inside the hogpen he came to himself and came back. And this Nation is doing likewise, for there

are unmistakable signs of a return to sound thinking and to constitutional government, one of laws and not of men. Folks everywhere, even some politicians, are getting more or less frightened and saying, "Something must have happened to the Constitution." And they are as dead right as was a witness at an inquest over the remains of a man named Ole, killed by a railroad engine. The witness said, "When I was going home I went up the railroad track and saw Ole's hat; further on I saw his hand cut off; then I saw his foot; and on further I saw his head lying there. And then I said, 'Something surely must have happened to Ole.'"

Industrial leaders, in increasing numbers, are speaking out against a repetition of the errors of the 1920's. Reasons for the sharp swing away from constitutional government to bureaucracy are not obscure. That modern Frankenstein, as Senator BYRD, Democrat, Virginia, styles it, is not a creature of chance. Industrialists know why this Nation is being run by a "bunch of bureaucrats," as Chairman SUMNERS of the House Judiciary Committee puts it. They are aware of the shortcomings of the past and are determined they shall not happen again. They realize that private enterprise must promise more than high production and high employment. It must establish its right to public confidence if it is to survive, by guaranties that practices tending to defeat high production and high employment will be forever abandoned. And it is doing that very thing. Along that road lies the greatest good for the greatest number. Cerainly, what we seek is not to be found in glorified bureaucracy, despite the fact that Harold Ickes shouts, "I am a bureaucrat." To comprehend fully that menace, reference to Webster's dictionary is timely. Noah Webster says: "Bureaucracy—a system of government by bureau heads, responsible only to administrative officers above them, not subject to the law of the land; a system that lacks enterprise and resourcefulness."

An encouraging aspect of present business is its open-mindedness. Business cognizes that it must be informed on all sides, preach not only to the converted and listen not only to those who can put into the mind nothing that was not already there. Business under private enterprise cannot survive an ostrichlike attitude, respecting opinions of speakers and writers with which it disagrees. It is only human to favor the member of our clan, or church or lodge; but if a man who isn't a member tells you your home is on fire you'd better listen anyway. He might be right.

Reference has been made to the profitable lessons to be learned from wartime disclosures. They are numerous and diverse, in both the national and the international fields. We hear much lately of freedoms. There are many and their range is wide. But let us dwell tonight on the United States tradition of freedom, with emphasis on the freedom of enterprise, the keystone of all freedoms. The war spotlights the indispensability of that freedom, as to victory both on the battle front and the home front. First, let us define what we mean by private enterprise. Democracy is a brief answer, but so many professors have been broadcasting their ideas about that form of government that a more specific reply is called for. Napoleon once said, substantially, "I can always find a professor to justify anything I want to put over. Besides, they write in such an incomprehensible jargon that people can't understand what they are talking about." But one professor, namely, Harley L. Lutz of Princeton University, in these words, makes crystal-clear what is meant by the system of private enterprise: "It is one in which the production of goods and services is performed mainly by individuals or privately owned corporations. It is not comletely free in the sense of being completely exempt from any public regulation. Such has never been the case. It is free in the sense there are no barriers, legal, social, or political, no barriers of race, creed, birth, or breeding, which prevent anyone from engaging in some way in the activities or services performed by enterprise." With that definition in mind, let us relate that freedom to wartime revelations.

The might of our industrial machine has vividly shown what private enterprise, which built that machine, means to us. When the Germans decided to go all out for mechanized warfare they went right up our alley. They challenged us at our strongest point. They banked on their superior preparation as concerns immediate striking power. They failed to reckon on the adaptability of Americans and their industrial processes. It is fitting to stress the story of American achievement in the battle of production, so that our people will appreciate the secret and source of their strength, and also because they are now disposed to study the principles which safeguard that accomplishment. Only a few years ago the popular attitude was different. Then, in many quarters, distrust of business prevailed; people thought its leadership was weak and that there was something sinister about it. This difference between the present friendly attitude and the hostile attitude of a few years ago is, I believe, the difference between the restoration of individual freedom and the continuance of the trend toward totalitarian regimentation. We at home and the boys in the Army and Navy are learning of the performance of our guns and ships, of the production of billions of pounds of equipment by the greatest arsenal in world history; we see the visible evidence of the ability of our railroads to transport men and equipment in amounts and at a speed never before attained; of the output of our electric utilities reaching unparalleled heights. We are justly proud and justly we pay our tribute to private enterprise.

Every branch of industry has scored an impressive record. The railroads are great champs, but I should like to cite the record of another industry for the reason that it has more than served its time and its turn as a scapegoat and a whipping boy. Its demonstration of ability to meet the extraordinary demands of war as well as those of peace should prove that that industry was soundly conceived and developed, in the best tradition of private enterprise.

The electric-utility industry has participated importantly in every war effort. It has never been too little or too late. In common with other enterprises, except those of the Government which are tax exempt, electric utilities help to finance the war. Taxes take almost 25 cents out of every dollar of gross revenue, of which Washington gets the lion's share. From the construction and operation of the training camps and the war factory, through to the equipping of every soldier and sailor, electricity has played a vital part. In the production of every article it has made available vital energy every second of the 24 hours of every day. As of October 1, the grand total of electric power from all sources in the United States is 260,000,000,000 kilowatt-hours per year, or 45 percent of the world's supply. This enormous supply has made possible these services to the war effort, not in substitution for but in addition to the continuance of service in the homes, the factories, the farms. Availability of an ample supply of electric power, as a result of development work mainly at the risk of private capital, largely accounted for the rapid growth of our war plant and its output. In short, that industry was ready. No weakness, no unsoundness there. The consuming public, as a whole, as well as industry, rejoices at the achievements of electric-power utilities. I refer to the fact that electricity rates are at an all-time low. In the last 4 years, residential rates are 10 percent off, as against an increase of 24 percent in living costs.

We are prone to regard figures, other than those pertaining to our own financial statement, as somewhat dry; but bear with me a minute while I offer a few more which reflect a high measure of credit on one outstanding creation of private enterprise. True, the Federal Government has inched its way into the ownership picture until, as of October 1, its plants produced 12 percent of the total public power supply. The bulk of Government power goes into the aluminum and magnesium industries but the private utilities are the ones which are turning the wheels of industry in the great industrial zones, in the shipyards and aircraft plants in the Baltimore area, for instance, as well as serving many heavy chemical industries. Since June 1940, the combined electric generating capacity of plants serving the public supply, independent of isolated industrial units, has grown by 8,000,000 kilowatts; and in December, that capacity will be a full 50,000,000 kilowatts. The margin between peak loads and generating capacity to carry them still remains about 10,000,000 kilowatts, the June 1940 figure. Because the power supply appears ample through 1943 and 1944, the War Production Board and the Office of War Utilities have canceled or postponed completion of 2,000,000 kilowatts of generating capacity that the private utilities were in process of constructing. That action is eloquent in the light of prediction by the Federal Power Commission that the power supply would be insufficient.

Here is an indication of the improved position of private utilities in popular esteem, which reflects a swing away from statism and back to private enterprise; hence, is worthy of note. In the decade ending in 1942 there were 1,039 elections, involving the choice between business and political management. In the first 3 years of that decade, 326 elections were held and 62 percent favored political management. In the last 3 years, 189 elections were held and only 33 percent were favorable to political management. To date, this year, there have been only 3 elections, all of which went against political management. These figures are revealing.

There are other wartime disclosures. Some of them relate to the services of hundreds of our leading businessmen, directing the huge production machine centered in Washington. Look at Ed Stettinius, Jr., former head of the United States Steel Corporation, then Lend-Lease Administrator and now Under Secretary of State. Those services belie the credo of demagogy that anyone connected with big corporate business is, per se, wicked, and antisocial. Annual corporation reports have also been illuminating. They show that, despite the new high records of business volume reached last year, the net income generally declined because of higher operating costs and higher taxes. Six of the big steel companies, which reported new high levels in production last year, all show a decrease in net income as compared with 1941, the combined total for the group being down 34 percent. The 1942 earning figures of the United States Steel Corporation are of more than usual interest. The corporation produced over thirty million tons of steel ingots in 1942, a new high record; yet the income of the company and its subsidiaries was less than $72,000,000, compared with one hundred and sixteen million in 1941. This is hardly the picture that one conjures up when one hears and reads glittering generalities about the wartime profits of American corporations. Industry is paying 75 percent of all taxes in the United States. In other words, it is the mainstay of government. Of course there is extreme danger in the present policy of the Government of deriving a

larger portion of its revenue each year from corporations. Matthew Woll, vice president of the American Federation of Labor, charges that the corporation tax policy of the Government is being used "for the destruction or conversion of our society into some idealistic state, and jeopardizes the opportunity of labor of obtaining employment under private enterprise."

In support of free enterprise, it's the duty of all of us to make clear the tax situation, so that the morale of the worker may not be lowered and that he may understand the social significance of the operations of his company. There is hope that the power of selfish ruthless interests and of those politicians who serve them will be broken by the unifying power of war. There is hope that the majority of the people will see the dangers and inconsistencies of certain policies designed to redistribute the wealth, in an economic revolution which attacks our traditional democracy under the cloak of war emergency, and which would make our Bill of Rights a relic of aspirations and ideals, not a solemn covenant for the use and progress of humanity. There is hope that workers will come to hold enough Government paper, in the form of bonds and stamps, to see the merits of a sound fiscal policy and the importance of profitable business as the basis for the tax revenue with which to redeem the bonds.

"We are paying a terrible price in blood and tears because we were unprepared for war; we may pay a devastating price if we are similarly unprepared for peace; and wishful waiting would put our freedom in the greatest jeopardy." Thus truly speaks Paul G. Hoffman, president of the Studebaker Corporation. Our industrialists are planning for the post-war period in the greatest possible degree without detracting from the war effort. They are not waiting for an economic Pearl Harbor after the armistice to prepare for problems that must be faced. Looking beyond victory day, they see an era in which there will be decentralization of manufacturing, and evolutionary rather than revolutionary changes in products and services. Comprehensive studies of post-war problems are being made by the National Association of Manufacturers, the committee on economic development, headed by Mr. Hoffman, and other agencies; and specific suggestions will likely be forthcoming shortly as to the best manner of meeting the problems involved in changing over from war to peace, of preventing job-destroying dislocations. Although some plans are hardly out of the fact-finding stage, the master charts embrace provision for 55,000,000 jobs, 9,000,000 more than there were in 1940, as soon as possible after hostilities cease. That would call for the production and sale of an annual output of goods valued at about $150,000,000,000. That objective can be reached only if plans are made now and if an environment favorable to free enterprise prevails. For industry, the job of winning the peace means creation of jobs for soldiers, sailors, and present war workers; and it is studying how to apply the design of war production to the needs of the Nation when peace production is resumed. This work is of prime importance. It concerns the urgent needs of this Nation's 35,000,000 families.

In any consideration of these post-war plans we must bear in mind the 10,000,000 or more men in the military personnel who will have a fundamental experience in common. And we must also remember that that experience will have been shared by the other millions who, if they have not actually fought in the war, will have shared it, as not only the most tremendous experience in our history but also as the affirmation of a faith. Far-sighted industrial leaders are not discouraged about the prospects. George A. Eastman, president of Armour & Co., expressed his opinion in a radio talk to our fighting forces overseas, in which he said: "If industry is permitted to expand in the American way and to make and sell the things that people will want, including many new items from war-inspired inventions, there will be work not only for those who are presently employed but also for the men who will be coming back." The big thing is to let business keep on being competitive. Nobody is going to a ball game if you don't keep score. Profit making is just keeping score. The essential ingredient for post-war prosperity will be perpetuation of the American system of government and of private enterprise. On that score, Senator O'DANIEL, of Texas, spoke yesterday at a New York City luncheon, declaring that the best chance of preserving the American system of free enterprise lay in electing to Congress sound Democrats in Democratic States and sound Republicans in Republican States. During the war, all of us can be influential in the conservation of fundamentals which will insure the perpetuation of that system after the war. We should now direct our energies into efforts which will insure a proper climate for business after the war, as the Committee on Economic Development phrases it; otherwise, we face a long cycle similar to that in which Russia has been operating since World War No. 1. Crackpot ideas of visionary business baiters would snatch from the people the opportunity to enjoy post-war material well-being on an ascending scale. Those business baiters seek to destroy private enterprise only that they may climb to power over its ruins. One thing is certain, and you can lay to that, if it is destroyed, our prosperity goes with it.

In no small measure the fate of our individual enterprise system will be determined by the success or failure of the plans which are being made to take care of post-war problems. Democracy will survive only if it succeeds in providing a high level of employment and an outlet for the ambitions of youth. American productive genius, as represented by both capital and labor, can meet the challenge better than any bureaucratic supergovernment. Industrial America will meet that challenge successfully because it is coming out of the war with a vastly stimulated intellect; and when that livelier intellect goes to work on the things of peace we'll see a new machine going down the road. Men are again thinking adventurously—the blinders are off:

Until recent days, every effort, for a thousand years, was bent toward reducing the power of the state over the individual; for there is no such thing as a beneficent state. Every state would absorb the individual in its iron bosom; for it is composed, at least in part, of those who seek unlimited power. Human beings, being what they are, are, in the main, not primarily beneficent but are self seekers, egotistic, and love power for power's sake. Inch by inch, in this fight to reduce the power of the state, the bloody ground was contested. In dungeons, in chains, on the rack, men had refused to submit. Thus was free enterprise born. To save that freedom of enterprise, along with others akin to it, we are now engaged in war production and are fighting on the seven seas. The purpose of the present struggle is identical to that for which men fought 25 years ago, namely, to save mankind from a mechanistic philosophy. This epical struggle is a struggle of the individual against the strangling power of the state; a struggle between nature, whose very law is individualism, and man-made absolutism, which is a form of insanity. The right to individual liberty is a divine law; a law written in the trees and the flowers, in the body and mind of man. Capt. Eddie Rickenbacker has this to say about rugged individualism: "We spent billions of dollars to take away initiative, imagination, and rugged individualism. We thought that a Government of the super few could plan for all of us. Now we are spending billions of dollars to teach our boys in the forces imagination, initiative, and rugged individualism."

No armed guard will bar the door to our liberty; there will never be a barbed-wire fence between us and opportunity to work and build and grow and make this life worth living, this war worth winning. The thunder and lightning of hell are let loose in this total war of total terror. The bully who is now whining in the Fuehrer's roofless fortress told the story on that soft summer evening of June 10, 1940, when, from the balcony of the Palazzo Venezia, he bellowed: "Fighters of land, sea, and air, Blackshirts of the revolution, we take to the field against the plutocratic and reactionary democracies. Conquer. It is a conflict between two ages, two ideas." Surely it is—the age of conquest and the age of reason; the idea of the slave world and the idea of man's freedom.

The American character, whatever its shortcomings, abounds in creative energy, courage, resourcefulness, and is bottomed upon the profound conviction that nothing in the world is beyond its power to accomplish. That conviction, with respect to industry, was dynamically expressed by Henry J. Kaiser when he declared, "It doesn't matter what can't be done, so long as we have to do it we can do it." In 1918 the Chairman of the War Industries Board put it this way: "It can't be done but here it is."

There is no exaggeration but rather only sober fact in the statement that, even as the defeat of totalitarianism depended on the stand which Winston Churchill and other gallant British leaders made in the fall of 1940, so does the cause of freedom, the American way of life, depend on the stand which American businessmen make today against the onrushing tide of state socialism. Before the war men who should have known better either approved by silence or accepted collectivist schemes designed to kill private enterprise. Two weeks ago Dr. Robert A. Millikan, American physicist and Nobel Prize winner, said: "This time the external threat to our freedom is not destined to succeed. However, a second threat, arising from too great centralization of power in Washington and the internal corrupation that it inevitably breeds, is greater today than at any time in American history. It is devoutly to be hoped that the American voters have read the lessons of history better than have some college professers, recent administrative advisers."

In other words, there can be no free or individual or private enterprise, call it what you will, unless we have a free political economy, such as provided for in the Constitution, with the principle of self-government kept in the powers of the States and local communities. Do you imagine that the political economy in the realm of the Tennessee Valley Authority is as free as is the economy in the St. Lawrence area, which, to date, has been spared such an authority? How free would you expect it to be throughout the country were the dozen or more proposed Federal authorities, modeled after the Tennessee Valley Authority, with their tens of thousands of employees, established from coast to coast? Conceive of the state of affairs should, for instance, the dream of those bureaucrats, plugging for Government ownership of the private electic power industry, come true. For refusal to obey a directive issued in a field outside the domain of a Federal bureau, arbitrary actions in the past indicate that the recalcitrant citizen might be penalized by having his lights turned off.

Almost invariably, political parties, although ultra sensitive to organized opinion, are remarkably insensitive to unorganized opinion, which, when it differs from their

own views, they are apt to dismiss as a form of inconvenient heresy. A new way of thinking, consequently, has to translate itself into some organized form of expression before it can begin to affect the statute books. Through all our affiliations, let us see to it that we leave nothing undone in that direction. Let us see to it that the organizations to which we belong speak up, not in the language of selfish interest, but in the cause of our way of life. Recent developments evidence increasing activity on the part of Americans to save America, but, however favorable the present signs, we cannot risk a let-down, for a frontal attack against free enterprise will likely be lustily launched when the armistice whistles blow. We must be prepared on all sides, for in the forest of this tormented world the trees have strange habits and twists. We shall be prepared, for these words ring true: "In rapture we ride the stormiest gale, for God's hand is on the helm and His breath is in the sail."

A National Military Cemetery Should Be Established in Every State

REMARKS

OF

HON. EARLE D. WILLEY

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. WILLEY. Mr. Speaker, I arise today to bring to the attention of the Congress the urgent need of a well-planned policy with respect to the establishment of appropriate and additional national military cemeteries in the various States.

At the end of World War No. 1 it was decided, partly out of deference to the wishes of the French Republic, to establish American military cemeteries in France for the final resting places of our heroic soldiers who died in battle there. That policy seemed proper at the time, but later events have raised doubts as to the wisdom of the decision. For one thing, it was not contemplated that less than a quarter of a century after their establishment that the German invader would again control the soil where our American cemeteries are located. Who knows what has happened to those shrines since the tragic events of 1940? What has happened to the metal fences which enclosed the cemeteries? These questions show the uncertainties that exist with respect to the hallowed places where our soldier dead now rest.

There are 8 American military cemeteries in Europe. One of these is in England, 1 in Belgium, and the other 6 are in France, where 30,902 American soldiers are buried. However, a total of 46,639 were returned to the United States from Europe after the last war in accordance with the expressed wishes of the nearest relatives. This proved even at that time that the predominant sentiment was to have our American heroic dead returned to their native soil.

As for the present world-wide conflict, with the battle zones extending into every remote corner of the globe, it would seem to be a wise policy to have all of our American heroes who fall in battle returned to the United States at the earliest moment after the end of the war to rest in eternal sleep within the borders of their native States, or in our national shrine at Arlington. This, I feel sure, is what the boys would want and will carry out the fervent hopes and prayers of their fathers and mothers. Such a policy should be well planned in advance, so that when the war ends, national cemeteries within the States will be sufficiently complete to avoid undue delay in the return of our honored dead to their native soil.

It is my thought that popular sentiment favors the establishment of new national military cemeteries in all the States which do not already have them. I know that such is the hope of the citizens of my own State of Delaware. In harmony with this sentiment a resolution was adopted at the last session of the legislature of Delaware urging the Congress of the United States to enact legislation for such a national military cemetery in the State. It would seem fitting also that these national cemeteries be located at or near the State capitals.

Such a program should be authorized by this Congress, the land acquired, an outstanding architect appointed, the architectural plans drawn, and the work undertaken by the appropriate authority in the War Department. Such plans should, of course, envisage the architectural harmony of the State capital where located, and should contain chapels of appropriate design.

An investigation discloses that there are at the present 20 States which do not have within their borders a national military cemetery. These States, with a total population of 31,165,600 are as follows: Arizona, Colorado, Connecticut, Delaware, Idaho, Maine, Massachusetts, Michigan, Nevada, New Hampshire, North Dakota, Ohio, Oregon, Rhode Island, South Dakota, Utah, Vermont, Washington, Wisconsin, and Wyoming. In addition, it is understood that there are 5 States with a total population of 24,391,619 in which the national military cemeteries are now filled, and thus new ones will need to be established or the present ones enlarged. These States are California, Florida, Missouri, Pennsylvania, and West Virginia.

This gives a total population of 55,557,219 in the 25 States where new national military cemeteries are needed or where those now existing should be extended.

It is my hope that all Members of this body interested in the establishment of adequate and appropriate burial places for members of our armed services of all wars, will join in presenting to the proper committee a thoroughly studied plan for the establishment of carefully designed national military cemeteries in each State which will be in keeping with those established in France after World War No. 1 under the leadership of Gen. John J. Pershing, Chairman of the American Battle Monuments Commission. I feel sure that every Member of this House will desire nothing less than such a shrine in every State where their soldier dead may rest in eternal glory near the scenes and persons dearest and most intimate to each of them.

When completed, these national shrines will stand in perpetuity in all our States as the final resting places of the American heroes of all our wars.

Washington's Pentagon Building a Labyrinth—Guide Not Much Help—Diminishing Returns

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. BENDER. Mr. Speaker, when the House of Representatives was considering the appropriation for the construction of the Pentagon Building, I opposed the proposal on the ground that such a structure would ultimately represent a vast waste of taxpayers' funds. By building an office so big that the guides employed to conduct the luckless visitor through it can get lost, we are wasting, first, manpower; second, wartime; and, third, tax funds.

These views are confirmed by the report of Mr. William F. McDermott which recently appeared in the Cleveland Plain Dealer, which I ask leave to reprint in the RECORD:

MCDERMOTT GETS LOST—WASHINGTON'S PENTAGON BUILDING A LABYRINTH—GUIDE NOT MUCH HELP—DIMINISHING RETURNS

(By William F. McDermott)

You can get a vivid idea of the immense expansion of the military establishment by taking a walk around the corridors of Washington's Pentagon Building, the mammoth new structure for the housing of War Department activities. It sprawls over the tranquil countryside bordering the Potomac in such size that it is difficult to believe your eyes. I am told that 30,000 people work there, but I doubt if an accurate census has ever been taken.

It is not merely an office building, but a large, self-contained city, with its own restaurants, drug stores, dry cleaning establishments and post office. The main entrance hall is as spacious as the concourse of a great railway terminal such as St. Lazaire or Victoria Station.

No visitor is trusted to find his way alone in these labyrinthine passages. He might be lost for days. Professional guides are employed to prevent such mishaps. They are called escorts.

If you have a definite appointment with an individual occupying a chair in this wilderness of oaken desks you apply to one of the girls at the information counter. She takes your name and address, writes them down in a book, then telephones your man and, if he remembers you have an appointment with him, he sends out an employee from his office to conduct you in safety to his lair.

GIVES YOU A BADGE

The girl supplies you with a badge. You can't find anyone without a guide and you can't get in or out without a badge.

In the main entrance hall there is a service bureau which provides visitors with escorts.

I gather that these servants of the Government do nothing else but walk these halls all day long showing weary travelers the way they should go.

When I had finished my business in one of the Pentagon offices I had to repair to another part of the building and the problem of how to get me there arose. An escort was summoned.

There seemed some doubt about his professional competence and he was carefully interrogated as to whether he knew the location of the office to which I was to be taken. He gave assurance that he did.

The unpleasant truth was that he didn't. He walked me what seemed a distance of several miles over stone floors and wound up at the wrong end of the building. Then he asked directions, took bearings, and resumed circumnavigation.

GETS LOST AGAIN

On the way back he got lost again. We finally reached our destination, after footwearying wandering and by a process of empirical experimentation rather than by science.

I asked my guide, a Negro gentleman, how long he had been working in that capacity and if his feet weren't being killed by constant jolting on these inhospitable stones.

"I have been here," he said, "since the building was built. My feet used to hurt, but they don't hurt no more. You get used to it."

His feet had got used to the stone floors, but they had not yet got used to tracking with sureness to any given destination in this tangled jungle of offices and departments.

Where but in Washington could it be that a Government building should be so huge and complex that men employed as guides should still be getting lost in its intricate corridors after pounding their feet on its hard floors day after day, month after month It is fantastic and incredible, but so is much else in Washington.

OTHER BUILDINGS ARE LARGE

The Pentagon Building is only one of the immense structures occupied by the War Department. The Munitions Building on Constitution Avenue is not precisely a hut. The new War Department Building, a block north, is an imposing and populous structure. But the Pentagon Building is something to take your breath away. It is the concrete and bizarre symbol of the immensity of the war in which we are engaged.

You wonder if there is not a point at which size begins to yield diminishing returns. How much time is wasted by erecting a building so large that you must employ guides to get people in and out of it? Would not a number of smaller buildings have been more economical?

I suppose these questions have been threshed out by master minds and answered to their satisfaction. Anyhow there the Pentagon Building stands, in all its massive and formidable dimensions, and there is will continue to stand, like the pyramids of Cheops, immovable and incredible.

Realism Versus Wild Promises

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, it is time to bring into open discussion some of those things which the American people are thinking, but which the world-power politicians, and those who would like to establish a United States world W. P. A. unlimited, keep hush-hushing as though they were matters about which the American people ought not to think at all, and which should not be discussed in good society, or even in the sanctity of the home.

The American world-power politicians here, and the hordes of them scattered throughout the world, are busily projecting plans for us to rule the world; reform all the governments of the other countries of the world; provide food for the ill-fed; clothing for the ill-clad, and shelter for the ill-housed of the world. I pointed out in a recent broadcast that about half of the peoples of the world, outside of America, fall into the category of the ill-fed, the ill-clad, and the ill-housed, as we in America are accustomed to use the term. I also pointed out in that broadcast that we cannot hope—we of America—to use up our natural resources, our supplies of raw materials, our energy, and our labor, in supporting all of these hundreds of millions of people who are underprivileged or undernourished in other parts of the world.

Our international promisers are leading the peoples of other countries of the world to believe that the United States of America is going to intervene in their domestic affairs, not only to the point of supporting all of their unemployed and their incapacitated populations, but to the further extent of regulating their wages, working hours, and working conditions. Our five United States Senators who have just returned from a trip to the battle fronts of the world confirm my statements.

It is perfectly obvious to any clear-thinking American that we cannot do all of those things for all of these countless millions throughout the world. We may help them, over a long period of time, to help themselves; to fit themselves for self-government; to have an appreciation for liberty, and to know how to use it—and live it. Beyond that we in America cannot successfully go, and we can go that far only if we remain a sound, solvent, free, representative Government and people.

If there were any possibility of the United States using her manpower to police all the other countries of the world, particularly the countries under the domination of the Axis dictators, and if there were any possibility of our own American people working long enough and hard enough to supply these ill-fed, ill-clad, ill-housed multitudes in other countries, and if there were any possibility of our stripping ourselves of our raw materials in a world-wide charity movement such as has never been imagined by men before in the history of the race, then there might be some point in considering all of these broad promises now being made, and of refraining from taking a gloomy view of the probabilities of their fulfillment.

If we are going to be realistic and rational, we must project our thinking to the point when the war will be over. When hostilities have ceased, it is natural for the fathers and the mothers, the brothers and the sisters, the wives and the children of America, to want their loved ones to come back home as quickly as possible.

When the fighting has ceased, and the readjustment to peace has begun under the terms of an armistice, will it be natural for the American people to want to continue their sacrifices for years, under the rationing rules and the point system, in order to feed multitudes of the peoples across the seven seas? Every one of you listening to me this evening knows the answer to that.

After hostilities have ceased and the Axis Powers have been vanquished will it be natural, or probable, that the American people will want to continue increasing their own already crushing burden of taxation in order to put shoes on the Hottentots, or neckties around the necks of the Arab nomads of the deserts? You folks know the answer to that question.

When hostilities have ceased and the people of the United States are deeply engrossed in the multifarious phases of their own readjustment to a peacetime basis, in the problem of reemployment for their own people, for millions of returned soldiers and sailors and women of the uniformed services, and other millions of munitions workers dismissed from smokeless factories, is it probable that our people will then be willing to continue to interest themselves greatly in changing the hours, and the wages, and the working conditions of the peoples of the Far East, of the Orient, of middle Europe? You folks know the answer to that one also.

When all of our domestic problems, not one of which was solved, but all of which were obscured by the advent of the war, and all of which have been aggravated by the war, rise up and confront us with a demand for solution, will it be possible, not to say practicable, for the American people to neglect their own domestic affairs to solve the domestic problems of the millions of people in other parts of the world whose social customs, whose ancient traditions, whose religious beliefs, and whose philosophic doctrines make their lives in every way different from our own? You folks know the answer to that question.

Now I ask this one:

What is to be accomplished, what good does it do for some of our politicians to make these extravagant promises to the other peoples of the world when we realize, even now, that those extravagant promises cannot, to any appreciable extent, be fulfilled? All that can be accomplished by making such extravagant and unfulfillable promises is to reap for the United States of America the hatred of these other nations, growing out of their disappointment that we do not keep our promises, and their loss of confidence in our repeated pledges.

If we are going to be realistic and practical, we must realize that the end of the hostilities is not going to bring a brave, new, golden world into being, with a new era of brotherhood and cooperation suddenly growing out of the cessation of the greatest and most bitter struggle in

which men ever engaged on the face of this globe.

On the contrary, it will be the same old world with all of its old problems; with all of its old hardships; with all of its old griefs and disappointments accentuated; with all of its old cross currents of human desires, and conflicts of human will and selfishness; all of these, and a veritable avalanche of new hatreds, of new strains, of new hardships and sacrifices entailed in the devastations caused by the war, which will then confront us. At the risk of being criticized by those who like to talk about a brave new world, and how we are going to establish it, I say to you that it will only be by God's help that we can repair the old world and make it habitable and peaceful again. The great weakness in all of these visions for a brave new world after the war is that the dreamers who envision such a world do not take into account the flaws in human nature, the selfishness in human nature, the frailties of humar reasoning inherent in all peoples in all nations, which produced the First World War, and then brought on this second terrible conflict. The selfishness, the conditions generally which brought about this conflict are not going to disappear magically at the end of this war

Of course, the people of America would like to see a world free from poverty, hardship, privation, jealousy, selfishness, fear, economic insecurity, and wickedness. Of course, the American people will be ready when this war ends, as they have always been ready, ever since this Nation had its birth, to do all we can to bring about such a perfect world and such perfect mankind. But there is nothing to be gained; there is no point in deluding other peoples, and in fooling ourselves, by rash and extravagant promises, of what we will do to usher in the millenium after this conflict is over, when, at the first clear, sober glance we see that we cannot fulfill such promises.

It seems to me, my fellow citizens, that we can do much more to persuade the world back to sanity, peace, and prosperity, if we make only promises we have some fair chance of fulfilling, if we promise to help these people as much as we can, but we must make it clear to them that not only must they help themselves, but that it is their job and not ours to rid their own thinking of the hatreds and the prejudices and the desires for revenge generated by this and previous struggles.

There is no use closing our eyes to the fact that very great portions of the world will be in a state approaching anarchy and chaos when the war ends. Most of their governments will have been completely shattered. Most of their monetary systems will have been destroyed. Most of their economic systems will have been demolished. Most of their leading citizens will have been killed. In many of them their own populations are already divided into two classes—those who feel that they have been betrayed by their own countrymen, and those who will be accused of having participated in that betrayal. Under such conditions, it is entirely clear that temporary provisional governments will have to be established, after hostilities cease, in those countries which are in the condition I have just described. Their military authorities will not only have to set up such governments, but they will have to maintain such governments by the force of their troops. These facts, however, do not alter the other great fact that the people of America, when hostilities have ceased, will want their boys and girls back home just as soon as possible, and that that overwhelming national desire will constitute a political force that will be well nigh irresistible.

These international promisers do not take that great force into account. They apparently believe that the American people will be as ready to endure hardships and privation, regimentation, and bureaucratic pulling and hauling as they have been during hostilities. But that is not American human nature. It is not human nature at all. The American people have been ready, and they will continue to be perfectly willing, to make any sacrifices, to endure any privations which they feel are genuinely necessitated by the war. They will feel very differently when they are told they must look forward to further years of separation from their loved ones in the armed services, because those loved ones are to be kept in other countries for long periods to police the governments of other peoples; they will feel very differently, will the American people, when they are told they must continue to work, to sacrifice, to sweat and toil, to oe taxed and taxed while international power politicians continue, far down the years, to spend and spend on other nations and peoples

I give you this message tonight, my fellow citizens, not because I want to diminish by one atom the willingess of the American people to do all they can to help restore the world to sanity and peace. I give you this message, because I do not believe extravagant and unfulfillable promises made on behalf of the American people, by self-appointed spokesmen, will contribute anything to the restoration of the world to sanity, peace, and prosperity. Such promises, I believe, will constitute an impediment rather than a contribution to world-wide peace.

I, therefore, believe we should be rational, realistic, practical, and sensible in the promises we permit to be made on our behalf to the other peoples of the world.

It has been well said by a wise man that "One promise broken is worse than a hundred promises not made."

Vote at Every Election

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. BENDER. Mr. Speaker, "the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude" reads the fifteenth amendment to the Constitution of the United States.

The right of election is the very essence of the Constitution.

Election day is independence day. So long as we retain the right to select our own public officials we retain our freedom.

Every time we fail to exercise the privilege of voting we forfeit our right to criticize those who have gained public office. Every time we find it more convenient to stay at home or discover that we are too busy to vote, we abandon our American heritage of freedom.

From indifference to the choice of public officials, it is only a small step toward indifference to our rights of free press, free speech, free worship. We cannot join the long and growing list of those nations which have forgotten all human liberties.

Municipal elections, town meetings, State and county elections, every one of these plays its part in the development of American history.

You owe it to yourself and to your Nation to vote at every public election.

Let the people of every city in America demonstrate by their votes that they cherish the love of freedom for which our country stands.

Let no election in our country go by default. If you are registered as a voter, go to the polls.

Let America continue to speak through a tremendous flow of ballots.

Vote at your elections November 2. It took thousands of years to win you that right to vote. Exercise it.

Repeal of the Chinese Exclusion Act

REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. REED of New York. Mr. Speaker, I have always entertained a very high respect and admiration for the Chinese race and especially since my close association with Chinese students at Cornell University. These students have since become recognized as outstanding statesmen of the world. I, for one, am proud that the Chinese are our allies in this great war to which we are committed in the Pacific. There are powerful and compelling reasons why we should remove the present ban against the Chinese which now exists in the immigration laws. I believe the Chinese are entitled to a quota. I think it is about time that as a Nation we attempt to make some atonement for the ghastly sin committed by those who have been in charge of our foreign policies for the last 10 or 11 years. I recognize that there can be no atonement that will wash out the bloody and inhuman part which

our shipments of war materials to Japan played in the slaughter of Chinese men, women, and children.

The brutality of the Japanese was not first revealed at Pearl Harbor. Those in charge of our foreign affairs had due notice of the barbaric propensities of the Japanese as early as December 12, 1937. It was on that date that the American gunboat *Panay* and three American tankers, sailing on the Yangtze River, were attacked and sunk by Japanese airplanes, killing several of our people and wounding a score of others. I admit that the Japanese, true to form, apologized, as is their practice, as they will undoubtedly do for recently beheading one of our allied aviators.

The indisputable facts with reference to the *Panay* were that the visibility was clear, that a large American flag was displayed on deck, that the Japanese authorities had been apprised in advance of the *Panay's* movements up the Yangtze River, that when the ship was sinking a motor launch approached and fired on her, that Japanese soldiers went aboard the ship, and that similar outrages were committed by the Japanese on British ships in the Yangtze River the same day.

This brutal affair and Japanese bombings of Canton in the spring of 1938 prompted numerous organizations to demand an embargo on the export of war materials to Japan.

I pointed out in the Seventy-fifth Congress that 54 percent of Japan's imports of war materials had been obtained from the United States and one-half of the gas and oil used by Japanese bombers in their attacks on Canton were sold by American exporters.

Mr. Speaker, without going further into the facts with reference to the enormous quantities of war materials, which I have heretofore placed in the RECORD, I wish to say that I realize that it will require more than a token quota and soft words to expiate the indefensible and ghastly sin committed by the Roosevelt administration against the Chinese people and Nation, but at least it will atone so far as the removal of the race discrimination can do so. Therefore I favor the repeal of the Chinese Exclusion Act.

Recentralization of Industry

REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. COFFEE. Mr. Speaker, I avail myself of this opportunity to inform my colleagues that seven of our number have been designated as members of a House steering committee to act in cooperation with a similar committee of Senators in the matter of trying to recentralize heavy industry in the United States. The appointment of this steering committee, composed of Congressmen PATMAN, of Texas; TARVER, of Georgia; MANSFIELD of Montana; KING, of California; WINTER, of Kansas; CASE, of South Dakota, and myself, as chairman, was made under the authority given the able Senator from Nevada PAT MCCARRAN, by vote of the Senators and Representatives who attended a joint meeting held on Monday, October 4. This recent conference was preceded by a meeting of House Members, who, for some time, have been seriously concerned over the problem of working out a program of industry recentralization. At this first meeting it was arranged to meet jointly with a large group of Senators, in whose behalf Senator MCCARRAN suggested, earlier in the summer, the advantages to be derived from such cooperation.

Mr. Speaker, the question of recentralizing heavy industry in the United States is so broad in scope and embraces so many factors related to the economic development and self-sufficiency of various regions and sectors of this country, I would not presume myself capable of discussing it now, even if time permitted me to do so. It is a tremendous and vitally important subject. At the joint meeting of Senators and Representatives we were treated to a brilliant outline discussion of the major aspects of this problem by the learned Senator MCCARRAN.

It is only fair and proper, Mr. Speaker, that I point out that there are many of my colleagues who are fully conversant with many phases of the industry recentralization question. Individually, and sometimes as members of special or standing committees of the House, we have heard this subject ably discussed by Members on both sides of the aisle. My able colleague, the gentleman from California [Mr. KING], has been and is now deeply and constructively engaged in a study of the steel shortage, particularly as it affects the merchant marine construction program of the Pacific coast. As a member of the special steel shortage subcommittee of the Merchant Marine and Fisheries Committee, chairmanned by the genial and industrious gentleman from Alabama [Mr. BOYKIN], the gentleman from California [Mr. KING] has given that committee and the House membership tremendously valuable data relating to the steel shortage in its wartime and post-war implications.

In similar fashion, the gentleman from California [Mr. WELCH] has drawn upon his many years of study of the steel and iron industry to enlighten the House on the subject at hand. The gentleman from Montana [Mr. O'CONNOR], the gentleman from Oregon [Mr. ANGELL], the gentleman from California [Mr. VOORHIS], the gentleman from Texas [Mr. PATMAN], and many more whose names should be mentioned, are included in the large group of House Members coming from 26 States of the Southern, North Central, Northeastern, and Western regions of the country, who have already or could graphically portray how certain natural resources in the several States lie undeveloped and lost to the war-production program. In the Southwest and all through the western part of the United States, we have plants and factories turning out war and civilian goods; fabricated items that require steel, iron, aluminum, copper, lead, magnesium, and countless other alloys. Within the 26 States, encompassing the regions I have mentioned, we have all the resources, all the ores and the coal and other components required to furnish the basis for a great and thriving heavy industry development that will make these areas economically more self-sufficient, by far, than they are today.

Mr. Speaker, over half of the Nation's shipbuilding program is concentrated on the Pacific coast. This region provides much of the pig aluminum produced today. We could produce more. I could go on listing other examples if time permitted. Texas and Montana, South Dakota and California want to increase their contribution to the war-production effort. But our natural resources of all types are not developed or utilized in full except in rare instances. We can prove that a great steel industry can flourish in many of the regions I mentioned a moment ago. We do not have such an industry. An odd plant or two, yes; but they cannot even begin to feed the gaping maw of the shipbuilding industry alone with the steel it requires now and must have in the post-war era. West coast shipbuilding, to use the same example, depends upon Pittsburgh, Massillon, and Gary for most of its steel. We depended upon these steel centers in World War No. 1. We are still depending upon them. We have been thus dependent for too long. They have not been able to meet the full load imposed upon them by World War No. 2. They could not and should not be expected to do so. In many places throughout these 26 States steel plants should be going up right now. We can find the material. Transportation savings alone will justify the expenditure of manpower and critical materials needed to build the plants.

Mr. Speaker, we do not have the steel plants or the aluminum plants and all the other plants which could be fed with the components of ore and oil and water power and coal, much of which lies unused, in greater or lesser degree, in these afore-mentioned States.

The President of the United States has been reported as saying he favors a decentralization of heavy industry. The House and Senate joint committee I have discussed here today favors a recentralization or decentralization of industry as a war measure and as a post-war program. We think it can be done. We are going to study the problem intently. We are open to assistance and cooperation from every Member of this House and every committee thereof. By the same token, we will help every Member and every committee of the House in connection with any phase of this program of study, analysis, and action. If there are any industrial monopoly interests blocking the logical development of competitive industries in the southern and western regions of the United States, we are

going to find out who they are and how they have been operating. We will then hope to find a way of making their opposition ineffective. If they have any dollar-a-year representatives in the Government still on their pay rolls we want to know who they are and just what they have been doing or may propose to do when faced with making vital decisions on these matters.

Mr. Speaker, we have a big job cut out for ourselves and we know it. Fortunately, we have been able to join forces with a group of Senators as determined to see this thing through as are we. We have a splendid joint spokesman in the person of Senator MCCARRAN.

Mr. Speaker, various special committees will be appointed by the seven-man House steering committee to study, in cooperation with the Senators, the multiform and manifold major questions which present themselves on all sides, in connection with the broad problem I have briefly outlined here today. In behalf of the House steering committee, I invite the cooperation of all Members coming from the areas most affected by an underdevelopment or complete lack of development of its natural resources. That area would generally lie west of the Mississippi and south of the Ohio Rivers. Make yourselves known to the gentleman from California [Mr. KING], or the gentleman from South Dakota [Mr. CASE], or any of the five others on the committee. We will welcome your participation. Though not functioning as an official committee of the House, we are not desirous of becoming an exclusive or select group. There is room and work for everyone. To all will come the credit and satisfaction of joining in the most concerted effort of its kind on Capitol Hill—an effort to give other areas of this country what only a few now enjoy to overflowing, namely, greater economic independence as contrasted with dangerous and growing dependence. Mr. Speaker, we have started the battle. We are determined to persevere until at least a measure of success is ours.

Sound Legislation

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. PRIEST. Mr. Speaker, an editorial appearing in a recent edition of the magazine, Aero Digest, opposing the adoption of the Civil Aviation bill, which has been reported by the Committee on Interstate and Foreign Commerce, illustrates the type of loose thinking about civil aviation problems against which we must constantly be on guard. Misinformation, misconception, and misrepresentation must be carefully winnowed out of our thinking if we are to provide for civil aviation the sound legislation it needs.

The argument of the editorial is briefly this: It states that we had only 350 planes on our domestic common carrier system when the United States entered the war whereas Hitler had thousands of transport aircraft, and South America had more than twice the route mileage and air-line stops, as did the United States. We may overlook, for the sake of argument, the inaccuracy of this statement. The editorial then goes on and says that the reason there were only 350 planes on the domestic air lines was that the air lines had to enter into long hearings before they could start any new service.

The editorial then contends that private flyers and flying schools had thousands of planes due to the fact that private flying was subject only to safety regulations and not to economic regulations.

Then the editorial proceeds with this extraordinary statement: "If the Lea bill passes, Federal control of all phases of civil aviation will be absolute."

The implication of this argument—although the editorial carefully obscures its point—seems to be that the Lea bill proposes to impose some Federal economic regulation on the private pilots and the flying schools.

Any such suggestion is false.

The Lea bill does not impose any economic regulation whatsoever on any aviation activity except commercial point-to-point transportation for hire. It does not, in any way, complicate or add to the safety regulation of private fliers or flying schools or other miscellaneous flying activities.

With respect to private and miscellaneous flying, other than commercial transportation of persons and property for hire, all that the Lea bill does is to bring the law into line with what is the existing practical situation.

As every aviator knows, as a practical matter, all private and miscellaneous flying must necessarily comply with Federal safety regulations. This is due to the fact that some time every plane and every pilot will either be crossing a State line or will be flying on an airway or will be flying in the vicinity of an airway and interstate traffic. In fact, the C. A. B. has already found it necessary, under existing law, to extend its safety licensing requirements so as to include all private and miscellaneous aviation. The Lea bill simply ratifies what has already been found to be necessary. And hardly a voice was raised in the hearings before the Committee on Interstate and Foreign Commerce in opposition to the idea that safety regulations for all civil aviation must necessarily be uniform throughout the country.

Furthermore, the suggestion in the editorial that our domestic air lines were hampered by the economic regulations of existing law, prior to the present war, is groundless. No such objection has ever been made to the Committee on Interstate and Foreign Commerce by any of the many witnesses testifying before it. The remarkable progress of our domestic air transportation system prior to the war is a matter of public record. Every informed person knows that our domestic air transport industry in its prewar development clearly led the whole world. We have been so far ahead of every other country in the world in terms of volume and standards that American air transportation is accepted everywhere as the very acme and it is equally common knowledge that credit for this great development has been given, by the leaders of the industry itself, and with absolute unanimity, to the adoption of the Civil Aeronautics Act in 1938.

Apparently the writer of Aero Digest's editorial would advocate that we repeal the Civil Aeronautics Act of 1938, take away the sound, tried, and tested economic regulation now in effect for commercial air transportation, and go back to those hideously chaotic days which had, by June of 1938, brought the air transport industry to the very verge of bankruptcy. Advocacy of any such step flies in the face of every lesson which history in this and in other industries has to teach us.

With respect to economic regulation, what the Lea bill does is to assure that the sound provisions of the present law will be extended so as to cover all commercial transportation of persons and property by air, and to prevent the possibility of burdensome pyramiding of unnecessary and conflicting State regulations on top of an entirely adequate and sound Federal regulation. This proposal is dictated by a deep appreciation of the peculiar requirements of commercial transportation by air, and the need to keep Governmental regulation as simple and as uniform as possible. The easiest way to prevent rapid and sound development of commercial transportation by air is to permit the growth of a complex maze of duplicating and conflicting regulatory laws.

The Lea bill is designed to prevent such a maze and its adoption, as we have been reminded through a resolution of the House of Delegates of the American Bar Association at its recent convention, is essential if we are to attain a sound basis for the most constructive regulation and development of this new industry.

Price of Crude Oil

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. REED of New York. Mr. Speaker, the national security of this Nation is in peril. The lives of millions of our fighting forces are being subjected to a potential hazard which is fast approaching an actuality. I refer to the stubborn resistance of the O. P. A. to the demand for action in setting a price for crude oil that will enable the operators of stripper-wells to continue to produce this essential war material, a product admittedly vital to the success of our mechanized war. Let our Army be deprived of the oil nec-

essary to operate tanks, trucks, and planes on the fighting front even for a few hours and the consequence might well be the slaughter of many thousands of our men.

An oil shortage in a crucial struggle with the enemy for an hour could mean defeat instead of victory for our fighting forces. Yet, in the face of such a threatened calamity to our men in the field and to our prestige and honor as a Nation, the O. P. A. treats with contempt the appeal of the outstanding oil experts that immediate action be taken by the O. P. A. to save the existing oil wells and, furthermore, insure the discovery of other producing fields.

Oil to meet civilian needs as well as the imperative requirements of our Army, Navy, and Air Force, and that of our allies, can be assured only by O. P. A. action now in granting a compensatory price increase which is strongly advocated by the Petroleum Administrator for War, Hon. Harold L. Ickes, who is entrusted with the grave responsibility of supplying additional oil and gasoline.

The failure to heed the advice and warning of those who are informed and who realize the danger to our war effort, should the production of crude oil be further hindered by bureaucratic stubbornness, is serious enough to demand direct action by Congress.

Let me enumerate here some of the steps that have been taken by those in the Government and in private industry in this crude-oil production controversy:

May 13, 1941: Independent Petroleum Association of America, in midyear meeting in San Antonio, Tex., calls attention to subnormal prices on petroleum.

July 26, 1941: Independent Petroleum Association of America filed statement with Petroleum Coordinator for National Defense and Office of Price Administration.

October 7, 1941: Phillips Petroleum Co. notifies Office of Price Administration of intention to raise crude-petroleum prices 25 cents per barrel.

October 10, 1941: Phillips Petroleum Co. asked by Office of Price Administration to delay price increase pending study of situation. (Study is still under way.)

October 22, 1941: Independent Petroleum Association of America, at annual meeting in Tulsa, by resolution, asserts need of higher crude oil and products prices.

October 27, 1941: Independent Petroleum Association of America presented second and more detailed statement and petition with Petroleum Coordinator for National Defense and Office of Price Administration for price increase.

October 21, 1942: Independent Petroleum Association of America, in annual meeting, in Wichita, Kans., insists on price correction and takes lead in forming crude-oil requirements committee, composed of producers' associations of the United States.

October 22, 1942: O'Mahoney committee makes report, based on extensive testimony taken at Casper, Wyo.; Artesia, N. Mex.; Midland, Tex., and Washington, D. C., and cites evidence that price adjustment is needed.

October 22, 1942: Congressman WILLIAM P. COLE, JR., writes letter to President, broadly outlining oil problem and warning that supply for war effort is in danger, and saying that "the cost of finding and producing oil is greater than the price for which it sells."

December 31, 1942: Lea committee—formerly known as Cole committee—makes report following hearings in Washington, asserting:

> The Government must so adjust the prices of petroleum and petroleum products that the petroleum industry is enabled to carry out its war tasks in full.

February 3, 1943: Petroleum Industry War Council recommends to Petroleum Administration for War that price ceilings on crude oil be raised 25 cents, with accompanying raises in products prices.

March 23–25, 1943: Crude Oil Requirements Committee meets in St. Louis, establishes committee of 21; report made and filed with Petroleum Administration and Price Administration.

April 2, 1943: Committee of 21 of Crude Oil Requirements Committee calls on Petroleum Administrator in Washington to urge price advance.

April 3, 1943: Interstate Oil Compact Commission, meeting in Wichita, Kans., by resolution, asks that crude oil prices be advanced.

April 7, 1943: Petroleum Administrator recommends to Price Administrator average raise of 35 cents per barrel in crude-oil price ceilings.

May 1, 1943: Price Administration rejects Petroleum Administration's recommendation of price increase.

May 5, 1943: Independent Petroleum Association of America, at mid-year meeting in St. Louis, Mo., by resolution again insists price increase imperative to provide for military needs and other essential uses.

May 10, 1943: Patman committee recommends immediate adoption of Petroleum Administrator's recommendation of 35-cent price increase. Patman committee had held hearings in April 1943.

June 10, 1943: Petroleum Administrator renews request for price ceiling raise of 35 cents.

July 3, 1943: Lea committee makes report, based on hearings of April 1943, again asserts need of price incentive to stimulate supply of petroleum.

August 7, 1943: Price Administrator again rejects Petroleum Administration's recommendation.

August 9, 1943: Petroleum Administrator appeals from decision of O. P. A. to Judge Fred M. Vinson, Director of Office of Economic Stabilization.

September 18, 1943: Conference of 16 Governors of western and southern States, meeting in Denver, telegraphed the President and Director of Economic Stabilization, urging 35-cent advance in crude-oil prices.

In addition to the foregoing, numerous individual declarations in favor of crude oil price advance have been made by Members of Congress, by Governors, by many oil producers' associations in all principal producing areas, and by the National Conference of Petroleum Regulatory Authorities. Several other committees of the Senate and the House have held hearings. A number of bills are pending in Congress to effect a price increase.

Mr. Speaker, the only mitigating circumstances, so far as the failure of the O. P. A. to act is concerned, would be a frank confession by them that they are simply the marionettes which move only when the strings are pulled by a "higher power" in the New Deal.

Unless Congress acts now to break this log jam there is a serious problem of supplying gasoline for our war needs, and the public may well become reconciled to the fact that there will be no gasoline for family driving and a drastic cut in the most essential driving next spring.

The O. P. A. has brought the country face to face with a situation that will make the present rationing seem like a wild and reckless hand-out.

Address by Senator Thomas of Oklahoma Before National Food Conference, Chicago

---

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the National Food Conference held at Chicago on September 16, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Gannett, members of the Food Conference, ladies, and gentlemen, at the outset I want to say that I am not a resident of the city of Washington. And a second statement—I am not a bureaucrat.

I want to compliment and congratulate whoever it was, or whoever they were, who conceived and brought forth this conference. This is the democratic way to present and consider problems. If we should have lost this war, this conference could not have been held, because in the countries that have been invaded and conquered two people can meet and confer unmolested, when three assemble a suspicion is aroused, and when as many as five get together, some man in uniform appears to disperse the assumed conspiracy.

WE WILL WIN THE WAR

I am glad to say that we are not going to lose this war. I do not know how long the war will last, but I have a conviction that we are now on the way to winning the war. If we should have lost this war, or hereafter if we should lose this war, the consequences would be too terrible almost for portrayal. The same thing would happen to us that has happened to the countries in Europe that have been taken over, and it is my opinion that the nation or nations conquering the United States would make of us an example too terrible to contemplate. However, the first thing that would be done would be to notify the people to bring in their arms.

WHAT WILL HAPPEN IF WE LOSE

If we should fail, the invaders would notify the people in Chicago, and in every city in the country, on a certain date, at a certain place, "Bring in your arms and surrender them," and if you do not, the penalty is possibly death. That is No. 1.

The second thing that would happen would be the taking over of all of the important facilities, storehouses, and transportation in the United States, and thereafter they would become the property of and would be under the management of the invader, so that the citizen, in order to secure food and clothing for himself and family, would have to appear at the management of some of these institutions and say, "Mister, what can I do to secure food and clothing for myself and my family?", and the citizen would be told exactly what to do.

He would be told where to appear and when to appear, and after he had appeared he would be told what to work at and how long he should work at that task, and when the task was completed he would be given a stipend at the discretion of the agent. That would be No. 2.

VALUE OF OUR FINANCIAL SYSTEM

No. 3. The invaders would take over the financial system of this Nation and perhaps some do not understand just what this financial system embraces. The financial system of America today is the basis for every financial system on earth. There is no monetary unit any place in the world, save in the United States, to which other nations can tie their currency. The dollar, and the dollar alone, is the only monetary unit anywhere by which other currencies can be valued and measured.

We have in this country today, in the Public Treasury, almost twenty-two and one-half billions of gold, and gold is the one thing that all nations, civilized and savage, recognize as money. We have that sum in gold in our public Treasury tonight. There is only about thirty billions of gold that has been discovered since we have record that is used for money, so we have, or you have, twenty-two and a half thirtieths of all the gold that is used for money in the civilized world, so far as we know.

That is not all. In our financial system we have over one-third of all the silver that has been discovered since the dawn of time and such silver is worth about $4,000,000,000 in legal money.

That is not all we have. Today we have in circulation something like eighteen and one-half billions of legal money.

But that is not all. Tonight when the banks are closed and the books are balanced, it will be found that all the banks of the Nation together have over $108,000,000,000 in credit or deposit money.

Add those figures—one hundred and eight billions of credit money, eighteen and a half billions of paper money, four billions of silver money and twenty-two and a half billions of gold. When you add those figures, you find it makes a total of over one hundred and fifty billions of the best money in the world, and if we should lose this war our banks and financial system would be taken over and that prize is enough to justify any bandit or outlaw nation, or any group of bandit and outlaw nations, to try to take over the United States of America.

But that is not all that would happen to this country. The profits derived from industry, the profits derived from the work of all our people, would be taken over by the invaders and such profits would not be used to make public improvements in America but that money would be sent abroad to rebuild the devastated countries now engaging in this war on behalf of the Axis Powers.

I am glad to appear upon this program very briefly with a number of my distinguished colleagues in the United States Senate. This morning we heard the distinguished junior Senator from Texas [Mr. O'DANIEL]. Tonight you will hear two other Senators of the United States; you will hear Mr. BUSHFIELD from South Dakota and you will hear Mr. BUTLER from Nebraska.

Then this morning you heard your own distinguished Senator from Illinois, and let me say for Mr. BROOKS that there is no man in the Senate who better represents his State than does the distinguished junior Senator from Illinois.

These Senators that I have just mentioned come from the central part of the United States, Texas, Illinois, South Dakota, and Nebraska, so I am glad to appear on the program with them. They speak for the farming section of the United States and, without exception, they represent the viewpoint of the great mass of true Americans who make possible the central breadbasket of these United States.

NATURE OF CONFERENCE

I am glad to appear on this program and to hear the discussions that have taken place up until this hour. Some people criticize the Members of the Congress for talking too much. They say that the Congress should adopt a program and put it into effect immediately.

Well, let us see what has happened here today in this Food Conference assembled in the city of Chicago. We have heard speakers say that taxes are too high. Two of the speakers have made that statement—that taxes now are verging upon confiscation. Then we heard another speaker say that unless we raise taxes still higher and take this surplus money out of the pockets of people, we are going to have inflation.

Well, that raises an issue that could not be solved without some debate and argument.

SUBSIDIES

That is not all. We have heard on this platform today a condemnation of subsidies, yet the speaker who has just left the floor stated that while he was against subsidies he was fearful that subsidies would have to be agreed upon and provided.

My friends, I am against subsidies. I take my place on the side of those speakers who have condemned subsidies.

The only sizable plan to pay subsidies is upon farm products—that is, upon food. It is my understanding that the people generally have more money available now to pay for the things they need than they have had during my lifetime, and now while the people have the money and no place to spend it, it is proposed to drive prices down through a roll-back and to make up the difference between the rolled-down low price and what might be termed a fair price by paying the difference with cash drawn from the Public Treasury.

The Public Treasury is being drained right now just about as much as it can stand, and if this program of subsidies should be adopted you will have to draw checks upon the Treasury to pay the subsidies, and from whence are you going to get the money in the Treasury with which to meet those checks?

We cannot raise so much money by taxation, nor by the selling of bonds and stamps, so the only alternative is for Uncle Sam to print more bonds, place such bonds in the banks of the country, and then to begin to write checks against the credit thus created.

To the extent that additional bonds are issued the national debt will be increased and will have to be paid by those who come after us. Our people have more money in their pockets now with which to pay their bills than at any time in history; hence, in my opinion, they are not justified in demanding that their grocery bills be charged to either future generations or to the soldiers now on the many fighting fronts of the world.

INFLATION

It is my judgment that such a plan is highly inflationary. I am against inflation. I know of no one who is in favor of inflation, although for years I have, by some, been called an inflationist. On this point let me explain.

Away back yonder 10 years ago when cattle were selling for 3 cents a pound and less, when hogs were selling for 3 cents a pound and less, when wheat in my State was selling for 19 cents a bushel at Enid, when cotton was selling for 5 cents a pound throughout the South, I was in favor of higher prices, and to get higher prices I proposed that we take action to reduce the then high value of the dollar.

The value of the dollar governs prices. When dollars are high, prices are low. When dollars are low, prices are high. For over 10 years a number of the Members of the Senate and the House have been trying to get the price level up to 100. We started such program in 1933 and we did not accomplish that end until last November. The price level has been below 100 for almost 15 years, or from 1929 until November 1942, and that is all the advocates of higher prices demanded—that the price level be raised up to 100.

Now the price level stands at 102.6, or 2.6 above 100. This is all the inflation we have to date.

Before I get too far from the subject, I want to place in the RECORD my conception of the purpose of this conference—and I approve of the conference, I am glad to be here.

PURPOSE OF CONFERENCE

America and the world are face to face with food and feed shortages, if not actual famine. Everyone must admit that. Such shortages are due to world-wide wars, to reduced acreages planted, and to floods and droughts.

Yesterday, as I flew to Chicago from the South, in Illinois not far from this city, I saw fine bottom lands inundated with water. You cannot tell what crops are planted on those lands. I saw one valley water-covered and all I could see were the tops of trees, the tops of houses, and the tops of barns.

Last May floods destroyed millions of acres of crops in the United States. A million acres were destroyed in my State of Oklahoma. Productive lands in many counties have been converted into battlefields and here at home vast areas of farm lands have been converted into munition plants, airports, Army camps, rifle and bombing ranges, and training grounds. Because of the induction of farm boys and farm labor into the armed forces, manpower for food and feed production has been curtailed. Because of the need for steel for the war effort, the production of farm machinery has been restricted.

The production of food has been largely mechanized. Hence, productive land, ample machinery, and manpower are absolutely necessary to produce the food for the soldiers, our allies, our munition workers, our own people on the home front, and the peoples liberated by the Allied armies.

It is considered a better war strategy to equip and feed our Allied soldiers than to have to train, equip, transport, and feed our own soldiers to fight on foreign battlefields. This is the foundation of the lend-lease program.

It would not be humane, in my opinion, to drive the invaders from Allied lands and then force such liberated peoples to starve for the want of food.

By the end of the present year we plan to have almost 11,000,000 men in the armed forces of our country. These soldiers and sailors must be provided with ample food. To serve these boys will require the efforts of tens of millions of workers in our munition plants, upon the farms and upon the home

front. These producers, processors, and distributors of war supplies must likewise be supplied with food.

Because of the existing 4-year war, our allies whose lands have been invaded and destroyed have been unable to produce sufficient food for their own forces, so it has fallen to our lot—not through desire but through necessity—to furnish food and equipment or else some of our allies will fail, because men can't fight without food.

In addition to the necessity for furnishing food to the peoples mentioned, we are now taking vast numbers of prisoners of war, and under the law of nations we are required to house, guard, and feed our prisoners exactly as we expect our enemies to take care of our American boys who have been captured on the fields of battle.

It is obvious that as this war progresses, the land and manpower available for food production throughout the world will be still further restricted and curtailed. Hence, the present problem of food production is all-important. World conditions and developments as herein outlined are responsible for this National Food Conference, and the all-important question is, "What can be done to increase food and feed production, to serve the absolutely necessary demands not only of our own but of the entire Allied war effort?"

SUGGESTIONS FOR RELIEF

In connection with the solution of this problem, the following proposals should be, in my opinion, considered:

1. Additonal manpower must be made available for work on the farms and ranches of our country.

2. An additional supply of farm machinery must be produced and made available to those engaged in food and feed production.

3. Additional lands must be reclaimed and placed in production.

The reclamation of additional lands for productive purposes may be secured in two ways:

(a) Through the immediate completion of irrigation projects and systems now under construction; and

(b) The immediate construction of flood-control works to prevent much of our richest bottom land from being destroyed through disastrous floods.

Irrigation will increase food production through the placing of water on land at the proper time, and flood control will increase food production by preventing disastrous floods from overflowing and destroying not only the crops but even the land itself.

4. An adjustment of prices to farmers to the end that they may receive at least full parity for the products from their farms.

FULL PARITY FOR FARMERS

It is my conviction that if the farmers of America could secure full parity for the things they produce, they would not ask for more. We do not, in my opinion, have a fair parity formula in existence today. The formula that we have is not a written formula. It exists only in the minds of the men in one of the departments at Washington.

The Congress prescribed a general principle governing parity but the Congress did not write a definite parity formula. As a result, the men who have made up this parity formula, in their minds, have refused to include farm labor costs among the various elements going to make up parity prices and it is my conviction that until the farmers of America are given the opportunity of having placed in their parity formula the expense that they must be to in hiring labor and the expense that they must be to in the providing for the members of their own families that may perform work—until that time comes, we will not have a fair and just parity formula for the farmers of the United States.

It should be the policy of our Government, in my opinion, to guarantee in wartime sufficient wages to the producers of war supplies to cover costs of production and in addition a reasonable profit. This policy should be extended not only to wage earners, to factories, and plant management but, in addition, it should be extended to the producers and distributors of food.

Maladjustment of prices in each necessary war industry should be given consideration and equitable and fair adjustments at the earliest possible opportunity.

The proposals herein suggested and the program herein outlined, I feel certain, will be considered by the Congress which reconvened on the 14th of this month.

Before I proceed further let me make a statement that industry in this war has performed almost perfectly. I would not say perfectly because that is a superlative. Industry has done a wonderful job in production.

WHY WE ARE NOT PREPARED

We started with almost nothing in this war. When the last war was over, the people of this country believed that war was a thing of the past, would not permit their further war; that if trouble should come, in place of solving that trouble on the battlefield we would get the agents of the governments interested around a table and there we would discuss the problem and adjust it by arbitration and by diplomacy.

The people, believing that wars were a thing of the past, would not permit their Congressmen to vote appropriations to build battleships, to make cannons, rifles, and munitions of war. For 20 years we did not build a single battleship. For 20 years we did not make a single cannon. For 20 years we made not a single rifle.

So when this war came upon the United States we had only the remains of the supplies after World War No. 1 had concluded; hence we had to start with nothing that was modern.

The American people are not a warlike people, and that is evidenced by the fact that shortly before this war broke out in Europe we had an army of only some 113,000 men. That is all the men we had in the Regular Military Establishment of the United States. Then we had the officers running the number up to slightly above 120,000. We had a National Guard of something like 200,000, not adequately trained and poorly equipped. That is all the Army that we had so far as men were concerned.

Then we had the same ships that we had 20 years ago. We had cannons upon wooden wheels. By that I mean wooden hubs, wooden spokes, wooden felys, and steel tires—cannon made to be propelled by horses and mules. But today warfare is a mechanized institution. You can imagine what might happen if we should hook one of these cannon behind a truck, start down across the country at 40 to 60 miles an hour. Such a cannon with wooden wheels and steel tires would not last a mile.

It is because of these facts that I have just catalogued that we have not made better progress with our part of this war to date. We are just now starting in this war, so far as the United States is concerned.

INDUSTRY IS PRODUCING

I say industry has done a fine job. Already industry has produced over 115,000 planes, war planes, and many of those planes are now on the fighting fronts throughout the world Industry has produced to date more than 60,000 tanks, and those tanks are now scattered throughout the fighting world. Industry has made 175,000 new cannon, and those cannon are scattered throughout the world. Industry has made over 6,000,000 rifles of the repeating kind.

Until this war started, the only kind of a rifle we had was a single-shot rifle, the best rifle in the world 25 years ago, but when this war broke out we found that the Germans, Italians, and Japanese had a repeating army rifle. We did not have such a rifle, so we had to provide such a rifle for our Army.

Some people complain about the time it takes to get things done, because we have been slow in getting our equipment. Let me cite one incident. When we revised the plans and specifications for the new Garand rifle, we did not have sufficient factory equipment to make those guns. The Government advertised for bids, and the best bid we could get was from the Winchester Arms Co. This company required 14 months to make the tools necessary to make the guns. But to date we have more than 6,000,000 of these repeating rifles.

To date we have made more than 200,000 rounds of artillery ammunition. To date we have made more than 25,000,000,000 rounds of small-arms ammunition. We have made thousands of ships, and by the end of this year we will have 10,800,000 men in the armed forces of this Nation.

We are now planning to have an Army of 10,800,000 men; 8,300,000 of this number will be in the Army proper, which embraces the Air Corps, and the other 2,500,000 will be in the Navy, and the Navy embraces the marines and the Coast Guard.

So far as I can learn, it is not contemplated to have more than 4,000,000 men across at any one time. That was the program when I left Washington, now more than 60 days ago. I see in the paper today that they have now raised that estimate, and they hope soon to have 5,000,000 men across.

If we should be able to get 5,000,000 men across on foreign fronts and battlefields: Subtract 5,000,000 from 10,800,000 and that leaves 5,800,000 men to be retained here in the United States in army camps located throughout our country. These men are to be inducted, trained, and held subject to call for foreign service wherever and whenever needed.

Industry has done a good job in this war. The farmers would have done equally as well had they been encouraged as industry has been encouraged and had they had the same support from the Government that has been accorded to industry.

AGRICULTURE—A WAR INDUSTRY

To date, so far as I know, farming has not been publicly acknowledged by the Government as a war industry, yet in my opinion there is no industry more important to the war effort than farming. Our soldiers cannot live without food. The war workers in industry cannot live without food. The families of the war workers cannot live without food.

So unless we have food, the war effort fails. Of all the things I can think of, food is the most essential and the most important to the war effort. So we should all do what we can to increase the production of food.

To do that we will have to convert some of the opinions that now exist in Washington from what they now are to what they should be. I think that agriculture and farming should be recognized as a war industry and I think that the farmers of the country should be afforded and guaranteed not only cost of production but likewise a reasonable profit.

The policy in the War Department and the policy in the Navy Department is such that if a contractor secures a contract to make Army supplies or Navy supplies and if he loses money on such contract, he is invited to come back and secure a second contract

at a sufficiently higher price to make up the loss on the first contract and to give him a profit on his second contract.

I only wish the farmers of America had that policy extended to them.

I assure you that I appreciate the opportunity of being invited to this conference. I was born in Indiana, as has been stated by Mr. Gannett. I was not born in a city or even in a village. I was not born on even a section line. I was born and raised back in the center of a wooded section. I never saw electric lights until I was grown. I never spent a night in a city until I was as tall as I am now. I came from a farm. I represent a great farm State. Farmers make up our largest single group and unless farmers are permitted to prosper our Nation will falter and eventually languish and perish.

I can see vast good that may come from this conference. Already good has come from it. I note in the public press today that on yesterday some high officials in Washington took notice of what is going on here in Chicago because they had a conference with respect to food production. The results of that conference will remain to be seen.

Also, I note in the public press where the mayor of New York City made the statement that higher prices are necessary. Mayor LaGuardia is reported to have made such a statement. If we can in this short time get the attention and the ear of high officials at Washington, if we can get the attention of the mayor of New York City—and you must remember that the mayor of New York City represents a consuming population—it will be indeed an accomplishment.

Now consumers, as consumers, want cheap food and they want cheap clothing. Out here in the West, in the bread basket of America, we are producers and as producers we want high prices for the things we produce that go to feed and clothe the people of the consuming East.

The industrial East wants cheap food and cheap clothing; the producing West wants high prices for their food products and would like to have cheap prices for things they have to buy. This conflict of wishes and interests must be recognized and equitably adjusted.

So this forum, which Mr. Gannett and his associates have provided here in Chicago, wherein various viewpoints have been expressed, clashing and conflicting as they must, has developed the facts; hence, Mr. Gannett and members of the conference, I am confident that great good will come from this Chicago National Food Conference.

Airways for Peace

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. Edward Warner, Vice Chairman of the Civil Aeronautics Board, for the current issue of Foreign Affairs:

AIRWAYS FOR PEACE

(By Edward Warner)

The first international air services were inaugurated in 1919. Twenty years later the independent states or major colonial possessions which did not have regular air connections with their neighbors could be numbered on the fingers of one hand. A large part of that service is still in active operation, especially in the Western Hemisphere. But it will be enormously expanded and much of it will be remade in the years immediately following the present war. If there is ever to be a fundamental change in the legal and political framework which had gradualy developed in the last 20 years the time for it will be when we shift from war to post-war conditions. We must decide now whether change is really desirable and, if so, consider what new forms might be substituted for the old ones.

The basic political features of the air transport situation before the war were as follows:

1. Each state maintained full sovereign rights in the air space above its territory.

2. Most states (though by no means all) had adhered to one of the two major international conventions governing air transportation, that of Paris (1919) and that of Havana (1928).

3. The parties to these conventions undertook to give certain general privileges to the aircraft of other ratifying states; and those which ratified the Paris Convention undertook to observe uniform practice in such matters as traffic rules and standards for licensing pilots and aircraft.

4. In practical application, the conventions created no rights to operate international air transport services.

5. Such international services were established either as a result of bilateral agreements between governments, or when interested air lines themselves secured concessions to operate into and within foreign territories.

Since 1918 little has been heard of the argument that the air should be free above a certain altitude, in the sense in which the seas are free beyond territorial limits. No one now seriously questions the fact that the full sovereignty of every state extends to the air space above its territory. All international agreements have taken it for granted. No one is likely to question it in future, unless as part of a general review of the privileges of sovereignty and of the possibility of abridging them by general agreement or of surrendering some of them into the keeping of an international organization. Freedom of the air as now conceived would be merely an agreement among sovereign states to restrict the exercise of their recognized sovereign rights.

The International Convention for Air Navigation, signed at Paris on October 13, 1919, had an effective membership in 1938 of 33 States.[1] The Pan American Convention, concluded at Havana in 1928, was ratified by the United States, Mexico, Chile, and Ecuador, all the states of Central America except Salvador, and all the Caribbean states (excluding the colonies of European powers) except Cuba. Few of the larger South American countries and none of those bordering the Caribbean on the south ever adhered to either convention.

Both of these conventions have been interpreted and applied in the sense most unfavorable to the free expansion of international air services. Both permitted a reasonably free movement of privately owned aircraft in the territories of member states, as well as of commercial aircraft not engaged in a regular scheduled service; but both have been interpreted so as to deny a corresponding freedom to the operators of regular transport services, thereby making the inauguration of regular services dependent upon special agreement. In the case of the Paris convention, a certain ambiguity in the text was resolved so as to limit the freedom of air transport. The Havana convention was less ambiguous. To most readers it seemed to say clearly that air transport should be free within the territories of the ratifying states. But it was not so applied.

Efforts were made from time to time to secure a more liberal interpretation of the Paris Convention or to modify it into a more liberal form. From the first, the British had favored a large degree of freedom in the operation of air services into and through all countries. So had the Dutch, who were like the British in possessing a small home territory, distant colonial territories, and an established tradition as carriers. Whenever the Government of the United States had occasion to make a declaration it supported freedom of operation.

In June 1929, a conference was held in Paris to consider revising the Paris Convention so as to permit greater freedom of operations. It was attended by representatives of the United States, Germany, and certain other states which had not ratified the convention, as well, of course, as by representatives of the adherent states. Only the United States, the British Empire, the Netherlands and Sweden favored the change. In opposition were 27 states (including Brazil, Cuba, Chile, Haiti, Uruguay, and Venezuela from the Western Hemisphere) Even the modest proposition that the ratifying states bind themselves not to prohibit the establishment of international transport services except on "reasonable grounds" (they themselves presumably being their own judges of reasonableness) mustered only 11 out of 30 votes.

Since no general privilege of international operation was recognized, there remained two procedures by which international services might be established—by bilateral agreement and by unilateral concession. The former has been the prevailing rule in Europe, the latter in the Western Hemisphere south of the Canadian border. Bilateral agreements varied widely in their provisions. In the case of two major powers they customarily provided for complete equality of privilege with respect to a particular route, which would then be operated by air lines of both states. Where a major and a minor power were concerned, the commoner practice was for the more powerful to receive the privilege of operating a through service between the principal centers of the two countries while the smaller received the privilege of operating certain international services of a more local character.

Sometimes the agreements fixed the maximum number of schedules to be operated daily or weekly by each carrier (as in the case of the trans-Atlantic services between the United States and the United Kingdom and the United States and France), but more often that was left for the carriers themselves. In fact, one can hardly appraise the significance of the intergovernmental agreements without at the same time allowing for the effect of the intercompany agreements, which usually were secret. Since most European air lines were in effect the agents of their governments, it was by agreements between them that rate and service wars were avoided. The extreme form of such intercompany arrangements was the pool, which involved the distribution of total traffic revenues in accordance with some agreed ratio. Pools were particularly favored by the Germans, the French, and the Swedes. The British shunned them.

Most of the international services to which American air lines have been a party have been authorized by concessions obtained directly by the carrier[2] from the government

[1] This included 7 of the members of the British Commonwealth. Of the remaining 26 members, 20 were in Europe. In the Western Hemisphere, Canada, Peru, Uruguay, and Argentina ratified (some others did also but withdrew subsequently).

[2] Pan American Airways, or its subsidiaries or affiliates, in practically every instance.

concerned but there were exceptions. The United States Government has had agreements with Great Britain (1935) and France (1939) covering trans-Atlantic air services, and with Canada (1939 and 1940) covering all air transport services across the border. Under the agreement with Britain, which remains in force until 1950, a designated carrier of each country may operate two schedules per week between the United States and the United Kingdom.

By 1939 the process of reciprocal exchange through bilateral agreement had developed so far in Europe that there was a close approximation to general freedom of passage. Although Germany was generally recognized to be holding the Damoclean sword of war over all her neighbors, German aircraft were being welcomed on daily services to the airports of the United Kingdom and most countries on the Continent. If it was considered dangerous to let the transport aircraft of potential enemies fly over your territory, and if it was that presumed danger which had brought about the defeat of a general agreement conceding the natural right of passage, the course taken failed to accomplish its purpose. The aircraft of potential enemies, and of all other States, were overhead at all hours.

On this side of the Atlantic, Pan American Airways or Pan American-Grace Airways had concessions to operate into every one of the American republics and into most of the South American and Caribbean colonies of the European states. The case of the United States and Canada is exceptional in that the length of the border and the grouping of many large cities close to it on either side make necessary a number of distinct international services. By an agreement entered into December 3, 1940, these were so allocated as to avoid any direct duplication.[3]

For the future, the following new alternative procedures appear possible:

1. Air transport might be operated internationally, either through a world monopoly or through a number of companies representing groups of nations interested in particular areas.

2. There might be general agreement on a body of principles defining in general terms the air transport privileges to be enjoyed by all countries. (They might go so far as to convey to every country the right to carry passengers and goods between any two points in the world; or the privileges conveyed might be much less extensive.)

3. Air transport might be conducted by privately or governmentally owned air lines, bearing national flags but operating subject to an international control and receiving from an international agency the certificate that gave them the right to conduct international services.

Alternatively, of course, bilateral bargaining might continue as in the past.

II

Proposals for the international operation or air lines first received serious attention in 1932 when the French delegation to the Disarmament Conference proposed the internationalization of civil aviation as a measure of security against the possible misuse of civil air fleets. Specifically, the French proposal was that international civil air transport services should be entrusted to continental, intercontinental, or intercolonial organizations which would operate them under the auspices of the League of Nations. Orders for the necessary equipment would be allocated among the aircraft-building states in proportion to their industrial capacity rather than with a view to securing the equipment, regardless of its source, which would permit the most economical and efficient operation. A few of the Continental European delegations favored the scheme but it received little support from people actively connected with air transport. These denounced it with vehemence, perhaps less because it would remove national characteristics from the air lines than because it might entail governmental direction and the restriction or elimination of private enterprise.[4]

Now that there has been another war and the world has seen what the bomber can do, the aims which the French proclaimed a dozen years ago, often to deaf ears or impatient audiences, will find new advocates. Looking back on the years from 1931 to 1939, many will proclaim the indivisibility of peace. Already the proposal to deprive civil aviation of all national quality has been revived, and it has found a surprising measure of support in Britain. Journals of such importance as the Times and the Economist have favored as much internationalization as can be obtained in the face of anticipated American opposition. Labour Party spokesmen are also favorable. In general, Conservatives are opposed, seeing in the development of air transport under British control an influence for the unification of the Empire. The opposition of those professionally engaged in areonautics is (with isolated individual exceptions) vigorous. The British Government has taken no position, but seems likely at least to give the possibilities of internationalization serious and respectful study. Even those who dismiss it as impossible on a world-wide scale often hope that some consolidation of interests in Europe may avert the rival operation of 15 or 20 companies with the active backing of as many governments.

In the United States the proposal has not aroused any such interest. Vice President WALLACE has sponsored it, but without attracting much response. American operators and the manufacturers of aircraft would certainly oppose it, as they would any scheme that was likely to bring air operations more directly into the hands of government, whether national or international.

III

If we intend establishing any general principles defining a natural right to participate in air commerce, we shall do this most easily as a part of a world convention on air navigation. After the war there will be a plain need for machinery to insure uniformity in aerial rules of the road and some other matters. Either the Paris Convention of 1919 will be extensively recast or it will be replaced by a new instrument taking account of experience on both sides of the Atlantic. Some specification as to the degree of freedom of transport operation that is to be generally conceded could be included. This would be easier than to try to build an air navigation convention on technical considerations alone and subsequently to attempt to secure general adhesion to a separate agreement outlining the right to participate in air commerce.

One general principle would establish the right of transport aircraft to make nonstop flights across the territory of foreign nations. Thus an air line that wished to operate from Sweden to Greece would have the right to cross the territory of the intervening states without special sanction.[5] A next step would be to extend the universally recognized right of nonstop passage to include stops of foreign aircraft for refueling. Such a concession, of course, would not in itself convey any right to pick up or discharge a single passenger or package.

That much, at least, should be hoped for. No country ought to claim the right to bar the passage of aircraft handling only through traffic and, therefore, in no way affecting its own commerce. To do so, and to refuse to let them use available ground facilities and purchase supplies, would be an outrageous exploitation of geography for purely negative and destructive purposes. It would be particularly outrageous in view of the rapid contraction of the earth's surface through the development of aviation. That sort of obstuctionism by countries which occupied strategic positions along important intercontinental routes was the greatest barrier to the development of international air transport between 1920 and 1938. Its recurrence should be discouraged.

If the decision were made to go still further, the next step might be a general agreement which allowed the aircraft of a member nation to discharge traffic which had originated in the metropolitan territory of that nation and to pick up traffic which would be delivered there. For example, a Canadian air line could then operate across the United States and on to the countries to the south, dropping off traffic of Canadian origin at the various points touched on the outward-bound journey and picking up Canada-bound traffic at the various points on the return. It would not be privileged, however, to handle traffic between the United States and the countries beyond. If it wished to handle traffic originating in any one of those other countries and terminating in another it would have to secure the right to do so by special agreements with the governments immediately concerned.

A likely limitation will be the reservation of cabotage rights. National companies thus will have the sole right to handle traffic which both originates and terminates within the national territory. The United States insists on this in its coastwise shipping laws and in analogous provisions in the Air Commerce Act of 1926. Many other countries have taken the same position, and the practice is likely to become even more general in the future. Before the war, continental air lines operating into England were allowed to carry passengers between British points. This seems likely to be changed, and, in addition, cabotage may be reserved not only for traffic in the United Kingdom but for traffic throughout the British Commonwealth as a whole, which would mean that all traffic both originating and terminating within the Commonwealth would be transported by air lines of the Commonwealth. Some British critics challenge the wisdom of such a policy, but it has two obvious appeals—the economic one that it would provide a substantial "home market" for British air transport, and the political one that it would draw the parts of the Commonwealth together into a single self-sustaining air bloc.

Much talk has been heard about "spheres of influence" as a basis for distributing postwar air traffic so as to avoid destructive competition. Generally the term implies that the globe should be divided into economic zones, and that traffic taking place entirely within one zone should be reserved for the

[3] The air lines of the United States traverse the border at seven points (not counting a landing in Windsor, only a few minutes by bus from Detroit); while the Trans-Canada Air Lines secured a privilege in which both it and the Canadian Government were particularly interested, namely, to operate nonstop between New York and Toronto so as to make connection with the Canadian transcontinental line to Vancouver.

[4] There have been a few cases of actual international operation, e. g., by the Russo-German company, Deruluft.

[5] The right of nonstop passage was contained in the United States-Canada agreement of 1939. It was stated in general terms and without reference to particular routes, although an exception was made as to nonstop services between the United States and Alaska across Canada.

air lines domiciled therein. Interzone traffic would be open to the enterprises of the zones involved, on terms to be determined. This device would bar American air lines from competing for traffic which both originated and terminated overseas, and might be expected similarly to bar European companies from handling traffic originating and terminating in the Americas. Complications would be presented, from our point of view, by the fact that several European states have wide-flung colonies, some of them in the Western Hemisphere. Britain, France, and the Netherlands might have a claim to a domicile in every zone.

Whatever rights of entry and passage a nation may concede to foreign air lines, it will impose certain restrictions in the interest of safety. The world's ports are open to peaceful maritime commerce, but a European vessel cannot enter New York Harbor without picking up a local pilot. Since it is impracticable for an airplane to pick up a pilot the captain will have to possess the qualifications of a local pilot for all the airports which he enters. He will have to know the local traffic rules, the radio procedures, the obstructions around the field, and the miscellany of detail which an airline captain must master before he is allowed to command even on a purely domestic flight. Language will often be a problem, for there must be some means of direct oral communication between the officers of an incoming aircraft and the traffic controllers in the airport tower. Such matters will be even more important in the post-war period than they have been in the past, for increasing traffic congestion will increase the necessity that every pilot shall understand local control methods and cooperate with them. The methods should be standardized to the greatest possible degree, but variations in the local terrain will always require some special local procedures.

Another proposal is sometimes heard—that the great powers assume leadership in the development of international air lines either by regions or on a world-wide basis, using their economic and political power to obtain unique privileges. Occasionally it goes so far as to assume that only a small number of states will be allowed to participate in international air transport. Our own consciences would hardly accept such a denial of opportunity to our weaker neighbors. The fact is, however, that large expenditures and great technical ability are required to develop air lines, and that this fact by itself will limit the number of countries which operate anything except short local routes.

In one respect at least leadership will be indispensable. Safe and efficient operation will demand that air-traffic rules and regulations as to airworthiness and other matters be standardized. The necessary agreements will be secured more easily in discussions between a limited number of nations having wide experience in aircraft manufacture and operation than in an assembly of all the sovereign states of the world. No question of appreciable national advantage is likely to arise in this connection. If a limited group will frame competent technical proposals they should receive universal and grateful acceptance.

IV

A strong motive among those who advocate the internationalization of air lines is their fear of what may happen if one of the alternative courses is adopted. British observers in particular foresee possible cutthroat competition, with extravagant or excessive operations maintained for prestige or indirectly for military purposes, and often supported by Government subsidies. They fear a subsidy race, with new international jealousies and dangerous tension as the result.

Many persons have put forward substantial arguments for the complete elimination of subsidies in air transport after the war, but there is little reason to expect that this can be achieved. Many States are likely to wish to maintain air communications on certain routes which would not produce sufficient commercial revenues to cover the cost of operation. In the general interest, too, air transportation should be made available to parts of the world where commercial advantage alone would not insure its maintenance. Countries where costs are high may also find it necessary, if they wish to serve as international air carriers, to provide subsidies to cover the cost differentials. The United States has done this for its merchant marine.

The economic effects of a real race in subsidies would be direct and immediate.[6] The political effects would be indirect. Nations will hardly be brought to the point of war by their efforts to maintain supremacy in the field of air transport at government expense. However, the spectacle of the United Nations engaged in such efforts would be a disheartening augury of their inability to cooperate in matters more directly connected with the preservation of peace. Both the economic and political consequences ought to be averted.

Publicity would help. The very full financial reports that each American air line submits to the Civil Aeronautics Board each month have aroused astonishment and admiration in other parts of the world. The British aircraft industry has suggested that all nations agree not to allow lines to engage in international operations unless they make regular public reports as to the sources of their revenue and their expenditures.[7] This excellent proposal might be supplemented by a universal undertaking to make public the terms of agreements between air lines and governments.

A direct limitation of subsidies by international agreement is often proposed but seems impracticable because of national differences in cost levels and because indirect subsidies may take an infinite variety of forms. Control might be applied more easily to the uneconomic consequences of subsidies, such as: (a) rate cutting; (b) maintenance of luxury services at normal rates; (c) maintenance of a volume of service beyond what the traffic actually warrants.

One way to prevent rate-cutting and other extravagant and uneconomic practices would be to create an international air commission having powers over international services analogous to those exercised by the Civil Aeronautics Board in the United States. Its functions could include the approval of tariffs, the setting of maximum limits on volume of service and the hearing of complaints regarding unethical or uneconomic competitive practices. It might even be given the power to certificate routes and determine which services should be operated by which carriers and how much competition there should be on particular routes. It might be a continuous or frequently recurrent session of representatives of the governments concerned in a particular area; or it might be a genuinely international agency, the members of which were chosen individually by some process designed to minimize the likelihood that they would turn out to be merely national advocates.

The two ideas are far apart. An agency of the first type would function through diplomatic adjustments; every issue would be resolved by compromise. If any agency of the second type lived up to its expectations, it would be a judicial body and behave as such, like the quasi-judicial agencies of national government now possessing similar powers within their respective territories. An agency whose members had no commitment or responsibility to any particular national interest would be clearly superior in theory; but to endow such a body with actual powers, as opposed to merely advisory functions, would mean a very sharp break with tradition, and any proposal of the sort would have to overcome a strong feeling against entrusting national interests to an agency composed largely of "foreigners."

Unless an international air commission of the judicial type is created there certainly will be need for frequent meetings among the aeronautical officials of states having common problems. Disputes over subsidy arrangements for competing lines can be reduced, if not averted, by frequent and frank exchanges of views among the governments concerned. Rates will have to be harmonized with conditions of service either by governmental regulation or by agreement among the carriers themselves. The need for governmental controls should not often arise. Commercial enterprises would be slow to start rate wars, for reprisals would be easy. But how the controls are to be supplied when they are needed ought to be planned in advance.

V

For aircraft operators, all the problems of law and diplomacy are less important than those of ground organization. They do not need a continuous right-of-way on the surface, but they do need bases and communication facilities on a much more elaborate scale than the layman often appreciates.

Where practicable, for example, it is advisable that there be well-equipped bases at intervals of some 500 miles along all major routes. They must have not only adequate landing surface and hangars and stores of supplies but also radio installations to give assistance in navigation and weather information directly to aircraft in flight. Additional radio stations, either off the course or at closer intervals along it, may be needed to supply supplementary aid. There must be a network of weather stations, in constant communication by wire or radio with a central point; and there must be the necessary organization to receive, map, and interpret the weather reports and to distribute them.

The war has created many bases in places the very names of which were almost unknown a few years ago. Some are on mid-ocean islands which, until the builders came were virtually uninhabited. Many of them have been built entirely or in part with American funds and with American material and labor in territories under the sovereignty of other nations.

Bases have been constructed during the war without reference to their post-war status. Considerations of sovereignty have not come in. Nothing, however, could be more certain to embitter the post-war relationships of nations now allied than recourse to the privileges of sovereignty to prevent civil aircraft from passing freely from one part of the globe to another. All question of wartime contributions aside, the selfishness of a state which refused to allow the aircraft of its friendly neighbors to stop and refuel at an established base—perhaps the only one available—would create a source of endless irritation in international relations.

Universal recognition of the general right of a civilian airplane to enter all territories, colonial or metropolitan, for refueling or other technical purposes, would eliminate all friction of that sort. This is the writer's strongest reason for hoping that a convention establishing such a right may be made and that it will receive unanimous approval. Above all, it should be approved by the

---

[6] It was a desire to guard against the consequences of unrestricted intranational competition that produced the Civil Aeronautics Act in this country and analogous statutes in some others.

[7] The Future of British Air Transport, a memorandum by the Society of British Aircraft Constructors, June 1943, p. 6. Similar proposals had previously been made by Sir Frederick Handley-Page, long known as a builder of large aircraft.

United States and all the members of the British Commonwealth, thus forestalling the development of what might otherwise become a very sore spot in Anglo-American relations. The advantages would be mutual. Americans desire to use bases in British territory for intermediate stops along various American routes; and the British and Canadians desire to have free right of passage, including the right to stop for fuel, over Alaska and in the American island territories of the Pacific.

Air bases must be kept up. Radio stations must be operated; weather observations must be made; and equipment must be modernized or supplemented from time to time. Great bases have been built for wartime purposes in territories where the local government may lack the inclination or the resources to assume the upkeep and where the local population may not be technically competent to carry on the necessary services. In such cases some form of outside assistance and supervision must be assured. This may create another occasion for joint action by the major aircraft-operating countries.

Bases should be open to the traffic of all countries on equal terms and their radio and other facilities should be available to all comers, of course within the limits of the safety provisions already described. The suggestion is sometimes heard that the time is ripe to go much further and to put the operation of air bases on a truly international footing. Unless we envisage the development of a much more centralized world organization than the League of Nations ever was, there would be no authority competent to undertake the operation of air bases in all parts of the globe. Much more restricted international associations, however, can be helpful. Already the South Pacific islands of Canton and Enderbury, which are important only as air bases, are under joint British-American control. In the course of developing air bases, the United Nations (to paraphrase Winston Churchill) have become pretty thoroughly mixed up with one another; and when the use of these bases is extended, either for international transport or international policing, or both, occasions may arise for transforming existing associations into permanent relationships.

VI

When the present war ends, security will be the paramount consideration just as it was in 1919. It will color all the talk about the future of civil aviation and dictate many of the decisions made in that connection.

The apprehensions which a nation feels regarding the civil air fleet of a neighbor generally spring from the possibility that it can be used for espionage from the air, or that it can be converted into combat aircraft, or that it can be used to carry an air-borne invasion.

The possibility of espionage will probably occasion less alarm after this war than it did 25 years ago. The arts of concealing and protecting military installations from air observation have been improved. Air lines can be required to avoid limited areas of particularly vital military significance. And the experience at Pearl Harbor, in an area which no Japanese air line had ever been allowed to approach, will remain as a reminder that there are likely to be more effective means of gathering military information than by operating a scheduled air transport service.

The fear of direct conversion of transport aircraft to combat types also belongs largely to the past. Although they have many parts in common, both types are too specialized for it to be possible to transform a transport fleet overnight into an efficient bombing unit. Operating crews are more readily interchangeable; and the closest approach to a real hazard may lie in a potential enemy's use of an air route to make pilots acquainted with targets they might later be called on to attack.

The possibility of surprise air-borne attacks by civil transport airplanes cannot be entirely excluded, at least in a close-packed area like Europe. This risk will have to be taken into account by those who plan security measures for the future. But even a very limited national defense force or a comparatively weak machinery of collective security should be able to isolate and destroy the largest body of troops that any civil air fleet could convey.

There remains the possibility that an air transport fleet might be a military air force in disguise. The disguise could not be long maintained. In any case, the problem of how to deal with an aggressive air force is a main security problem of the future. Armaments must be brought into balance and made available for the use of some collective security system, so that the present United Nations may be relieved of the fear of sudden attack by the regular forces either of their present enemies or of each other. The problem of how to prevent the misuse of transport equipment or the concealment of combat aircraft under a transport guise would be solved almost incidentally.

VII

The United States and Great Britain are likely to be the leaders in the development of international air transportation. Russia and China have great tasks ahead in building up air communications within their own vast territories. So do most of the British Dominions and the principal nations of South America. But while all these states will be conducting international operations to some extent, and sundry European states also, a very large proportion of the world's long-range international air-line operations will be carried on under the American or British flag.

For that and other reasons, the relations of Great Britain and the United States in this field need special consideration. What are the interests of each? And where may they conflict?

Both countries have a tradition of advocating the free use of the air. Whenever there has been an occasion for a formal declaration of principle, both have stood for removing restrictions and enlarging opportunities. With that background, they ought to agree easily to extend to each other on a reciprocal basis the right of innocent passage and the right to stop for refueling. Both will gain more by such an agreement than by a policy of mutual exclusion. Both peoples are travelers by temperament, and in both countries many persons look forward eagerly to opportunities for swifter and more convenient movement by air.

Each nation has great ambitions in the air. Aside from the general intangibles of national pride, and from the bearing which the possession of air-transport facilities has on security and trade, the mainspring of American interest in this connection is the eagerness of American youth to find a place in aviation. The same situation obviously exists in Britain. There it is supplemented by considerations of imperial unity, however, and by the necessity of depending upon the revenues of carrier services, both sea and air, to adjust the British balance of payments.

When British and American ambitions encounter one another in the air, the result may be either direct competition or the invention of some device to avoid it.

Competition might be avoided by an allocation of traffic or by an allocation of territory. The first alternative, which is the pool, has never been popular in Britain and certainly would not be in America. The idea of allocating territory, i. e., recognizing "spheres of influence," runs into difficulty along the border lines of the proposed zones. It also runs up against the psychological difficulty that the peoples of both countries have been learning to think in global terms. They will not be patient, either in Britain or in the United States, of proposals that they be fenced off from any part of the world.

Competition may make conflict, but it need not do so. Competition between British and American air lines should be as keen, but at the same time as friendly and as cooperative in matters where cooperation is mutually advantageous, as the competition between any two of the air lines within the United States. There will be no occasion for Britain and America to parallel each other's routes throughout. But the writer believes that a substantial amount of competition will be healthful to trade and beneficial to the traveler, and further that it will cause less friction than the measures that might be devised to avoid it.

Across the North Atlantic, at any rate, parallel American and British services may be expected between New York and London. If the situation causes any more friction than arose out of the three parallel nonstop services maintained by American air lines between New York and Chicago before the war, it will be evidence of a quite needless inability of the British and American Governments to cooperate in finding fair solutions for whatever problems of scheduling, rates, or alleged unfair competitive methods may arise. Most of the problems involved in the use of each other's bases would be solved by acceptance of the fundamental right of any transport aircraft to stop for refueling at any base, whatever the nationality, and by agreement on standard traffic rules and radio procedures.

An issue between the two countries might arise out of the fact that the United States is producing military transport planes at a great rate at the present time, while British production concentrates on combat types. There has been great anxiety in British aeronautical circles and in Parliament over the possibility that the end of the war will find Britain with no aircraft that could perform creditable transport service. The industry that has produced the Spitfire and the Lancaster can obviously develop transports, and good ones; but development takes time. The Deputy Prime Minister told the House of Commons on June 1, however, that arrangements were being made for the development of four new transport types, to be carried forward as rapidly as their subordination to the priority of military requirements would permit.

American builders have certain advantages. They have had more specialized experience with transports than the British have had, and they have been accustomed to working closely with a number of air lines instead of a single one as in Britain. American factories will be producing transports at the end of the war. However, they will be models built mainly for military purposes and a large surplus of these will have accumulated. It is unlikely that there will be any occasion to continue the production of these models, and as a result American factories, like the British, will be making ready to build newer types. While the newer types are coming through the preparatory stages both countries will operate air routes with existing equipment, which probably will mean largely with surplus military aircraft no longer required by the air forces.

There should be nothing in any of these problems to make serious trouble between the two countries. If all dreams could be fulfilled, Britain and America would each like to carry the air traffic of the world. Since neither can expect to do the whole job, each must prepare to deal with the other as a friendly and cooperative competitor. The Government must not be content merely to make a rigid initial agreement. The departments concerned with civil aviation must remain in constant communication to make certain that the agreements are working

properly and to expand them or liberalize them where necessary. As in the case of many another problem of British-American relations, the underlying spirit will be more important than the legal form of the solution. The only agreement that can be genuinely satisfactory to either party in the long run will be one which will be genuinely satisfactory to both. It must leave no sting or sense of defeat to either. Both British and American air transport operations can be of benefit to both countries, and to all the rest of the world. Success in handling the air transport problem will make success easier in other fields. And any advantage that either country might seem to gain in placing political handicaps on the air transport opportunities of the other would prove to have been indeed a pyrrhic victory.

Plotting a Sensible Course for Peace

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio adress entitled "Plotting a Sensible Course for Peace," delivered by me on the Congressional Record of the Air program over station WHN, at New York City, on October 12, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A permanent world peace is the heartfelt desire of every decent human being in America, but before a durable plan is plotted the domestic and world-wide problems certain to be encountered in such a gigantic undertaking should be thoroughly explored.

Naturally, too much detail would result in endless haggling, but on the other hand the hush-hush psychology of "Let's win the war first" casts suspicion. I feel that a frank consideration of post-war conditions the world over as a sound basis for post-war collaboration now, will avoid countless unfortunate tragedies and blunders later.

So far as I know, no responsible person in the United States is advocating isolation. Lightning-quick, world-wide radio communication, and modern transportation facilities have made political, cultural, social, spiritual, and commercial isolation utterly impossible in our one world. However, in the family of nations, every nation has its own conception of international morality and its own private problems that only it is competent to judge and adjust. Accepting the existence of these vital factors is not obnoxious nationalism; it is common sense

In Asia and Europe hundreds of millions of human beings are slowly starving to death. Day by day malnutrition and diseases incident to it are reaping a terrible toll. Throughout the globe economic, political, and social revolution is the order of the day Mob violence and civil wars are smoldering beneath the surface all over the continent of Europe.

In this country we face not merely the threat but the actual reality of demoralizing inflation which, one way or another, must reap a terrible toll in suffering and chaos. When the war ends the Federal Treasury will be hopelessly bankrupt. Millions of war workers will be thrown out on the street and it will require superhuman skill and ability to convert American industry quickly to a peacetime operation.

The moment war stops the full impact of these terrifying conditions will sweep us off our feet unless we are prepared for their devastating challenge. Amid the shock and joy of a sudden peace, demagogues, political theorists, opportunists, and empire builders will take full advantage of our dazed disunity to serve their unholy purposes.

We are spending more money in this war than all the United and Axis Nations put together, but that is no indication that we can make a similar peacetime contribution. There is a bottom to every barrel. Improvidence at home in making war decrees impotence abroad in the post-war period. We cannot rehabilitate the world when the war ends until after we rehabilitate ourselves. When the world discovers that we are only "poor relations," they will lose all interest in our theories of milk for the Hottentots. When he goes broke, Uncle Sam will learn to his chagrin what every former rich man learns about friendship.

Our one hope for preserving this Republic, in my opinion, is that private industry, operating under the free enterprise system and aided by an understanding and sympathetic Government, will somehow provide the opportunity quickly whereby this generation and succeeding generations may tediously toil and produce their way out of an impossible economic quagmire.

The one hope of establishing permanent order in the world is an honest and humble and unselfish and frank approach toward the post-war world by the three great powers—Russia, Britain, and America. I say "honest" because we are fooling no one but ourselves when we proclaim the Atlantic Charter publicly and go about the business of empire building privately. I say "humble' because the military strength of the three great world powers does not give them a proprietary decree from the God of justice to dominate the world. I say "unselfish" because selfisl materialism is so obviously in the forefront in both camps in this war. And I say "frank" because no nation among the United Nations has yet said what the post-war aims of the United Nations are to be. If you challenge this last statement, I ask you: What of Finland, what of the other Baltic States, what of Poland, what of the Balkans, what of Africa, what of Palestine, what of India, what of Hong Kong and Burma, what of the East Indies, and what of the minorities and the other so-called backward peoples of the earth?

We have denounced aggression for everyone. Do we mean it, or is it merely clever, high-powered double talk? Is it enough to not practice imperialism ourselves? Can we, with a clear conscience, point with pride to our well-established policy of anti-imperialism and at the very same time employ our military strength to promote and insure the success of British and Russian imperialism? With what utter contempt must the small states and the so-called backward peoples of the earth about to be gobbled up, regard such shallow hypocrisy

Both Stalin and Churchill have frankly dropped some pretty broad hints as to their objectives in the post-war world, and the emphasis has been on what they expect to get and to hold, and not on what they are to give. These strong and realistic statesmen are laying the ground work for empire building and we knowingly are aiding and abetting them.

International friendships like private friendships stem from mutual understanding, mutual respect, mutual esteem, and mutual interest, on a voluntary basis. By the very nature of things, these vital factors cannot be made compulsory. Americans who smugly advocate policing the world with our military might have not consulted human nature sufficiently. Empire building and exploiting the world and policing the world will ever go hand in hand. Unless we abandon our traditional policy of antiimperialism, we had better proceed with profound thought in the dangerous field of cooperation by military force.

We should cooperate in every possible way with everyone to establish a just and understanding world. More than that we should assume world leadership—but we should put a price on our participation in such a glorious adventure. The price should be that the whole world enjoy freedom from exploitation and subjugation. Do we have enough faith in mankind and enough honor in our hearts to play the game that way or must we forever be enchanted with the political intrigues of Europe and despise our own true destiny of advancing the cause of freedom and the dignity of liberty?

Full cooperation with other nations on any basis, and especially the proposal to enter into post-war alliances with Britain and Russia is very attractive to America, since we are so desperately anxious to win a permanent and durable peace. However, we should always remember that peace to be durable must be built upon righteousness and justice and character and mutual interests, and not on alliances. If we are going to enter into alliances we must insist that our confederates-to-be meet our standards of international integrity and morality. If they will not accept nonaggression and nonsubjugation, frankly we ought not to enter into an alliance with them. That must be our price, and if we hesitate to assert it with determination and vigor now, we will not be true to our ideals.

Substitute force for justice in international relations and you are not above Hitler's beastly conception. If we should substitute policing for the good-neighbor policy, our leadership in Latin America, built so painstakingly by Secretary Hull, would go up in the smoke of battle within the hour. We made a choice on this point when we went to war with Hitler. We must stick to that choice in the post-war world.

One of these days I hope the Senate will bring out and pass a post-war resolution that will say precisely what it means and mean precisely what it says. We must be brutally frank with Britain and Russia as well as with the victims of Hitler, and stop fawning and double-talk and hypocricy. Churchill and Stalin are hard realists and we had better acquire toughness in dealing with them or give up the game of internationalism as too rough for our sensitive souls.

Suppose Russia declines to alter her rather well-defined objectives of conquest and aggression on the Baltic, in the Balkans and in middle Europe, and Churchill insists upon holding his own come what may, must we declare war on these great powers the moment Hitler and Tojo are finished off? No, indeed. I do not advocate anything of the sort. However, I would let them and the world know that we are retiring to the Western Hemisphere with this curt pronouncement: "Gentlemen, you must accept alone the terrible responsibility of your empire expansion program. The United States is checking the whole mess in the Eastern Hemisphere to you. We do not like your policies of aggression and subjugation and we will not be a party to them." Acquiescence and participation in policies to which we cannot subscribe will never square with American ideals and will not result in a permanent and durable world peace.

I have a profound admiration for Churchill and Stalin as military leaders and statesmen but neither of them has me either hypnotized or cowered. My mind is made up to not approve empire expansion by force, by Hitler, or

by Stalin, or by Churchill. I see no other honorable way to avoid disaster to ourselves and the world.

A total abandonment of our ideals in the post-war period will ruin all chances of a durable peace. How much better it will be for our peace of mind, our own institutions, and for civilization itself, if we demand a sincere and honest program for the whole world; and if that is refused by Russia and Britain, we must remain true to our ideals and to prove our sincerity and understanding actually put into full fruition such a program in the Western Hemisphere.

The United States can and will, if she devotes herself to such a cause, weld the Americas into the finest and most wholesome international relationship ever to exist in all history. In time, if we are patient and prudent in its exercise, we can gradually extend our system of good neighborliness and cooperation to every continent.

Above all come what may we must remain steadfast to our ideals of good will among men and nations.

Senators Urged To Support the Steel Program Formulated — Development of Native Iron Ores for Use by Local Industries Favored by 26 Governors

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech by Hon. FRANK W. BOYKIN, of Alabama,

It is gratifying to learn that the Senate has become concerned about developing our natural resources I understand there is soon to be appointed a committee clothed with investigative authority identical to that under which our House committee has operated continuously ever since its original appointment during the Seventy-seventh Congress. Like our group investigating the steel situation, these Senators also urge the conversion of our idle mineral resources by local industrial production for both war and peacetime requirements.

SENATE INTEREST MARKS OFF THE SECOND MILE

We of the House, therefore, may regard the recent gathering on the Senate side as constituting a genuine recognition that the work under way on the House side has made a genuine impression over the Nation. The fact is, this work is already well into the second mile.

We of the House invite them, as companions, to render all assistance possible within their own spheres of influence. They are also pledged to help in putting the scattered local iron ore resources to work. Where the natural development of local industries has been retarded by steel monopoly practices these Senators may well redouble the pressure for remedial action.

We of the House regard this expression of interest as clear recognition that in small business lies the hope of this Nation and that through local independent production of steel lies in a large measure the answer to the threatening problem of post-war unemployment in this land of plenty.

Such grass roots are now taking hold. Over the Nation, local businessmen, chambers of commerce, civic and labor organizations, and the alert editors are beginning to ask: "What about doing something real to employ our natural resources lying dormant beneath our feet?" For now every school child has come to realize that humble iron and steel, the master metals of war and peace, must be available in abundance in the locality where industry is to prosper.

Yes, the Governors of 26 States are actively backing our committee's work. Several have headed special delegations to Washington, while significant groups have petitioned for the adjournment of our committee to their locality to examine into their industrial situations.

THOROUGH WORK BY MEMBERS EXPLAINS ACCOMPLISHMENTS

Members of the House Merchant Marine and Fisheries Committee, you will recall, led the fight to have the whole steel shortage situation thoroughly examined. This finally culminated, but rather late, and not until the great Higgins contract calling for the construction of 200 Liberty ships at New Orleans was canceled on the ground that there was not enough steel.

Our House committee was then created specifically to go into the steel situation, and it has done well under the circumstances.

Since that time I, as chairman, have witnessed real accomplishments. Unpublicized remedial actions have taken place, for this group took its assignment in dead earnest.

We were most fortunate in the types of men chosen, for there was confusion, downright interference, and almost no funds.

Our work was especially benefited by the indefatigable labor of such fine public servants as Congressman RICHARD J. WELCH, of California, to Congressman FRANCIS D. CULKIN, of New York, who has since passed on; to Congressman GORDON CANFIELD of New Jersey, to Congressman HENRY JACKSON of Washington, Congressman WINDER HARRIS of Virginia, and Congressman MEYER of Maryland. Later, as the Seventy-eighth Congress convened, two additions were made to fill vacancies. The very able and helpful Congressman JOSEPH MANSFIELD, of Texas, who is better known as the chairman of the Committee on Rivers and Harbors, and Congressman CECIL R. KING, of California, who has headed a persistent probing into the iron and steel scrap situation facing war production.

Our committee is, of course, continuing its original inquiry into the steel situation. It intends to carry on with probing and prodding until genuine solutions are assured and until ships of steel and armaments pour forth in the volume needed to win the war. Then it intends to relieve the sanitary and other civilian and agriculture impairments forced upon us by this steel shortage crisis.

The defense minded remember Congressman WELCH who on this floor led the early fight in the decade past to restore shipbuilding on the Pacific coast. It was then as clear to this veteran champion of our American resources as it is now to us all, that our No. 1 handicap to effective service to this Nation at war was our steel situation. Yes, the ability of coast shipbuilders is well known. The records are unequaled in history, but little is it realized that every ship is still built under a tremendous handicap.

STEEL FOR HULLS MUST BE SHIPPED ACROSS ENTIRE COUNTRY

Little is it known that almost every pound of the steel entering these ship hulls has to be shipped out there across this wide and expansive Nation. Think of the needless waste of time and delays, the mounting inventory troubles and dispatching problems these shipbuilders must face in their struggle to help win this war.

These huge operations are in constant jeopardy; for that steel is not made from the rich ores that abound throughout our West. Instead that steel is made almost entirely east of the Mississippi. Then it is exposed to many weeks in transit over badly congested rail facilities.

In those early days the clamor for the building of steel plants on the coast fell on deaf ears. Certain shipbuilding interests, of course, frowned on the idea. The steel masters realized too that to make steel on the coast out of local iron ore, would put an end to their peculiar pricing system, formerly referred to as "Pittsburgh Plus."

Well, we lost then but only for a time. Some progress is of record. But the 600,000 ton output anticipated from the Kaiser Steel Plant cannot commence to meet the coast industries' requirements. A vast shortage of vital steel persists and unless more steel plants are built, it is certain to doom forever many a district to the fate of abandonment and endless unemployment.

SPECIFIC ACCOMPLISHMENTS DIRECTLY DUE BOYKIN COMMITTEE LEADERSHIP

Recordings of the open hearings and the full outline of unfinished business of our committee will soon be released. I would, however, at this time invite your attention to two of our many accomplishments. Though unheralded, both significantly reflect a phase of our committee's approach.

The first is the process for making the iron metal from iron ore without the usual necessity of consuming any coking coal. You may know that as long as the steel industry, in making the iron metal out of the native iron ores, sticks to the use of but the one process, which requires huge blast furnaces and coke, our competitive economics require that the facilities and plants used must be near or accessible to the coking coal deposits. As these resources are found to exist in but a few sections of the country, the blast furnace and freight become forces that limit the development of metal industries to these few sections.

The Nation will, however, soon learn that an excellent quality of iron can be made commercially from ores without using any coal or coke—thanks to fertile minds and the will to dare something unconventional. Here is another H. A. Brassert production. After designing the largest steel plant known and building successful iron and steel facilities to reduce the local iron ores to the metal here and in a dozen other countries, this pioneer has now turned his talents to the growing problem of small business facing his own country.

Instead of coke or coal, this process is designed to use hydrogen. And it is to produce not pounds, but tons of iron—at a cost of production and with a purity that makes it easily competitive to pig iron for making the better grades of steels and alloys.

This winter the 35,000-ton iron plant using hydrogen at Warren, Ohio, commences operation. Here the hydrogen is obtained as a byproduct from a local gas source. Despite intense opposition from its inception, our committee has encouraged it and is carefully expediting this development. The reason is evident. There are many areas of the country that have local iron ore deposits. They also are capable of producing hydrogen from such abundant local resources as natural gas, the cheaper grade coals, lignite, peat, or electricity.

The perfection of this modern process and demonstration plant spells real hope for large sections of the country heretofore industrially retarded.

EXPLORATION OF IRON DEPOSITS ESSENTIAL TO SOUND STEEL PROGRAM

Our committee learned that the Senators were being asked to approve the meager Bureau of Mines request for $314,000 for the exploration of raw materials for steel production in only six States. This the BOYKIN

committee considered as woefully inadequate and too sectional in its benefits. So the second accomplishment culminated on this floor when it formulated a $2,000,000 substitute and promptly received an almost unanimous House vote, a genuine vote of confidence.

As a result every State in the Union endowed with substantial ore deposits is to benefit. Once this raw material for steel production is identified, located, measured by core drilling for its tonnage, and analyzed for quality characteristics—then and not until then can the engineers compute accurately the mining costs needed for advising private investors about plant locations in the area and other matters such as metallurgical processes and facilities to be used.

BUREAU OF MINES AND STATE COOPERATION TO EMPHASIZE SMALL-BUSINESS NEEDS

You will recall that our committee at that time made a pledge to the Congress, and it promptly got the support required. It assured the Congress that it would continue its persistent efforts for the next year, and it would serve in a liaison-supervisory capacity, to assist in perfecting a seriously needed program of cooperation between the Bureau of Mines and the different departments in the various States whose congressional districts are interested in expediting these timely explorations.

Let us not lose sight of the small business interests in this vital steel industry. I refer to the so-called nonintegrated companies, the producers of finished steel products who are still dependent upon the big steel companies for their raw materials, such as pig iron. Here they have repeatedly pleaded their causes with confidence. Here they regularly receive encouragement, sincere cooperation, and friendly counsel.

SENATORS ADD REAL STRENGTH

Now that the steel program is on its second mile of an eventful journey, our committee on the House side extends its congratulations to these fearless-minded Senators; for there is great work to be done. The country is becoming conscious of the need for decentralization—by the expansion of iron and steel making facilities at locations in the retarded areas of the Nation.

This profound objective alone is big enough to enroll the support of every Member of the Congress.

Our committee's freedom of action and the absence of red tape explains why the work of our House group has been so widely felt. The trail has already been blazed through, well past the first mile—the toughest part of the journey.

May these efforts on both sides of the Congress result in a greater realization that hand in hand with the right to earn a decent living through work is the recognition that America's genius must be free to produce and that there must be freedom of enterprise for small business.

Newspaper Advertising Bill

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2d

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me to the Alabama Press Association at Birmingham, Ala., August 18, 1943, on Senate bill 723, commonly known as the newspaper advertising bill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Raising enough money to finance the war—hundreds of billions of dollars—is the financial task ahead of us. The two principal sources of revenue are taxes and bond sales. The Treasury Department handles both of them. The rate of taxes for each taxpayer is fixed by law; payment is compulsory. Bond purchases are entirely voluntary.

Great Britain and Canada are spending large sums of money buying newspaper space to use in urging the people to buy Government War bonds. They have had great success and are pleased with the program. Our Treasury Department has declined to use paid advertising to increase bond sales. I introduced a bill in the Senate, and later Hon. CLARENCE CANNON introduced the same bill in the House, requiring the expenditure of not less than $25,000,000 and not more than $30,000,000 each fiscal year during the present war for advertising in newspapers the sale of War bonds, and providing that at least one-half of the total amount made available shall be spent with weekly and semiweekly newspapers. There are in the United States approximately 9,000 weekly and semiweekly newspapers qualified for Government paid advertising, and about 1,800 daily newspapers, not including foreign-language newspapers.

NO THREAT TO FREEDOM OF PRESS

Some of the opponents of the Bankhead-Cannon bill have asserted that its passage will destroy the freedom of the press. It is claimed by some of the big papers—and a few small ones who sometimes accept the thinking of the big ones—that the purchase of space by the Government for advertising the sale of the largest series of Government War bonds in the history of the world constitutes a subsidy which is likely to sap and ultimately destroy the independence of the press. That claim has so little substance and so little justification based upon experience for 150 years that the implication promptly arises that it is being made by special pleaders in the absence of sound arguments with which to oppose the passage of the bond sale advertising bill. As one who has observed for many years the independent and honorable attitude of editors and publishers as a class, I am impressed that the objection to the bill based upon suspicion of convenient consciences or moral flabbiness is totally unworthy of serious consideration. There is nothing in the Bankhead-Cannon bill that threatens in any way the constitutional right of the press to maintain complete liberty and independence.

ADEQUATE SAFEGUARDS INCLUDED

Adequate protection and safeguards against unworthy efforts by the Treasury Department to exert improper influence on newspapers are contained in the bill. I quote the following provisions in the bill:

"SEC. 3. The Secretary of the Treasury shall, in cooperation with recognized existing publishers' associations to be designated by him (including one such association representing only daily newspapers, one representing only weekly newspapers, and one representing only newspaper advertising agencies), prescribe regulations for carrying out the newspaper advertising program herein provided for so as to—

(a) secure the best financial results for the United States consistent with such program;

(b) completely safeguard the freedom of the press;

(c) fairly allocate advertisements to individual newspapers;

(d) prepare material for submission to newspapers for use as advertisements;

(e) avoid interference in any manner with the independence of any newspaper or its responsibility in serving its readers;

(f) keep the war finance campaign in all of its phases as nonpartisan as possible; and

(g) protect editors and publishers in their right to publish criticism of the policies or conduct of the Secretary of the Treasury or of any other public official whenever they determine that such criticism is justified."

The requirement that the Secretary of the Treasury shall set up administrative committees composed of representatives of publishers' associations and newspaper advertising agencies was not included because of lack of confidence by the authors in the integrity of the officials of the Treasury Department. It was included to assure doubting newspapers that the program would be administered justly and also give all newspapers a fair division of the advertisements under regulations adopted and administered by the approval of their own representatives. That requirement was also included in the bill to assure an administration along the lines which are proving entirely satisfactory to the press and the Government of Canada.

SUBSIDY CHARGE ABSURD

Paid newspaper advertising of war bond sales has frequently been denounced by opposing newspapers as a subsidy program. Secretary Morgenthau has called it a subsidy. What is a subsidy? Webster's Elementary School Dictionary defines subsidy as follows: "A government grant to assist a private enterprise; any gift made by way of financial aid." Is it a gift to a newspaper when the Government pays it for the labor and expense incurred in printing an advertisement explaining the need by the United States for large sums of money in conducting the war effort and of the great value in raising much of the needed money by the sale of War bonds? Is payment for such services by a newspaper and the surrender by the newspaper of the necessary space a grant or a gift or a subsidy?

Very recently the Home Owners' Loan Corporation has announced that it will buy space in the newspapers to sell 10,000 homes under its control. I am wondering if the papers which get those advertisements regarded them as subsidies. It seems strange that some people believe that advertisements for the sale of War bonds sponsored and paid for by business corporations do not threaten the independence of the press and do not constitute subsidies, and that advertisements for the sale through a Government agency of Government-owned property do not endanger the liberty of the press and do not constitute subsidies, but that paid advertisements by the Government for the sale of War bonds create a terrible menace to the independence of the press and constitutes subsidies. That position is absurd.

NO LOSS OF INDEPENDENCE

Why do some editors charge that the sale of advertising space to the Government will weaken the convictions of editors and publishers of papers that accept such advertisements in the regular course of business and under a mandate by Congress that such advertisements must be placed in the newspapers? Before Congress passes the bill a majority of each House must decide that such advertisements are in the public interest and will help secure the money necessary to successfully conduct the war. The charge of loss of independence as a result of selling newspaper space under an act of Congress requiring the Government to buy such space is utterly ridiculous.

It is truly unfortunate that in so great a field of useful service as that of the press of this country—made up of thousands of men and women great in character and intellect—an effort should be made by a minority, however powerful that minority be, however

strong it may be in newspaper circulation and in finances, to defeat a proposed legitimate and much-needed advertising program by attempting to generate doubt in the minds of the people and of the Members of Congress about the ability of the newspaper fraternity to stand firm and true to its convictions and to maintain and retain the independence of the press in the event a business plan—similar to the one which has been working successfully for some time in Great Britain and Canada—is put into operation in this country.

The Government has from time to time this year placed advertisements with selected newspapers. The War and Navy Departments have placed a lot of paid advertising. Can anyone claim that such advertising has altered in the slightest degree the attitude of the newspaper carrying it in its relation to public affairs? I call on anyone who fears a debilitating effect on newspapers by so-called subsidizing advertisements to point a finger of scorn at such weak and erring publishers and identify them. Are the sponsored advertisements being used so generously throughout the country in whole-page advertisements by large taxpayers subsidizing and weakening the independence of the newspaper that solicits and gets such profitable advertisements from large corporations who have nothing to sell the public? I have heard of no bad turncoat effect on any newspaper.

PRESENT SYSTEM INADEQUATE

The system of sponsored advertising works well where the public has been convinced of the need for all-out cooperation and where there are corporations and firms who are accustomed to using large-scale advertising. However, the small city dailies and weekly newspapers do not enjoy their proportionate part of such business. The present system operates in its application and effect as a discouraging discrimination against such newspapers. Under the existing method of hit-or-miss sponsored advertising and the absence of an adequate number of such advertisements in small city and rural area newspapers, the need for all-out participation in war financing has not been sold to millions of good citizens. Four families out of ten—40 percent—have not bought a War bond. Millions of people do not read metropolitan newspapers. They read only small city dailies and weeklies. I submit that many sponsored advertisements not prepared or supervised by the Government do not carry an effective sales talk on the duty of everyone to buy War bonds if he possibly can. I do not mean to criticize the plan of sponsored advertisements. It serves a good purpose as far as it goes, and should be continued by all means, whether the Government enters the field of paid advertising or not.

GOVERNMENT ADS SUPPLEMENTAL

Government advertising should be supplemental to sponsored advertising. Government advertising should go into all the newspapers and not be confined to the newspapers that find sponsors for advertising. Government advertisements, prepared by expert advertising agencies and published where the large metropolitan papers do not go, would doubtless bring to the Treasury additional hundreds of millions of dollars by greatly increasing the total bond sales and thereby more widely distribute bonds among the people. Drastic steps should be taken to transfer a large part of the absorption of the public debt from banks to individuals. From March 31, 1941, to June 30, 1943, the increase in the public debt was $87,000,000,000. The net change in holdings (bond purchases) of commercial banks, Federal Reserve banks, mutual savings banks, insurance companies, Federal Government agencies, and trust funds was 51.5 billion dollars. All other investors acquired only 35.5 billion, or about 40 percent of the total. It would be exceedingly healthy and fortunate if these figures could be reversed. The bulk of buying should be switched from cities to the towns and country—from bankers to individuals. The population of small towns exceeds that of large cities. When the farm population is considered, the preponderance against the large cities is great. The bond sales campaigns should be brought to the plain people in small cities and rural areas with the strongest sales arguments, presented by media in which the rank and file of the people have confidence. Let the metropolitan press and the daily newspapers in large cities everywhere continue the good job they did in the last campaign. With Government advertising added to what they can do, and the effective appeals which smaller dailies and weekly papers can present to millions of small town and rural people through Government advertisements and such sponsored advertisements as they can get, and through their own editorial appeals. I believe it is safe to assert that newspapers generally, if aided and encouraged by some remuneration by the Government for purchased space, would render immediately more free service to the Government in promoting the sale of Government securities.

IMPRESSIVE PRECEDENTS

Fortunately, there have been important and impressive precedents in the matter of Government-paid advertising for raising money to conduct war. In England the Government has conducted a paid advertising campaign for the sale of its war securities for more than a year, with highly satisfactory results. The British Government during 1942 spent nearly $10,000,000 for advertising. In Canada advertising expenditures for war purposes in 1942 amounted to approximately $3,000,000. Much of the money spent in both of these countries was devoted to newspaper advertising.

The following statement made by Mr. H. R. Long, manager of the Missouri Press Association, was recently placed in the CONGRESSIONAL RECORD by Senator CLARK of Missouri:

"One of the interesting sidelights on this question (Government-paid newspaper advertising) is that the Federal Gover ment is an old-time buyer of newspaper space and that in all probability the very first advertising campaign of truly national proportions was undertaken by the Treasury Department during the War between the States. At first the war-loan issues of that day found little favor with the public. The bond issue of 1862 was a failure until Jay Cooke, a Philadelphia banker, was called in by Salmon P. Chase, then Secretary of the Treasury, to handle the campaign. Cooke did the job successfully—by the means of advertising.

"In 1864 when Secretary Chase was succeeded by William P. Fessenden, bond sales had fallen off, and the Government again needed money badly. Cooke was called back. This time he selected Peaslee & Co., an advertising agency operated by L. F. Shuttuck, to handle the war-loan advertising. Advertisements were placed in every known newspaper in the Union, regardless of size. Altogether, war-loan advertising appeared in four or five thousand newspapers and was paid for by the Government at the newspapers' regular rates. Fessenden had with difficulty sold $133,000,000 in bonds in 7 months; Cooke and the newspapers in less than 6 months sold $600,000,000 worth.

"If the use of paid Government advertising in 1864 caused the newspapers to sell out to bureaucracy of that day, the records fail to show it. In fact, the robust, outspoken policies so characteristic of the newspapers of the reconstruction period definitely were not in keeping with the behavior to be expected of a kept press."

GOVERNMENT PAYS INDIRECTLY

The Government in an indirect way is paying for a large part of the costs for sponsored war bond sale advertisements, although it does not select the newspapers in which the advertisements appear and does not control the material and arguments that appear in such advertisements. The sponsors deduct the amount paid newspapers as a part of the cost of operating their businesses, thereby securing compensatory reductions in their income taxes. Where a sponsor is in a high tax bracket he gets pay from the Government in an indirect way for a large percentage of the amount paid newspapers on account of sponsored advertising. The amount of taxes lost to the Government as a result of the sponsored advertising plan is not an open public transaction. The amount of taxes saved to the sponsors is not shown by direct records in the Treasury Department. Each deduction as a part of the cost of operating a business is a concealed transaction. The amount paid by sponsors is a matter of agreement with the newspapers carrying the sponsored advertisements.

The Secretary of the Treasury is opposed to the passage of the Bankhead-Cannon bill. He is rejecting the crown (political power), either because he does not want to control the press or because he knows he cannot do so under the provisions of the plain, business-like program provided for in the Bankhead-Cannon bill. In other words, the Secretary has more confidence in the stability of the press than have some members of the press itself.

RIDING FREE HORSE TO DEATH

It appears, however, that the Secretary wants to ride a free horse to death. Appeals to patriotism have secured free and unlimited service for the Government's bond sale campaign by daily and weekly newspapers throughout the country. The Secretary wants to continue that free advertising in spite of adverse financial results that may accrue to countless newspapers lacking the advantage of adequate sponsored advertising. As a result, some papers favored with sponsored advertising are growing stronger and thousands of financially weak newspapers are growing weaker. The Government wants to use their space without compensation. Many of their former advertisers have discontinued newspaper advertising because they have nothing to sell or because advertising is totally unnecessary to find buyers for their reduced stocks. Material and labor costs have increased. Taxes are higher.

The weekly newspapers are the greatest sufferers from war conditions. Many weeklies have found it necessary to fold up. These papers are prized institutions in the towns and rural areas where they circulate. They have given to their Government until it hurts. They have not threatened to strike. They are going through to the end or as long as they can endure. It is not right for the Government to oppress them as is being done by sending them countless pamphlets, mats, suggestions, arguments, and sales material for publication but withholding all compensation for service and space acquired. These newspapers are close to the people and are capable of rendering far more service than the present uncompensated system permits.

Most of the corporations buying newspaper space, like the Ford Motor Co., have nothing to sell at this time. They are spending large sums for advertising, yet they want no orders. They are in position to select the newspapers from whom they buy space and to withhold future advertisements if the editorial attitude of a newspaper on subjects of business practices or of national policies does not suit them. Newspapers know that big

advertisers, as well as contributors to sponsored advertisements, are free to give a newspaper their business or to withhold it and place it with newspapers that agree with them. Under the Bankhead-Cannon bill the Secretary of the Treasury has no discretion about placing or withholding advertisements. He cannot react in placing advertisements to reflect editorial attitudes. He is not left free under the bill to place advertisements to suit his own fancy or objectives. He is required to fairly allocate advertisements to individual newspapers under regulations prescribed in cooperation with representatives of newspaper associations and advertising agencies. With complete freedom of representatives of special interests to give or withhold a staggering volume of advertising business it seems clear that such power is a greater threat of coercion and of loss of independence to the press than would be Government advertising under the protective and safeguarding provisions of the pending bill. If there is any group of thinkers in this country who ought to believe in the application of logic and consistency in the domain of public affairs, it is the newspaper editors. There is no doubt that an overwhelming majority of them favor the passage of a paid newspaper advertising bill, and they are clearly right.

SPONSORED ADS DECREASING

There is a growing reluctance by newspapers to solicit sponsored advertisements. I have information from several newspapers that there is an increasing resistance to cooperation in sponsored advertising. The Government pays for everything it buys and for all services rendered it in all phases of carrying on the war effort, with one exception—it declines to pay for newspaper space used in raising the money to pay for everything else.

ALL-OUT SUPPORT ESSENTIAL

Secretary Morgenthau in a form letter "to all newspapers" said:

"To be successful our effort must reach into every home in the land, because money must come primarily from individual Americans." Also:

"The people of your community look first to their newspapers for leadership when united action is needed and this loan can only succeed through such action." Also:

"We need this all-out support of newspapers to make this drive a success."

FOR BEST INTEREST OF PUBLIC

The passage of the Bankhead-Cannon bill will save the life and independence of many small city daily and weekly newspapers. The operation of a sufficient number of newspapers able to reach the masses of the people is almost as important as is the independence of the press, which has been safeguarded primarily for the welfare of all the people. In conducting the campaign to favorably publicize the staggering requirements of the Treasury of the United States newspapers are rendering tremendously helpful service. The Government, however, should in the public interest cooperate more efficiently and equitably with our "home town" newspapers.

Covenant of the League of Nations

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. HATCH. Mr. President, in connection with the post-war problems and resolutions which are being discussed, it occurred to me it might be a good idea to have printed, for the information of Senators, the Covenant of the League of Nations. The current issue of the United States News, whose editor is David Lawrence, contains the Covenant of the League of Nations, together with editorial comment. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[From the United States News of October 15, 1943]

THE COVENANT OF THE LEAGUE OF NATIONS

The Covenant of the League of Nations still lives. It is built into the existing treaty structure of 44 nations. Let the United States ratify this Covenant now and pray God to give us the will and the courage to make it at last an effective instrument of international cooperation. For by its provisions, special alliances are expressly forbidden and, instead, the member nations are equally obligated to use all their force and resources as against aggressor states—whether members or nonmembers—to enforce and maintain the peace of the world. (David Lawrence.)

The High Contracting Parties, in order to promote international cooperation and to achieve international peace and security by the acceptance of obligations not to resort to war, by the prescription of open, just and honourable relations between nations, by the firm establishment of the understandings of international law as the actual rule of conduct among Governments, and by the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organized peoples with one another, agree to this Covenant of the League of Nations.

ARTICLE 1

The original Members of the League of Nations shall be those of the Signatories which are named in the Annex to this Covenant and also such of those other States named in the Annex as shall accede without reservation to this Covenant. Such accession shall be effected by a Declaration deposited with the Secretariat within two months of the coming into force of the Covenant. Notice thereof shall be sent to all other Members of the League.

Any fully self-governing State, Dominion, or Colony not named in the Annex may become a Member of the League if its admission is agreed to by two-thirds of the Assembly, provided that it shall give effective guarantees of its sincere intention to observe its international obligations, and shall accept such regulations as may be prescribed by the League in regard to its military, naval, and air forces and armaments.

Any Member of the League may, after two years' notice of its intention so to do, withdraw from the League, provided that all its international obligations and all its obligations under this Covenant shall have been fulfilled at the time of its withdrawal.

ARTICLE 2

The action of the League under this Covenant shall be effected through the instrumentality of an Assembly and of a Council, with a permanent Secretariat.

ARTICLE 3

The Assembly shall consist of Representatives of the Members of the League.

The Assembly shall meet at stated intervals and from time to time as occasion may require at the Seat of the League or at such other place as may be decided upon.

The Assembly may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

At meetings of the Assembly each Member of the League shall have one vote, and may not have more than three Representatives.

ARTICLE 4

The Council shall consist of Representatives of the Principal Allied and Associated Powers, together with Representatives of four other Members of the League. These four Members of the League shall be selected by the Assembly from time to time in its discretion. Until the appointment of the Representatives of the four Members of the League first selected by the Assembly, Representatives of Belgium, Brazil, Spain, and Greece shall be members of the Council.

With the approval of the majority of the Assembly, the Council may name additional Members of the League whose Representatives shall always be members of the Council; the Council with like approval may increase the number of Members of the League to be selected by the Assembly for representation on the Council.

The Assembly shall fix by a two-thirds majority the rules dealing with the election of the non-permanent Members of the Council, and particularly such regulations as relate to their term of office and the conditions of re-eligibility.

The Council shall meet from time to time as occasion may require, and at least once a year, at the Seat of the League, or at such other place as may be decided upon.

The Council may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

Any Member of the League not represented on the Council shall be invited to send a Representative to sit as a member at any meeting of the Council during the consideration of matters specially affecting the interests of that Member of the League.

At meetings of the Council, each Member of the League represented on the Council shall have one vote, and may have not more than one Representative.

ARTICLE 5

Except where otherwise expressly provided in this Covenant or by the terms of the present Treaty, decisions at any meeting of the Assembly or of the Council shall require the agreement of all the Members of the League represented at the meeting.

All matters of procedure at meetings of the Assembly or of the Council, including the appointment of Committees to investigate particular matters, shall be regulated by the Assembly or by the Council and may be decided by a majority of the Members of the League represented at the meeting.

The first meeting of the Assembly and the first meeting of the Council shall be summoned by the President of the United States of America.

ARTICLE 6

The permanent Secretariat shall be established at the Seat of the League. The Secretariat shall compromise a Secretary General and such secretaries and staff as may be required.

The first Secretary General shall be the person named in the Annex; thereafter the Secretary General shall be appointed by the Council with the approval of the majority of the Assembly.

The secretaries and staff of the Secretariat shall be appointed by the Secretary General with the approval of the Council.

The Secretary General shall act in that capacity at all meetings of the Assembly and of the Council.

The expenses of the League shall be borne by the Members of the League in the proportion decided by the Assembly.

ARTICLE 7

The Seat of the League is established at Geneva.

The Council may at any time decide that the Seat of the League shall be established elsewhere.

All positions under or in connection with the League, including the Secretariat, shall be open equally to men and women.

Representatives of the Members of the League and officials of the League when engaged on the business of the League shall enjoy diplomatic privileges and immunities.

The buildings and other property occupied by the League or its officials or by Representatives attending its meetings shall be inviolable.

ARTICLE 8

The Members of the League recognize that the maintenance of peace requires the reduction of national armaments to the lowest point consistent with national safety and the enforcement by common action of international obligations.

The Council, taking account of the geographical situation and circumstances of each State, shall formulate plans for such reduction for the consideration and action of the several Governments.

Such plans shall be subject to reconsideration and revision at least every ten years.

After these plans shall have been adopted by the several Governments, the limits of armaments therein fixed shall not be exceeded without the concurrence of the Council.

The Members of the League agree that the manufacture by private enterprise of munitions and implements of war is open to grave objections. The Council shall advise how the evil effects attendant upon such manufacture can be prevented, due regard being had to the necessities of those Members of the League which are not able to manufacture the munitions and implements of war necessary for their safety.

The Members of the League undertake to interchange full and frank information as to the scale of their armaments, their military, naval, and air programs and the condition of such of their industries as are adaptable to warlike purposes.

ARTICLE 9

A permanent Commission shall be constituted to advise the Council on the execution of the provisions of Articles 1 and 8 and on military, naval, and air questions generally.

ARTICLE 10

The Members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all Members of the League. In case of any such aggression or in case of any threat or danger of such aggression the Council shall advise upon the means by which this obligation shall be fulfilled.

ARTICLE 11

Any war or threat of war, whether immediately affecting any of the Members of the League or not, is hereby declared a matter of concern to the whole League, and the League shall take any action that may be deemed wise and effectual to safeguard the peace of nations. In case any such emergency should arise the Secretary General shall on the request of any Member of the League forthwith summon a meeting of the Council.

It is also declared to be the friendly right of each Member of the League to bring to the attention of the Assembly or of the Council any circumstance whatever affecting international relations which threatens to disturb international peace or the good understanding between nations upon which peace depends.

ARTICLE 12

The Members of the League agree that if there should arise between them any dispute likely to lead to a rupture, they will submit the matter either to arbitration or to judicial settlement or to inquiry by the Council, and they agree in no case to resort to war until three months after the award by the arbitrators or the judicial decision or the report by the Council.

In any case under this Article the award of the arbitrators or the judicial decision shall be made within a reasonable time, and the report of the Council shall be made within six months after the submission of the dispute.

ARTICLE 13

The Members of the League agree that, whenever any dispute shall arise between them which they recognize to be suitable for submission to arbitration or judicial settlement, and which cannot be satisfactorily settled by diplomacy, they will submit the whole subject matter to arbitration or judicial settlement.

Disputes as to the interpretation of a treaty, as to any question of international law, as to the existence of any fact which if established would constitute a breach of any international obligation, or as to the extent and nature of the reparation to be made for any such breach, are declared to be among those which are generally suitable for submission to arbitration or judicial settlement.

For the consideration of any such dispute, the court to which the case is referred shall be the Permanent Court of International Justice, established in accordance with Article 14, or any tribunal agreed on by the parties to the dispute or stipulated in any convention existing between them.

The Members of the League agree that they will carry out in full and good faith any award or decision that may be rendered, and that they will not resort to war against a Member of the League which complies therewith. In the event of any failure to carry out such an award or decision, the Council shall propose what steps should be taken to give effect thereto.

ARTICLE 14

The Council shall formulate and submit to the Members of the League for adoption plans for the establishment of a Permanent Court of International Justice. The Court shall be competent to hear and determine any dispute of an international character which the parties thereto submit to it. The Court may also give an advisory opinion upon any dispute or question referred to it by the Council or by the Assembly.

ARTICLE 15

If there should arise between Members of the League any dispute likely to lead to a rupture, which is not submitted to arbitration or judicial settlement in accordance with Article 13, the Members of the League agree that they will submit the matter to the Council. Any party to the dispute may effect such submission by giving notice of the existence of the dispute to the Secretary General, who will make all necessary arrangements for a full investigation and consideration thereof.

For this purpose the parties to the dispute will communicate to the Secretary General, as promptly as possible, statements of their case with all the relevant facts and papers, and the Council may forthwith direct the publication thereof.

The Council shall endeavor to effect a settlement of the dispute, and, if such efforts are successful, a statement shall be made public giving such facts and explanations regarding the dispute and the terms of settlement thereof as the Council may deem appropriate.

If the dispute is not thus settled, the Council either unanimously or by a majority vote shall make and publish a report containing a statement of the facts of the dispute and the recommendations which are deemed just and proper in regard thereto.

Any Member of the League represented on the Council may make public a statement of the facts of the dispute and of its conclusions regarding the same.

If a report by the Council is unanimously agreed to by the members thereof other than the Representatives of one or more of the parties to the dispute, the Members of the League agree that they will not go to war with any party to the dispute which complies with the recommendations of the report.

If the Council fails to reach a report which is unanimously agreed to by the members thereof, other than the Representatives of one or more of the parties to the dispute, the Members of the League reserve to themselves the right to take such action as they shall consider necessary for the maintenance of right and justice.

If the dispute between the parties is claimed by one of them, and is found by the Council, to arise out of a matter which by international law is solely within the domestic jurisdiction of that party, the Council shall so report, and shall make no recommendation as to its settlement.

The Council may in any case under this Article refer the dispute to the Assembly. The dispute shall be so referred at the request of either party to the dispute, provided that such request be made within fourteen days after the submission of the dispute to the Council.

In any case referred to the Assembly, all the provisions of this Article and of Article 12 relating to the action and powers of the Council shall apply to the action and powers of the Assembly, provided that a report made by the Assembly, if concurred in by the Representatives of those Members of the League represented on the Council and of a majority of the other Members of the League, exclusive in each case of the Representatives of the parties to the dispute, shall have the same force as a report by the Council concurred in by all the Members thereof other than the Representatives of one or more of the parties to the dispute.

ARTICLE 16

Should any Member of the League resort to war in disregard to its covenants under Articles 12, 13, or 15, it shall *ipso facto* be deemed to have committed an act of war against all other Members of the League, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking State, and the prevention of all financial, commercial, or personal intercourse between the nationals of the covenant-breaking State and the nationals of any other State, whether a Member of the League or not.

It shall be the duty of the Council in such case to recommend to the several Governments concerned what effective military, naval, air force the Members of the League shall severally contribute to the armed forces to be used to protect the covenants of the League.

The Members of the League agree, further, that they will mutually support one another in the financial and economic measures which are taken under this Article, in order to minimize the loss and inconvenience resulting from the above measures, and that they will mutually support one another in resisting any special measures aimed at one of their number by the covenant-breaking State, and that they will take the necessary steps to afford passage through their territory to the forces of any of the Members of the League which are cooperating to protect the covenants of the League.

Any Member of the League which has violated any covenant of the League may be declared to be no longer a Member of the League by a vote of the Council concurred

in by the Representatives of all the other Members of the League represented thereon.

ARTICLE 17

In the event of a dispute between a Member of the League and a State which is not a Member of the League, or between States not Members of the League, the State or States not Members of the League shall be invited to accept the obligations of membership in the League for the purpose of such dispute, upon such conditions as the Council may deem just. If such invitation is accepted, the provisions of Articles 12 to 16 inclusive shall be applied with such modifications as may be deemed necessary by the Council.

Upon such invitation being given the Council shall immediately institute an inquiry into the circumstances of the dispute and recommend such action as may seem best and most effectual in the circumstances.

If a State so invited shall refuse to accept the obligations of membership in the League for the purposes of such dispute, and shall resort to war against a Member of the League, the provisions of Article 16 shall be applicable as against the State taking such action.

If both parties to the dispute when so invited refuse to accept the obligation of membership in the League for the purpose of such dispute, the Council may take such measures and make such recommendations as will prevent hostilities and will result in the settlement of the dispute.

ARTICLE 18

Every treaty or international engagement entered into hereafter by any Member of the League shall be forthwith registered with the Secretariat and shall as soon as possible be published by it. No such treaty or international engagement shall be binding until so registered.

ARTICLE 19

The Assembly may from time to time advise the reconsideration by Members of the League of treaties which have become inapplicable and the consideration of international conditions whose continuance might endanger the peace of the world.

ARTICLE 20

The Members of the League severally agree that this Covenant is accepted as abrogating all obligations or understandings *inter se* which are inconsistent with the terms thereof, and solemnly undertake that they will not hereafter enter into any engagements inconsistent with the terms thereof.

In case any Member of the League shall, before becoming a Member of the League, have undertaken any obligations inconsistent with the terms of this Covenant, it shall be the duty of such Member to take immediate steps to procure its release from such obligations.

ARTICLE 21

Nothing in this Covenant shall be deemed to affect the validity of international engagements, such as treaties of arbitration or regional understandings like the Monroe Doctrine, for securing the maintenance of peace.

ARTICLE 22

To those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the States which formerly governed them and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, there should be applied the principle that the well-being and development of such peoples form a sacred trust of civilization and that securities for the performance of this trust should be embodied in this Covenant.

The best method of giving practical effect to this principle is that the tutelage of such peoples should be entrusted to advanced nations who by reason of their resources, their experience or their geographical position can best undertake this responsibility, and who are willing to accept it, and that this tutelage should be exercised by them as Mandatories on behalf of the League.

The character of the mandate must differ according to the stage of the development of the people, the geographical situation of the territory, its economic conditions, and other similar circumstances.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized subject to the rendering of administrative advice and assistance by a Mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory.

Other peoples, especially those of Central Africa, are at such a stage that the Mandatory must be responsible for the administration of the territory under conditions which will guarantee freedom of conscience and religion, subject only to the maintenance of public order and morals, the prohibition of abuses such as the slave trade, the arms traffic, and the liquor traffic, and the prevention of the establishment of fortifications or military and naval bases and of military training of the natives for other than police purposes and the defense of territory, and will also secure equal opportunities for the trade and commerce of other Members of the League.

There are territories, such as Southwest Africa and certain of the South Pacific Islands, which, owing to the sparseness of their population, or their small size, or their remoteness from the centers of civilization, or their geographical contiguity to the territory of the Mandatory and other circumstances, can be best administered under the laws of the Mandatory as integral portions of its territory, subject to the safeguards above mentioned in the interests of the indigenous population.

In every case of mandate, the Mandatory shall render to the Council an annual report in reference to the territory committed to its charge.

The degree of authority, control, or administration to be exercised by the Mandatory shall, if not previously agreed upon by the Members of the League, be explicitly defined in each case by the Council.

A permanent Commission shall be constituted to receive and examine the annual reports of the Mandatories and to advise the Council on all matters relating to the observance of the mandates.

ARTICLE 23

Subject to and in accordance with the provisions of international convention existing or hereafter to be agreed upon the Members of the League: (a) will endeavor to secure and maintain fair and humane conditions of labor for men, women, and children, both in their own countries and in all countries to which their commercial and industrial relations extend, and for that purpose will establish and maintain the necessary international organization; (b) undertake to secure just treatment of the native inhabitants of territories under their control; (c) will entrust the League with the general supervision over the execution of agreements with regard to the traffic in women and children, and the traffic in opium and other dangerous drugs; (d) will entrust the League with the general supervision of the trade in arms and ammunition with the countries in which the control of this traffic is necessary in the common interest; (e) will make provision to secure and maintain freedom of communications and of transit and equitable treatment for the commerce of all Members of the League. In this connection, the special necessities of the regions devastated during the war of 1914–1918 shall be borne in mind; (f) will endeavor to take steps in matters of international concern for the prevention and control of disease.

ARTICLE 24

There shall be placed under the direction of the League all international bureaus already established by general treaties if the parties to such treaties consent. All such international bureaus and all commissions for the regulation of matters of international interest hereafter constituted shall be placed under the direction of the League.

In all matters of international interest which are regulated by general conventions but which are not placed under the control of international bureaus or commissions, the Secretariat of the League shall, subject to the consent of the Council and if desired by the parties, collect and distribute all relevant information and shall render any other assistance which may be necessary or desirable.

The Council may include as part of the expenses of the Secretariat the expenses of any bureau or commission which is placed under the dirction of the League.

ARTICLE 25

The Members of the League agree to encourage and promote the establishment and cooperation of duly authorized voluntary national Red Cross organizations having as purposes the improvement of health, the prevention of disease, and the mitigation of suffering throughout the world.

ARTICLE 26

Amendments to this Covenant will take effect when ratified by the Members of the League whose Representatives compose the Council and by a majority of the Members of the League whose Representatives compose the Assembly.

No such amendment shall bind any Member of the League which signifies its dissent therefrom, but in that case it shall cease to be a Member of the League.

(The foregoing is the full text of the Covenant of the League of Nations, with all amendments to date.)

Facts, Figures, and Promises

EXTENSION OF REMARKS

OF

HON. C. DOUGLAS BUCK

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. BUCK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject "Facts, Figures and Promises," delivered by the junior Senator from New Jersey [Mr. HAWKES] at the annual dinner of the Controllers Institute of America, New York City, September 21, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your organization, the Controllers Institute of America, is composed of men whose careers have led them to cultivate a passion for facts and figures. You appreciate the value of factual data. You have learned to dig out the facts and the figures. You know how to evaluate them and how to separate

the truly factual from the fictitious. And you have the ability to utilize this information so that it will present a valid picture upon which to base a plan of action. Conversely, you—above all men—can appreciate the helplessness of any enterprise, be it private or public, which is compelled to make decisions which are not predicated upon factual data, or which are based upon administrative regulations which lack a solid foundation.

Yet this latter condition is the one in which your Congress finds itself today. In order to perform its legislative function the Congress must have ready access to an enormous amount of statistical and factual information which will give its Members an accurate picture of the conditions confronting industry, agriculture, commerce, finance, labor, and foreign trade. But Congress is often handicapped in securing the facts and its Members frequently are forced to rely on information procured from administrative agencies which, either because of incompetence or deliberate intent, is sometimes found to be inadequate, inaccurate, and conflicting. Oftentimes the administrative branch of government refuses to give essential information to congressional committees, however much they may need it in order to arrive at the decisions they are expected to make. And never were the true facts more urgently needed than they are today.

Take post-war planning as an instance. You businessmen must not for one single moment overlook your vital stake in whatever plans are proposed and decided upon for redeveloping our national economy in the post-war period. Government, as well as business, is engaged in post-war planning. Did you know that 30 of the 245 agencies now engaged in post-war planning are Federal bureaus? They are financed through taxation—and much of their work involves duplication, overlapping, and the employment of unnecessary manpower. Some duplication is unavoidable, even necessary, but there is no reliable leadership to coordinate the work of these planning agencies.

Some of the Federal planners are drafting their proposals along the line of a "planned economy" which would revolutionize our economic and social system, in a manner that is alien to our American way of life. Their plans repudiate all our traditional conceptions of public finance, and our American pattern of governmental relationships with industry, business, and agriculture. These planners minimize the dangers of an unbalanced Federal budget and an ever-increasing Federal debt. They call for an expenditure of public funds on a level never before considered or dreamed of.

Not only do these "planners" regard cost as a secondary matter, they propose changes in our political system which they admit—and even boast—will curb our traditional liberties. Their "plans" ignore the fact that individual opportunity, properly established and protected, would make it unnecessary for the Government to do most of these things. They overlook the truth that our people do not wish to be serfs or wards of the state—and that men, standing on their own feet, made America great.

These planners of an alien breed maintain that we in the United States are really fighting two wars. One, they say, is abroad—against the Axis. The other is here, at home—and they call it the people's revolution

I am not crying "wolf!" These are facts, not fancies. The blueprints are already published for all to see. They call for the Federal ownership and control of our public utilities, of our transportation and shipping facilities, of our investments and even of our land. Nor are they blueprints only. Already the Federal Government owns $16,000,000,000 worth of manufacturing plants and equipment, much of it built during this war emergency. These Federal planners of whom I speak intend that the Federal Government shall retain the ownership of these plants after the war, and they plan to use them as an instrument to secure Federal control of our key industries.

And land? Already the Federal Government owns land aggregating almost 300,000,000 acres. That is an area equal to the combined areas of New England, all the Middle Atlantic States, including Maryland and West Virginia, as well as the entire State of Pennsylvania, the Southern States of Virginia, North and South Carolina, Georgia, Florida, and Alabama, plus Ohio, Illinois, and Indiana. Twenty-one States, with enough left over to make 32 Districts of Columbia. One-fifth of the total land area of the United States.

The Federal Government—your Federal Government—has organized a vast and overwhelming bureaucracy. The Farm Security Administration, to cite one example (although it is a comparatively small bureau), has 15,000 employees. It occupies 2,700 separate local offices, for which the Government is paying rent and furnishing personnel—largely for the purpose of controlling the farmer's life, and (some say) to control the farmer's vote.

Think of the difference between our Office of Price Administration and its British counterpart. O. P. A. has 2,700 lawyers—500 of them in Washington and 2,200 distributed throughout the country to regulate and to see that the people are regulated. In Britain, the legal staff for the same operation totals only 10—with accomplishments which apparently please the British people better than O. P. A.'s do here.

Here is another set of facts and figures which should cause every American to "stop, look, and listen." Ohio, which has 25,000 State employees, has 90,000 Federal employees. Within the borders of Pennsylvania there are 44,000 State employees, as compared with 215,000 who are on the Federal pay roll. Wyoming, with only 1,100 State employees, finds 6,200 Federal employees in the State. With all due allowance for the fact that the conduct of the Federal system requires a substantial number of Federal employees in each State, there is an odious comparison between the records of the present and the records of the past.

I could go on ad infinitum citing figures of this sort. But I simply wish to call attention to the fact that the cost to the taxpayer is increased almost directly in proportion to the number of Federal employees we have. All of them have expense accounts—including travel, telephoning, and the like—and the total runs into millions of dollars. The bill for travel and communications for this fiscal year, conservatively estimated, will reach $100,000,000, and this does not include a single penny for the expenditures of the Army and the Navy.

The Joint Economy Committee headed by Senator HARRY F. BYRD has done an outstanding job in the interest of the taxpayer. Senator BYRD'S committee has pointed out practical ways in which Government expenditures may be reduced without the loss of efficiency.

After careful examination of the records made by the administration and Congress during the past 10 years, one can only conclude that they have as their objective the assumption of greater power and control by the Government over individual life. If these policies are continued, they can only lead to the destruction of the system of free enterprise and unhampered private initiative and the substitution of state direction and control of all the lives of our citizens.

That is the goal of the Federal planners. But, gentlemen, it is not the desire of the American people. In my trip across the United States, I found in every section that the people are beginning to recognize the importance of preserving private enterprise in this country. This recognition is not confined to the owners of business; it also comes from the intelligent labor leaders and intelligent workers in every State. They are beginning to realize that if we destroy the American system there is no place left for any of us to go, except to statism, under which we would be a completely regimented people subject to the orders of a single individual or of a small coterie of power-crazy men.

The American people must be told a lot of unpleasant truths in the most pleasant way possible. They must know the truth as to what the last 11 years have done to this Nation and then decide if that is the road they wish to continue traveling.

The people of America want to get back to the rule of laws, instead of the rule of men. They crave to be rid of these ill-informed bureaucrats who tell them what they can eat, what they can wear, and where they can go. Many of the people think they should tell the bureaucrats where to go.

They are tired of seeing Government establish rules for private industry which Government itself does not follow in the conduct of business. Government can cover up its losses. Private industry cannot. Government gets money through the power of taxation. Private industry must get it from the bank or private sources. Government, generally speaking, makes no return on its investment—and few of us, if any, ever know of the failures made by Government in business. Government pays no interest on the funds it invests in business, and through its multifarious departments can bury, unseen and unknown, very costly mistakes. Private enterprise cannot do this. Therefore, the yardsticks produced by Government for the purpose of regulating private industry are unreliable, misleading, and ofttimes destructive of private business.

Some law should be enacted by Congress requiring the Comptroller General to investigate and give a full and accurate accounting to the people on the operations of Government-controlled or Government-owned plants

The American people do not intend to allow anything to divide them. They will be united to complete victory—the kind of victory that will enable the Allies to make a sound and just peace in the hope that it may be a permanent peace. The mothers, fathers, and youths themselves expect us after this victory to do something we have never done before in establishing real and enduring peace. They do not wish to go to war every 25 years What that something is they cannot now say, but they want peace and security.

The American people don't mind hardship. They are willing to sacrifice in every way, to whatever degree is necessary, in order to win the war. But they want the hardship spread honestly and evenly among them. They don't want to cheat at home while the boys are serving honorably abroad. They want to be able to look these boys in the eye when they return and say, "We have preserved American institutions at home so that you may have the benefits of the system you defended on the field of battle."

What are we doing to make that welcome possible? Think, when the wars in Europe and Asia end, our economy will lose the customer who now buys half its output—the Government. Many of the 10,800,000 present members of the armed forces, plus nearly all of the millions in war work, will be returning to peacetime pursuits, eager for jobs.

They will insist on getting them—useful jobs at decent pay and with ample opportunity for advancement. Never again will doles and subsistence levels be tolerated. Jobs for these returning soldiers and sailors and war workers must be provided through the resources and ingenuity of business—or the Government will be forced to take over in a major way. And that is what the Federal planners are counting on.

They know that if we have too much unemployment for too long a time after peace comes, our free society can easily be supplanted by a dictatorial regime. It is a lack of jobs on a grand scale that gives regimentors their opportunity. Unemployment in Italy gave Mussolini his big chance. Hitler's gangsters were recruited from among the unemployed. It isn't plotters on the left who constitute the real hazard to our free society, but rather the pressures stemming out of widespread, unwanted idleness. If collectivism comes to American, it will be by default on the part of the good citizens rather than by design on the part of the revolutionaries.

How can we avoid that disaster? Well, we must do a number of things. We must reestablish the independence of the three great branches of government. We must get rid of excess bureaucracy and man-made directives. We must see that the States are protected in the rights which belong to them and which, under the Constitution, were never ceded to the Federal Government. And, unless we wish State socialism—the kind of government which controls the lives of the individuals and tries to divide property—we must get rid of subsidies, even those subsidies which help our own line of business.

Furthermore, we must see that intelligent men administer the necessary agencies of Government—men who recognize that cost of production must bear a fair relationship to any ceiling price. High cost of production and low ceiling prices which permit no legitimate and fair profit, constitute the pincer-jaws which can crush free enterprise to death.

We must also protect the right and duty of American citizens to criticize honestly and openly any regulations or controls of the individual life issued by a bureaucratic administration. We are asked in the name of the war effort not to criticize those in authority for bungling the job which involves not only the lives and health of our civilian population but also the lives of our fighting forces. But when our right to criticize ceases, then the lifeblood of a free people will cease to flow.

Of course, citizens in wartime recognize that the temporary surrender of certain rights and the acceptance of temporary regulation and restriction are necessary to victory. But they still must criticize, to the end that such regulations and restrictions will not interfere with the successful conduct of the war.

It is especially important that the businessman emerge from his shell of timidity and feel free to criticize and to present to his Congressman his ideas, his suggestions, and whatever facts he has which may help his Representatives in Washington to solve the momentous problems which confront the Nation. Despite a 10-year campaign of vilification of the American businessman conducted by the administration and its allies—and financed largely with the taxpayers' money—the majority of the Members of Congress still have a wholesome respect for the opinions, judgments, and facts presented to them by businessmen. This has become increasingly true during the past 2 years, as the result of the remarkable job done by American industry in the war effort. That is why businessmen should get together as much as they can, among themselves and with other groups, to develop recommendations on taxation, Government spending, labor legislation, post-war planning, and other related problems.

In advancing their suggestions on these matters, however, businessmen should be sure that they do not repeat the mistakes which they made in years gone by. They should keep first in mind the common good. And whatever they do must be done within the bounds of sound economics. After you decide your course, you must fight courageously for it, but never approve what seems popular when in your heart and soul you believe in another thing that is right—but unpopular at the moment.

Business must fight for the foundation of all freedom—the freedom of a man or woman to work when or where he or she chooses, union member or no union member. This is the basic freedom—individual initiative, and it is the foundation upon which depends individual enterprise, individual accomplishment, individual security, and the solvency of the United States Government. The main spring, which is a fair reward for work and accomplishment, and the development of genius, produces the only fruit from which taxation can be collected.

Labor is entitled to the right to organize, the right of collective bargaining, the right to strike lawfully in peacetime, and to legislation which is necessary to prevent unjust exploitation. Laws governing labor and capital must be just if they are to be effective. They must contain equity for all groups, and should never unfairly invade the constitutional guaranteed rights of personal liberty, free enterprise, private initiative, or the realm of lawful property ownership. No one with ill will toward labor or capital will accomplish anything worth while as a representative of the people.

America is labor and capital. Under the American system of freemen, every workingman should have the opportunity to fairly earn and save, so that he may become a property holder and owner of business, and a part of management as millions of our individual citizens have done under our American system. Examples without number could be cited. That is America, and anything which interferes with the operation of this system will help to destroy free enterprise. The watchword is "Justice to all and special privilege to none." If labor and capital, through failure to understand each other and to voluntarily cooperate, destroy the system of free enterprise and initiative, then each should now recognize that both must become the slaves of the state. We must not break the mainspring of American life—honest profit for hard work, for accomplishment, and for the use of genius in experimentation, research, and the development of the things required for the sustenance, recreation, and happiness of the human family.

American businessmen must do more than this. You must take part in the American system of government by acting now to reverse the trend in governmental affairs. That trend today, as outlined by the Federal administration—and up until now approved by the Congress—will lead ultimately to the destruction of States' rights, the socialization of the school system, of medicine, of the legal profession, and of business and industry. This is not a job for once a year or every 4 years. It is a job every year—365 days a year—and it requires the same kind of efficient organization which you build for the conduct of your own business. Recognize your duty now to see that the men who take high office in Washington and in your State capitals, in the executive branch or as legislators, be they Republicans or Democrats, believe in the things you are trying to save. You can't expect to save the American system of freemen unless your representatives in the Federal, State, and local governments sincerely believe and will follow through in saving the things you and I wish saved.

And, while we are on the subject of selecting the right kind of representatives, it is my firm conviction that every nation should scrupulously avoid doing anything that can in any way leave the impression with the people of one country that those in another country are interfering with the election processes of that particular country. We must not try to influence the vote or the will of the people in any other nation, except by our example at home. No other country must try to influence the will of our people or the vote of our people, except through their example at home. This is vital if we are to remain friends and cooperate on a great scale for the development and perpetuation of peace.

Always we come back to facts and figures, and sometimes we stack them up against the promises which distinguish the New Deal from the American Deal, where the cards are really on the table. Facts are usually strangers to the extreme internationalists in our country, but they are willing to be long on promises. They place the ideal ahead of the practical and would substantially sacrifice the national identity, character, and independence of the United States Government in exchange for a superstate or United Nations of the World. They do not explain how that superstate would avoid intrigue and coalition of groups within itself, if and when certain nations had to be denied something which their own people or leaders demanded. They do not tell us how they would overcome the innate selfishness of human beings, or how they plan to avoid the problems arising from international competition. Their desires and objectives are commendable, but their knowledge is far from convincing.

Midway between these internationalists and the relatively few pure, unadulterated isolationists to be found in all political parties, are those millions of Americans who believe in maintaining our independence, but who also feel that we can afford to enter into a definite agreement with Allied Nations for the purpose of enforcing the peace. This middle group, which contains the great body of our citizens, would recognize only those nations which acknowledge the sanctity of contracts and the obligation to fulfill them even when conditions become difficult. These Americans believe in fair-trade treaties, and wish to exchange the wares of one nation for those of another on a basis which does not needlessly disturb the markets for our own products. This basis of exchange, they hold, must consider cost of production and the established living standards of the people in the various countries involved. And they know that we must maintain peace and economic tranquility within our own borders if we would be strong enough to render real leadership service to the world.

This midway group believes the United States is justified in maintaining an Army and Navy of sufficient size and strength to help keep the peace, by force if necessary. It feels that this is like paying a small premium on an insurance policy of peace and in the light of the human lives lost and the hundreds of billions of dollars being spent for this war, that such a cost is a justified taxation upon the people.

I believe the great body of our American citizens today falls within this group three. They wish to know the facts before they take action, but they wish definitely to take action in the cause of building and maintaining a just peace for the benefit of mankind. I find myself pretty strongly linked to the reasoning and objectives of this group.

Quoting Shakespeare—

"There is a tide in the affairs of men
Which, taken at the flood, leads on to fortune;
Omitted all the voyage of their life
Is bound in shallows and in miseries;
And we must take the current when it serves,
Or lose our ventures."

In the last analysis, the war will be won and the postwar victory achieved by standing on sound facts, figures and promises. We cannot win either battle by waving a magic wand or by idealistic hoping. This is a practical world, and it behooves you gentlemen and all Americans to recognize that the solution of our problem depends entirely on true facts and figures, and that we must not make promises which we cannot keep.

Promises are made by words. They must be fulfilled by acts Let not our words outdistance our acts. The easiest way to lose our friends and to make new enemies is to make promises which we cannot keep or which—worse still—we do not intend to keep.

We must keep faith with ourselves, otherwise we shall fail to keep faith with other nations of the world.

Admission to the United States of Racial and Religious Refugees

EXTENSION OF REMARKS

OF

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made jointly on September 9, 1943, by the National Democratic Club and the National Republican Club of New York City, relative to admission to the United States of aliens who are racial and religious refugees.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

There is overwhelming proof that the Nazis, carrying out Hitler's program as contained in Mein Kampf and as reiterated many times both before Germany entered the war and since, are systematically murdering the Jews in Europe within their control with the intent to bring about the complete annihilation of these Jews. This slaughter, which includes indiscriminately men, women, and children, is continued daily and the best available figures indicate that practically one-half of the Jews within the control of the Nazis have thus been wantonly killed. There is no basis for this slaughter except antipathy, and that antipathy, however expressed or camouflaged, is based on the fact that the Jews have and practice an ancient religion, peculiarly their own, which religion is offensive to Nazi leaders, once nominal Christians, but now open pagans. The right of the Jews to practice their own religion is recognized by all civilized nations. It is expressly recognized in the United States by the first phrase of the first amendment of the Constitution, reading as follows:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

Recently this has been reiterated in substance by the President of the United States in conjunction with leaders of other nations in what is known as the Atlantic Charter. Efforts are being made in various parts of Nazi-occupied territory, and even Germany itself, to end this slaughter. Naturally where pleas and appeals are made to people not completely lost to all normal dictates of humanity, even though affiliated with Nazi policies, efforts are made to explain, evade, and minimize the outstanding fact that these mass massacres are the most shocking of all brutalities which have occurred in modern times.

One thing often reiterated is that the United States, by a simple resolution of its Congress and without permanent change in its immigration policy could suspend immigration limitations in behalf of all aliens necessarily fleeing religious persecution in order to save their lives, such suspension to extend for only a few months after the conclusion of hostilities. Legislation of this sort should be passed by the Congress of the United States, and quickly. It is believed by well-informed people that unless something is done within the next 6 or 8 months, which months will embrace winter, none of the Jews native to Poland or Germany and still there or who have been removed to either Germany or Poland from Axis-held territory will be alive. The inhuman barbarities to which they have been subjected have so impaired their strength that those still living—scantily provided with shelter, clothing, and food, as they have been for months and years and will continue to be—cannot, even if they are not murdered, survive another winter. Those who die of starvation or exposure are just as much murdered as those who are shot down as so many are being daily

It is true that all of these Jews are outside the scope of direct assistance from any American agency. It is also true that responsibility lies primarily on the Nazis and their satellite governments. We are fighting a war for freedom and liberty, and one of our enunciated principles is freedom of religious worship. If people anywhere are being killed because of the exercise of their religious privileges, we can at least take action such that, during the progress of hostilities, any such people who escape with their lives from such mass murder can find an asylum in the United States. In the beginning our country was founded very largely by religious refugees and one of our proudest traditions of the past is the extent to which we have been a refuge for the persecuted and the oppressed. It is no answer to say that this proposed action relates to one class only; the complete rejoinder is that that is the only class which is being exterminated and that extermination for religious reasons is in direct defiance of American principles.

There is some talk of the financial burdens involved. The amount involved is so small that this is unworthy of discussion. Jews have been residents of the United States nearly 300 years and we are familiar with their capacity for self-support. Like every other class among us, certain of them are left destitute in infancy by the death of parents or become unable to support themselves by old age or (but this is very rare among the Jews) become incapacitated through bad habits. But all over the United States the outstanding fact is that Jews rarely become public charges for the reasons given or any others. Those becoming incapacitated are almost invariably supported by relatives or friends or in the large and adequate institutions erected and maintained for their care by their Jewish coreligionists.

We therefore call upon the Congress of the United States to pass without delay the attached resolution to express not in words alone but in action the unquestioned fact that these mass murders shock humanity, and that, so far as the United States is concerned, the victims, if they can escape from the countries where they are being murdered, can find an asylum in the United States.

Without going into details, the doing of which might be unwise and harmful, we are assured by those in touch with European conditions that the quick passage of such legislation would save thousands of lives.

* * * * *

We specifically and urgently request the introduction of legislation of the character which we have indicated and also specifically request immediate hearings before the appropriate committees, at which hearings we respectfully request to be heard.

WILLIAM F. FULLEN,
For National Democratic Club.
THOMAS J. CURRAN,
For National Republican Club.

Votes in the Services

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Votes in the Services," from the Chicago Daily News of Monday, October, 11, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VOTES IN THE SERVICES

Congress faces a test of its ability to do its work in the matter of soldiers voting in 1944. The hopeless botch made of the last tax bill and the crudely drawn Smith-Connally anti-strike bill are conspicuous examples of legislative jerry work, but there has been a whole lot of the same that has not had the public scrutiny deserved.

This war is being fought partly to preserve the principles of representative government, and so Congress is charged with the duty of showing that in times of stress and strain, American parliamentary institutions will work, and work right. To the extent that this is also a war for democracy, it is urgent that American democracy be not discredited by the disfranchisement of 11,000,000 of its defenders in the armies at home and abroad and on ships at sea.

But soldier-voting is a political process, and so the enactment of a law to provide for elections in the armed forces is a job surrounded and pervaded by the short-sighted selfishness of practical politics.

Congress must cast aside any considerations of partisan, class, sectional or group advantage in the enactment of a law to enable the soldiers to vote. The present makeshift measures must be abandoned outright. The clumsy State provisions for absentee voting also will have to be discarded.

The law must not attempt to do too much. The citizen at home rarely knows who he is voting for when he marks a blanket ballot for a long list of candidates for minor offices, so it is even more absurd to try to get the vote of Bill Jones, of the first tank brigade of the umpty-fifth armored division, now in

Africa and maybe in Norway by November 1944, on school commissions for the second high-school district of Silver Bow County, Mont.

To get a workable law we believe Congress will have to confine soldier voting to Federal offices—Presidential electors represented by the names of candidates for President, United States Senators, and possibly Congressmen. Complications and trouble are sure to result from attempts to include State elections.

The principle of voting by mail will have to be adopted without equivocation or attempts to hedge it about with cumbersome safeguards. The military elections, of course, cannot be held on a single day, and the votes should be taken as far in advance of the November election at home as may be feasible—say not later than September 15, 1944. We can ill afford the suspense and confusion attending a Presidential election, the outcome of which might be kept in doubt up to Christmas by delays in receiving and counting soldier votes.

The secrecy of the ballot simply cannot be maintained in its entirety in receiving, recording, and transmitting the votes of soldiers and sailors. Secrecy has become such a political fetish that some people doubtless believe it is a constitutional "must." But early American elections were largely viva voce, and this custom survived in Kentucky up to 55 years ago. Partially open voting will have to be revived, if the soldiers are not to be cheated of their vote. To assume that this would lead to coercion by military authorities is to assume a political zeal and bias by the officers that simply do not exist.

We are quite aware that in stating the conditions precedent to genuine soldier voting, we are laying ourselves open to charges of radicalism. That cannot be helped. Soldier voting, under our present military and naval forms of organization, in which territorial units have been eliminated almost 100 percent, requires radical measures simply because our existing election machinery and laws are based upon territoriality.

But there is nothing sacred about the territorial basis of elections. If the federal Commonwealth of Australia can devise means by which its soldiers vote all around the world, we can do it, too. And we may gain some valuable experience that can be applied to the reform and modernization of our peacetime election laws. There has been a movement for voting by mail for many years.

The Judge Is Still Tops

EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. ANDREWS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and timely editorial entitled, "The Judge Is Still Tops," published in Collier's, issue of October 16, 1943, and having reference to the Secretary of State, Hon. Cordell Hull.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE JUDGE IS STILL TOPS

A lot of people, ourselves included, were sorry to see the able and experienced Sumner Welles quit the State Department. We cannot see, however, that Welles' resignation justified the attacks it brought on Cordell Hull, long-time Secretary of State. To us, "Judge" Hull is tops, as for many years.

Mr. Hull's main trouble (if you can call it that) is that when he is appointed to run a certain job, he likes to run it—insists on running it, in fact. He does not like to be bypassed, ignored, or double-talked out of any of the authority, or any of the responsibility, that goes with the job.

Given the immensely important job of Secretary of State, Mr. Hull proposed from the beginning to be Secretary of State, in fact as well as in name.

He has been a strong man in his own right. Americans have respected Cordell Hull for his honesty, his intelligence, his vigor, and his liberal opinions. Secretary Hull bridges the idealism of Woodrow Wilson with the progressive policies of President Roosevelt. He pushed the idea of reciprocal trade treaties relentlessly until finally public opinion of both major parties came to his support.

In his recent statement of foreign policy, Secretary Hull made audacious proposals, yet he expressed plainly the conviction that no foreign policy could be safely pushed beyond the point at which Congress and enduring public opinion will approve. The Secretary of State has never lost his contact with the voters. That explains his strength with the people.

We think that the Judge, as his fellow Tennesseans know him, came through his trials with dignity and integrity. We also think that his statement of foreign policy reflects, as accurately as any, the hopes and ideas of the American people.

James A. Farley

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article which was published in the September issue of the Spectator—Life Insurance in Action:

Jim Farley's life is that of a boy and of a man born with a cheerful, fun-loving disposition, who derives his greater pleasure from intimate association with his fellows. He coupled this appreciative interest in the affairs of his friends with an ability to make their circle an ever-widening one to be bound, ultimately, in a countless group reaching the four corners of the earth. A natural charm with sincere modesty enables him to win and keep the affection of men from every walk of life. His biography, beginning at his birth at Grassy Point on May 30, 1888, evidences unending development along broad lines.

His public life began as a servant of his town and step by step brought him through county, State, and national offices. Socially, his gregarious nature makes him a typical American joiner and he is now a member of scores of organizations. His business acumen has led him into the directorship of many important business organizations. His grasp of public, social, and economic affairs more closely approximates that of the average American than that of any other man in public life. His honesty of approach to the solution of the problems they present has been recognized widely and nine universities have conferred upon him honorary degrees in token of their esteem.

In public life, of all men, James A. Farley, from a small town in Rockland County, N. Y., may be described as a practical idealist. There are many idealists in politics, who grandly plan and many practical politicians who ignore social inspiration, but no other man has succeeded as has Jim Farley in making dreams come true, mostly for others.

His simple, direct appraisal of life would mark him unquestionably as one who would recognize that a prime duty to his family was to guard the future as far as humanly possible against sadness and want. There is no surprise then that he should state that he "would always secure for them as much life insurance as my financial position would permit."

James A. Farley, a biographer might write, in his youth determined upon a code of personal ethics to govern his relations with his fellow man. To this code he rigidly adhered, the while he himself climbed the long hard trail which led from small town obscurity to the light that beats on a national character. Years of success, years of intellectual growth, years of an ever-broadening vista, have not altered by a hair's breadth his attitude toward the men and women who once gave him their confidence and their friendship. His plan of life permits of no compromise in his dealings because of wealth or influence.

He has not changed his smile to please the classes. He has not slackened the vigor of his handshake with the masses. Jim Farley has maintained his high idealism throughout his entire life and although he does not now hold public office, he is available still for counsel and service in behalf of an almost endless chain of charitable, philanthropic and patriotic causes. His genius in organization and his unwavering willingness to contribute his best for his fellow man make his leadership in constant demand.

Hon. Anthony J. Dimond, Delegate from Alaska

REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. MAGNUSON. Mr. Speaker, the highest elective honor Alaska can bestow is the office of Delegate to Congress. I need not stand here today and extol the virtues of our beloved and able colleague, the Delegate from Alaska, Hon. ANTHONY J. DIMOND, but I ask unanimous consent to extend my remarks and include therein a splendid article from the publication Alaska Life about our beloved friend, TONY DIMOND, in which he has been signally honored.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

The article referred to follows:

[From Alaska Life of September 1943]

ANTHONY J. DIMOND, OF ALASKA

(By Richard L. Neuberger)

The highest elective honor Alaskans can bestow is the post of Delegate in Congress. America's largest territorial possession does not vote on President of the United States. Its Governor is appointed. It has no Sena-

tors. But it does have the privilege of sending to Washington one Member of the House of Representatives—a Member without a vote, it is true, but a Member with a voice on the floor and with a place on committees, where most legislation is actually decided.

For more than a decade the people of Alaska have given this solitary elective accolade to a tall, gaunt 61-year-old resident of Valdez, named ANTHONY JOSEPH DIMOND.

TONY DIMOND was born sixty-one years ago in Palatine Bridge on the Mohawk River in upper New York State and did not migrate to Alaska until he was old enough to vote. He attended public grade schools in Palatine Bridge and then went to St. Mary's Catholic Institute at nearby Amsterdam. He also taught school for several years. Around the turn of the century he began to read about the great gold strikes in the Klondike.

For a year or so, DIMOND resisted what dime novels and the first flickering movies were calling "the lure of the Yukon." But the more he heard of Alaska and the more lithographs of Alaskan scenes he saw, the stronger the lure became. In 1901, he crossed the country in a day coach and waited on the Seattle docks until he could get space on a ship headed north through the Inside Passage. He went down the gangplank at Valdez, 1,600 miles from Puget Sound, and found thousands of miners and prospectors preparing to cross the huge, coagulated mass of the Valdez Glacier on their way to the riches of the Yukon.

"I felt as alone as the Ancient Mariner," states DIMOND now. "I didn't know anyone in all that milling crowd. I guess I just couldn't bring myself to venture into the wilderness in that state of mind. I stayed in Valdez. Not many of my fellow cheechakos had formal educations, and jobs were easy to get."

Gold was discovered at Fairbanks, north of Valdez, in 1904. When DIMOND heard about this latest strike he strode into the wilderness. Gold so near was an irresistible inducement. He strapped a pack on his angular frame and hiked into the solitudes. For eight years he roamed the Alaskan wilderness looking for dust and nuggets to put in his chamois-skin poke. He soon learned that the wilderness provided lots of adventure and not much livelihood. For every prospector who struck it rich, a hundred failed completely. TONY sent down to the States for lawbooks, which he read in front of the campfire at night. Alaska is still full of pioneers to whom he gave free legal advice on the trail.

In 1913, DIMOND began to practice law. He put his pick and shovel and sifting pan in the woodshed and never used them again. As a loyal Democrat he qualified for the job of United States attorney at Valdez during the Wilson administration. In 1920 he was elected mayor of Valdez, and 2 years later went to the Territorial Senate. He held both posts until he was sent to Washington in the election of 1932. Valdez is still his home.

In a way, studying law was a necessity as well as a choice. While riding through the underbrush on a prospecting trip in the rugged Mount Wrangell country, DIMOND slumped from the saddle with a bullet through his left leg. The trigger on the revolver in his holster had been tripped by a stray spruce branch. It took him 4 months to recover from the long, vertical wound, and he realized that he had to undertake something less strenuous than prospecting. This old, accidental injury has ailed Delegate DIMOND for 30 years. It has required surgery a dozen times and, although he is vigorous and active, he still walks with a stiff limp.

TONY DIMOND is the Territory's most famous public figure. His loping stride with its slight limp is known in every hamlet and backwoods town. Few Alaskans have not at some time received a letter from him. His weekly reports appear in nearly all Alaskan newspapers. He is Alaska's voice and spokesman in the National Capital.

If the mail of Alaskans is indiscriminately censored, it is TONY DIMOND who rises on the floor of the House and protests. If Alaska fails to receive proper recognition in the appointment of Federal administrators, TONY DIMOND registers the Territory's complaint. If commercial interests are marauding the natural resources of the Territory, TONY DIMOND demands that exploitation give way to conservation.

"TONY DIMOND is a one-man congressional delegation," once observed former Senator Lewis Schwellenbach of Washington, now a Federal judge. "His voice is literally as the voice of 10."

From the standpoint of volume, TONY DIMOND's voice is not loud. In fact, it is low and calm. It is part of a shy and modest personality. Although he represents the most robust and vigorous sovereignty under the American flag, TONY DIMOND is mild mannered and quiet. His protests and complaints in the Halls of Congress derive their force from earnestness and sincerity rather than noise and bombast.

In these stern days, when Alaska is the only part of the Western Hemisphere where actual engagements with the enemy have occurred, TONY DIMOND is chiefly known as the man who long ago forewarned the Nation of the events now taking place. Alaskans remember that 6 years ago, a tall lean man with horn-rimmed glasses stood before a committee of his fellow members of Congress in far-off Washington, D. C., claiming that Japanese dories, ostensibly fishing for salmon off Alaska's rocky shores, were in reality manned by disguised officers of the imperial navy. These "fishermen," he said, might be wearing greasy dungarees and tattered denims but in their wardrobe lockers at Yokohama undoubtedly hung swords, epaulets, and caps with braided visors. And he insisted that the prize which the fishermen sought was not the flaky flesh of sockeye or pinks but information of the depth, defenses, and landmarks of Alaskan harbors.

"The Japanese," the tall man said, "know more about the vital Aleutian coast line than we do."

From Tokyo came an immediate and outraged protest. Such accusations were "utterly absurd," said the adjutant to Admiral Osumi, the minister of Japan's navy. Surely Americans would not be so gullible as to believe that a friendly power was taking soundings in Alaskan waters. "The statements," declared the incensed adjutant with finality, "are unworthy of denial."

An official of the Japanese Foreign Office said he was sure Americans knew that his country was not conducting espionage in the Aleutian Islands. "It is ridiculous that we would use fishing boats for that purpose," was his concluding non sequitur.

For a decade TONY DIMOND, as he is known to the inhabitants of his vast 586,400-square-mile constituency, has been a sort of congressional Nostradamus, prophesying practically everything that has occurred in the North Pacific since December 7, 1941.

From the time he set down his old black valise in the Washington station, DIMOND began demanding the fortification of Alaska. "Do you know," he asked an Idaho Congressman in 1935, "that there isn't a single cannon in the Aleutian Islands, which extend to within 716 miles of Japan?"

He buttonholed Senator HOMER BONE, of Washington, the State nearest to Alaska, and warned that what Alaska needed was "planes, planes, and more planes." He told the House at large a hundred times that Uncle Sam had better take the "welcome" sign off his Aleutian doorstep. And he spoke so frequently for a wilderness highway linking the United States with Alaska by land that some of his colleagues decided he was hipped on the subject and stole off to the cloakrooms when he took the floor.

The bulk of DIMOND's pleas were rejected by his fellow Members of Congress. The Old Guard in the Army and Navy turned him down, too. The State Department disregarded his warnings about the personnel of Japan's "fishing" fleet. But DIMOND campaigned until he convinced his colleagues. Prospecting for gold on Alaska's stern uplands makes a man tenacious. He estimates now that in speeches, letters, and reports urging an impregnable defense for Alaska he about matched the wordage of Gone With the Wind.

This perseverance produced results. DIMOND began to make converts. Two of them were highly important: Gen. George C. Marshall, Chief of Staff, and Lt. Gen. Henry H. Arnold, head of the Army Air Forces. In 1939, with war rocking Europe for a second time in a generation, they looked at War Department files and saw that the only military establishment in Alaska was a few companies of infantry at Chilkoot Barracks.

"And the guns there," DIMOND explained, "point toward our Canadian friends in the Yukon Territory, not toward our potential enemies in Japan. The Chilkoot post dates from the days of the Klondike gold rush. Alaska needs modern bases that fit the day of the long-range bombing plane."

Yet from the 1940 Army appropriation bill a House committee cut out $68,000,000, which included funds for the strategic Alaskan base at Anchorage. Dimond, Marshall, and Arnold argued with the committee for weeks, with no success.

"Then," says DIMOND, recalling the struggle, "we received help from a fellow named Adolf Hitler. He invaded Denmark and Norway."

The Congressmen got out their maps and globes and found that the Scandinavian Peninsula was just over the top of the earth from Alaska. Bombers could fly that distance. In fact, Russian planes had done it. The committee restored the Anchorage funds and added a lot more money for other Alaskan defenses besides. DIMOND believes that was the turning point. The arming of America's far northern outpost was really under way.

In the past year and a half Alaska's Delegate in Congress, who has a voice on the floor and a suite in the House Office Building, but no vote during roll calls, has seen the events he forecast coming to pass. Early in January he asked his colleagues: "If on December 7 we had on station in the Aleutian Islands at Attu 1,000 planes, including a suitable number of bombing planes, is it not pretty plain that there never would have been the assault of that day on Pearl Harbor?" Japan answered his question a few months later by directing at Attu the first invasion of North American soil in more than a century.

For years DIMOND sought to have Attu fortified. In Alaska, people now say that TONY DIMOND has been as right as Billy Mitchell, and in Alaska, that is considered right indeed. It was Mitchell who warned, "Whoever holds Alaska will hold the world, and I think it is the most important strategic place in the world. An air offensive against Japan from Alaska could be decisive."

TONY DIMOND has been so right that he is the uncontested overlord of Alaskan politics. He first was elected Delegate in 1932, ending a Republican regime. The Republicans have not been in the running for Delegate since. The territorial legislature, with its 16-member house and small, clubby 8-man senate, is overwhelmingly Democratic.

In fact, in the past two elections for Delegate, the Republicans put forth no candidate

of their own but supported DIMOND. He has become a symbol of the defenses, armaments, and development on which Alaska must depend for survival.

Seven years ago TONY DIMOND first advocated construction of an international highway which would link Alaska with the interior of the continent. "Alaska to all intents and purposes is an island," he pointed out. "It is as cut off from the industrial and manufacturing centers of the United States as an island would be. It can be reached only by planes or ship. Land transportation to Alaska is essential."

In countless instances DIMOND has been ahead of his time. He was among the first to demand development of aviation bases in Alaska. He read the early prophesies of Gen. "Billy" Mitchell and gave them voice in Congress. He lent constant backing to Gen. H. H. Arnold, another pioneer advocate of military air bases in the Far North. When Arnold, then a lieutenant colonel, led an Army flight to Fairbanks from Edmonton in 1934, and enthusiastically reported his findings and impressions in the National Geographic Magazine, DIMOND gave the report distribution and support in the House of Representatives.

Statehood for Alaska is TONY DIMOND'S greatest ambition. He wants the far-flung domain which he represents in Congress to be the 49th star in the American flag. As the first advance toward such sovereignty, he is sponsoring legislation now providing for the election of Alaska's Governor. At present the gubernatorial position is filled by appointment.

In Ottawa recently Tom O'Neill, a member of the Canadian Parliament from British Columbia's Kamloops Riding, said to me, "You know, lieutenant, the boundary line between Alaska and British Columbia isn't rigid enough to prevent us from often thinking of TONY DIMOND as practically a representative from British Columbia as well as his own constituency. In fact, we all remember the years when Tony was crusading for adequate defense of our whole north Pacific seacoast."

In Washington the DIMONDS do not take much part in capital social life. There are three Dimond children, two girls, and a boy who is in the Army. Mrs. Dimond is a former Valdez girl whom Tony married in 1916. Both she and her husband would rather eat moose meat and baked potatoes in the Fairweather Range than hors d'oeuvres at an exclusive Washington embassy party.

The fierce pressure of Washington in wartime has prevented TONY DIMOND from going home to Alaska for several years. But although out of sight, Alaska has never been out of his mind.

The Effect of Agricultural Machinery Shortage on Production

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech on the subject The Effect of the Agricultural Machinery Shortage on Production, by C. C. Cogswell, master of the Kansas State Grange. This speech was delivered by Mr. Cogswell at the National Food Conference of Consumers and Producers held at Chicago September 17.

Mr. Cogswell, whom I have known for years, is a progressive and successful farmer as well as a sound farm leader, and his remarks on this subject are worthy of the careful attention of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

While no definite data is available to enable one to quote definite figures or percentages of decrease of production because of the shortage of agricultural machinery it can be definitely stated that there was a material loss, both in production and in the harvesting of that produced during the crop season of 1943. Every indication points to a greater decrease in the year 1944.

In practically every community where foodstuffs or grain is produced in quantities, there are examples of inability to plant, cultivate, or harvest because of lack of machinery or lack of repair parts for farm machinery.

Many farmers who this year took long chances during planting season have had experiences which caused them to resolve to not take such chances again. Many farmers have stated that they planted in quantities beyond that justified by their machinery supply They took a chance that if they got it planted they would be enabled to get repairs for machinery to cultivate and harvest it. In many instances they were disappointed, with the result that much of their crop was not properly cultivated and a considerable portion of it was never harvested.

There are unnumbered examples of equipment valued at several hundred dollars being idle as long as 8 weeks at a time because of inability to get a single repair part that could not be made locally by any machinist or where the old part could not be repaired.

In one of the richest and most productive agricultural counties in my State, farm owners, too old to operate their farms, who formerly were overrun with prospective tenants, are now advertising for tenants solely because of the shortage of machinery. Because of bungling this year experienced farmers have lost confidence in their ability to secure new machinery or necessary repair parts and are reducing their operations. Many are discontinuing farm operations. These are being replaced by inexperienced men from other industries to minimize their chances for induction.

There are many farms of sufficient acreage to justify two or more tractors where it is definitely planned to reduce acreage next year because one or more of the tractors used this year are definitely not to be depended upon for next season's work These farmers are planning to reduce acreage rather than take a chance on their machinery being in condition to cultivate and harvest as large a crop as they might be able to plant. In other words, farmers who were willing this year to take the chance on planting more than their machinery would cultivate and harvest are not willing to do so again.

Farmers are planning carefully and attempting to estimate the amount of acreage they may plant with the hope that the machinery on hand will hold out to cultivate and harvest it. They prefer to reduce the acreage and feel reasonably confident they can cultivate and harvest it rather than plant the full acreage and take chances on being unable to properly cultivate and harvest it because of inability to get farm machinery and repairs.

Two years extra use of the farm machinery which normally would have been replaced with new during 1 of these 2 years, coupled with the fine combing of old machinery lots and junk yards has greatly decreased the available, usable farm machinery in the heaviest producing areas of our country.

The farmers as well as other businessmen are having difficulty because of the necessity of operating with inexperienced and inefficient help. This has increased the necessity for additional repairs and shortened the period of usefulness of machinery, thus, contributing another cause for a reduction in operations. Many farmers prefer to plant only the amount they are able to handle by the operation of their own machinery rather than trust the operation of valuable machinery, which cannot be replaced, in the hands of inexperienced and inefficient operators.

In an effort to meet the quotas and demands of the Government in increased production of specific crops, especially flax and soybeans, many farmers have so changed their machinery needs that allocation policies have been greaty disrupted. The machinery successfully used in large fields of wheat and coarse grains is not adapted for use in the harvesting of flax and soybeans. It is practically impossible to satisfactorily combine either flax or soybeans with the larger size wheat and coarse grain machines.

There is a large shortage of corn machinery in the vast areas which during the drought years changed from corn to wheat and have now gone back to the production of corn.

All these factors combined with many others have made a tremendous reduction even in the year 1943. There is no doubt in the minds of those who have given the matter careful study but that the reduction will be much greater for the year 1944 unless something is done promptly to give definite assurance to the farmers of our land that machinery and repairs will be available in greatly increased quantities next year, and that they will be available on time. There is danger that farm machinery as well as many kinds of food and some war materials may be "too little and too late."

In order that those responsible for increased production of farm machinery and repairs, whether they be manufacturers, distributors, or those in charge of allocating and rationing materials, we will now make a few suggestions regarding corrections or improvements over what was done this year along these lines.

During the summer of 1943, soon after the W. P. B. increased the allocation of steel to manufacturers of farm machinery and the newspapers gave wide publicity to the order, we received a letter from the president of one of the large farm machinery concerns advising us that we should not be overconfident of receiving increased machinery and repairs. They stated that while allotments had been increased, the increased amount of steel had not been delivered and there was little indication that it would be possible to get delivery in time for use for the crop then growing. In a mild way they were attempting to tell us that it was impossible to manufacture farm machinery or repairs from allocations or W. P. B. orders.

The operator of one moderate-sized farm advised us that a valuable machine was out of use 8 weeks because of inability to procure a small but essential repair part. This was a standard machine manufactured by one of the best known farm machinery companies. Another small farm operator advised us that he had a $500 loss because of inability to secure repairs for his combine at harvest season.

Inexperienced help in the manufacture and assembling of farm machinery is apparent in the machines which are being delivered. This is causing a lack of confidence in the proper delivery of new machinery coming out under war conditions.

One dealer in a territory that normally requires from 45 to 55 combines annually this

year received an allocation of 10. Of these 10 not a single one was received with all the necessary parts enabling it to operate. Every machine had to wait delivery until missing parts were ordered and received from the factory or taken from the dealer's shelves. Several had been improperly assembled and it was necessary to take them apart and reassemble them before they could be operated.

The present plan, for the manufacture of sufficient farm machinery for use in 1944 to supply 80 percent of the 1940 or 1941 requirements, is the minimum which can be expected to encourage a normal planting for next year. The normal demand next year would no doubt be 50 percent greater than either of these base years because of excessive use during the past 2 years.

On July 10 last, one of the internationally known farm machinery companies sent notices to all their dealers informing them that all back orders of 60 days or longer were being cancelled and requesting that the dealer reorder any parts which had been back ordered that long and on which he still desired delivery. Such an order would indicate that the number of back orders, 60 days old, were tremendous. Actually they had so many of them they couldn't even keep them properly filed for filling. The dealer, handling this particular line in my home town, had more than 200 items affected by this order.

Some dealers are already advising their customers that they have been advised by their companies not to build hopes too high for the receipt of the 80 percent of their 1940-41 requirements since they still do not have the material in sight to manufacture it; that even if the material were on hand they would still face the necessity of finding men to do the work of manufacturing and assembling it. They do not manufacture farm machines on cost-plus basis as they do other war materials.

The change from horse power to mechanized farming solved some of the problems of production but it also created new ones.

It is not possible, as some would have us believe, to return to horse power—even if the horses were available, which they are not, it would still be impossible to get harness, shoes and other equipment necessary to use them. Then, too, horse power farming is limited to the number of horses available. You cannot work a horse overtime You cannot fill him full of hay when he has done a day's work and proceed at once to work him on through the night. If you attempt it you kill your horse and permanently lose your power.

Mechanized farming has forced dependence not alone upon machinery but also upon gasoline, kerosene, or other refined fuel. This fact definitely links gasoline shortage and rationing with the shortage of machinery.

Nature wisely placed ample supplies of these fuels near the areas most dependent upon them for the production of food. But men in other areas unwisely decreed that nature's processes must be changed.

If present gasoline regulations had been in effect two or three months sooner many thousands of bushels of grain would have been wasted in the fields. Under rules existing at the time heavy losses occurred because of delay in receiving supplies of fuel at the farms. Many service stations were entirely out of gasoline in vital areas for short periods.

Present regulations requiring refineries in central Kansas (also the center of a heavy grain-producing area) to ship both crude oil and refined products to eastern markets where the ban on pleasure driving has just been lifted is both unnecessary and uneconomical.

The fact that regulations from the same source permit these same refineries to ship in both crude and refined products from west Texas proves it unnecessary and the fact that such shipment could and would be subsidized by government proves it uneconomical. Why the double shipping and the double subsidy? Why not ship direct from west Texas to eastern markets and save both transportation and subsidy?

There is plenty of tangible evidence to justify the conclusion that unless more sound practices are put into effect for the allocation and delivery of machinery, repairs, and motor fuel to farmers, they cannot meet the production demands made upon them. They probably will not be able to meet the vital needs of our country.

It is just as important that changes be made in time so manufacturers can produce on time so farmers can get the machinery and repairs on time. A combine delivered too late is of no use until another year; a repair for a plow received after the soil is too dry to till is of little value and greatly reduces chance of production.

The farmer will not fail; he will continue to do his best. But, he must have the necessary equipment and he must have it on time.

Those who formulate and issue rationing regulations and directives from bureaucratic Washington must understand and appreciate this fact and do something about it—and they must act in time.

If they do not, serious shortages—perhaps actual famine—will stalk our own country in 1944.

Report of Subcommittee on Cost of Production

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks, I submit herewith, by request, some observations having to do with the cost of crude oil:

The subcommittee on cost of production has been meeting for the past 2 days for the purpose of determining the cost of finding, developing, and producing crude oil as of June 30, 1943. Also to consider the effect that the 48-hour week will have on future costs and to determine the increased costs since October 1941, which was the date of freezing the price of crude oil.

The Tariff Commission report of cost of producing crude petroleum for the years 1939-40, and the 9 months ended September 30, 1941, is not a proper basis upon which to maintain the price freeze placed on crude petroleum by the Office of Price Administration.

It is historical and does not provide for replacement costs.

It does not include any provision for the cost of financing exploratory and development work. Interest on borrowed funds is a substantial amount.

It does not include any allowance for the thousands of operators whose individual production is small, and whose average production costs are substantially higher than the production costs of the few major companies and other large companies whose volume of production enables them to produce crude petroleum at a lower cost than the average producer and whose figures dominate the results shown by the Tariff Commission.

The finding and developing costs are based on the cost of the finding of discoveries and extensions of pools for the first 6 months of the year amounting to 437,963,000 barrels of oil. The operating costs are based on the cost of producing 709,342,000 barrels. It is estimated that the extensions and discoveries are 272,000,000 short of equaling the production for the first 6 months of the year. We realize that it would very likely cost more to find and discover the additional 272,000,000 barrels necessary to maintain reserves than it did to find and discover the 437,963,000 barrels, but no allowance has been made for this point.

We have estimated that the cost of finding, producing, and developing a barrel of crude oil as of June 30, 1943, was $1.244 which is an increase of 48 cents per barrel over the cost of the third quarter of 1941, as reflected by the Tariff Commission's Report. We further estimate that the 48-hour week will increase the cost at least 5 cents per barrel. This would bring the cost at the present date to $1.294, exclusive of interest for capital.

The costs are summarized below:

Finding costs	$0.578
Development costs	.320
Production costs	.388
	1.286
Less: Gas and miscellaneous revenue	.042
Estimated June 30, 1943, cost	1.244
Estimated additional costs caused by increased hours at overtime rate	.050
	1.294
Tariff Commission Report third quarter 1941 cost	.764
Increased cost since the freezing of crude oil prices	.530

The margin above cost should be sufficient to provide for:

a. Funds for the exploration needed to find adequate new reserves;

b. Funds to cover replacement cost;

c. A reserve fund for secondary recovery or other conservation measures;

d. A fair return on borrowed and invested capital, taking into consideration the extreme hazards involved in searching for and finding oil;

e. To maintain the industry as a healthy, going concern;

f. For Federal and State income taxes.

Post-War Jobs

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. TYDINGS. Mr. President, on Monday, October 11, 1943, before the Economic Club of Detroit, Mr. Alfred P. Sloan, Jr., chairman of the board of General Motors, delivered an address on the political and economic problems confronting the Nation in the post-war period. The address is so thought-provoking and well considered that I think it would be instructive if read by all elective and appointed members of our Government. I hope my colleagues will have

opportunity to read it, and I ask unanimous consent that it be printed in the RECORD.

It has been estimated by the Government Printing Office that the address will cover five pages of the CONGRESSIONAL RECORD, and that its printing will cost $225.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate this opportunity to appear before your organization. These are momentous days through which we are passing, not only in themselves but more particularly as to their implications for the future. I do not need to remind the leadership of the city of Detroit—which might well be called the capital of war production—that the war is not won. Our first job is to win the war. That you appreciate fully as well as I do. We must not be misled by the fact that the general trend of events at the moment is in our favor. Otherwise the war could never be won at all. But, as we work for victory, we must think beyond today and into the years ahead. This is essential if we are to win the peace as well as the war. My remarks this noon—post-war jobs—are based upon that premise.

Its purpose is twofold:

First, to point to a challenge that confronts the leadership of American enterprise. That challenge is to prepare now, and in a realistic manner, to meet the responsibilities it must face as the economy passes from war to peace. Also, to reemphasize the importance of all of us doing our part aggressively and with imagination. That is the approach that has made American enterprise the envy of the world, both in war and in peace.

Second, to attempt to express, in the attack on this objective, a point of view as to some of the more vital problems involved and the opportunities available for the production and distribution of goods and the utilization of the supporting services. This calls for consideration of what might be done in integrating business operating policies into the economic structure as a whole to insure a more rapid transition from war to a peace economy and, more important, to contribute to an expanding economy with increasing job opportunities and progressively higher standards of living in the years to come.

WAR-TO-PEACE PROBLEMS STAGGERING

We can start by saying that the problems the world faces, both political and economic, as it passes from war to peace, stagger the imagination. Many seem beyond the capacity of the human mind to grasp in their full significance—quite aside from the difficulties involved in the administration of proper solutions. Yet upon the finding of realistic solutions and their aggressive and imaginative application will depend whether or not the sacrifices of the war have been in vain. The winning of the war is not the end objective. The real objective is a sound and constructive peace. Winning the war makes such a peace possible. It provides an opportunity. That is all.

At Dunkirk our civilization stood on the verge of destruction. Only by what appears to be a miracle was it saved. The lesson to be learned stands out crystal clear. We had failed utterly to recognize the clear implications of the handwriting on the wall. We were woefully unprepared for the supreme test of war. Are we to repeat such a serious mistake by being unprepared for peace or, now that we are winning the war, shall we direct all available effort not demanded by the war itself, which must remain our prime purpose, to the real objective—the winning of the peace? And will we recognize in making that peace effort the many economic errors that so prejudiced our progress in the days before the war? Much can be accomplished now, notwithstanding the uncertainties involved. This is particularly true of those problems that lie in the area of enterprise where business is directly concerned.

But why this uncertainty as to the peace? Simply because our people do not and cannot be expected to understand the technical intricacies of the problems involved or appreciate the difficulties of finding the right solution. War is dramatic. A military or naval conflict fires our imaginations and stirs our emotions. We can in a way visualize the trend of success or failure as the tide of battle moves back and forth. Glaring errors will eventually be corrected by an aroused public opinion. But on the peace front it is vastly different. We often fail to interpret peace problems in terms of our daily lives. Hence there is grave danger of our being led into obligations and responsibilities we would not accept willingly if the real facts were appreciated by the people at large. We should therefore start to segregate and to discuss our post-war problems, and now. Not in generalities, but in concrete terms. What are these problems and what are we going to do about them?

There are two approaches. In aeronautical terms, one is in the stratosphere, so to speak, the other is on the sea level. There is already too much of the former, too little of the latter. Stratosphere planning attacks the problem from the top. It is the planning of the spenders. Much of it is based on the belief that a few years of war have brought about such profound changes in human reactions that we are to enter a new, different, and completely idealistic world. Starting from the top down involves a danger of regimentation, with an ever-expanding bureaucracy as a permanent factor in our economy. Sea level planning attacks the problem from the bottom. It is the realistic approach. It is the planning of the producers. Its foundation is the great force of individual initiative—the keystone of our system of free enterprise.

I believe every businessman should study these post-war problems from the standpoint of the particular set of circumstances involving his own business. That is a fundamental of free enterprise. Each must make his own contribution in his own self-interest—but with due regard to the broader objectives involved. American business leadership realizes that to produce and distribute goods and services, no matter how efficiently, is not enough. Consideration must be given to the impact of business policies upon our social and economic structure as a whole. Business leadership must take the form of industrial statesmanship. It enjoys a truly great franchise under our system of free enterprise. It must protect that opportunity. It must broaden the scope of its responsibilities.

In the general discussion now taking place about what is to happen after the war there is far too much Utopia—too little realism. We need to remind ourselves that we cannot devote such a large part of our resources and productive effort over several years to creating instruments of destruction that contribute nothing to our standard of living, we cannot place such an economic burden upon the present and future generations, and out of the destruction of wealth create a sound and lasting prosperity for all. Such reasoning does not make sense. There is a price that must be paid for the economic wastage of war. It will take hard work, greater efficiency, and considerable time to overcome the losses the war has created. It will call for intelligence of the highest order, as well as a realistic approach to many complicated problems, if we are to achieve the goals we seek and have a right to attain. Solutions of individual post-war problems, even intelligent solutions, are not in themselves sufficient. They must be coordinated into a well-developed and balanced whole.

THREE CLEARLY DEFINED OBJECTIVES

I am convinced that out of the mass of conflicting and confusing propaganda, out of the great variety of loosely defined objectives and the far too many glittering generalities that are being fed to our people as a preview of the post-war world, there arise three clearly defined "musts," the attainment of which would go a long way toward insuring our gaining the peace and making certain that the sacrifices we are making in winning the war will not be in vain.

They are:

1. Jobs for those who are willing to exchange their time and talents for a proper wage.

2. Means must be found to prevent further attacks on our civilization. There must be no World War No. 3.

3. Our international relationships in the economic sphere must be on the basis of a "two-way" street.

First, as to the problem of jobs, there is, I believe, much confusion in our thinking. It should be clarified. Some seem to believe that the number of jobs can be determined in the abstract by some arbitrary method. We must keep in mind that jobs are a result—not a means to an end—however desirable the objective may be. They are a result of the combination of capital, management and opportunity. The catalyst is a possible profit. The foundation is confidence in the future of enterprise as determined by national economic policy. Without these ingredients there can be no jobs in a free economy. Therefore the future trend of job opportunities is determined by the relationships of the component parts. An analysis of future possibilities involves a discussion of such relationships. The number of jobs available at any time determines the state of employment. Practically speaking, at the best a limited amount of unemployment is unavoidable.

The second means that force if necessary must be organized to prevent further wars. Our civilization cannot stand such a catastrophe every few years and continue to exist. The third means no world W. P. A. at the expense of the American taxpayer. No lowering of our standard of living to that of other countries. Our sovereignty must remain at all times unrestricted.

Jobs—challenge of post-war period

The challenge of the post-war period is jobs. But we cannot meet this challenge by adopting panaceas or by the conjuror's trick of pulling rabbits out of the hat. We have tried all that. It has failed us. The problem can be solved permanently only within the structure of sound economic policy. No nation, no political group, no industry, no leader can persistently transgress the dictates of economic law. Determining the route to be followed is not sufficient. It will require dynamic and imaginative leadership. It will demand of that leadership a comprehensive understanding of the relationship of each unit within the enterprise system to the system as a whole. And that broader understanding must be boldly applied in the policy making phase of business management. This is essential to the preservation of the American competitive enterprise system.

This challenge that our economic, industrial and political leadership now faces cannot be ignored. The American people whose standard of living is involved and whose economic security is at stake, have a right to a solution. Never again can we afford to take the risk to the stability of our institutions of a 50 percent utilization of our economic resources with millions of people out of employment and millions more working short

time, irrespective of what the underlying causes may be.

If the conditions are such that the enterprise system is unable to meet in a practical and realistic way this challenge of high employment, then the people will demand political action although it is perfectly clear that this would never prove a solution. But there is involved in the problem a responsibility we are apt to overlook. While management must actually do the operating job under our system of free enterprise, Government has a vital part in laying down national economic and fiscal policies to the end that the job has a fair chance of being done. At the advent of the war, existing national economic policies greatly prejudiced the expansion of enterprise. Our economy was frozen in a degree. This state of affairs has been lost sight of under the stimulation of the demands of war. Unless political wisdom prevails, similar handicaps will return to plague us and limit our possibilities when the war is over.

We should profit by past experience. We should do those things in a national way that will serve to encourage and stimulate enterprise in all its forms. The objective cannot be achieved otherwise. We must provide the necessary incentives. We must rebuild a foundation of confidence in the future opportunities of individual enterprise. Business cannot plan ahead with confidence if uncertainty exists as to the continuation of our existing economic system. Or if this system is to be hamstrung by those in power who believe in something different and act to prevent the system of competitive enterprise from working effectively. What I am saying is that all obstacles along the highway leading to the maximum of job opportunities must be removed. It is not difficult to identify those obstacles, but it is quite another thing to develop a sufficiently widespread appreciation of their importance so that corrective political action may be insured.

Need more jobs than ever

Our productive plant has increased actually and potentially as a result of wartime expansion. The problem of providing jobs will be greater in the post-war period. And before the war the problem had not been solved—far from it. Moreover, our productive efficiency tends to increase, due to technical progress. This process will continue, unless further restrictions are imposed on the effectiveness of management and worker Increasing technical efficiency means we must provide an increasing number of job opportunities, and in two ways. We must develop new things to produce. We must, in search of an ever-expanding market, produce existing things at always lower prices. If we do not, there are certain to be fewer jobs available instead of more as the years pass on. This must not happen.

The war effort has had a tremendous effect in intensifying business activity and employment. Total war requires the maximum of almost everything. War becomes the business of the entire country. Stimulation takes place along the entire economic front. No matter how mighty may be the resources of any country, there is not enough of anything. Higher wage rates, increased hours of employment, and high employment flow from the prodigious expenditures of Government in financing the war effort, thereby creating an appearance of prosperity in spite of lower standards of living for a large part of the people Such a situation is bound to raise the question of continuing Government expenditures to insure job opportunities in time of peace in the event that they are not made available within the structure of the private enterprise system, notwithstanding the futility of such an approach. The issue cannot be ignored. It is before us potentially at this time.

Deficit spending not the answer

Undoubtedly there are areas of opportunity where Government has operated and can continue to operate in the future without danger to the free enterprise system. Public works of all kinds come to mind. Harbor improvements, highways, and airfields are illustrations. But if we examine the scope of these possibilities we shall see that the aggregate effect of such activities in relation to the magnitude of the peace objective is entirely inadequate. It is important to recognize this fact. It will be even truer in the post-war period in view of our increased productive capacity and our goal of a greatly increased peacetime national income. It is clear that if we are to depend upon Government expenditures, or continuous deficit spending, as it is called, to maintain and expand employment and to increase the national income in times of peace, Government must operate in a far broader way than ever before. It would have to compete with private enterprise in the production of goods and services. Here arises a direct conflict between Government in business along a wide front and private enterprise. It is inherent in such an approach. It cannot be avoided. And, no matter how efficiently private business might be conducted, it could not continue to exist. Subsidies and other uneconomic policies would mark the beginning of the end—the end of the American competitive system as we have known it, the beginning of the socialization of enterprise. It is one approach or the other. It cannot be both. We must choose.

Government and private enterprise

Some of those advocating large governmental expenditures—continuous deficit spending, in other words—have convinced themselves that the old concept of debt no longer holds. They do not call it debt any more. They refer to it as "Government contribution to consumer purchasing power." They argue that a continually rising governmental debt is essentially a conservative program. The illusion that an ever-increasing debt is an ever-expanding national asset is a concept of economy that can and should be boldly and successfully challenged. The end of such a road is definite. It means an unsupportable public debt leading to repudiation in part, depreciation of currency or some other equally undesirable result. It is not to be inferred that Government deficits are not justifiable under certain conditions. War is an illustration. A great depression is another. These necessities lend no support to the theory of continuous deficits to stimulate productive enterprise.

I do not mean to imply that Government has no place in the operation of the economy other than to establish sound policies, thus keeping clear the road to greater opportunity. It has. Free enterprise cannot be maintained today under a policy of laissez faire. The field of opportunity must be not only established on a sound basis but maintained through proper regulation. There is a sharp distinction between establishing national policies affecting the economy as a whole and regulation of the individual units within the economy The areas included in central banking policies, tariffs, social-service programs, taxation, public works and protection against monopolies are illustrative of essential functions of Government. A sound establishment of the broadest field of opportunity means expanded job opportunities; maintenance of that field through constructive supervision of the system provides the means to compensate for the tendency to excesses, both booms and depressions, which tend in the final analysis to unstabilize job opportunities.

TWO POST-WAR PERIODS

In discussing the problem of jobs after the war, to avoid any misconception we must define what we mean by "after the war." There are two areas of time involved, very different in their economic background—the early years and the longer term. The early post-war years might be referred to as a period of shortages, with a preliminary interval of hesitation and transition immediately following the armistice. The long term will commence where the period of shortages tapers off.

Modern history records the fact that after all great conflicts there follows a period of great business activity. Only in duration and intensity does the pattern vary. All the circumstances point to a repetition of this pattern at the end of the present conflict, but on a greatly intensified scale. No former war has seen such a great concentration of economic forces directed toward a single objective and one not in any way concerned with the normal peacetime needs of the people. Moreover, in the 25 years since the last conflict our productivity has enormously expanded not only in aggregate volume but in variety. In World War No. 1 American industry was just preparing to change over to total war production at the time of the armistice. The present conflict finds it already completely converted. Our participation in the former war was for only a relatively short period, already exceeded in the present war. There will have been practically no consumer durable goods such as motorcars, electric refrigerators, etc., produced for several years. All such needs must be deferred in favor of the war effort. It is clear that an enormous potential demand for all kinds of goods and services is developing.

Purchasing power and shortages

Assuming the war continues until the end of 1944, it is estimated that wartime savings of individuals will be about $100,000,000,000. A considerable part of this will be in liquid assets—in banks, savings deposits, and War Savings bonds. Consumer indebtedness will have been largely liquidated so that the reservoir of installment purchasing power will be refilled. Similar accumulations by business and industrial corporations are estimated to add $30,000,000,000 more. Superimposed upon all this there will be in all likelihood a foreign demand resulting from the same fundamental cause—shortages—plus destruction resulting from the war, the amount of effective demand being limited however by the nature of the economic settlements of the war and the ability of other nations to buy, or our willingness to give. Hence, it appears to be clear that there will be ample purchasing power already created to keep our enterprise system active for a period of a limited number of years. To the extent, of course, that the price level is permitted to rise due to inflationary forces existing, the real purchasing power of these savings is correspondingly reduced.

Jobs in all likelihood will be available to insure high employment in the period of shortages. However, due to the fact that centers of war production have not always coincided with the centers of civilian production, important geographical problems of unemployment will of necessity arise. Also certain peacetime industries undoubtedly have expanded their wartime employment beyond any peacetime needs. Major adjustments will be necessary.

Control of inflation

The real problem of the period of shortages will be to control the inflationary influences of an abnormal reservoir of purchasing power in the face of what will be at first extreme shortages of consumer goods. Unless some temporary controls are maintained until production develops a better balance and the law of supply and demand can operate freely again, the consequences may be truly disastrous. At best this is a most complicated problem, because as peacetime production expands it creates additional purchasing power.

We all hate regimentation. We now know what it means. However, in times of war it is essential to a degree and we must accept the fact that regimentation will carry over into the early peace period, until goods available for delivery to consumers are in reasonable balance with the ability to buy.

A DRAMATIC POSSIBILITY

The economic circumstances existing in the period of shortages appear to present an opportunity for accomplishment in both magnitude and scope unparalleled in the history of American enterprise. They deserve our most serious consideration. All the essential economic forces are present to justify the conclusion that, if they could be aggressively, intelligently, and promptly capitalized, we would achieve a peacetime national income far in excess of any heretofore enjoyed. But, desirable as this may be, it is not the most vital point at issue. That is the long-pull position of American enterprise with reference to expanding job opportunities. Granted that the circumstances involved in the period of shortages are synthetic in origin, can they be used nevertheless as an instrumentality to repair the damages of war and to rapidly accelerate the rate of increase in our national income, thus, relatively speaking, reestablishing it permanently on a higher level and insuring a corresponding improvement in our standard of living?

This is, in my judgment, the most important question that faces business management. Academically considered, it would appear as if such an accomplishment were possible. Realistically considered, it would seem as if the answer would be found, first, in the willingness of management to take the initiative and assume the risk in adopting such business policies as would insure not only a maximum over-all utilization of our existing economic resources—raw materials, manpower and plant capacity—but also the expansion of such resources to a level of production possibilities commensurate with the progressively higher income level desired. Second, it would demand a different attitude as to the problems of business on the part of Government than has existed during the last decade.

One thing is certain. Such an accomplishment is impossible without the same all-out effort on the part of management along the whole economic front as has characterized the war effort. Even an all-out effort on the part of some will not suffice. If it be true that high employment is a "must" in the long-term post-war era as a vital component in the winning of the peace, then the opportunity here presented must not be ignored.

Passing to a peace economy

When war production is halted we must reconvert as promptly as possible our production facilities to the products of peace. Now what might be done to minimize the impact of this transition period as affecting the problem of temporary unemployment? And what might be done to minimize the later transition from the period of shortages to the long-range problems of the years ahead?

Undoubtedly the most dramatic attack on both these problems would be a governmental pronouncement of the Nation's firm belief in competitive enterprise and the profit motive as the keystone of the national economic policy, in such form as would carry conviction and hence serve to rebuild a foundation of confidence in the future of business. That may not be practicable. But what we can do and what should be done to this end is to identify and adopt such policies as demonstrate our convictions in practical terms. After all, actions speak louder than words.

Disposal of Government-owned plant

To illustrate, the Government has an investment of more than $15,000,000,000 in wartime industrial plants and equipment. What could be more helpful than a declaration of policy that, aside from such plants as might be needed as a standby for the future, the balance would be made available to private enterprise? And what could be more constructive than to establish the essential procedure outlining how that is to be done? Industry could then, where possible, integrate such plants into its post-war planning, thus placing them in productive use in the shortest space of time and expanding the number of job opportunities.

This problem presents real difficulties. Most of these plants are designed for a specific, highly specialized purpose, of necessity largely unrelated both in type and capacity to any peacetime needs. Their conversion to other purposes involves both a shrinkage in value and an investment of additional capital for different machinery in part and for retooling. Many plants are of such magnitude that few can afford to buy or effectively operate them at any price. But after all the real worth of this huge investment is not its cost, not its liquidating value, but the contribution it will have made to victory and the contribution it can make to a peacetime economy. Such are the facts. They should be faced realistically. We should establish the rules now, whatever they must be.

Production orders for maintenance and replacement of inventory

Some industries have no real reconversion problems. Their contribution to the war effort has been to make more of what they always made. On the other hand, our mass fabricating industries—motorcar, for example—are producing products entirely different from and but little related to the needs of peace. Such industries are in a way limiting factors during the period of reconversion. This effect may be cushioned by the fact that inventories required for the production of many peacetime goods have been liquidated and must be built up again during the period of shortages. Management should place orders promptly to build up stocks of supplies and parts while plants are being rehabilitated, to enable raw material suppliers to continue production, thus reducing the problem of shifting employment into peacetime channels.

Modernization of production facilities

Obsolescence and depreciation have been increasing at an accelerating rate during the war. Normal replacements have been impossible. Better instruments of production are now available. Better techniques are known. Maintenance has been deferred due to lack of materials and manpower. Management should plan to release orders promptly, to modernize equipment, and to bring maintenance up to normal standards.

Cancelation of war contracts

Then there is the problem of canceling war contracts. In the aggregate, the matter of contract cancelation is an enormous problem. A prompt clarification of the financial uncertainties as to procedure would allow business to plan more effectively. It might well contribute to a reduction in the loss of national income and employment in the period immediately following the war. While working capital is tied up in war inventories, industry will be handicapped in its efforts to reconvert. We should establish the rules now.

Disposal of wartime inventory and machinery

Billions of dollars of inventory and other billions of dollars of machinery that now are, or upon cancelation of contracts will become, the property of the Government must be moved out of existing plants before reconversion can be started. A parallel problem has to do with policies for the disposition of stocks of war goods in process and of materials usable for peace purposes. Action in planning for these contingencies is important.

Clearing plants for peace production

It has been suggested that some war production might be continued after the armistice to reduce unemployment during the transition period. That would be a very costly procedure. But in any highly integrated scheme of mass production a plant must be made completely available before the production of peacetime goods can be got under way. And in a group of plants the length of the period of reconversion might well be determined by the last plant turned back. A partial reconversion would mean in many cases a double reconversion with corresponding double interruption in employment. We should remember that when industry converted from peace to war, employment was sustained by new plants coming into production specially constructed for war purposes. That support is not likely to be available when the process is reversed.

Post-war reserves

Practically all businesses are involved, though some perhaps in a small way, in these problems of post-war reorganization. Generally speaking, those in the fabricating area of industry are involved in a very important way. The cost of reconverting plants is a legitimate cost of the war effort. Reserves for that purpose should be permitted as a business expense. While every case is different, if such reserves were limited in use to expansion or betterments or the specific cost of reconversion—in other words, used to expand job opportunities and to increase efficiency—it would be the best national investment we could make. This should be done.

Importance of new designs

The limitations as to new designs and new products in the early post-war period are self-evident. Yet it is important that we move forward as rapidly as circumstances permit. Technology has advanced in the war years. We can do a better job. Better technique should enable us to lower prices and thus stimulate consumption and employment. If industry could now be assigned material for research and engineering development in those instances where it would not detract from the war effort it would help speed up the introduction of new designs of existing things as well as of new things. The amount of material required for this purpose would be negligible in relation to the total. This should be done.

SECOND POST-WAR PERIOD—FIVE MAJOR PROBLEMS

The problems I have identified are merely illustrative of the many points of attack. They must be met sooner or later. Delays are both costly and dangerous. But the most vital question that faces the economy because of its long-pull implications is whether, after the deferred accumulated demands for goods have been satisfied, we can continue to maintain a rising national income with expanding job opportunities. Or must we accept a shrinkage, perhaps an economic collaps ?

The answer as I see it involves five major points: (1) The policies of government toward enterprise; (2) the intelligence with which enterprise conducts its affairs, not only as to itself, but in relation to the economy as a whole; (3) the relations of business with labor; (4) the success with which inflation is controlled during the war, and particularly during the period of shortages; and (5) foreign relations as affecting international commerce. Let us consider these problems from the objective of expanding job opportunities over the long-term position.

AREA OF GOVERNMENT ACTION

I have discussed our broader and more general post-war problems largely in terms of the principles involved. But business managers and all concerned with enterprise in its various forms can operate only under

concrete policies. We must get down to cases. We have seen that to reach our objective of high employment with a high national income, both in balance with other desirable factors, we must have constructive action on the part of both management and government. Government regulates the field of opportunity. Management discharges its operating function within that field. These relationships are by far the most important of the five points I have mentioned as affecting the long-term possibility of job opportunity. First, let us identify the more important problems related to maintaining a field of maximum opportunity—the responsibility of government, in other words. We can well start with the highly important question of taxation.

Post-war taxation

It can hardly be denied that our revenue policy, as judged by its pre-war structure, was a hodgepodge of inconsistencies resulting from emergency demands, compromises, and political expediency. It failed to reflect any long-range, farsighted considerations from the point of view either of meeting the increased demands of Government for revenue or of expanding the sources from which such revenue might be collected. In the pre-war years its effect was to penalize enterprise rather than to expand enterprise. It entirely ignored the concept that lower tax rates may increase total dollar revenue through an expanding economy, just as lower prices of goods will increase consumption by bringing into the market a greater number of buyers.

War taxation has little in common with peace taxation. Many financial problems arise in war as related to tax policy that do not exist in time of peace. Profits tend to expand during war. Because this results from the Nation's distress, the excess may be taxed to the limit, and justly so. But peacetime conditions are different. High taxes, such as existed in the pre-war period, tend to destroy incentive. It is no longer worth while to risk capital in new ventures or expand existing ones if the tax collector takes too large a part of the profits while the investor assumes the entire risk of loss. That is not the way to promote the venture spirit or to encourage the expansion of enterprise. Taxes on individual income must be sharply reduced when the war is over and rates established which are not confiscatory from the point of view of prejudicing the incentive of profit.

Encouragement for increasing technological efficiency

In the light of the urgent need for expanding enterprise and job opportunities and the important contribution that the capital goods industries can make both directly and indirectly toward that objective, we should examine the possibilities of some form of tax advantage to encourage the modernization of all instruments of production and service.

For years there has been a trend toward double taxation at increasing rates. Taxes are collected on the earnings of corporations and again on the stockholders as individuals. We should find a satisfactory substitute for the existing system. The profits of business corporations should be taxed but once. This means that business taxes should be reduced sharply to nominal rates to encourage expansion of enterprise. Beyond that amount the profits of business should be taxed only after they are distributed to business owners as individuals.

Capital should be free to flow from one type of investment to another. This is hampered by the capital-gains tax. Investors should be encouraged to move their capital from one investment to another with a minimum of restriction. The net revenue from the tax on capital gains is not important, hence we restrict the freedom of capital to little purpose. England, whose approach in such matters is far more experienced than ours, does not tax capital gains. Tax rates on capital gains should be reduced, preferably eliminated.

Labor relationships

The existing national policy regarding the relationship of labor and business is manifestly unfair. Both sides should be treated as equals in relation to their responsibilities and privileges. Every right-thinking businessman should support the principle of collective bargaining. But, recognizing the great gains in privileges labor is now enjoying, there must come a corresponding degree of responsibility for its acts. No man should be required by law or as a matter of national policy to pay for the privilege of having a job. A most serious cloud on the potential accomplishments of the immediate post-war period is the relationships of labor and management.

Such are a few of the components which, in the aggregate, determine the breadth of the field of opportunity as established by national policy within which the enterprise system must operate. We must expand that field both by eliminating all obstacles that now exist, thus clearing the highway down which we must travel, and by adopting such economic policies as will enable us to accelerate the rate of progress. Both approaches are essential.

THE RESPONSIBILITY OF MANAGEMENT

That, however, covers only one phase of the problem. Capitalizing the opportunity is essential. That is the responsibility of management. I have already made the observation that business leadership cannot limit its horizon of action to the physical production and distribution of goods and services. That will not meet the challenge of the future. It must have the courage and likewise the understanding to integrate its policies into the economic and social structure as a whole. In so doing it enlarges its own opportunity for accomplishment.

The importance of technological advance

Business must have customers. More customers mean more jobs. But customers must have money to buy. Hence, an expanding purchasing power is essential to expanding job opportunities. Approximately 85 percent of our total national income comes from wages, salaries, and other forms of compensation to employees or self-employed persons. Nearly 70 percent of the total is actually wages and salaries, mainly wages. Hence the wage factor is a fundamental in our formula for high employment. Too many believe that by increasing wage rates we increase purchasing power, thus creating more customers, and, therefore, more and better jobs. This is not true if the result is to increase costs. Costs largely determine selling prices, and with increasing selling prices increased wages may buy no more goods and services. Hence, increasing wages must be justified by improving our efficiency through technological progress—better machines and better production techniques. In other words, there must be more effective use of materials and manpower.

The influence of wage rates

If we increase wage rates among certain groups, not offset by improved efficiency, we raise selling prices out of balance with the purchasing power of other groups whose wages have not been correspondingly increased. If the wage rates of workers in one industry are higher than in other industries they may be supported, in an economic sense, by greater productivity made possible by a higher degree of mechanization. Even so, there is a point that must be reached, wherever it may be, where even a reduction in hourly wage rates will actually increase workers' annual income or increase the number of workers employed because total employment is expanded through the resulting influence of lower prices. From this we learn that, to contribute to the goal of high employment, wage rates must be set at such a point that the resulting selling prices will insure maximum consumption. We live by the year, not by the hour.

The need for incentives

I have emphasized the importance of incentive. I believe that applies not only to capital but to all workers, management as well as those receiving compensation on an hourly basis. Men are not created equal in their willingness to work or their ability to produce effectively. Those willing and able to produce more should be given the opportunity to earn more. That, after all, is the American way—opportunity to progress according to one's ability. Such a philosophy is contrary to the concept of some labor leadership. I would urge adoption of some plan that would do justice to those workers willing and able to produce more. Speaking in generalities, the economic result would be to lower costs and prices, hence expanding job opportunities.

While the most efficient instruments of production are essential to high employment through reducing costs with their effect on selling prices, there is involved another important consideration. There are job opportunities in producing these more efficient instruments of production. And there are still more job opportunities in the necessary services such as power and transportation required in support of their production. It is a fact little appreciated that the job opportunities in providing essential services are equal to those involved in the production of goods. If we will examine the record we see clearly that our production plant, speaking in terms of generalities, is obsolete from the point of view of the standards of present-day technology. There exists here a large reserve of job opportunities.

It has been estimated that jobs will be required for something like 55,000,000 people in the post-war period. About 25 percent of the total number of workers can be employed directly in manufacture. Another 25 percent in agriculture and construction. The remainder must find their work in the supporting services rendered to business and to the community at large, such as transportation, distribution, the professions, and in the Government service. But the productive part of the enterprise system, especially factory production, is in a degree the creative center from which radiate the economic forces that set the pace at which the wheels of the entire system revolve.

Research not limited to physical sciences

Closely allied to what has just been discussed is the need of improving efficiency from the point of view of the research function of management. The resulting benefits are of the same order as those which flow from more efficient instruments of production. Too often research is thought of as being limited to the physical sciences. But it is equally applicable to all the functional activities of management. Therefore we must not only intensify research as commonly termed, but we must further extend it into other operating functions such as distribution, labor relations, personnel, etc. All can serve to improve efficiency. And increased efficiency means lower costs, lower selling prices and expanded production.

New enterprises

Job opportunities must be further multiplied by creating new things. As our scientific knowledge widens, it opens up new vistas of opportunity. New processes are developed and new products created. Management should direct its research activities not only to the expansion of existing enterprises but to the creation of new ones.

Business savings

The disposition of the savings of business and individuals raises an important economic problem—one little appreciated. It is essential that we reinvest our savings promptly and productively. They must not remain static. An economic formula tells us that production is equal to consumption plus savings. To the degree that we freeze our savings we reduce our ability to consume by just that much; hence, we contract job opportunities.

Monopolies

We have heard a good deal about the restriction of enterprise through monopolies of one form or another. Any attempt, knowingly, to restrict output, to control prices or to limit markets in any way tends to destroy the very foundation upon which our system of free enterprise rests. This must be recognized as a fundamental concept of business itself. It applies with equal force to monopolistic and restrictive practices of all types—whether indulged in by labor, management, or any other group affecting production or distribution. Today no businessman can know with any degree of certainty what constitutes an unlawful practice. The antitrust laws should be clarified.

How best to use cost savings

This brings us to another consideration. If we make savings in costs, irrespective of their source, what is the most effective use of them in promoting more job opportunities? We can (a) increase wages, leaving selling prices the same, (b) reduce prices, or (c) increase profits. Time does not permit a discussion of these relationships. However, this can be said: Cost savings bring the greatest expansion of job opportunities if they are reflected in reduced consumer prices. In making this comment it is not to be presumed that prices should be reduced to the point of subnormal wage rates or of subnormal profits. Consideration must be given to these and other factors as well. The point is urged, however, that we cannot continue to produce unless we can sell. And we cannot sell an increasing quantity of goods unless we have expanding purchasing power. Reducing consumer prices as an economic policy contributes the most to that end.

Establishment of prices

I have stressed the importance of prices in stimulating demand which leads to increased employment. Overhead costs per unit of output vary up and down inversely with the volume of business. This means that in times of depression, when business is at a low ebb, these costs are relatively high. And in times of great activity, relatively low. Hence prices, to the extent that they are determined by overhead costs, tend to intensify depressions by curtailing demand and to stimulate booms by expanding demand. They are not wholly determined by overhead costs, and the extent to which they are so determined depends upon the accounting policies adopted by business.

Business should base its costs on an overhead determined by a practical rate of utilization over the long term of all the economic resources of each particular business as measured by a realistic estimate of its annual productive capacity. Under such a procedure, while profits still vary with volume—that is inevitable—costs and their influence on selling prices will not. Hence, the economic influence of the ups and downs of business volume as influencing prices through costs is eliminated. It is not to be assumed that prices can be arbitrarily established by any formula. But we can never do the best toward any objective, whatever it may be, unless we understand and are guided by the fundamentals involved.

International possibilities

Some organizations like General Motors have created large overseas markets. In these markets General Motors operates its own organizations. It delivers its products from its factories directly into the individual communities of every country where sales opportunities exist. In many countries it carries on semimanufacturing operations. In others it manufactures complete products and commands an important share of the market. General Motors exports its capital, its products, and its know-how. The result has been to benefit both the domestic and foreign consumer by making it possible to buy at lower prices resulting from large-scale production. Such a policy creates job opportunities both in production at home and distribution overseas. Large sums are paid in local taxes abroad. Profits are earned for General Motors stockholders. These profits are taxed here, and when spent domestically create more jobs through expanding purchasing power. Such an approach will contribute to progress in an orderly and sound way.

I have seen since the war of 1914 a trend in many countries toward economic self-containment. The export of motorcars, for instance, has been prejudiced by the desire, and a perfectly natural one, for other countries to keep to themselves the wealth created in the production of goods. Even if their people must pay higher prices for less desirable goods, and they do, nevertheless there may be real or apparent offsetting benefits for the nation as a whole. And then there is the problem of the development of industry from the point of view of national defense. I look for this trend to be accelerated as a result of the war. To use the motorcar industry as a case study, it will increasingly have to decide whether to enter the industrial scheme of other countries and manufacture locally or lose such markets to the domestic enterprise of foreign countries.

Normally, international trade is constantly expanding or contracting in line with the general state of the world economy. Its trend is affected by many influences—political, financial, and economic. It will always be so. But I am convinced that the forces I have just mentioned are certain to influence the trend downward unless offset by corrective measures. Stabilization of international exchange, adjustment of tariffs, elimination of quotas, more intensive promotion of foreign markets are cases in point. Management should put forth every effort, make use of every sound procedure, and Government should support the effort to export our labor and materials in the form of goods and services. But we can do more. If we examine into the record we find that as the countries of the world improve themselves economically, thus increasing their purchasing power by developing their natural resources, expanding their industries and improving their efficiency, their trade with other nations increases accordingly. Here is an opportunity. We can help others and earn a profit for ourselves by judiciously exporting our know-how and our capital through establishing productive enterprises. By so doing we benefit through the resulting general stimulus to international trade and through the profit return on our capital.

But there is one factor which must be reemphasized. It is common to all plans that contemplate exchange of goods and services with other countries. We tried to ignore it in the twenties and thereby learned a costly lesson. I refer to the fact that whether we export our goods, our services, or our capital and know-how, we can be paid only by accepting, directly or indirectly, goods and services in return. There is no other way. As our national income expands we shall need more of the products of other countries, for no nation is entirely self-contained. If we buy more we can sell more in return. But there is no avoiding this fundamental principle.

MORE THINGS FOR MORE PEOPLE IN MORE PLACES

I stated at the beginning of this discussion that its purpose was an attempt to point out the challenge that faces the management of American enterprise as the economy passes from war to peace and into the long-range position beyond, and to urge that it recognize and prepare to assume its responsibilities. And further, to emphasize the fundamental fact that, if there can be a prime objective in the economic area the attainment of which will make an important contribution to the winning of the peace, that objective is the ability of free enterprise to create jobs for those who are willing to exchange their time and talents for a proper wage. It is not an easy task. It has little possibility of accomplishment unless it is attacked with a dynamic and imaginative approach on the part of all concerned. It will not just happen. It will require that such an approach be supported by a recognition of the various forces, economic and others, that bear on the problem.

An attempt has been made to identify certain of these forces, both negative as now existing and positive as containing possibilities for future constructive action. It is recognized—and this point cannot be too greatly emphasized—that no abstract economic principle can be adopted blindly as an operating policy. It should be considered only as a part of a balanced whole—a guide to a better result. But, on the other hand, while it may not always be practical to adopt the course that is best economically, those who share great responsibilities can never form the right judgment without seeking the broadest possible understanding of what is technically right economically.

It must not be assumed that this post-war objective of expanding job opportunities is the responsibility solely of management. It is not. It cannot be attained by management alone. It demands the cooperation of Government. It demands the cooperation of labor. It requires an understanding on the part of management, government, and labor as to how the components must be reconstructed in order to take their proper part in the picture as a whole. It necessitates a recognition of the fact that the pressure group approach, political expediency, and a narrow viewpoint or understanding must give way to a far higher level of thinking based upon the concept that we must seek what is best for the greatest number—knowing that it is almost certain to be the best for each.

Such an approach does not contemplate a redistribution of wealth as it may exist today or tomorrow. But rather the marshalling of manpower, raw materials, production facilities, know-how, and all other economic resources to the end that more and more things are made available to more and more people in all places. This is the theory of plenty, in other words, with expanding job opportunities for all.

Plain Speaking

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. SPRINGER. Mr. Speaker, an editorial appeared on the 8th day of October 1943, in the News Republican, of New Castle, Ind., which contains an analysis of our situation in this country during this terrible war. We must win this war, and every effort on the part of the people must be directed to that ultimate victory which must be ours. Those things which

operate as an obstruction to the war effort must be entirely eliminated. All useless and nonessential spending of the people's money must be stopped. If the New Deal continues its spending policies, and if those in power do not stop the waste and extravagance which has run rampant during the administration of the New Deal in this country, we may find ourselves without the funds to further prosecute the war to victory. There can be a financial defeat in this war, just as there can be a defeat upon the field of battle. The President, and his departmental heads, should realize that fact—and they should correct those ills before it is too late.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD, and to include the editorial to which I have referred, entitled "Plain Speaking," which is as follows:

PLAIN SPEAKING

Back in the carefree days of the W. P. A. Harry Hopkins was credited with carelessly blurting out the true philosophy of the New Deal in these nine impressive words:

"Tax, tax, tax—spend, spend, spend—elect, elect, elect."

As long as the myth prevailed that only the wealthy paid the taxes, the appeal to the general public was attractive, and under the guise of relief to the needy, the Federal Government was permitted to spend, spend, spend, to the tune of millions of dollars a year in extravagant public projects, which enabled the New Dealers to elect, elect, elect.

It was political patronage on a grandiose scale.

Through W. P. A. and the other New Deal patronage bureaus, Mr. Hopkins and the many other New Deal wastrels developed a rare skill in pillaging the Public Treasury year after year.

Came the war—and came a new deluge of spending.

When a nation has been attacked, there is no immediate thought to the cost of defense.

First it was millions for national defense, then millions for aid to our allies, and rapidly the millions leaped into the billions and tens of billions.

Not only have the American people been called upon to finance our own tremendous war program but also to give billions of dollars to aid our Allied Nations.

Nearly every fighting nation in the world today except Germany and Japan looks to the United States to meet a large share of its war costs.

It is just beginning to dawn on Congress—and the people—what all this means.

The bitter truth is that with a war far from being won, we are rapidly nearing the limit of our spending power.

If we are to achieve a victory that assures new security to our Nation and to our people, we must stop the profligate waste of public funds by a spendthrift administration.

The same wastrels that squandered our public funds in peace time are still in positions of authority, and they have brought many of their ilk into the Federal Administration.

Before the war they had millions to squander—now they deal with billions.

For all the legitimate needs of financial support to back our fighting forces overseas in speeding the day of decisive victory, the American people—through Congress—will gladly meet the costs.

The same applies to all the legitimate costs of aiding these fighting men to return to civilian jobs after the war, and to the generous care of the wounded and disabled.

It is only common sense that as much as possible of these heavy war expenses be paid now, through taxes, rather than defer them, through the sale of bonds, until after the war when they will be a crushing economic burden upon the very men who did the fighting.

But before Congress passes any new tax legislation, it should study realistically the fact that under the guise of wartime necessity, the wastrels in Washington are throwing away millions and millions of dollars for illegitimate and unwise purposes.

The war economy which the Government has imposed upon the people must, in turn, be imposed upon the New Deal spendthrifts.

Government bureaus must be shorn of all nonessential activities, and Federal pay rolls must be trimmed of all loafers and draft dodgers. The Federal Government itself has created much of the so-called manpower shortage.

All contracts for war supplies must be scrutinized for exorbitant profits and for purchases far in excess of actual needs.

Lease-lend gratuities must be sharply trimmed.

All the fantastic spending sprees to sugarcoat the world at the expense of the United States taxpayers must be brought to an abrupt halt.

If America is to survive as a strong Republic, all this riotous spending that does nothing to win the war must be stopped.

Our only protection against the New Deal wastrels and pillagers is the strong arm of Congress.

Let the full force of the public opinion be exerted now—before it is too late—to save America from its own despoilers.

Palmer Hoyt's Rule for War Reporting

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. McNARY. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial appearing in the New York Herald Tribune of Wednesday, October 6, 1943, entitled "A Play-by-Play Account." I mention this editorial because of the reference made to Mr. Palmer Hoyt, editor of The Oregonian, who heads the domestic branch of the Office of War Information, and who has performed splendid service to the War Information Office and the public generally.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

A PLAY-BY-PLAY ACCOUNT

Few who lived through World War days can fail to have been impressed by the profound ignorance in which the home public was kept concerning the actual conditions on the battle fronts, or by the shock which came when the post-war flood of now-it-can-be-told books suddenly revealed something of the brutal truth. Mr. Palmer Hoyt, who heads the domestic branch of the Office of War Information, suggests that this shock was largely responsible for the mood of defeatist pacifism which filled the succeeding years, and on it he bases a plea that this war should not "be made to look like the pleasant, gallant, and chivalrous affair that it is not." Mr. Hoyt lays down an admirable general rule for war reporting: "If we but want to, we can produce a running, play-by-play story of the war, with pictures, with radio accounts, with newsreels, that will make each of us an eyewitness"—to the filth and horror, as well as to the adventure and heroism—without propagandizing in one sense or another

It is an admirable directive, and it is one, it seems to this newspaper, which the press, the magazines and book publishers, the newsreels and radio reporters, have tried to live up to and, on the whole, have fulfilled with remarkable success. We have a far grimmer and more detailed picture of life in a Solomon Island foxhole, on the Salerno beaches or in a Flying Fortress squadron than we had, during the last war, of life in the western front trenches. But if the picture is still incomplete, the fault does not lie primarily with the press, radio, and newsreels. For these find themselves laboring under two difficulties, both of which should be recognized.

One is ineradicable; it is the inveterate optimism and the inveterate want of imagination of a public which has never itself directly experienced war. A newspaper reporter, at imminent risk of his own life, can gather a vivid account of the sights and sounds of battle, of the casualties, the wreck, the terror; it still requires a sensitive and thoughtful mind to transmute his words into something of the actuality described. All the facts may be given—an ammunition ship blown up, six heavy bombers lost, a submarine missing—and many will still simply refuse to understand what those facts mean. This is a permanent factor in the problem of war reporting.

But the second difficulty need not be. That is the difficulty of a censorship which constantly tends not to release all the truth which can be told, but to manipulate opinion with the truths it does release. It is the tendency of high authority, both military and civilian, to be constantly feeling the public pulse, administering shots of optimistic fact when the pulse seems lowered or shots of gloom when it appears to be too high. There is no front-line correspondent who will not say that there is his greatest obstacle in the way of giving a straight play-by-play account of the actualities of war. Mr. Hoyt's remarks evidence his own desire to reduce the obstacle, and it is less now than it was in the earlier months of the war. But it is still more prominent than it should be.

Problems of American Business

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. MURDOCK. Mr. President, on October 7, 1943, Mr. H. A. Benning, of Ogden, Utah, president of the Amalgamated Sugar Co., and one of the West's most distinguished businessmen, wrote me quite at length concerning taxes, present problem confronting American business, and problems which will necessarily present themselves to American business in the post-war era. The statement of Mr. Benning is so timely and so

well thought out and presented that I feel it is worthy of inclusion in the CONGRESSIONAL RECORD. I feel that my colleagues may very profitably read it. I therefore ask that the letter referred to be included in the Appendix of today's RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE AMALGAMATED SUGAR CO.,
Ogden, Utah, October 7, 1943.

Hon. ABE MURDOCK,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MURDOCK: I hesitate to write you at this time from the viewpoint of an American businessman. However, I feel so strongly that there are important matters to which we have to turn our thinking, and for that reason am doing so. Victory, of course, is the primary object of all American thinking and activity. Victory should not be the end of our thinking, nor is it a single aim which excludes or should exclude all other considerations. We are told by our leaders and asked to believe that victory is essential to preservation of democracy as a way of life. Belief in this concept is the motive power behind all of our present activity. To "preserve" is to maintain something possessed as distinguished from the acquisition of something new and never before possessed.

We have possessed and enjoyed the advantages of democracy. We are not struggling to preserve that way of life against substitution of a new way of life dictated by our enemies. We have permitted the democratic processes to be temporarily in suspension in the interest of the war effort. This we have done willingly and in full good nature. But, to those of us who believe we are fighting for the preservation of democracy, it is plain that plans must now be afoot for the projection of democracy, saved by victory, into the post-war years.

Meantime the fight goes on and irresistibly the pressure of our armed might brings nearer the destruction of our enemies. There is ample credit for all. There is no need to belittle the efforts of any group to magnify the importance of another. Chief credit must go to the officers and men of the armed forces. But it is because those men are fortified by the superior productive power of our people as a whole that they and our allies will prove themselves invincible.

Without intending any slight to any other group in our society we press the claim that the American businessman is a prodigious contributor to the success of our production effort. Large and small, business has shown a magnificent resourcefulness and genius for teamwork. It is the genius and resourcefulness of American business which largely measures the difference in capacity to produce between ourselves and our enemies when both are put to the test of the long pull and the grand struggle.

That genius and resourcefulness is quite properly one of the main hopes for the continuation of the democratic way of life in the post-war years. Business must make the same contribution to the ways of peace that it has been and is doing to the production of the necessities of war. It will not fail in that duty but it must have and is entitled to some encouragement. It asks for an attitude which is not hostile and it requires sufficient freedom from unreasonable restraints and interference to permit the play of its great capacity.

Business, as we commonly accept the term in this country, embraces the production, transportation, and exchange of goods with all of the numerous activities dependent upon and necessary to that work. Business requires to be relieved of unwarranted and hurtful criticism. It is not an evil or predatory thing. It should not be dangled before the populace as something to be feared and hated. It should good-naturedly accept necessary and reasonable restraints, but it should not be continued in existence as a whipping boy for the satisfaction of the whims of any group.

It should, as soon as the war is over, be freed from the invasion of countless Government agencies bent upon the imposition of endless rules and regulations so involved and confusing, and oftentimes so complicated as to make compliance, on the one hand, and continued operation, on the other, almost impossible. To this end there should be an orderly but rapid closing out and dissolution of all but genuinely essential regulatory agencies and bureaus. The power of the bureau has grown so great as to seriously challenge the best intelligence and the highest fortitude of Congress, but Congress will not demand victory by the armed forces in the field and then on the home front succumb to the pressure of the ever multiplying bureaucrats.

This would relieve business of useless and hampering interference and at the same time separate hundreds of thousands of unecessary persons from the public pay roll. It would accomplish the break-down of a power great enough to challenge and ultimately dominate the will of Congress. It would, at the same time, result in a great cut in the cost of government and the corresponding relief to business in its effort to take the place of Government in the establishment and maintenance of pay rolls.

Business must continue to be the principal financial support of Government through the payment of taxes and at the same time it must be the source of those great pay rolls, without which there can be no happy and prosperous people and without which Government steps in and the democratic way of life expires. These demands upon business can be met only if business has the resources and earnings with which to meet them. Allow business only its operating expenses, siphoning off nearly all revenues in excess of expenses in the way of taxes, and shortly there will be neither pay rolls nor taxes.

Taxes are essential for the servicing and reduction of the public debt and the current cost of Government. A sound economy requires that both must be reduced. Reduction can be accomplished only through economy and taxation, but tax levies upon business must be tempered to the necessities of a thriving business. Business, made anemic by excessive taxes, will not in the long run yield sufficient revenues, no matter how severe the tax levies may be. Business must accumulate reserves to enable it to take up the slack resulting from the cessation of war activities. The change-over will require vast capital and the demands of the Government should harmonize with that necessity.

Any increase in the normal tax rate on business at this time will be detrimental to the post-war program, and it is questionable whether it will return a substantial increase in revenue in the long run. The present normal tax rate of 40 percent plus the excess profits levy allows no more than enough, in most instances, to pay a small return on legitimate capital investments.

The challenge to business to keep the wheels humming during the reconstruction period is already heard throughout the land. Business will take up the challenge and make the fight to the bitter end because it knows that the alternative is government enterprise in the place of private enterprise. Call government enterprise what you will—socialism, communism, or fascism—it is not democracy and it is democracy that business, including management and labor alike, is committed to preserve.

Business, like all other elements in our society, is and has been essentially honest and it should not in the interests of the total welfare longer suffer unwarranted and unfair criticism. It is unfortunate that in the minds of so many, groups of citizens are set off and classified one against the other as if their interests were fundamentally hostile, one to the other.

I am sure that you are mindful of the thoughts expressed herein and I am confident that you appreciate the seriousness of the situation our economy is confronted with. I am hopeful that Congress will accept its responsibility in connection therewith.

Yours very truly,
H. A. BENNING,
President.

Thomas Goode Jones, of Alabama

EXTENSION OF REMARKS
OF
HON. JOHN H. BANKHEAD, 2d
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, October 14 (legislative day of Tuesday, October 12), 1943

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Hon. John S. Tilley, before the joint session of the Senate and House of Alabama, on June 23, 1943, on the occasion of the presentation to the State of Alabama of a marble bust of Governor Thomas G. Jones, author of the first lawyer's code of ethics.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THOMAS GOODE JONES, 1844–1914

AN APPRECIATION

It is given only to the discriminating adequately to appraise memories and traditions. Whether in the life of individual or nation, today, as always, these intangible forces wield a largely unappreciated influence. A man's heritage inevitably contributes materially to make or to break him.

And so, that nation which forgets its past is likely to forfeit its future. That people which fails to honor its great will eventually have no great to honor. To glorify courage and chivalry is to provide an incentive for future courage and chivalry. More than this, to pay tribute to our noble dead is indirectly to exalt ourselves; it is our blood-strain, our stock which produced them. Their worth is indicative of the stamina of that stock. Their achievements offer the promise that, given the setting and the demand, the breadth of vision, the virility of body, mind and soul which was theirs will at intervals crop out in those who are flesh of their flesh, blood of their blood.

THE SOUTH CONTRIBUTES TOWERING PERSONALITIES

The earliest biblical records recite that "there were giants in those days." Fortunately for humanity, the race has rarely lacked towering personalities. In the production of these outstanding figures certain epochs, certain groups have excelled. It is your and my proud boast, a claim amply buttressed by the record that in days gone by our Southland contributed more than its quota of national immortals. Recall the names of the pilots of our ship of state in that stormy period which marked the growth of this people into a mighty Nation. The Declaration of Independence, the leadership of the armies of the Revolution, the Constitution of the United States, all were the work of patriots of southern blood. Glance at the story of the decades which in-

tervened between our birth as a Nation and the War between the States; 4 of the first 5, 9 of the first 12, 10 of the first 16 Presidents of the United States were sons of the South. True, with the close of hostilities in 1865, there were also closed to southern statesmen the doors of national eminence. True also, that even after the passing of three quarters of a century this embargo on southern leadership in national affairs still remains. Be this as it may, the blood-strain is still here, the virility, physical, mental, and spiritual persists, and, while the field of operation is circumscribed, the call of opportunity will hear a ready and powerful response. Undeniable proof of the accuracy of this observation is supplied by the occasion which brings us together today.

ELOQUENCE OF DEEDS WELL DONE

Once more to these historic halls we have come to review a notable record, to crown again with the laurel the brow of one of Alabama's giants; one who honored and was in turn honored by his people. It is no occasion for empty eulogy. In such an hour mere fine phrases and rhetorical flourishes appear inane and cheap; for there is an eloquence beside which the mere eloquence of words loses its charm, namely, the eloquence of deeds well done, of a record freighted with distinction, of a noble life grandly lived.

And, what a record it is.

AN ARISTOCRAT OF CULTURE AND REFINEMENT

For Thomas Goode Jones the start was auspicious. He was a child of the red old hills of Georgia. It was his high privilege to be born of parents springing from the soil, and saturated with the traditions, of old Virginia. It was an imposing heritage, one the impelling force of which was to color his entire life. Thus it was his to be that most fortunate of men, a man with a background, and that background one of the best. He was to prove worthy of it. Not for him to choose merely to bask in the reflected glory of his past, nor to drift with that too-numerous company of those who, coming from something, are nothing; from first to last he earned for himself the right to Kipling's characterization, "a first-class fighting man." Born to the true aristocracy, the aristocracy of culture and character, he took his place in the ranks of those who "walk with kings, nor lose the common touch." Panoplied by nature to march in front of the crowd, there blazed ever on his shield that legend, that irresistible driving force which in the final analysis differentiates the real from the spurious aristocracy, "Noblesse oblige."

THE SOLDIER

Soldier of the Southern Confederacy

Hardly had he emerged from childhood when the storm, long threatening, broke in fury. A Virginia Military Institute cadet, he answered a call to Richmond to serve as drillmaster of soldiers for the Confederate Army. Entering the service as a boy-private, by the end of the struggle sheer merit had elevated him to the rank of a boy major. At the age of 17, as a member of the Virginia Military Institute corps of cadets he was one of Jackson's "foot cavalry" in the Valley of Virginia. His no less than seven wounds received on the field of battle tell their own story of the grimness of the encounters as well as the dare-devil nature of his and his comrades' courage.

Rides at head of Gordon's immortals

Toward the end of the war there came a day when Lee was to make his desperate attempt to break through the line of steel which Grant had forged at Petersburg; it was left to a picked 300 men to charge the Federal defenses and at their head rode a 21-year-old major of the staff of Gen. John B. Gordon. The major's name was Thomas Goode Jones.

Bears Lee's flag of truce

On that fateful morning of April 9, 1865, with his battered fragment of an army worn to exhaustion, no option was left the Confederacy's great chieftain; it was imperative that he send a flag of truce to General Grant. The bearer of the flag was Major Jones.

Long years after the guns were hushed, while lecturing in Montgomery, General Gordon paused to recount various instances of his former young staff officer's gallantry in battle. In 1914, upon receipt of news of his friend's passing, Col. W. Gordon McCabe, of Virginia, himself a distinguished former Confederate officer, wrote Mrs. Jones: "In the Army of Northern Virginia he was our beau ideal of the daring and skillful young soldier who, in homely phrase, would go anywhere and do anything."

When Appomattox was history, the young veteran turned to Montgomery where for a brief period he engaged in farming and in editing the Daily Picayune. There was hardly an interval ere arrived the next call to conspicuous service.

THE STATESMAN

Leads manhood of State against reconstruction

After starving the Confederacy into submission, an ungenerous conqueror blackened history with a chapter the utter shame of which brings the crimson to the cheek even of fair-minded men of the North. The Radicals set out to crucify an Anglo-Saxon civilization, unquestionably the proudest this country had boasted. Highminded statesmen everywhere recoiled in horror from a deliberate plan to enfranchise, even to enthrone in power in the South, its former slaves, thousands of them only a generation removed from voodooism and savagery.

A crushed and bleeding people despairingly cried out for leaders with capacity to know what to do and courage to do it. Under prevailing conditions resistance appeared sheer recklessness; yet, defying the might of the conqueror, scorning the bayonets of Federal forces of occupation, the manhood of the South staged a daring revolution. Disarmed and seemingly helpless, their leaders disfranchised and humiliated, the old fighting spirit reasserted itself and with their bare hands, as it were, the former Confederate soldiers redeemed their civilization. History records no nobler contribution to the reenthronement of intelligence over ignorance, the resurrection of ideals of government for which strong men were ready to die.

In the forefront of the struggle, with the same nonchalant disregard of danger which had characterized his soldier days, marched the former young major of Gordon's staff. The debt of the present generation to the intrepid spirits who wagered their lives to rescue their section from the barbarities of reconstruction defies exaggeration.

Councilman, legislator, speaker of the house

This assignment ably executed, his fellow Montgomerians placed him in the city council, where for many years he faithfully guarded their interests. Then he heard another call. His county chose him as its representative in the Legislature of Alabama. One single fact exemplifies the ability and the character of his activities in this field; 2 years after he took his seat his fellow lawmakers placed him in the chair of speaker of the house of representatives.

Limitation of time precludes a review of his statesmanlike career as a lawyer of integrity and prominence. Suffice it to record that he became president of the Bar Association of Alabama and respondent to an appeal to cooperate with important committees of the American Bar Association.

Author of first lawyer's code of ethics

It should be added that his unique contribution to his profession of law, one which won for him national recognition, was his authorship of the Alabama Lawyer's Code of Ethics, the first adopted in the United States. The document has influenced similar codes in many other States and supplied the foundation stone for the canons adopted by the American Bar Association.

THE GOVERNOR

Fearless and kindly Governor

Steadily growing in stature and influence, fate had destined him for further and higher distinction. In 1890, at the age of 46, the people of his State chose him as their Governor. Giving up a lucrative law practice to receive only a modest salary, he held the office for two terms. The record of his administration speaks for itself and speaks with impressive force. He charted his course with the iron hand, the utter fearlessness, the kind heart which had ever made him a marked man. Stormy situations there were in plenty, crisis followed crisis to test his stamina but, with a fortitude that did not quail, he met and mastered each obstacle as it arose.

His part in framing Alabama's new constitution

Another problem was presently to raise its head. Over a long period conditions had developed which demanded a restatement of the organic law of the State. With scrupulous care Alabamans selected their most representative men and sent them to a constitutional convention. The Second Congressional District, of which his county was a part, designated the former Governor as a representative in the responsible task of rewriting the constitution. Of his participation a later occupant of the gubernatorial chair was to write: "He easily ranked as one of its leaders; many of the wisest provisions of that instrument were incorporated through his efforts and will ever remain an enduring monument to his profound knowledge of constitutional law."

THE JURIST

President of United States calls him to bench

More and more the Alabaman was becoming known beyond the limits of his State. Perhaps the crowning honor of a career of distinction came when President Theodore Roosevelt sent to the Senate of the United States for confirmation his nomination of Thomas Goode Jones as judge of the District Court of the United States, Northern and Middle Districts of Alabama.

At great financial sacrifice he entered upon this service. And here, again, the uncompromising integrity of the man of background, the mastery of law of a life-long student, the rugged virility of the soldier, the breadth of view of the statesman combined ideally to fit him for this exalted post. An irresistible tendency to mercy tempered an inflexible devotion to justice. The vicious felt the weight of a mailed fist; the unfortunate, the victims of cruel giants of circumstance, came to know that within that glove of steel there was a hand as gentle as the hand of a woman.

For the man on the bench was no stranger to the poignancy of sorrow; over and over again the iron hand entered his soul and so, nothing human was alien to him. Under his guidance, in consequence, the Federal court became a true temple of justice, a bulwark for the law-abiding, a terror to the law breaker. An associate on the Federal bench, Judge William I. Grubb, thus evaluated his service: "He was one of the ablest lawyers and judges, and one of the purest and most lovable men whom it has been my good fortune to be associated with in any of the relations of life."

Passes into the great silence

After a public career extending over a full half century, in his seventieth year, at the very pinnacle of his matured effectiveness, the end came. Administered to by a faithful companion, the former Georgena Caroline

Bird, Montgomery's "Miss Gena," who carried out to the end her betrothal vow "to love and cherish until death do us part," surrounded by a devoted family, the tired and spent veteran of a hundred battles, battles of peace and of war, passed into the great silence. The entire South knew and appreciated its loss.

Alabama mourns her dead son

The chief executive of Alabama ordered the flag at half mast, the capitol draped in mourning. His former battle comrades, his beloved Montgomery Greys, other State militia, the band of his old regiment, the civilian authorities of city, county, and State, together with a throng of his neighbors and friends assembled tenderly to lay him to rest in Oakwood. Governor Emmet O'Neal issued an official proclamation in which, among other tributes, he wrote:

"The memory of his strength of will, his dauntless courage, his devotion to high principle, his eminent service to the State both in war and in peace, will remain to all Alabamians not only a source of patriotic pride, but an enduring inspiration. * * *

"When the scroll which contains the names of the great men of Alabama is unrolled, there will be none that will occupy a higher or nobler place than Thomas Goode Jones. The one grand tendency of his noble life and character has been to elevate the whole tone of the public mind, and to inspire a deeper sense of patriotism and a loftier conception of the duties of citizenship."

His name shines with honor

Of what other Alabaman is it to be written that on as many and as varied fields of service, the battlefield of his country, the profession of law, the council of his city, the legislature of his State, the gubernatorial chair, the constitutional convention, the Federal judgeship, his name shone with like honor? And to how few men is it given to live a life so worthily demonstrating the truth of the words of the great Galilean, "He who would be greatest among you, he shall be the servant of all."

Your Excellency, Governor Sparks, Judge Walter Burgwyn Jones, a worthy son of a noble sire, himself with a long and distinguished record of nearly a quarter of a century as presiding judge of the fifteenth judicial circuit of Alabama, today performs a public service in giving to his State this portrait in marble of his revered father. The creation of Herbert Adams, of New York, a sculptor of national renown, an exquisite work of art in its own right, this classic likeness will preserve for this and for generations yet to come the handsome presence, the dignity and manliness of one who loved his State and gave a life of service to his people.

I count myself highly honored to be privileged this day to present to the State of Alabama this memorial to Thomas Goode Jones.

Resolutions of the Poweshiek (Iowa) County Farm Bureau

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a set of resolutions adopted by the Poweshiek County Farm Bureau, and in this connection, Mr. Speaker, I desire to call attention to the fact that Poweshiek County is in the heart of the richest agricultural region in the world, a section that is contributing enormously to the war effort in manpower, in the armed services, purchase of War bonds, and food production.

The resolutions follow:

RESOLUTIONS PASSED BY THE FARM BUREAU—COUNTY ORGANIZATION GOES ON RECORD ON IMPORTANT ISSUES

The Poweshiek County Farm Bureau unanimously adopted the report of the resolutions committee at the annual meeting Tuesday night. The resolutions report had been presented at the township meetings for discussion and some resolutions were removed and others added on suggestions from these meetings. The report of the committee was as follows:

Be it resolved by the Poweshiek County Farm Bureau:

1. That we reaffirm our allegiance to the United States, the Department of Agriculture, the Extension Service, and the Iowa and American Farm Bureau Federation, and we will cooperate with them to the fullest extent.

2. That we pledge our wholehearted support to the churches and other organizations in the county working for the betterment of the community.

3. That we extend our wholehearted support to the National Government in the prosecution of the war effort and in so doing we will bend every effort to meet production goals established by the Department of Agriculture.

DRAFT BOARD COMMENDED

4. That we commend the Poweshiek County draft board for its efforts to maintain an adequate supply of skilled agricultural labor and for its insistence that deferred farm workers remain on the farm and not be allowed to shift to industry.

5. That we recommend the farm-to-market roads be so chosen as to provide an all-weather outlet to the most people, rather than an attempt to make through connections or establish standard width and quality roads.

6. That we recommend to the State Farm Bureau federation as much decentralization and democracy within the organization as possible. The officials of the federation be commended for their constant efforts to suggest improvements within the State organization but that the demand for action on these suggestions come from the townships and counties and that pressure and salesmanship from the federation be applied sparingly, especially, in face of opposition even though minor or local in character.

7. That we recommend that adequate funds continue to be made available for administration of the A. A. A. program but that there be more local control. State committeemen should be elected and ideas for the program should originate on the township and county levels.

8. That the suggestion for forming a Farm Bureau life insurance company be even more thoroughly investigated and that it be launched only when it becomes apparent that it has the wholehearted support of the majority of the counties.

SIMPLIFY TAX RETURNS

9. That the Federal income tax laws be simplified.

10. That the recent restriction on school bus travel be modified at least until all nonessential bus and truck travel is eliminated.

11. That we pledge ourselves to all-out opposition to any group attempting to organize farmers and collect dues by the check-off system or by any method other than voluntary.

12. That we favor Federal laws subjecting the accounts of labor unions, and other organizations, to an audit and that officials make available to members an account of yearly receipts and disbursements.

OPPOSE SUBSIDIES

13. That we approve inflation control through forced savings, bond purchases, higher taxes, and increased production, but that we oppose subsidies as an ineffectual method and one unfair to farmers.

14. That we favor the drastic curtailment of red tape, bureaus, and overlapping agencies and that politics be completely divorced from all branches of the Department of Agriculture.

15. That we favor action to assure the farmer of an adequate supply of unmixed proteins, so that we will not be forced to buy materials that he does not need to pay excessive prices for his protein supply.

16. That the Poweshiek County Farm Bureau thoroughly discuss the peace, post-war problems and adjustments, and be prepared to assist the State and American federation in counseling with the United States Government in assuming its responsibility in world affairs.

Youth Control

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mount Vernon (Ohio) News:

YOUTH CONTROL

We have seen, in the past decade, the tentacles of the gigantic Federal octopus reach out from Washington into every nook and corner of this broad land and seize control of many functions which previously for generations had been under local management.

A man farms these days on a pattern laid down by Federal planners; he eats, to a great extent, that which Federal planners decree he may have; he pays rent under a Federal control system; his working hours, wages, and places of employment are pretty much what the Federal Government says they shall be.

By means of many devices, including subsidies, rationing, labor legislation, and decrees, the Federal Government has regimented the American public to a degree that would have been termed preposterous if suggested not more than a dozen years ago.

The war is responsible for some of the regimentation, of course. And some of it is necessary to put efficiency in the conduct of the war.

But there is plenty of evidence that the Washington planners are looking beyond the war, are scheming to continue the regimentation program beyond the day it is needed to marshal our resources and efforts behind the war program.

They are of the school of thought who believe that everything should be managed from Washington, who would tell the American people what to wear, what to eat, how to spend their leisure hours, what to do with their money, what to read, and when and where to work, and for how much.

They are the boys who believe that the American people are not intelligent enough to work out their own destiny; who believe that thinking for the American people must be done in Washington.

They pose as "liberals," although in fact they are advocates of the oldest form of government in history, the totalitarian, in which

the people have nothing to say in how they shall be governed.

Strenuous denials have been made in some sources that such plans are being formulated. But there is too much evidence to the contrary to make these denials convincing.

There is, for instance, the attempt of the Federal Government, through the Office of Civilian Defense, to organize the youth of the country into a junior citizens service corps.

Under this plan, the volunteer war activities of such organizations as the Y. M. C. A., Y. W. C. A., Boy Scouts, Girl Scouts would be combined, under Federal control. The members of these groups would be uniformed, would be pledged to devote a certain number of hours each week to war activities under Federal control.

There is nothing in the manual of the proposed Junior Citizens Service corps at which one could take offense. But, at the same time, there is no need, even under the present emergency, for a Federal youth movemen The organizations affected by the proposal have been operating efficiently in every war chore turned over to them.

And there is good reason, even if this were not the case, to be suspicious of any national youth movement, regardless of the guise under which it is proposed.

We have seen how the boys and girls of Germany, Italy, and Japan have been organized and regimented for de[illegible]ed reasons. We cannot take a chance on that happening here.

Regimentation is the mark of a totalitarian state. Regimentation of children is a device employed by dictators to train rising generations to submit supinely to the desires of a dictatorial government, to educate children to glorify war, to wean them away from ideals the human mind naturally establishes if education is permitted to proceed without political interference.

National control of children has been misused in so many instances that one is compelled to reach the conclusion it could happen here. Let's not provide the opportunity.

Address of Hon. D. Lane Powers to Graduating Class of Aviation Cadets at Napier Field

---

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. CANFIELD. Mr. Speaker, our distinguished colleague, Representative D. LANE POWERS, of New Jersey, who has done so much toward building up our air forces, was the principal speaker before the class of aviation cadets graduating at Napier Field, Ala., on October 1. At that time he had the happy privilege of pinning the wings on his son-in-law, Lt. Phillip McHugh.

Mr. POWERS' address follows:

Colonel Daniels, distinguished guests and members of the graduating class: It is a signal honor for me to be present today at the graduation of a class of officers of the United States Air Corps. It would be an honor to anyone to address you—but to me it is particularly gratifying to be invited here since I have closely identified myself with the efforts of our Nation to build a competent and effective air arm since my first year in Congress. Looking at you men today I see a fulfillment—a glorious fulfillment—of all of the hopes and all of the ideals which those of us had who first planned an improvement program for the Air Force.

May I, at the beginning, bring to you the personal greetings of my colleague, my friend, the distinguished Representative of the Congressional District in which Napier Field is situated. I refer to the Honorable HENRY B. STEAGALL, of Alabama, chairman of the Banking and Currency Committee of the House of Representatives and one of the most valuable legislators in this or any other Congress. Chairman STEAGALL asked me to present to you members of the graduating class his congratulations on the attainment of your wings and his best wishes for your success as officers of the Air Corps.

You men are on the threshhold of a new phase of active Army life. Until the present time you have been concerned largely with learning the elements of effective air warfare. From today on you men are going to put the training you have had into practice. Some of you will be flying transport planes, some will be teaching other eager young men the same lessons you have learned so faithfully and well. Others of you will go forth to the far-flung battle fronts of the world, there to come to deadly grips with the enemy—to meet him, to engage him and to conquer him!

The finest opportunities that this Nation can offer to any military man are your future. You are graduating as members of a splendid force. However, not only are you being honored today, but you are assuming a grave and serious obligation. You are now charged by the Army Air Forces to uphold the reputation of that branch of the Service, and to further the splendid record that Army airmen have made all over the world—whether as instructors, as transportation pilots, as individual fighters, or as members of bombing crews. That record has consistently been high and I am just as sure as the fact that today is Friday that you men will not only uphold that record but you will add to it new pages of honor and glory.

Your future duties will call upon you to cover almost every field of air activitiy in this war. You are the ones, as members of our fighting air force, who must spearhead the offensive that the latter part of this year and the early part of 1944 will bring. With you in your daily tasks go the interest of the public, the blessings of the country, and the approbation that everyone has for an individual who tackles a tough task and gets it done successfully.

The intensive military value of the Army Air Forces has been especially impressed upon the public and upon the high ranking military officers within the last few years. For that reason, as ranking minority member of the War Department Appropriations Committee, I can guarantee you and every man in the Service that the Congress of the United States will continue to appropriate every dollar, every thousand dollars, and every million dollars that are necessary to give you men the training you need and the fighting tools you require. Further, I can assure you that the Congress of the United States will not fail to record and reward exceptional merit shown by any flyer or any member of the Air Forces or any other military arm.

I have said that your presence here is a fulfillment of dreams that many of us had back in 1933 and 1934. It may interest you to know that in those days the War Department appropriation bill for all of the military needs each year would not amount to half a billion dollars. In those days many men who were imbued with the idea that this country could be supremely isolated, could blindly ignore the events in other parts of the world, would closely scrutinize each item requested in appropriations for the War Department. In those days my War Department Appropriations Committee would hold hearings lasting a month or more on a bill which would total two or three hundred millions of dollars. Then we would take that bill to the floor of the House, and for weeks Members of Congress who smugly believed that we needed no Army at all to protect this rich land of ours would do their best to cut the War Department appropriations to the very bone.

During that hectic period those of us who saw menace abroad, who believed that if you own a treasure like this land we live in, you should be equipped to protect that treasure from any or all predatory nations, agitated for a program of improvement for our Air Corps. Our efforts were hampered, ridiculed, and many times cursed by those who opposed our views. The only recognition and the only satisfaction that I require for those years we spent fighting the War Department's battle in Congress I have received today as I stand here and look at you men who are the embodiments of our aspirations. I realize, and the world realizes now, that we were right—but I can remember the time it took us 2 weeks to get the House of Representatives to approve $20,000,000 of dollars for airplane research and development so that, should war ever reach our shores, the men who took our ships aloft to meet and give battle to the enemy would be flying planes that could equal or surpass in maneuverability, in fire power, in speed, and in the same armor plating the planes of the enemy.

Fortunately, we won that fight for those 20 millions of dollars and at that time the first step was taken to make the planes of Army Air Force comparable to those flown by the flyers of the gangster nations.

Now the picture is different. Now when the Army Air Force or any other branch of the service requires sums of the taxpayers' money to use for the purpose of protecting the taxpayers' investments those appropriations are made by the Congress with little or no question. Where we used to spend 3 months on a $300,000,000 bill we new spend a week on a $72,000,000,000 bill. And I can assure you that, should it become a military necessity, the great war appropriation bill this year of $72,000,000,000 will be surpassed next year or the year beyond that or as long as may be required so that you men may be assured of the equipment needed to do your job.

During the 20 years prior to 1942 the United States Army trained 4,600 air cadets. Since the fiscal year of 1942 the United States Air Force has trained 44,000 cadets. Furthermore, the expansion of the air arm of the service is going to continue. I am not releasing any military secrets when I tell you now that plans have already been laid for 273 air groups, for the production of 99,740 planes, with reserve engines and spare parts for those planes.

We are ready for a decisive year just as you men are ready to play your parts in making this year decisive. This country is united as it has never been united before on the one thing—we must win this war, we must must win the war as quickly as possible and we must totally destroy the enemy so that future generations will not suffer as we are suffering, and will not be called upon to sacrifice as you men are sacrificing.

The Japs and the Germans have seen the handwriting on the wall. That writing is being done by bombs, by fighter planes. The Japs and the Germans who were so arrogant and so cocksure a year ago are now beginning to wonder if maybe they have not bitten off more than they can chew. Believe me, they have taken too big a bite, and I know you fellows are going to get a big thrill out

of doing your part to kick that bite right back in the enemy's teeth.

Statistics alone prove to us that the victory will be ours. We have not only superior plane production facilities, we have also superior planes—but more than that the United States Air Forces are turning out and putting up against the enemy the highest type fighting pilots in the world. Our airmen are second to none, and as each German plane goes down in flames over Europe and as each Japanese plane crumples in the Pacific—the Japs and Germans are learning the answer that you men are giving and that any freemen will always give to any nation which attempts to throttle their freedom.

In the days and weeks and months that are to come you men are going to play your part, and you are going to be a credit and an honor not only to the Air Corps but to your parents and sweethearts, to the instructors who trained you, and to the people of the United States. To you, in closing, may I say that there seems to be no more fitting phrase that can be said to any airman than was said at the recent graduation exercise by my friend and fellow fighter for the expansion of the Air Corps, Lt. Gen. Henry H. "Hap" Arnold. If you remember nothing more of what I have said today but this, lock it in your hearts and keep it with you always. General Arnold said to your fellow officers, "Your men will look to you for justice, your commanders for faithfulness. Let neither find you wanting."

The Senators and the Bases

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann entitled "The Senators and the Bases," which appeared in the Washington Post of Thursday, October 14, 1943:

THE SENATORS AND THE BASES

(By Walter Lippman)

Now that the traveling Senators have seen the great American overseas bases which have been constructed during the war, they would serve the country well if they made it their next business to understand what they have seen. A serious discussion of the future of these bases is long overdue, and it has been a serious fault of British and American diplomacy that this critical problem has been so long neglected.

For the bases raise in their most concrete and practical form the real issues of our foreign policy. If these issues are not dealt with wisely and soon, they will continue to be agitated foolishly and ignorantly.

The great fact about this war is that, so far as we are concerned, we have had to wage so much of the war from bases which are not in American territory. This is as true of the war in the Pacific as it is of the war against Germany. Yet for some strange reason, there are not a few of our people who cannot seem to remember that when we were driven out of our own bases at Wake, Guam, and in the Philippines, we fell back upon the British Commonwealth and Empire and upon the French Empire.

The bases which the Senators saw and are concerned about are situated in British and French territory across Africa, in India, in Australia, and New Zealand, and along the chain of islands which connect Hawaii with Australasia. When General MacArthur retreated from Bataan, he retreated into British territory in order to rebuild his forces for the reconquest of the Philippines. If, after Pearl Harbor, Britain had not also been at war with Japan and had not brought British territory into the war, we should be fighting Japan from the obviously inadequate bases in Hawaii and Alaska. General Channault and General Stilwell and all of China would be 10,000 miles beyond our reach if we could not get to them from British India.

So when we talk about the future of bases in the Pacific, let us not for an instant forget that we would not be able to fight Japan from those bases if Britain were not our ally. Yet there are Senators who seem to think that after this war it will be possible for us to keep the bases without continuing the British alliance. This is total nonsense, and the sooner they realize it, the better.

Some of them seem to have fixed their eyes upon the island stepping stones from Hawaii to Australia. But the most elementary knowledge of military strategy ought to make them realize that these islands are valuable only as the stepping stones to Australia and New Zealand. Without these British Nations as our allies at the other end, the stepping stones would be as useless and as unsafe as a bridge built way out across a big river, but never connected with the other shore.

Now no one, I suppose, is so idiotic as to think that we would desire, or that the Australians would cede to us, bases on the Australian Continent. That being the case, the little stepping stone islands are in themselves of practically no military value unless we have a firm military understanding with Australia. In other words, it is the alliance which makes the bases important. The bases without the alliance are a bridge hanging in mid-air.

The same principle holds in regard to bases in the Atlantic, Iceland, Greenland, Newfoundland, are vital to the defense of the North American Continent. But what real military value would they have if we could not count absolutely upon the support of the British Isles in the defense of these outposts? Without the substance and reality of an alliance with the sea and air power of Great Britain, Iceland is a military liability. With Britain, it is a vital link in the chain of our common security.

In the South Atlantic we now understand the importance to the whole Western Hemisphere of bases on the bulge of Brazil, in the Portuguese Islands, and in the French and British West African Empires. But since no one is lunatic enough to think that Brazil, Portugal, France, and Britain are going to be asked to cede these territories to the United States, it follows that the use of these bases must be based on a system of security alliances.

The Senators are quite right to be interested in the future of these bases. They are crucial to the defense and security of the whole Western Hemisphere. But they must see that the airfields and naval installations can be defended and maintained only with the wholehearted cooperation of the countries in which they are situated. What military value is there in an airfield in Africa unless Africa can be counted upon in case the airfield is threatened?

Without the equivalent of an alliance with the country, a "base" in that country is meaningless.

Now once the Senators have faced that fact, they are bound to see that there is no point in agitating themselves about any particular base. If we continue our alliances, we can obtain, by reciprocal agreement of course, not only the use of all the bases that could conceivably interest us, but also the support of powerful countries if ever we have to use these bases in a war.

It follows that to negotiate about the future of the bases is to negotiate about the bone and sinew of the alliances which are necessary to the security of the American republics. Without the necessary alliances, we might gouge out some real estate, but we could in no possible way obtain the certain use of the indispensable strategic bases. With the necessary alliances we shall have the bases in the way which gives them their maximum military value.

Columbus Day, 1943

EXTENSION OF REMARKS

OF

HON. LOUIS J. CAPOZZOLI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. CAPOZZOLI. Mr. Speaker, last Tuesday, October 12, was the four hundred and fifty-first anniversary of the discovery of America by that great Italian navigator, Christopher Columbus.

Any anniversary of the discovery of our land is cause for rejoicing, yet this particular one has brought with it events which by themselves have given great satisfaction to all Americans, and particularly those of Italian descent. No longer is Italy at war against us. In fact, she is now alongside of us, fighting our fight, so that our victory shall be her victory. At last reason and justice have prevailed, and we find the people of Italy where they should have been from the very beginning of this conflict.

Columbus Day brings to mind the great contributions made by the Italians to the growth and development of our country. Yes, America owes much to Italians. It was an Italian, John Cabot, who first explored its soil and an Italian, Amerigo Vespucci, who gave America its name.

Enrico Tonti, Alfonso Tonti, Paolo Busti helped found the great cities of Chicago, Detroit, and Buffalo.

Filippo Mazzei, close friend of Thomas Jefferson, penned the phrase "all men are by nature created free and independent" which was incorporated into our Declaration of Independence in the form "all men are created equal." Thus it was an Italian who put into words the principle which is the foundation of our democracy and the issue for which we fight today.

Col. Francesco Vigo, by the aid which he rendered to Gen. George Rogers Clark, made possible the expansion of the United States, west of the Mississippi and north of the Ohio. The United States Congress passed an act, the effect of which was to recognize the aid rendered by Colonel Vigo in this connection.

These are not the only Italians who have made great contributions to our country. We find them in the Revolution and the War of 1812, with Stephen Decatur when that great American naval hero destroyed the *Philadelphia* in the harbor of Tripoli—in the Civil War—in

the armies of both sides. Today it is reliably reported that about 800,000 Americans of Italian origin are serving in the armed forces of our country. Many have made the supreme sacrifice. Many have been given public recognition as heroes. Amongst them we find Sgt. John Basilone, who is the proud possessor of the Congressional Medal of Honor.

When one pauses to consider the contributions of the Italians of our country he can understand the reason for the pride of the Americans of Italian origin.

Last Tuesday, in New York City, a citizens' committee, of which Generoso Pope was chairman and Judge John J. Freschi master of ceremonies, made arrangements to properly observe the holiday. There was a parade on Fifth Avenue and the marchers included the Honorable Fiorello H. LaGuardia, mayor of the city of New York, representatives of the armed forces of our country, of the New York City police, fire, correction, sanitation, and other departments, of the post-office employees, and many others. There were about 500,000 cheering spectators along the line of march.

At Columbus Monument the marchers passed in review before His Excellency, Thomas E. Dewey, Governor of the State of New York, and other notables. Following the parade Governor Dewey, Mayor LaGuardia, Judge Freschi, and Mr. Pope delivered addresses commemorating the occasion.

Mr. Speaker, under leave to extend my remarks, I include the addresses delivered by Governor Dewey, Mayor LaGuardia, and Mr. Pope. Judge Freschi's address is not available to me at the moment, and I intend to seek permission to insert it into the RECORD at a later date.

ADDRESS OF GOVERNOR DEWEY

Great and stirring victories have come to the United Nations since we celebrated Columbus Day a year ago. Mussolini and his Fascist band who led the Italian people into a war they did not want, have been deposed. Once again the Italian people can fight on the side of freedom. Many of them already have taken up arms against those who would seek to destroy the dignity of mankind and to enslave freemen.

The war with Italy was not of our seeking. It was distressing and abhorrent to the American people, who have always been linked by ties of sentiment and culture with the Italians.

All of us in America believed from the very beginning that the war between Italy and America was not wished by the Italian people. Now, with the Fascists out of the way, we know that the people of Italy never wanted this war. From the day the United Nations' forces first invaded Sicily, it has been proved time and time again that we have never been at war with the Italian people.

There have been some bigoted people who have sought to question the loyalty of Americans whose forefathers came from Italy. Such people have lived to eat their words. In our first roll of air heroes in the Pacific, the list of Italian names was one of the longest of all. And now, it is no longer a military secret that in the gallant Fifth Army commanded by Lieutenant General Clark are several fighting units composed largely of Americans of Italian origin. The deeds of that Army will live long in both Italian and American history.

When the Fifth Army entered Naples our soldiers found a city which had been treated to a process we thought was forever obsolete in our civilized world. It had been sacked. The Germans left Naples as though it had been overrun not by an army of human beings but an army of savages. That destruction was not an act of military policy; it was not even an act of vengeance. It was nothing more or less than sheer barbarism

The Fifth United States Army found the people of Naples decimated, deliberately starved, and even deliberately deprived of drinking water. I am sure the Italian people will be found doing their part to bring justice to the Nazis for these crimes against them and their cities. I am confident the Italian people will, before long, rise in their wrath and join us with their full strength in wiping the Nazi curse from the face of Italy and Europe as well.

We have peculiar reason in this year 1943 to be celebrating one of our national anniversaries, Columbus Day, with feelings both happy and solemn. We are happy to pay our tribute to him as one of great vision at a time when others had no vision; as one who had great courage when others lacked courage; as one who believed, when others doubted, that he had found a new, rich home for humanity.

These past few years have again shown that this new world discovered by Columbus is truly the last refuge of freedom. For a brief, tense time, freedom hung in the balance. Its light was flickering low. It had flickered out, with few exceptions, everywhere in the world except in the land discovered by Christopher Columbus.

Since we last celebrated Columbus Day we have come measurably closer to ultimate victory. But that brings upon us a fresh responsibility. There is the responsibility of redoubling our every effort, of never permitting a moment of overconfidence. Every time we relax our effort here on the home front we prolong the war. We have the warning from every informed officer of our Military Establishment that the most serious and most dealy fighting lies ahead of our armed forces.

Let us celebrate this great day in our history by resolving that when we assemble here a year from today we shall each have done our share; our country shall be still further advanced on that difficult path to ultimate victory.

ADDRESS OF MAYOR LAGUARDIA

First I want to express our appreciation to his excellency, the Governor of New York State, for being with us today. I know that I speak for everyone present when I say that we are deeply honored to have him with us. I want to express, further, my appreciation for all those participating in today's celebration of Columbus Day.

And today every American of Italian descent has a really just cause to be proud. Never before in the history of our country has there been a greater or more complete and unanimous demonstration of loyalty and patriotism than the Italian citizens living in our country have shown. These Italian people have clearly demonstrated, since the very first days of the war, a loyalty and a patriotism that has been unsurpassed to America. Out of the hundreds of thousands of Italians living in this country, not a single subject of Italy has been a problem to the FBI. Never have the immigrants of Italian origin since they came to the United States, and since we have been at war with Italy, been a problem to America. And though we were at war with Italy there was at no time a question concerning their loyalty to the United States.

The people here in America know and understand that we found no fault with the people of Italy. They knew we were fighting a cruel government that had oppressed the Italian people for the past 20 years and had betrayed them in the last 3½ years.

Today we are celebrating one of the greatest events in the history of the world. Today perhaps for the first time in more than the hundreds of years since Columbus discovered America, we are finding that Columbus was not so wrong, after all, in his idea that he was discovering the shortest cut to Asia. And Japan can tell you that! Because, here in America, we have the short cut from the top of the world.

To this continent have come people from all parts of the world. When Columbus landed on these shores he opened a land that is the hope of the world. Columbus, when he landed, planted the flag of the Spanish dynasty. We supplanted that flag with our own. But Columbus also planted the cross of the Prince of Peace on the soil of this new continent—and that cross stands on high—a beaming light for all mankind. We're still holding that cross on high now We abide by the symbol of that cross.

This is the time to stand back of our Government, our armed forces, our Commander in Chief. The Army and Navy are in good hands. By working harder, by giving more, we will be able to destroy the Nazis and the Japs and what's left of the Fascisti. We still have a great way to go. But, in the words of a great statesman: "Our country, in her relations with foreign nations, may she ever be right, but our country, right or wrong!"

ADDRESS OF MR. POPE

I want to thank our Mayor for making it possible for us to march up Fifth Avenue, and from now on, I hope that we will march up Fifth Avenue every year.

My good friends, today we are celebrating the four hundred and fifty-first anniversary of the discovery of America. Little did Columbus think, 451 years ago, that today we would be fighting to give Italy back to the Italian people. The Allies are right now fighting alongside the Italians in driving the Nazis out of Italy.

Last year, if you will recall, we had only a few Gold Star Mothers among those of Italian origin. This year we have many, many more. To these mothers go our blessing. W are proud of them. And I want to say that their sons have not given up their lives in vain. Their boys are heroes, fighting for a great cause. We shall never forget their heroic and supreme sacrifices.

We of Italian origin are much happier this year as we assemble here today to celebrate Columbus Day. We see, on the other side, the Italians fighting side by side with the United Nations. We see the Italian flag flying alongside the flag of the United States. We see and read in the papers the heroic fight that is being made by the Allies to free the people of Italy and to give Italy back to its people.

This year, once again the Italian flag flies proudly alongside the American flag in Sicily and Naples and other parts of liberated Italy. And only this morning I read in the newspapers that the people of Naples had been given white bread for the first time in many years. Yes, the Italian people were betrayed and starved by Mussolini and his Fascists. Mussolini never gave the Italian people the things they needed because he had to take the money for himself and his gang. But we are liberating Italy today. Sicily is free. Naples is free. Tomorrow other areas of Italy will be free.

Today all of us are behind our Commander in Chief and the armed forces in the liberation of all the enslaved peoples of the world. These people are looking to America everywhere for help and guidance. And we, supporting our Government, our Army, our Navy,

and our Air Forces will give everything to preserve liberty and freedom for all people.

I want now to introduce to you the master of ceremonies who helped make possible the celebration of Columbus Day. Today 37 States legally celebrate Columbus Day. I hope that in the future all of the 48 United States will do the same. Here is Judge John J. Freschi.

Newsboys Doing Their Part

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. O'KONSKI. Mr. Speaker, we hear much these days in praise of movie stars and other groups regarding their contribution to the war effort in aiding the sale of bonds. I want to pay tribute today to a group which is seldom mentioned, yet who are doing so much. The newsboys in many towns today are the spark behind any bond drive. Their door to door canvassing deserves more praise than most of us are giving. In one of my towns in my district, for instance, the newsboys sold $11,000 worth of bonds and stamps in 1 day. This is a small town of less than 10,000 people and represents more than $1 for every man, woman and child in that little town.

To give an idea of what these newsboys are doing, I ask leave to insert an article from the Merrill Daily Herald of Merrill, Wis. This article illustrates the praise which is due the newsboys of America:

Surpassing the expectations of the most optimistic, Herald carriers, with the complete cooperation of the citizens of Merrill, rang the bell Saturday with a total sale of over $11,000 in War stamps and War bonds.

From early Saturday morning until the final stroke of 8 Saturday night, Herald carriers visited the homes of Merrill citizens and brought them the direct appeal to buy War stamps and bonds to help build the aircraft carrier, *Shangri-la*, that will carry the war to Tojo's door.

Many interesting incidents developed as a result of this final drive by the Herald patriotic young businessmen, who, in spite of the fact that the day was their big day of the week, gave up fishing trips and picnics to turn the heat on Tojo.

Clifford Muschinske, 600 Genesee Street, topped all carriers to win the $25 War bond offered by the Herald. Dale Fischer, 1812 River Street, placed second; Jack Storm, 608 West First Street, came third. Other prize winners were Ray Chattin, Peter Olson, Jerry Proft, Lloyd Hinz, Ernest Kleinschmidt, Milton Pophal, Tom Bessey, La Verne Bochardt, Ed Neunast, Elroy Phingsten, Bob Tewes, Le Roy Rusch, Charles Bartlett, Robert Gruetzmacher, Patric Borst, and Jack Angus.

All prizes will be awarded at the Herald office at 6:45 p. m. Tuesday night.

Louis Schroeder will be awarded a special prize for effort. After contacting every home on his newspaper route, and after selling each home stamps, Louis decided that somewhere, someone in the city would buy some. By sheer effort in contacting people in the east-side business district he sold more than $20 worth of the stamps, some in the most unusual circumstances.

Joe Boettcher, 1705 Main Street, will also be awarded a special prize for extra effort.

One boy, walking down the street was hailed by a prospective bond buyer, whom the boy had never seen before; both came to the Herald office and all arrangements for the bond were made. The boy, happy, naturally, at such good fortune could not quite understand how he was so lucky.

Herald carriers want to thank the people of Merrill for their complete cooperation in their 1-day War stamp selling blitz. People dug deep, and the final total shows as a credit to the boys and citizens of Merrill.

When that aircraft carrier, *Shangri-la*, slides down the ways, the people of Merrill, and the boys who deliver the news to their homes, can feel that they personally have a stake in the ship that will help trip the Axis.

Kangaroo Courts

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two editorials from the South St. Paul Daily Reporter, South St. Paul, Minn., entitled "Kangaroo Courts" and "A Dangerous Flaw":

KANGAROO COURTS

The American Bar Association intends to work in this session of Congress for the restoration to American citizens of their right to a fair trial in a court of law. "It is almost incredible," says the Chicago Tribune, "but it is true, that this fundamental right is being denied; that citizens are being convicted and punished by Federal administrative boards which disregard the time-tested rules of evidence and many of the other safeguards against arbitrary decisions, and that even the right of appeal to a court of justice has been so whittled away that little remains of it.

"As former Chief Justice Floyd Thompson of Illinois intimated the other day, the recent activities of the O. P. A.'s kangaroo courts have given a new impetus to the bar association's efforts. The association has long been aware of the evil, but the efforts to undo the work of the new dealers has been slow and difficult. Now that many more people than ever before are the victims of the New Deal's oppressive tactics, the hope of restoring to Americans their traditional rights under the constitution and the bill of rights is considerably brighter," continues the Tribune.

"The Tribune has long been enlisted in this fight against an intolerable abuse of power. We would have opposed the trend as dictatorial even if the denial of a fair trial to citizens had been of proved benefit to the people as a whole. In fact, of course, the arbitrary conduct of the administrative agencies has served only to harass and humiliate citizens, to foment class conflict, and to create in the minds of thousands of men and women a sense of distrust in their government. The bar association has no more important task to undertake than the correction of this great and growing evil."

A DANGEROUS FLAW

The decision of the American Bar Association to ask Congress for legislation to restore the citizen's right to his "day in court," when he has been subjected to restraint or penalty by an administrative bureau, is timely. We believe Congress will heed the request, says the Chicago Daily News.

The recent decision of the three-judge tribunal sitting at Springfield that it had no jurisdiction in a case involving an O. P. A. order interfering with a milk-hauling plan in operation in central Illinois, revealed that in the law under which O. P. A. was set up, Congress enacted a revolutionary measure, contravening the entire American doctrine of government. The petition for an injunction to restrain O. P. A. brought by former Attorney General John E. Cassidy, under the Horner administration, was of course entirely devoid of political color. The court said that it was a highly debatable question whether the 26 milk haulers seeking the injunction were violating any regulation of O. P. A., but the court was helpless because, in the words of Judge Charles G. Briggle, who read the court's unanimous opinion: "The district court is a product of Congress, which can grant or withdraw jurisdiction at will, and in this case they have seen fit to withdraw that jurisdiction. To my mind, it is a trend that is bad and not in conformity with the traditions of America."

That Congress can abolish all the lower Federal courts and can even take away from the United States Supreme Court all powers except the very limited ones exercised under the "original jurisdiction" provisions of the Constitution is a fact seldom recalled by Americans. It is a flaw in our scheme of government similar in its potential dangers to the "suspension clause" in the constitution fo the Weimar Republic, under which Hitler was able to install himself as dictator and do away with the republic with literal sanction of the law.

Only in the McArdle case after the Civil War, when Congress deliberately amended the original law defining the duties and powers of the United States Supreme Court in order to prevent that court from considering a petition for habeas corpus sued out by lawyers for a man imprisoned by the army, has Congress intervened in a lawsuit to decide the case by either abolishing the court or powers of the court. But what can be done once, can be done again.

Laws establishing the new Federal bureaus such as O. P. A., which prescribe that decisions of the boards shall be binding upon the courts, virtually abolish the courts in order to estop citizens from asserting their legal rights. If that isn't fascism, what is fascism? True, we have only a multitude of little duces instead of one big Caesar, but a horde of petty tyrants can be worse than a lone despot.

The Problem of the Feed Dealers

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. O'KONSKI. Mr. Speaker, I think it is high time for this House to take action to straighten out the feed mess. If we do not act quickly there are going to be a lot of hungry people here in America. The feed dealers and farmers of my district are expecting us to take action. If we fail them, there will be serious consequences. Our feed dealers must get feeds—they must get these feeds now. I hope this House will take action at once on their behalf.

Mr. Speaker, to give an idea of what my feed dealers and farmers are up against, I ask leave to insert the remarks of Paul Gebert, Jr., a spokesman for the Central Wisconsin Feed Dealers Association, delivered at Tomahawk, Wis., a short time ago:

Mr. Chairman, Honorable Congressman, and friends, we have called this series of district gatherings in Wisconsin as a means of letting the voters in each congressional district meet and get to know the man who represents them in Washington. We feel that here is an opportunity to talk to the man who is on the scene in Washington, to let him know what our problems are, to let him know what we here on the home front are attempting to do to help win the war.

We trust that after this meeting, Mr. Congressman, you will be able to go back to Washington on September 16 with a better knowledge as to how our particular segment of your district feels on matters of national importance.

We want to impress upon you that the feed industry of this Nation, and especially the feed industry of Wisconsin, is doing its loyal share in helping to produce the food which is so vital to victory. The feed industry has worked under handicaps—handicaps of material shortages, handicaps of red tape, of bureaucratic control, and a maze of dictatorial regulation.

Despite the many difficulties, the feed industry has kept on the move, has successfully rationed scarce materials without Government control or direction and here in Wisconsin, especially, has seen to it that none if any farm animals suffered from a lack of sufficient protein. What the next 12 months will bring is very doubtful.

From where we sit it looks as if one of the biggest troubles in this country today is a penchant among bureaucrats for making too many plans which sound good for the accomplishment of a political end, but have not actually been planned at all because many of these goals are impossible of being filled.

As an example, consider the expansion program for livestock. When the livestock and poultry expansion program was laid before the farmer several years ago he was told that this good old United States was to be the bread basket of the universe—we were going to feed the world.

Plans were made for vast increases in farm animals not only for meat but also for eggs, milk, cheese, butter, and other farm products. All the planners could see were the astronomical figures of increased farm animal production. They forgot there was another side to this big program—the matter of feed to keep these animals alive.

It was here that the theorists failed to put feed before food. They evidently did not know that in order to produce food there must be adequate feed. They didn't realize what a large part the feed industry was already playing. Had they looked at both sides of the picture they could have realized that with present feed supplies we could never undertake the task of feeding the world.

Let's look at the crop prospects today. Present indications are for a good harvest, but still short of 1943 goals and 10 percent below that of the record year of 1942. Corn, the basic feed crop, was forecast in the Government July crop report at 2,706,422,000 bushels, some 470,000,000 bushels less than the 1942 crop.

Ordinarily this would be a bumper crop, but not this year when we consider the number of animals on farms. Production prospects of four major feed crops (corn, oats, barley, and grain sorghums) are some 14 percent smaller than last year and livestock numbers 10 percent larger than a year ago and still increasing so you can see what a crisis in food looms on the horizon.

The Government's policy of keeping feed prices low in relation to livestock prices has made it worth while for farmers to increase livestock production. Let's take a look at the farm animal population in 1943 with 1939, the first year of the war.

In 1943 we have 27,000,000 milk cows compared to 24,600,000 in 1939. We have 51,200,000 other cattle as compared to 41,400,000 in 1939. This represents 12,200,000 more head of cattle in 1943 than in 1939.

In 1943 we are raising 78,700,000 hogs as compared with 50,000,000 in 1939, a net increase of 28,700,000 hogs. We have 55,100,000 sheep and lambs compared to 51,600,000 in 1939. In 1943 there are 540,100,000 chickens on farms as compared with 418,600,000 in 1939, a gain of over 100,000,000.

Even now a decline in feed supplies is anticipated during this next feeding season, yet the index curve of animals on farms continues to rise. The danger in this situation is that with feed still relatively cheap, farmers continue to feed at about the same scale as during the past 18 months. When the pinch comes in 6 or 10 months, there is the danger of disorderly liquidation of livestock, such as occurred in the drought year of 1934. This could be a calamity with the Nation at war.

With the situation looming more acute, we should stop here a moment for the sake of our Congressman and sound a warning. It is altogether natural that when there is a shortage of feed some disappointed feeders might go so far as to accuse the feed dealer or the feed manufacturer of hoarding. They may complain to their Congressmen. Such comments might also be picked up by uninformed radio and news commentators who do not have the complete picture. They might in turn place the blame on the feed dealer and manufacturer when in reality there just isn't enough feed to go around.

This would be so far from the truth it would be pathetic. It would be a lie greater than to say that Hitler was the greatest benefactor of mankind. Which is some lie. The truth is that feed manufacturers, dealers, farm cooperatives, and agricultural colleges are working with the United States Department of Agriculture and other departments in Washington on a voluntary program which is distributing feed carefully and fairly.

It is important that feed supplies be continued to be distributed through the local feed dealer. The local feed dealer is the logical and natural source of supply for the farmer. He is in contact with the farmer almost daily. He knows the feeding problems of his own locality and in practically all cases has worked out a careful allotment plan to distribute present supplies of feed.

The local dealer is working under carefully restricted margins fixed by the O. P. A. With a ceiling on prices there is no incentive for the feed dealer to hoard. It would be tragic now to disturb the feed rationing program which has been worked out voluntarily by the feed industry. To have the Government attempt to ration feed would only seriously aggravate the distribution of present supplies and cause maldistribution.

For a moment let's turn to one of the alphabetical agencies which the feed dealer has to deal with. Because it is closer to all of us, let us look at the O. P. A. I believe every man in this room tonight is in strictest accord with the idea behind O. P. A. Each of us knows that the fight against inflation is one of the greatest battles of the home front.

But all of us, while sympathizing with the need of price control, do have legitimate criticism to make of the methods. We realize O. P. A. has a big task, but we also feel that O. P. A. has not done its job well.

In the feed industry, as in other fields, O. P. A. instituted the March 1942 freeze as a stop-gap measure until actual specific dollars and cents ceilings could be put into effect. This was to be temporary, but in the case of many feeds it looks as if it might be permanent.

It is true that some feed products have been given specific ceilings, such as mill feeds, soybean, cottonseed, peanut and linseed meal, meat scraps, etc., but every feed which has a specific ceiling there are perhaps two frozen at March levels.

As a result, the ceilings on the feeds frozen at March levels are working a hardship on many dealers. Ceiling prices on such items as malt sprouts, brewers grains, corn gluten meal, distillers by-products, and others vary from locality to locality. Jobbers of such products all have different ceilings, some high and some low. Feed dealers in the State who happened to have low ceilings in March 1942, have been at a disadvantage. We know of cases where feed dealers have had to pay as much and more than their retail ceiling in order to even obtain some feed ingredients. How can they be expected to sell at a loss?

Perhaps the O. P. A. bungling which has received the most attention from the public has been the situation on corn. The ceiling of $1.07 Chicago on corn has proved way out of line in relation to the price of hogs. It has thrown the price structure on corn out of kilter.

Today a farmer in the Corn Belt can get $1.30 to $1.40 per bushel for his corn when he feeds it to hogs whereas he can probably realize about $1 a bushel when he sells it to the grain market. No one can blame the farmer for holding his corn under these conditions, but what about the feed man and the farmer in the corn deficient areas?

We cannot say whether the price of corn should go up or the price of hogs should come down. But we can see that here is another example of how theorists in attempting to enforce a managed economy have tried to throw an established law of agricultural economics, namely the corn-hog feed ratio, out of the window and have been thoroughly frustrated.

What has happened in the corn market? For the past 6 weeks little or no corn has moved to the feed dealer through established channels. Some dealers in desperation, we know, have been paying as high as $1.40 per bushel to black-market truckers. But can you very much blame the dealer—his farmers are clamoring for feed. Which is the greater evil, to pay the black-market prices or to let his customers' farm animals suffer from a lack of good feed? You can decide that.

In the main, feed dealers have tried to live up to O. P. A. ceilings and regulations. Mr. Congressman you may be interested in this letter which was received by our association from a good member. We quote him:

"What are we supposed to do on this corn situation? We need corn for mixed feeds. Most of the corn, as you know, is being sold on the black market and the honest dealers are being penalized. My mother always taught me to be honest, but I am beginning to have some doubts as to whether or not it pays. Then, too, on the corn sold on the black market, actually the trucker does not enter on his books the full amount received and the Government is thereby cheated out of some income tax. What do you think we should do?"

Here is the type of feed dealer who is common in this area. He wants to abide by O. P. A. regulations but still feels he has an obligation to his farmers. We will skip our answer to his letter.

Perhaps the greatest criticism of the O. P. A. is its failure to understand business problems. We know that the men who actually work in the feed and grain section understand our industry problems, but we also realize that their hands are tied.

Their actions are controlled from above, possibly by a theorist who has no practical

business experience, but in more cases by political expediency. If the feed and grain section were left to do this price job properly and with full authority we feel sure our troubles would be few.

Another criticism of O. P. A. is its unwholesome penchant for making all regulations so legal that they cannot be understood by the average person. Recently the O. P. A. embarked on a policy of simplifying its regulations. Their first step was to amend a section of an order establishing maximum prices on certain bakery products to read as follows:

"All commodities listed in Appendix A are those known to the trade as such, exception therefrom such thereof, if any, while subject to another regulation." Does that make good sense to you?

Representative FRED HARTLEY of New Jersey in a national radio address made this charge:

"I charge that in practically every branch of the O. P. A. there are those who are using the war effort as an excuse and a means of promoting a collectivist policy within our Government, and under the guise of emergency orders, rules, regulations and interpretions of one kind or another are attempting to bring about socialization of every phase of our national life. There are those who desire to remake the economic system that has made America the land of plenty and substitute therefor a jigsaw economy, which in theory looks good but in practice falls apart.

"This condition permeates the entire O. P. A. set-up. Why is it that every phase of American business, every industry, every producer, marketer, and retailer is in a constant state of confusion? It is because the rules and regulations by which O. P. A. governs every phase of our economic life are being formulated by ex-college professors and young lawyers, few of whom have ever had a day's experience in the business or industry in which they are dealing. Defenders of O. P. A. will say 'Oh, we have industrial committees of men with business training.' That is true but these committee are simply for the purpose of window dressing. These committees are totally without authority on policies."

O. P. A. is an agency which prescribes the daily living rules for all citizens. It is a bureau which can tell all business what it can sell and what it can charge. It exercises control over human life from the baby carriage to the hearse, including the gas to carry you to your grave in a casket with an O. P. A. price tag on it.

An example of this type of thinking in O. P. A. is contained in the words of former Administrator of O. P. A., J. K. Gailbraith. Mr. Gailbraith is quoted as saying:

"New Deal methods during the last 10 years have brought into existence a totally different science of economics and business controls which are understood and can be managed only by the very young men free of the out-of-date theories of old-time economists and the working habits that practical men have learned from experience."

Listen to that statement and then think. True, pressure from logical men finally forced Gailbraith to resign. But did that end his public career? Oh, no, let me quote from an announcement dated August 14, 1943, issued by the Office of War Information.

"E. R. Stettinius, Jr., Lend-Lease Administrator, today announced that J. Kenneth Gailbraith had joined the staff of the Lend-Lease Administration and had been designated by the State Department and the Lend-Lease Administration for a foreign assignment."

It looks as if there is a reward for inefficiency.

Recently Senator HARRY BYRD, of Virginia, wrote an article which appeared in American magazine. He has summed up very forcefully what the attitude of the average American is:

"The people of America are desperately anxious to win the war at the earliest possible time and to win so conclusively that the peace of the world will be guaranteed for generations to come. They are willing to make any and all sacrifices to accomplish this. They want every Member of Congress to vote for and support every measure for the early winning of the war and at the same time to vote against every measure that undermines our Constitution here at home.

"We must shake off the notion that any American who criticizes the war effort is a traitor. No man is a traitor who criticizes waste and bungling, who wants the war machine to function more effectively, who protests the obstinate and inept conduct of bureaucracy and who wants to live again in a democracy when the war ends. He actually is a patriot. Congress is moving now to attempt to restore government by the people and to unsnarl the tangle that is weakening civilian morale."

We trust that this is true. We hope that the boys now fighting this war can come back to a country which has preserved the ideals for which they are supposed to be fighting.

In closing we ask that our representatives do everything in their power to:

1. Clear up the muddle of the O. P. A.
2. Support all measures which will definitely help win the war.
3. Turn down all attempts at boondoggling.
4. Help preserve the right of free enterprise, the right to work hard and build a business you can call your own.
5. Keep the Government out of private business.
6. Recapture the legislative branch of the Government from the bureaus which have taken the law-making powers of Congress.

We ask that you as our Congressman feel free in asking us for advice on any problem related to our industry. We trust that we also can feel free in offering advice and constructive suggestions.

Winning the War and Winning the Peace

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by our former colleague, Hon. Martin F. Smith, of the State of Washington, before the Sons of Norway at their annual Leif Ericson Festival held in Valhalla Hall, Jersey City, N. J., on October 9, 1943:

Mr. Toastmaster, distinguished guests, and my fellow members of the Sons of Norway—it is my happy privilege and I esteem it an honor to be able to thus address you due to my being an honorary member of Lodge Nansen No. 410, Staten Island, N. Y., which saw fit to confer honorary membership upon Mrs. Smith and myself, a distinction which comes to few and of which we are very proud.

It is now over 5 years ago since I had the pleasure of addressing your Twenty-fifth Biennial Interstate Convention held at the Winfield Scott Hotel, Elizabeth, N. J., May 7, 1938. At that time I had the good fortune of meeting many of you from Jersey City, and in addition to the delegations from New Jersey, those from the States of New York, Connecticut, Pennsylvania, Rhode Island, and Maryland. It was a great and inspiring convention, from which my wife and I shall always have many happy memories. During the years which have followed we have enjoyed the hospitality and wonderful fellowship of our friends in Nansen Lodge on Staten Island and in Brooklyn on numerous occasions and, of course, the lodges out in the State of Washington, where we have our home. When we were home 3 years ago, in October 1940, I had the honor of presenting Hon. Carl J. Hambro, president of the Norwegian Parliament, to a large and enthusiastic joint public meeting of the Hoquiam and Aberdeen lodges on Grays Harbor, Wash. I also had the pleasure early this year of participating in the organization of our new Lodge, Washington No. 428, in Washington, D. C., in cooperation with Brother Iver Thorson, who, as you know, continues to be a real "go-getter" for the Sons of Norway.

I have mentioned these delightful contacts which we have had during the past 5 years as a sort of a report to show our good behavior and constant interest in our great fraternal organization, which I consider to be one of the finest and most useful of its kind in the United States.

Many important events affecting mankind have occured during this period, probably one of the most crucial periods in the history of the world. Since April 9, 1940, the date of the treacherous invason by the Germans, it has been a tragic period for Norway and the Norwegian people. Since December 7, 1941, when the Japs made their dastardly attack at Pearl Harbor, it has been a trying period for all of us in the United States. With our allies of the United Nations we are engaged in a titanic struggle with the common enemy and dealing him crushing blows on all battle fronts.

Some of our friends in Nansen Lodge, notably Judge Arne Foss and former President S. H. Gabrielson, have reminded me several times that in the speech which I delivered at their second-anniversary dinner-dance on January 15th, 1940, I pointed out the danger of an attack upon Norway by the unprincipled Nazi war lords because of its strategic importance and valuable natural resources. Three months later in the dead of night, without a word of warning, the cowardly blow was struck upon trusting, peace-loving, democratic Norway. The world will never forget the heroic resistance offered by the Norwegian people, although they were taken completely by surprise. They inflicted costly losses upon the Germans and the small Norwegian Navy won world-wide renown by destroying German ships with a combined tonnage greater than that of the entire Norwegian Navy. The Norwegian Royal House and the Government succeeded in leaving Oslo in time and it was found possible to save and remove the gold reserve in the capital's bank, thereby outwitting the invaders. More intensive, persistent, and systemized sabotage has been carried on against the army of occupation in Norway than in any other country and the Nazis have been compelled to maintain the largest number of troops there. The underground in Norway has been outstanding in activity and has made life miserable for Quisling and his followers.

As the time approaches for the opening of new battle fronts in Europe it is my opinion that one of the most effective will be through Norway, and that the treacherous and cowardly attack upon Norway in 1940 will soon be avenged.

There is a strong possibility that a powerful combined air, sea, and land offensive will be launched to drive the Nazis out of the fjords and coasts of northern Norway and ultimately out of the entire area of Norway. With northern Norway in our hands it would not be long until we would liberate the whole population and gain their active support in our actual invasion of Germany itself.

In our own country we have made a record of progress in production, turning out the weapons of war, training our vast forces, and

financing the cost of the war, of which every American has every reason to be proud. As Speaker SAM RAYBURN of the House of Representatives recently pointed out in a memorable speech, we have made a record of achievement which has never before been equalled by this or any other nation in the history of the world. Speaker RAYBURN stressed the fact, which must be gratifying to every mother and father, that our boys in the armed forces are today better fed, clothed, sheltered, equipped, and provided for in every respect than any other soldier in the world.

Here at home we are preserving inviolate the great human rights for which our men are fighting and dying on the battlefields of five continents. Attorney General Francis Biddle has eloquently expressed this truth in discussing the problems of national defense as they affect the civil rights of our citizens as well as our alien residents who are also shielded and protected by our Constitution. I quote from Mr. Biddle's report to Congress, bearing date January 3, 1942: "The caliber of Federal law enforcement is both a measure and a symbol of the democracy we seek to defend. Democratic strength inheres in the achievement of efficiency without the sacrifice of justice or the invasion of individual rights." This is a cogent restatement of the very essence of the axiomatic words of the Supreme Court in the celebrated Milligan case: "The Constitution of the United States is a law for rulers and people equally in peace and in war, and covers with the shield of its protection all classes of men, at all times, and under all circumstances." The Department of Justice has successfully and vigorously prosecuted all cases of sabotage, espionage, and sedition, without the violation of civil and constitutional rights, and we have avoided the hysteria, which occurred in World War No. I. This is a creditable achievement and worthy of the high ideals and best traditions of our great democracy.

As we increase the tempo of our victories upon the land, the sea, under the sea, and in the air, our Government is wisely planning for peace and the post-war world. Secretary of State Cordell Hull's recent declaration of American post-war policy is a great state document. He approaches the subject from the viewpoint of our own national interests but with a due regard and consideration for the interests of the other nations and peoples of the earth.

After complete victory, which will require "efforts even greater than those thus far made," Secretary Hull favors a peace to assure our national interests, which he defines as "national security and the fostering of the economic and social well-being of our people." He states that "our task and that of our associates is to utilize this common interest to create an effective system of international cooperation for the maintenance of peace. * * * Those—immediate post-war—needs will embrace the task of taking practical steps to create conditions in which there will be security for every nation; in which each nation will have enhanced opportunities to develop and progress in ways of its own choosing."

Our Commander in Chief, President Roosevelt, summed up in his Ottawa speech what is undoubtedly the goal which all the peoples of the United Nations, including our own, are striving to attain. President Roosevelt said: "Every one of the United Nations believes that only a real and lasting peace can justify the sacrifices we are making, and our unanimity gives us confidence in seeking that goal.

"There is longing in the air. It is not a longing to go back to what they call 'the good old days.' I have distinct reservations as to how good 'the good old days' were. I would rather believe that we can achieve new and better days.

"Absolute victory in this war will give greater opportunities for the world because the winning of the war in itself is proof—certainly proving to all of us that concerted action can accomplish things. Surely we can make strides toward a greater freedom from want than the world has yet enjoyed. Surely, by unanimous action in driving out the outlaws and keeping then under heel forever, we can attain a freedom from fear of violence.

"I am everlastingly angry only at those who assert vociferously that the 'four freedoms' and the Atlantic Charter are nonsence because they are unattainable. If those people had lived a century and a half ago they would have sneered and said that the Declaration of Independence was utter piffle. If they had lived near a thousand years ago they would have laughed uproariously at the ideals of Magna Carta. And, if they had lived several thousand years ago they would have derided Moses when he came from the mountain with the Ten Commandments.

"We concede that these great teachings are not perfectly lived up to today, but I would rather be a builder than a wrecker, hoping always that the structure of life is growing, not dying.

"May the destroyers who still persist in our midst decrease. They, like some of our enemies, have a long road to travel before they accept the ethics of humanity.

"Some day in the distant future, perhaps—but some day it is certain—all of them will remember with the Master, 'Thou shalt love thy neighbor as thyself.' "

These words of our Commander in Chief express the hopes and aspirations of a majority of the American people and of mankind everywhere, regardless of politics, class, race, color, or creed, and are worthy of our support.

My friends, we are celebrating tonight what is officially known as Leif Ericsson Day, in honor of the memory of the intrepid Viking and Norseman who in the year 1000 was the first white man to discover and set foot on American soil. In the centuries which have followed down to the present hour our countrymen and the descendants of those who first saw the light of day in the Scandinavian countries in northern Europe have made rich and lasting contributions to the cause of civilization and to the development and progress of the United States. Tonight upon a hundred battle fronts in every quarter of the globe, soldiers, sailors, marines, and aviators of Scandinavian ancestry are by their deeds of valor and heroism adding another glorious chapter to the history of our Nordic race. They are helping to hasten the day when Norway and the whole world will be free—freer than ever before to continue their forward march to a happier, brighter era bringing peace, plenty, and prosperity to all mankind everywhere.

Remarks by John J. Sparkman Before Federated Women's Clubs at Scranton, Pa., September 21, 1943, and at Lewisburg, Pa., September 22, 1943

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks:

The question of our participation in post-war collaboration among the nations of the world may be considered from many different angles. To the economist it may present itself as a matter of trade relations, control of raw materials, cost of production, competitive conditions generally in the economic world. To the geographer it may concern itself primarily with altered national lines. The politician may think of it in terms of changed governments and governmental policies. And on and on through many, many points of view. My purpose today is to discuss the matter from one angle only. I want to discuss it as a means of preventing war in the future, and I want to discuss it objectively and realistically.

There is no need of my describing the horrors of war nor the harmful effects of war on the average community in America. If I understand correctly the objectives of your organization, you are particularly interested in community life and in doing those things that will mean the most to community life throughout this country.

Under modern war conditions community life is strained almost to the breaking point. There is not a community in America that has not been thus affected by the present war. The young men able to meet the physical standards have been taken for the armed services. The girls have gone away to work for the Government, or have enlisted in the uniform services, or have gone into war plants. Many of these boys and girls, confronted with the prospect of being apart for a long time, have married only to find themselves almost immediately separated for the duration without an opportunity to establish homes. All of this produces an abnormal community life. And now we are confronted with the further problem of having fathers of small children taken into the armed services. The inevitable result will be increased family hardship, social dislocation, and juvenile delinquency.

Many other conditions could be mentioned to illustrate the way in which community life has been affected. The farmers have felt it strongly, the housewife feels it every time she goes to market. In our everyday life we feel the effects of war and throughout America those dreaded messages beginning "We regret to inform you" are coming with an increased frequency.

These conditions and many more arising from the war are producing a shock to community life and to civilization so great that we are forced to the conclusion that we cannot stand it once every generation. Total war today is so all-consuming that civilization itself must fail unless we can put an end to war. Twice within a generation we have seen our finest young men offered up and twice we have seen the very foundations of democracy dangerously shaken. War has become more deadly, more total in its demands, and more costly. With a national debt already staggering in its bigness but destined to keep growing until it reaches perhaps $300,000,000,000 or even $500,000,000,000, we are made to wonder what our economic future can be. Every community, every family, and indeed every person must continue to feel the effects of this war for years and years after its end. We all and our children and their children must pay the bill not only through high taxes but possibly through a lowered standard of living. With interest on the national debt alone more at the end of this war than our entire governmental cost of only a few years ago, we shall for a long time be faced with the ever-present threat of inflation. Look at it as we may, we must decide that war is a destroyer of all that is good in your community and mine and that unless we eliminate it as a means of settling disputes between nations it must eventually destroy us.

While a war is in progress it is easy to resolve solemnly that we shall put an end to war. In the last World War our boys marched away from home to the strains of martial music with the stirring words ringing in their ears that that war was to make the world safe for democracy and that it was

the war to end all wars. We all believed that then. Our idealism was high and our purpose was good. Many a boy died in Flanders Field thousands of miles away from home and mother and loved ones—died there in the arms of a buddy, looking into the face and smiling as he died—believing that his sacrifice was not in vain and that his was a war to end all wars. How disillusioned must be those who returned only to have their sons when scarcely grown taken again to feed the maw of war. Our boys today are dying on battle fields and in the air and on the sea all over the world with the same high resolve—that war shall be no more in the land. In 1918 John McCrae wrote:

In Flanders fields the poppies blow
Between the crosses, row on row,
That mark our place; and in the sky
The larks, still bravely singing, fly
Scarce heard among the guns below.

We are the Dead. Short days ago
We lived, felt dawn, saw sunset glow,
Loved and were loved, and now we lie
In Flanders fields.

Take up our quarrel with the foe:
To you from failing hands we throw
The torch; be yours to hold it high.
If ye break faith with us who die
We shall not sleep, though poppies grow
In Flanders fields.

The same can be said of those boys of ours who are fighting and dying today, a quarter century later. Whether or not we keep faith or break faith with them is going to be determined by you and me and millions like us in thousands of communities throughout America.

Much might be said about our failure to take our part in the settlement of world problems following the last World War. We all have our own ideas about things that happened or failed to happen then and our responsibility in doing or failing to do certain things. I think it profits us little to dwell on those matters now but I do believe that we may well ponder while we are still at war what we can do to prevent a recurrence of this blood bath a generation hence. Ultimate victory for our side is now certain although the day may yet be far away. The current successes with which our arms have met are the result of carefully laid plans and well executed work a year ago—yes, 2 years, and even 3 years ago. As we planned a long time ahead to win the war, we must be planning now perhaps just as far ahead of time to win the peace when this war shall end. The part this nation has played in making that victory possible cannot be successfully denied. Just as important a part is ours at the peace table.

We must not shirk or in any way fail that responsibility.

To my way of thinking there is only one way to stop wars. Armaments will not do it nor will disarmament agreements entered into by only a part of the nations of the world. We have seen both plans tried and we have seen both of them fail. Killing the persons responsible for making war alone will not do it. There is now much agitation and rightfully so for the trial and punishment of those responsible and indeed we have promised the world that they would be so dealt with. We promised the same during the last war but we saw the Kaiser take refuge in a neutral country and there live to a ripe old age and finally die after being pretty well restored to respectability among the peoples of the earth. And mere threats against the right of refuge in neutral nations will not insure a different outcome this time. Unenforceable sanctions against aggressor nations have been tried and marked with dismal failure. Military alliances or combinations will serve but to align powers for or against us and to establish again a system of balance of power—a balance which inevitably becomes so delicate that only a slight shift may plunge the world again into war. Then there is another consideration to such alliances, that is that we cannot foretell what may happen to a nation within a few years. Who, for example, at the end of the last war would have seen Italy as a world threat, or crushed Germany as a menace, or Japan as a power arrogant enough to attack the United States? Or who then could have guessed that France would be overrun and completely defeated in every sense of the word within a few months after entering a war 25 years later? There was a time when England with her Navy could virtually rule the world. But who thinks that she can do that today though powerful she may be? Such are the changes of time that military alliances will no longer suffice. Then, too, we must not lose sight of the fact that isolationism against which we must fight in this country is but well served and strengthened by a military alliance, for such nations as ally themselves isolate themselves from the rest of the world.

There is only one way to prevent wars in the future. That is through an agreement among the nations of the world governing their dealings one with another. There must be a tribunal for trying disputes and rendering decisions enforceable by an international force by whatever name it may be called.

I well know that the great objection that is raised against this proposal is that of the surrender of sovereignty. Sovereignty resides in the people and means the right of the people to do what they want to do. If the people want to protect themselves against future wars by giving up a part of their freedom of action they can do so without destroying or in any way adversely affecting sovereignty. The history of our own Nation and the actions of our people offer many examples. In the Republican statement of policy at Mackinac Island this question was raised by Governor Sewall of Maine who asked "whether the phrase 'cooperative organization' among sovereign nations leaves the door open for us to yield some measure of sovereignty at some other time, should circumstances warrant." Senator Vandenberg replied: "The answer is that sovereignty possesses within itself the right to part with any portion of it by its own act of self-determination. That, of course, is an act of sovereignty."

By many it is felt that we should now put the world on notice that we intend to take our rightful place in solving post-war problems. To that end resolutions have been introduced in both House of Congress. The two that have received most attention are the Fulbright resolution in the House of Representatives and the Ball-Burton-Hatch-Hill resolution in the Senate. The Fulbright resolution is a short and simple statement giving assurance to the other nations of the world that we will cooperate. Its wording is:

"*Resolved by the House of Representatives (the Senate concurring)*, That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world, and as favoring the participation by the United States therein, through its constitutional processes."

The substance of the Senate resolution is similar but in more detail. It, too, is brief and is as follows:

"*Resolved*, That the Senate advises that the United States take the initiative in calling meetings of representatives of the United Nations for the purpose of forming an organization of the United Nations with specific and limited authority—

1. To assist in coordinating and fully utilizing the military and economic resources of all member nations in the prosecution of the war against the Axis.

2. To establish temporary administrations for Axis-controlled areas of the world as these are occupied by United Nations forces, until such time as permanent governments can be established.

3. To administer relief and assistance in economic rehabilitation in territories of member nations needing such aid and in Axis territory occupied by United Nations forces.

4. To establish procedures and machinery for peaceful settlement of disputes and disagreements between nations.

5. To provide for the assembly and maintenance of a United Nations military force and to suppress by immediate use of such force any future attempt at military aggression by any nation.

That the Senate further advises that any establishment of such United Nations organization provide machinery for its modification, for the delegation of additional specific and limited functions to such organization, and for admission of other nations to membership, and that member nations should commit themselves to seek no territorial aggrandizement.

The exact wording is not so important. What is important is that the American people, through their elected representatives in both Houses of Congress express themselves now. Details can be worked out later.

Under our Constitution an agreement tentatively reached at the peace table must be confirmed back home before we are definitely committed. Some commitments can become effective upon approval by a simple majority of both Houses of Congress. If the commitment is by treaty it must be ratified by a two-third vote of the Senate. Even in that event the House of Representatives must concur in making appropriations to carry out our part of the program. For that reason it is imperative that both Houses take a definite stand in making it known to the world that we are this time going to do our part. I assume that the final agreement terminating this war and setting up peace machinery will be by a treaty. This means that our part can be determined by 32 Senators, the number required for a veto of any proposed treaty. This makes it all the more important that the thinking of our people be aroused as to this problem.

Contrary to the thinking of many of our people, isolationism did not die at Pearl Harbor on December 7, 1941. It was simply submerged for the time being. Many people even today fail or refuse to see that the position of isolationism, in the belief that a wide expanse of water on either side of us gives us security from all the rest of the world, is today absolutely untenable. The nearness of the nations of the world to each other today changes all of that. We are told that no point on the earth's surface is more than 60 hours from our own front yard. What goes on anywhere in the world today may be known everywhere in the world in an instant. We are indeed near each other, and with that nearness we have become more and more dependent one upon another. In the modern world isolationism is not possible, but we must continually preach its impossibility if our people are all going to realize it.

Our job—yours and mine—all over America is to build up sentiment in every community in favor of definite and emphatic action by our country to prevent war in the future. The Congress representing the people is the body to take that action. The Congress will respond to the thinking of the people back home and translate that thinking into action. And, after all, the thinking of the Nation is simply the composite thinking of the people of every community and of the individuals of those communities. Often we may think there is little that we as individuals can do. Let me, in conclusion, suggest in that con-

nection that we remember the words and thought of the Patriot's Pledge by Edward Everett Hale:

"I am only one
But I am one
I can't do everything
But I can do something
And what I can do
That I ought to do
And what I ought to do
By the grace of God I will do."

The Other Side

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 12, 1943

Mr. VOORHIS of California. Mr. Speaker, whenever I believed it needed it I have criticized the O. P. A. I will probably have occasion to do so in the future. I believe sincerely that certain modifications should be made in some of the practices governing our price-control program. I believe particularly that ceilings on farm products should never be below cost of production. And I am convinced that a good deal better job could be done in narrowing margins between producer and consumer. I have nevertheless been sincerely impressed by the following article entitled "In Defense of Price Control," which appeared in the New York Times on October 10, and I am asking unanimous consent to insert it in the RECORD.

I do this because I believe it will be beneficial to Members of Congress to read this article. I want especially to call attention to Mr. Wilcox's third numbered paragraph where, referring to the action of Congress, he states:

It is less excusable, however, that instead of clearly defining the policies that should govern the agency, they should strike blindly at its appropriation, its program, and its personnel.

The article follows:

IN DEFENSE OF PRICE CONTROL

(By Clair Wilcox, professor of economics, Swarthmore College, formerly of the Office of Price Administration)

In conformity with the terms of the above proviso, a number of men who had previously served as professor of economics in American colleges and universities have been removed from positions of responsibility in the Office of Price Administration. Such men, in the words of their critics, "should never be permitted to make decisions." They have never "carried a precinct or met a pay roll." Their thinking "takes wing and soars through the clouds unimpeded by facts and unhindered by actuality." They are "phony," "half baked," "crack pot," "bumptious," "obnoxious," and "dangerous." In short, they are "long-haired professors."

They are professors, to be sure. But they are not long-haired. One knows of many politicians and businessmen who are better thatched. The adjective, apparently is not to be taken literally. It serves merely to emphasize the noun. The noun, of course, is serious. If a man was ever a professor it is supposed to follow that he is devoid of common sense; that he takes action without considering the facts; that he doesn't know what he is doing. Call a man a professor and you dispose of his case. Call him a long-haired professor and you demolish him.

This is a curious fact in a country that has invested billions in higher education, that sends its sons and daughters to college by the hundreds of thousands every year. If professors cannot be trusted to fix the prices of soap and spinach, they should certainly be forbidden to teach the science of economics to American youth.

Of course, nobody really believes any of these things. The professors—and, with them, the lawyers and the businessmen—in Office of Price Administration have been condemned, not because they have been impractical, but because they have been altogether too practical to suit their critics; not because they have acted without considering the facts, but because they have insisted on considering all the facts; not because they haven't known what they were doing, but because they have had the courage to do it.

The attack on the professors is but an incident in the attack on price control. It was preceded by a half dozen congressional investigations in which the inquisitors, concentrating their attention almost exclusively on 3 or 4 among the more than 400 price ceilings issued by the Office of Price Administration, sought to prove that the Office had acted without consulting industry, had altered business practices, curtailed corporate profits, destroyed small firms, interfered with production, and attempted, illegally, to perform the American economy and subject it to bureaucratic control. It was accompanied by legislation which cut $22,000,000 from the appropriation for Office of Price Administration, hamstrung the agency by limiting its power to specify and identify the articles which it must price, and sought to prevent it from employing subsidies as a means of holding down the cost of living.

By now, nearly every man, woman and child in the United States must be convinced that price control has been a miserable failure. Nothing could be further from the truth. Prices have been held much more successfully in this war than in the last. Electrolytic copper, which sold in 1918 for 37 cents a pound, sells today for 12 cents. Steel plates, which sold then for $180 a ton, sell now for $42. The wholesale prices of most industrial products have not risen significantly since 1941. The rise in the wholesale price and cost-of-living indexes is attributable principally to the rise in prices of agricultural products and foodstuffs, and this rise is attributable, in turn, to limitations which Congress has imposed upon the O. P. A. The cost of living, which had risen moderately during each month since the outbreak of the war, advanced sharply during the spring of 1943, but in June the rise was checked and throughout the summer the index actually fell—a major triumph for price control. Comparison of the inflation which has occurred in this war with that experienced in the last one indicates that O. P. A. had saved the Government and the consumer more than $30,000,000,000 by the end of 1942 and will save them as much as $90,000,000,000 by the end of 1943.

And this has been accomplished without inflicting real hardship on any group in the community. The average weekly wake of American labor is 35 percent higher than it was before Pearl Harbor. The net income of the farmer is 75 percent higher. Corporate profits, after taxes, are 90 percent higher than those earned in 1939 and 15 percent higher than those earned in 1941. Business mortality has fallen to the lowest figure on record. The period of price control has witnessed the greatest expansion of production that this Nation, or any other Nation, has ever known.

Why, then, has O. P. A. been attacked? The reasons are numerous. A few of the more important may be mentioned:

1. Public price fixing is traditionally unpopular. American business has always resisted control. Every regulatory law enacted, every agency established by the Congress has been denounced in its turn. The O. P. A. differs in but one respect. It has simultaneously imposed its ceilings upon nearly every price charged by nearly every trade in the economy. And it has been required, at the same time, to ration the consumption of meat and gasoline and many other goods. No agency that must meddle with matters which so intimately affect the daily lives of 130,000,000 Americans can expect to escape abuse. Price control may influence people, but it does not win many friends.

2. The O. P. A. has inevitably made mistakes. It has undertaken a gigantic and unprecedented task. It has been forced, upon occasion, to act without adequate information. It has sought to carry the whole burden of stabilization unaided by necessary implementation—by heavier taxation, by commodity standardization, by industrial concentration, and by the allocation of manpower and materials. It has failed to sell its program, to answer its critics, or to report its achievements in words that everyone can understand.

3. The O. P. A. has been granted wide jurisdiction and great powers. It is in action on all fronts and at all times. Its rules and regulations run into 10 thick volumes, all of them having the effect of law, none of them written by the Congress itself, a few of them productive of well-organized protests from powerful groups. It is understandable, therefore, that Members of Congress should be concerned. It is less excusable, however, that instead of more clearly defining the policies that govern the agency, they should strike blindly at its appropriation, its program, and its personnel.

4. The O. P. A., if it is to fulfill the responsibility imposed upon it, must generally refuse to raise its ceilings. But requests for such action are never ending, and these requests are frequently reinforced by letters, by telegrams, and by calls from Members of Congress, some of them polite, some of them insistent, some of them threatening. During the past spring and summer, Members of the House and the Senate asked the Office to raise the prices of meat, fish, poultry, milk, eggs, sugar, flour, bread, potatoes, beets, cabbages, onions, beans, lettuce, tomatoes, spinach, strawberries, honey, corn, cottonseed, tobacco, whisky, wool, mohair, furs, yarns, hosiery, workclothes, outer garments, ice, coal, crude oil, fuel oil, gasoline, logs, pulpwood, lumber, used trucks, brooms, and coffins.

If ceilings were to be raised in response to Congressional pressures, it is obvious that price control would become a gigantic pork barrel, price regulations would be produced by political log-rolling, and the battle against inflation would be lost. But if these pressures are resisted, it is equally obvious that O. P. A. will be attacked.

5. The O. P. A. provides a convenient target for enemies of the administration. It is in the forefront of popular attention. It is widely disliked. An attack upon it can be used to discredit the party in power. And, unfortunately, there are Members of Congress who are not above playing politics with economic stability.

It was in this context that the professor proviso was written into the appropriation act. Taken on its merits, the proviso is contrary to sound public policy. It violates the authority granted to the President by the Constitution to appoint and remove officials

of the executive branch. It involves, in effect, a suspension of the civil-service law and regulations. It attacks the fundamental principle that talent shall find the door open to a career in the public service.

It is the apparent purpose of the proviso to insure that the directors of the price-control program shall be competent. But competence in price control is a product not only of special training and broad experience but also of impartiality and balanced judgment. Some persons recruited from business, industry, or commerce will possess these qualities; others will not. Similarly, some persons recruited outside such fields will possess these qualities, while others will not. The line which the Congress has drawn is not one which is calculated to separate the competent from the incompetent. It is, rather, one which is designed to restrict the Price Administrator to the employment of the members of one group, regardless of their competence, and forbid him to employ the members of any other group, no matter how competent they may be.

The proviso rests upon a fundamental misconception of the nature of price control. It was evidently the view of its sponsors that the business interest is the only interest which is affected by the establishment of maximum prices. This is not the case. Maximum prices affect consumers as well as producers, buyers as well as sellers. Price control affects every man, woman, and child in the community. It should be administered with strict impartiality. A requirement which makes the direction of price policy the exclusive prerogative of a single group can only be interpreted as a declaration of intention that it shall not be so administered. The Congress might, with equal logic, surrender the Interstate Commerce Commission to the railroads, the Federal Power Commission to the utilities, the Securities and Exchange Commission to the stock brokers, and the War Labor Board to the unions.

The enemies of price control are children playing heedlessly with high explosives. The inflationary forces generated by our wartime expenditures are so powerful that once released they might well double, triple, or quadruple the general level of prices. Such an upward spiral, while it might bring immediate gain to a few, would risk ultimate disaster for the many. It would handicap military procurement by inducing speculative withholding of supplies, by provoking strikes, and by destroying business stability. It would add billions to the cost of the war and the size of the national debt.

It would defraud the holders of bonds, the depositors in savings banks, the beneficiaries of insurance policies and social-security payments, the dependents of our soldiers and our sailors, in order to reward the speculator and enrich the profiteer. It would impose a heavy burden upon the millions who work for fixed salaries and low wages. It would subject private enterprise, democratic self-government, and individual liberty to the greater hazards of post-war deflation.

These dangers are real. But if they are to be averted, conservative Americans must make their voices heard on Capitol Hill. If the able business men who have replaced the professors in O. P. A. continue, as they have begun, to hold the line, they, too, will be subjected to attack. And if they are to succeed, they must be granted a large measure of popular support.

In the meantime, the professor proviso should be repealed. It establishes too dangerous a precedent; already demands are heard that it be extended to other agencies of government, to minor positions in the executive hierarchy, to advisory as well as administrative posts. It smacks too plainly of the anti-intellectualism that characterizes the Nazi creed. In a land that grants to every citizen an equal opportunity to serve his fellows, it has no proper place.

Why Not Save Ten and One-half Billions?

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. SPRINGER. Mr. Speaker, an article recently appeared in the Indianapolis Times, by way of an editorial, which refers to the plan of Secretary Morgenthau to raise an additional $10,500,000,000 in taxes, which, added to the already high tax schedules, will impose almost an unbearable burden upon the taxpayers of this Nation. The New Deal has been the most extravagant administration in the history of the world. The hard-earned money of the taxpayers has been wasted, and it has been foolishly spent. Many agencies of government should have been discontinued by the New Deal, which are useless and unnecessary in time of war, but those in power continue to retain them and spend the money for such maintenance. All of these things are nonessential. The people know the facts, and they know that their money is being wasted and frittered away.

In analyzing our frightful situation in this country, the people are becoming disheartened and disgusted because of the frightful waste and extravagance they are witnessing.

May I say that instead of trying to extract an additional ten and one-half billion dollars from the downtrodden taxpayers in our country, the President and his crowd should begin trying to save ten and one-half billion dollars from waste and foolish spending. If some good business judgment should be exercised by those in power, instead of permitting their greed for perpetuation in office and in power to control, and get down to the business of winning the war, we would go forward as a united people in a common cause. As we find ourselves today, we witness confusion and discontent on every hand. The people are rationed and regimented in many instances far beyond the necessities of the hour; their opportunities to earn money with which to aid in the war effort have been taken away in part, and now they face a huge increase in their taxes. Is there any excuse for those in power to continue to waste the people's money, and then demand a huge increase in taxes, which many people will be unable to pay? That policy is wholly inconsistent. The people are greatly shocked because of those very destructive policies.

Mr. Speaker, a very enlightening and illuminating editorial appeared in the Indianapolis Times, of Indianapolis, Ind., on the 7th day of October, 1943, which I ask by unanimous consent to be included in my remarks herein.

It is my hope that all Members of Congress may read the editorial, which is as follows:

WHY NOT SAVE TEN AND ONE-HALF BILLIONS?

Secretary Morgenthau thinks we should realize there is a war going on. So he proposes ten and one-half billion dollars in new taxes. The fact that we're already paying 10 times as much taxes as we were paying 3 or 4 years ago doesn't faze the Secretary.

But Mr. Morgenthau also knows that an election is coming on. And apparently he is bothered by the realization that the number of direct taxpayers likewise has multiplied. Forty million taxpayers in voting booths could do wrong. So one of Mr. Morgenthau's proposals is that 9,000,000 people be relieved of the obligation of contributing directly to the Government's support. That would be done by the process of merging the Victory tax into the income tax in such a way that 9,000,000 of the Victory taxpayers would not become income taxpayers. The $30,000,000 loss in revenue would be more than recovered by higher rates on those who remain in the tax-paying fold.

Mr. Morgenthau's politics, however, run counter to his own statistics of income. He admits that four-fifths of all the people's income is received by persons getting less than $5,000 a year. Yet, Mr. Morgenthau's new tax program, like all of his others—and he has proposed at least one a year since he became Treasury chief—is aimed primarily at the other one-fifth of the total income.

It is about time for Mr. Morgenthau, the politician, to confess to Mr. Morgenthau, the revenue searcher, that after he has extracted all the blood out of that one-fifth turnip, he will still have to get the bulk of revenue from the four-fifths. Of course, most of the revenue he's now getting comes from the four-fifths, by indirect taxation.

One thing this country learned and taught the world is the lesson of mass production. A lot of wise guys tried to get rich manufacturing automobiles to sell for $5,000 with a profit of $3,000 on each vehicle. They all went broke. But Henry Ford became a billionaire making cars to sell for a few hundred dollars, with only a few dollars profit on each model T or model A.

If Mr. Morgenthau were thinking in terms of taxes for revenue instead of taxes for politics, he would frame a tax program to fit the market—to get the revenue where the money is. If the treasury is ever to get itself in a sound position, it will have to do as Henry Ford did—fashion a product which the mass of people will buy and pay for and believe is giving them their money's worth.

"Their money's worth"—ah, there's the rub. All the taxes that Mr. Morgenthau has persuaded Congress to enact add up to only a little more than one-third as much as the Government is spending. And if he were to get this additional $10,000,000,000-plus, that would still be less than one-half the spending. Present indications are that if the war ends 2 years hence the public debt will be around three hundred billions. At 3 percent interest, that would mean an annual carrying charge of nine billions—as much as the whole wasteful pre-war New Deal cost per year.

The people who get $1,000, $2,000, $3,000, $4,000 a year—which means more than 95 percent of us—are not so dumb but that they know this will mean food out of the mouths and clothes off the backs of all of them and their children and their children's children.

So we ask: Why is it that the United States is spending more money on this war than all of our allies combined? Why is it we must continue to pay cost-plus-fixed-fee prices for things the Government buys, and time and a half for overtime labor? Why not buy the materials of war at what they are worth, rather than submit to this hijacking? And why this swarm of bureaucrats feasting on our taxes and our credit while you preach sacrifice?

The people are willing to pay for every gun, every bullet, every plane, bomb, tank, cargo vessel, and warship, and all the food needed to supply our troops, and to provide our share of the supplies to our allies. We're ready to spend any amount of money

actually needed to save a single life or to shorten the war 1 minute. But couldn't we shed a few parasites from the pay roll and get just a little common sense management? Couldn't we adjourn New Deal politics for the duration?

Wouldn't it be a good idea for the Committee on Ways and Means, considering the 10½ billions in new taxes, to resolve itself into a committee on ways and means of not wasting 10 billions?

Florida Barge Canal

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. HENDRICKS. Mr. Speaker, I have today introduced a bill providing funds for the immediate construction of the Florida barge canal authorized by Congress.

I am still of the opinion that the completion of our Intracoastal Waterway system from Texas to the North Atlantic by means of this barge channel across Florida is the only solution to our petroleum situation. The Administrator of the Petroleum Administration for War, Mr. Ickes, has given warning that we can look for no relief in gasoline and fuel-oil supplies with existing transportation facilities. The Chief of Engineers has stated that if this waterway were completed, it would be capable of transporting all the petroleum supplies needed in the East.

I think by this time no one in the United States is unaware of the fact that unless we get additional transport means, not only the East must continue to suffer, but all other sections of the country as well. Had the project been begun last year it would now be well under way toward completion and the situation could have been relieved during the coming winter. Reduction in gas rations in the Midwest would not have been necessary and increasing amounts of all petroleum supplies would have been available for the East.

The objections formerly raised against the project that we did not have tugs and barges available for hauling petroleum can no longer be raised. Congress has authorized and the proper agencies of government have constructed and are now placing in operation large fleets of barges and tugs, which are now operating on the intracoastal waterway. If this connecting channel across Florida were open these barges could move all the way from the Texas oil fields to Trenton, N. J. This would free a very large number of tank cars for distribution purposes in the Middle West and to points inland from the Atlantic seaboard. If it is economical of steel and manpower to barge petroleum along the Gulf intracoastal waterway from Jacksonville to New Jersey, it is sheer nonsense to say that it would be uneconomical to haul it all the way by water via this short connecting link across Florida.

The Government has already expended much more than the cost of the canal and consumed many times its requirements of steel and manpower in operating fleets of barges and tugboats for piecemeal transportation. I think it is time we look at the matter realistically. It is not yet too late to prevent an increasingly serious and possibly disastrous situation.

The hope which some have entertained that the accessibility of the Middle Eastern oil fields would relieve the drain upon our Atlantic seaboard has been definitely quenched by official announcement that any oil which may be available to the allies from these fields will move eastward to the Asiatic area. Our petroleum situation is decidedly worse than it was this time a year ago, and I trust that the realization of this will cause Congress to approve the immediate construction of this obviously necessary facility.

Stop This Tax

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oil City (Pa.) Derrick of October 12, 1943:

STOP THIS TAX

Unless Congress does something to stop it, wage earners will have another 1 percent deducted from their pay envelopes beginning January 1 next. This is the old-age benefit tax. Employer and employee now pay 1 percent each, a total of 2 percent. This will be increased to 2 percent on each, or a total of 4 percent.

Under the law the increase would become effective automatically. Senator VANDENBERG, of Michigan, sponsored amendments in 1941 and again in 1942, which held the rate to 1 percent for 1942 and 1943. Recently he raised the question of an increase in 1944 when he presented a letter from the Chairman of the Federal Social Security Board advocating the increase next year.

As of June 30, 1943, the old age and survivors' insurance trust fund held by the Secretary of the Treasury was well in excess of the maximum requirements stipulated in the law.

The existing law requires the board of trustees of the fund to report to Congress whenever the board is of the opinion "that during the ensuing 5 fiscal years the trust fund will exceed three times the highest annual expenditures anticipated during that 5-fiscal-year period."

The total assets of the trust fund as of June 30, 1943, were $4,268,000,000.

Disbursements during the fiscal year ending June 30, 1943, were $149,000,000 in benefits and $27,000,000 for administrative expenses, or a total of $176,000,000.

The chairman in his letter estimates a probable maximum expenditure of about $1,100,000,000 for the calendar year ending December 31, 1949.

With nearly $5,000,000,000 now in the fund there is no earthly reason why this tax should be doubled next year. Federal taxes are creating a distressing situation both for capital and labor. Despite the fact that the tax has not been increased for the past 2 years the old-age pension fund is growing by leaps and bounds.

With only 2½ months of the year left Congress should do something about saving the wage earner and his employer this additional tax next year.

Dairy Farm Subsidies

EXTENSION OF REMARKS

OF

HON. ROBERT L. RODGERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. RODGERS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which was published in the Erie (Pa.) Dispatch Herald, Sunday, October 10, 1943:

DAIRY FARM SUBSIDY

To the EDITOR:

With disregard for the wishes and opinions of those most immediately concerned an attempt is being made to force a subsidy on the dairy farmers in lieu of a living price for their products. As long as I can remember, farmers have been strongly opposed to subsidies. This is true of all farmers and not merely of certain farm groups, as some superficial thinkers would have us believe. Farmers have always had to stand on their own feet. If they failed to make their farms produce their living it was just too bad. They ceased to be farmers, and someone who could make good took over. The idea of paying taxes to bolster up the business of someone who could not make good was and is extremely distasteful.

This attitude also has a historical reason. The farmers came here as pioneers. They literally grubbed and hewed their farms out of the wilderness. They built the roads and furnished the land on which to build them. They also maintained them for the use of everyone with little or no outside help until their use by the increasing number of automobiles made the burden too great. They still pay road taxes in addition to the taxes common to everyone.

This job of making the country livable required an almost fantastic amount of hard labor, when we consider it was done with little or no machine y. When my great-grandparents came to Erie County, the only mechanical power was that furnished by the water wheel and treadmill. Farming was the main business and everyone worked at it. The cobbler, the cooper, the doctor, the carpenter, the minister, all did some farming. They at least kept a cow. Grain was sown by hand, cut with a cradle and tied into bundles without the use of twine. It was threshed with a flail and winnowed by tossing it into the air and letting the wind blow out the chaff Hay was cut with a scythe, the swaths spread out to dry and then raked up with a hand rake. Clothing was made by spinning the wool of the sheep raised by the farmer. Firewood and building material were cut from the trees and prepared for use with an ax. Boots and shoes (and coffins) were all custom made for each user. All was done by hand labor. Gradually machinery has increased or multiplied the amount of work that can be done by a man. The farmer has been able to feed more people and thus free labor for other uses. The hours of labor were first from sun to sun, then

12, 11, 10 (6 days a week), until we have the present standards.

To a greater extent than in most other occupations, farmers are the direct offspring of farmers of the past generations. There is relatively little flow of young people from cities to farms, while if it were not for the flow of young people from farms to cities, the urban population would rapidly dwindle.

The farmers feel that since they themselves have created their business with their own efforts, and since they are engaged in an occupation as vital to winning the war as any other war job, they should receive as much consideration as workers in other lines. What would a worker engaged in making guns or shells think if he were told that instead of receiving the going wage, he would be paid but a fraction of it and if not satisfied he could take a day off and go to the relief board with a record of his daily expenditures, and perhaps he would receive a relief check to help make up his deficits? This is exactly what the farmer is asked to do.

The subsidy idea is particularly atrocious and obnoxious now, because the country as a whole is in a period of prosperity; everyone who will work is working. Subsidies and relief payments are unthinkable in times of prosperity. The farmer knows that if he must have a subsidy at a time like this, he will be utterly ruined when a retrocession or depression occurs.

He also knows that if his business requires a subsidy now, the subsidy idea cannot be abandoned in more stringent times, and that he will be doomed to eternal slavery to those having the power to set the subsidy. He knows furthermore that if the farmer is ruined and degraded, eventually the Nation will suffer the same fate. The fall of the mighty Roman Empire was due in no small part to the subsidy idea. As a result of giving the people wheat taken as tribute from conquered countries the farmers' business was ruined and when tribute failed there was no food supply to fall back on.

The subsidy idea is based on a fallacy. Any sound economist will tell you it cannot accomplish its purpose (if it has an honest purpose) since it is proposed to apply it to necessities, consumed in like amounts by all of us, it follows that a slight reduction of the taxes most universally paid would accomplish the same monetary result without the staggering cost of carrying through the program. Apparently, then, it is put out merely as a sop to some of the higher labor leaders, who must have a talking point in order to maintain their prestige. If a subsidy must be given let it be applied directly to those who are attempting to force it down the throats of the farmers.

H. S. LOOP, *North East.*

Induction of Fathers

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. JARMAN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from a constituent:

EUTAW, ALA., *September 17, 1943.*

Congressman PETE JARMAN,

Washington, D. C.

DEAR PETE: As you know I am a married man with two children, a boy 8 and a girl 2. If the Army or Navy needs me to help win this war I am ready to go. I had much rather my wife and children be without a father than to live in a Nazi-ruled land.

If you want to vote for the immediate induction of fathers go to it; we are behind you in every effort to back the attack.

We had a bond sale here last night and raised $212,000, our quota was $194,000, so you see we went over the top in one night, and still going.

Respectfuly yours,

P. O. CLUB.

HORACE L. RICHARDSON.

Thought, Time, and Action Required

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. WEISS. Mr. Speaker, I would like to include in my remarks an article by Melvin Jones, Secretary General, Lions International, entitled "Thought, Time, and Action Required," which recently appeared in the Lions International Monthly Letter. It is a very timely article worthy of the attention of every Member of Congress and of the American people:

THOUGHT, TIME, AND ACTION REQUIRED

Lions have long led the way in activities. A Lions Club barely rounds out those things which pertain to its proper administration—arranging for a meeting place, setting a meeting date, and the organization of administrative committees—before it begins to lead the way in doing things for the good of its community and nation. This is amply borne out by records submitted by the clubs.

It is essential that Lions Clubs continue to do these things. The challenge to every member of a Lions Club, and more particularly to its leaders, is to lead in community accomplishments and in the maintenance of those things which go to make up the democratic way of life.

In time of war many of the privileges of peacetime undergo change. Some even have to be temporarily given up. As the war progresses and people learn to expect changes, they begin to make adjustments. But from time to time criticisms are heard concerning the changes which are made. This, perhaps, is a good sign. It may be taken as evidence that the normal ways of living are valued, and that people are looking to the time when those things which have been taken away may be restored to them. Lions, however, with their Lions code of ethics as a guide, are careful with their criticism and liberal with their praise. They do not criticize unless they can propose a better way in which to do the job.

Recently much criticisim has been voiced, principally in the United States, with the manner in which certain affairs of public interest have been handled. There has been some criticism of the Congress and some of bureaus and bureaucrats. Since this is a matter which concerns all Lions as well as all other citizens of the United States, we believe it should be closely examined.

Who are the bureaucrats, and where do they come from? They are our own people, and they come from among us. They are part of us. They are our relatives, our friends, our neighbors. Who are the Senators and Representatives, and where do they come from? They, too, are part of us. They come from among us. They are chosen by us, as are most of our leaders. Many bureau members are appointed because of recommendations we make. Indeed, some may be members of our own clubs. Why are they in Washington? They are there because of us. And why are they doing these things they have been chosen to do? It is because of us. We have unloaded—we back home have unloaded—on them, matters of various kinds. Now, every time the Government is asked to assume another responsibility or to participate in some business, or to put some money into it, an agency must be set up to see that the affairs are properly handled or that the money is properly spent, in line with the demands which are made.

It would seem from this that one of the vitally important things Lions can do to prove their leadership in business, professional and community life is to see to it that their own affairs of their community, city and State are so conducted that the Federal Government will not be asked to do special tasks for them, and thus obviate the necessity of the setting up of agencies or bureaus for that purpose.

Lions have led the way in many things, among them home gardening projects. As a result, the shelves in the basements of many of them are filled with canned goods—the fruits of their own initiative and labor. They have at least solved part of the rationing problem, and have taken care of their immediate and some of their future needs, while performing a great service to their Nation. They did not telegraph Washington requesting laws to compel them to do this. They did the job themselves.

One of the most important missions of the Lions is to lead, in every one of their communities, in doing those things which will help win the war in the shortest possible time; then to give much thought, time and action to the solution of post-war problems. We must assume, more and more, our own individual responsibilities, do more and more things for ourselves rather than to ask our government to do them for us. We must think for ourselves, act for ourselves, and help our neighbors to do the same, rather than have our government do more and more for everybody.

Mr. Morgenthau

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Marys (Pa.) Daily Press of October 11, 1943:

MR. MORGENTHAU

Secretary of the Treasury Henry Morgenthau is not much of a matter-of-fact being. He belongs to the class whose feet are firmly planted in midair most of the time.

He blandly thinks all he has to do is whistle and all sorts of tax money will come out of hiding beneath blankets, in sugar jars, and other devious places.

He does not, as his immediate superior, President Roosevelt, believe that "tax money comes from the sweat of everyone who works for a living."

Mr. Morgenthau never had to work for a living. His father before him was quite well

fixed and Henry never had to worry where his next meal was coming from.

He is decidedly unpopular with Congress and that dislike is extending throughout the country to everyone who has to pay through his nose in the way of higher taxation.

Mr. Morgenthau last month was the spearhead in the sale of $18,000,000,000 worth of War bonds, and no sooner had the public taken a sigh of relief, than Mr. Morgenthau appeared before Congress with a program calling for $10,000,000,000 in additional taxation.

He will be lucky to get half that amount, for the general public is beginning to ask questions. Is wondering why it is necessary for this country to spend more than all the other belligerent powers combined.

Is wondering why other nations are looking ahead to post-war business expansion while this Nation is seemingly asleep at the switch.

The public is starting the question of why it is necessary to have so many hundreds of thousands of persons employed by the Government, and suggests that economy there will save billions annually.

The man on the street wonders, too, why the Treasury does not come up with a sound plan of taxation, instead of offering a hit or miss plan.

Morgenthau once publicly admitted he knew little or nothing about money. The public says "amen."

Brig. Gen. Joseph E. Barzynski

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD regarding the splendid work done by Brig. Gen. Joseph E. Barzynski, commander of the United States Army Quartermaster Depot at Chicago, Ill., in his effort to secure cooperation of our American womanhood for service in the WAC's, WAVES, SPARS, and Marines, I include therein a letter he received from the Most Reverend Samuel A. Stritch, D. D., archbishop of Chicago, in support of his work:

CHICAGO, ILL., *July 14, 1943.*

Brig. Gen. JOSEPH E. BARZYNSKI,
Chicago, Ill.

MY DEAR GENERAL BARZYNSKI: I am told that you are intensely interested in securing the Nation-wide cooperation of our womanhood in our war effort. Whenever our freedoms have been attacked, and our men have had to go out to battle to defend and protect them, our women have done their full part on the home front, in the fields, and in the making of needed military supplies. It is true that in other wars woman's part was mainly to supply the men at home and to engage in providing war supplies. In our times, when war is mechanized and heavily drains our male population from the pursuits of production and commerce, the part of woman in our war effort has taken on a new phase. We find women in our factories producing the sinews of war, women in our hospitals nursing and tending our soldier sick, women everywhere a contribution can be made by woman without the sacrifice of her dignity and social vocation. Rightly we have shown our contempt for the degradation of womanhood in some countries, where they have been called to the roll of actual combatants, and have decreed that woman's contribution must be without the sacrifice of her dignity and prime social vocation. I am sure that your efforts will meet with success. Patriotism is fostered by woman in the home, and the mothers of our land who have given their boys to our armed services have made a mighty contribution. Our women will answer the call of their country and do all in our war effort which rightfully may be done by them.

Sincerely yours in Christ,

SAMUEL A. STRITCH,
Archbishop of Chicago.

The service of women in our armed forces is vital to our war conduct, and every effort that aids in recruiting and encouraging them, especially by the great churchmen of our country, should be known far and wide.

Brigadier General Barzynski before going to West Point was reared and educated in Chicago, and our city is very proud of the splendid work he is doing as Commander of the United States Army Quartermaster Depot, and in addition to and above his regular assigned duties, he has taken an intense interest in the cooperation of American women in our war effort and is doing a great work in recruiting them in the services.

Hog Ceiling Bogs Down

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Omaha (Nebr.) Daily Journal-Stockman.

Mr. Speaker, the ceiling price established for live hogs has been a mistake. Even the O. P. A. inspectors out in the field realize it but they have no authority to correct mistakes of the all-wise bureaucrats in Washington. It is apparent that the inner kitchen cabinet consisting of Harry Hopkins, and others—those bureaucrats whose decisions are final—will not admit a mistake or correct an error.

The scale for ceiling prices that has been set up for live hogs will eliminate many of the small interior markets in Nebraska. It is destroying the freedom of the farmer to market his hogs. It will drive livestock to the large terminal markets. The differential in price between these markets has too wide a spread and thus the interior markets, which heretofore have met the terminal market prices, with a resulting gain to the small farmer, will now not even be able to meet the competition and stay in business. The ruling is arbitrary, unnecessary, and contrary to that provision of the Price Control Act which states definitely that no methods shall be attempted which will interfere with the regular established methods of doing business.

I am wondering, Mr. Speaker, if it is not the intent and purpose of this inner circle to destroy individual initiative and to bring everything from shoestrings to hair tonic under the rationing program. It is time this Congress undertook to perform a major operation on that part of the O. P. A. which is unnecessary. We might well pray that the operation produce some first-class funerals among those whose directives are stifling free enterprise and thus hindering the production of food.

The editorial follows:

HOG CEILING BOGS DOWN

That O. P. A. blundered in its hog ceiling edict was clearly demonstrated the first week. Even some of the O. P. A. boys admitted that, privately. Well, then, why isn't some move made to correct the mistake? Perhaps it is not as simple as that. Probably those apparently in charge actually haven't the authority. If a higher O. K. has to be secured, getting it may not be so easy. A certain pride of decision is involved. Backing down is a hard road for the bureaucrats. But the pork is getting scarcer and scarcer and Government requirements for Army and other needs go on and on. If this situation gets bad enough, and it looks as though it would, the hog ceilings will have to be revised, pride or no pride. What with ceilings on pork, it would appear that "discarded" would be a better word than "revised."

In a speech last week, Harry E. Reed, head of the War Meat Board, said, "The Board is not an action agency, and authority has not been delegated to the Board as a body." The Board simply meets, threshes out problems, and makes its recommendations—but no Government agency is under any obligation to pay any attention to those recommendations. There is only one thing certain about them—they go into a file. And that is just the trouble—no centralized authority. If the War Meat Board had real authority, it is a safe guess that there would be no hog ceiling, and further than that the cattle feeding business wouldn't be in the mess it is. But, no. Things are not done that way. The important decisions are left not to practical men with some knowledge of the livestock business but to theorists, who may know their slide rules but who never came close to slopping a hog.

Men who know the livestock and meat business intimately warned and warned of the impracticability of a ceiling on live animals, but the wisdom of practical men seems to have no weight in the administration of food affairs. To men wanting to do their patriotic best that is as discouraging as it is aggravating.

Real Independence for Philippines

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. STEFAN. Mr. Speaker, by leave granted I include in my remarks an article on Philippine independence written by Vincente Villamin, author, a Filipino lawyer and economist. Mr. Villamin opposed Philippine independence in the past, but now favors it because he argues that Japan's defeat will remove the Japanese menace and because America has

pledged economic aid to his country after the war:

The Philippines presently will have independence not once but twice. One independence is granted by Japan in Manila and the other by America in Washington. The Manila government, following the example of Japan-dominated Burma, may declare war against the United Nations, while the Washington government may declare war against the Axis. Thus the two Philippine governments may find themselves on opposite sides of the fighting line

The Philippines were taken over by America from Spain as the result of a war. Then they were taken over by Japan from America as the result of another war.

When America remained in the islands after defeating Spain the cry went up that she was embarking on overseas expansion and imperialism. But through her liberal policies the Philippine experiment has become a monument to her generosity for which the Filipinos showed their gratitude on the battlefield. Now Japan is inaugurating her own experiment and the same cry of expansionism and imperialism is heard. The two experiments differ. The Japanese starts at the top with independence, while the American began at the bottom by preparing the Filipinos for the responsibilities of independence.

NOT FREE UNDER JAPAN

Japan's announced good intentions toward the Filipinos are being expressed in all media of modern propaganda and by elaborate plans of development, reconstruction, fraternization, and collaboration If the Filipinos are hypnotized by the Japanese, the Manila government, even without declaring war, might yet embarrass America by simply telling her not to disturb the peace in the islands by keeping out and staying out. But the Washington government, which is the only legitimate Philippine government, can truthfully say that those Filipinos who "cooperate" with Japan are not free agents and that the Manila set-up is only a makeshift affair instituted by Japan during her temporary military occupation of the islands.

The issue will be finally decided by the winner in the war, which means it will be decided by America. After Japan's defeat the Philippine government in Washington will be reestablished in Manila with the aid of America.

The grant of independence in Washington is contained in Senate Joint Resolution 81, dated September 24, providing for the creation of a separate and self-governing Philippine nation not later than 30 days after its enactment. Among other things, this means that American-Philippine relations will be on a diplomatic basis, that warlike aid to the Philippines will be under the Lend-Lease Act, and that Filipinos will be foreigners here instead of American nationals owing allegiance to America and enjoying certain rights and privileges as such.

SUGGESTIONS MADE

The resolution is deficient in some vital particulars and the writer wired members of Congress the following suggestions: First, that independence be automatic on approval of the resolution because Japan might grant independence before America and thereby acquire a propaganda appeal and legalistic priority; second, that the status of Filipinos here be defined on a liberal basis; third, that the selection of the officials of the new Philippine republic after the present term expires be clarified to avoid a government by decree; fourth, that a preferential trade relation with America be specifically provided for in the resolution to free it from the effects of the most-favored-nation-clause principle in commercial treaties, and fifth, that the preamble to the resolution include a statement similar to President Roosevelt's declarations committing the American Government to aid in the reconstruction of the Philippines.

The question of the declaration of war against the Axis was raised by the writer for possible remedial or perfecting action in a telegram to the President of the Philippines, as follows: "It seems logical that . . . the first major sovereign act of the Philippine republic should be to declare war against the Axis before it can properly negotiate with America on the prosecution of the war in the Philippines as provided in Section 3, that is, if it has the plenary power to do so, considering that in a constitutional republican system the power to declare war resides in the legislative branch of which the Philippine republic in Washington has none. However, if and when the declaration of war is decided upon it should be made clear that it does not extend to the de facto Filipino government which Japan might set up in Manila.

PREPARING FILIPINOS

Under the Philippine constitution, which has provisions for both the Commonwealth and the republic, President Quezon and Vice President Osmena will act as constitutional officials of the republic until Nov. 15, 1943, when the former shall vacate the office and its powers and duties shall devolve on the latter, whose term runs to 1945. The constitution was drafted by a Filipino constitutional convention in Manila in 1935, adopted by the Filipino people in a special referendum and approved by the President of the United States. It is the cornerstone of the government and should be kept solidly and firmly in place.

The Philippine republic will have the Commonwealth's $215,000,000 on deposit in America and can command the immediate services of 125,000 Filipinos here and in Hawaii. The Manila government operates on a budget of about $15,000,000 with Japanese printed money which has no metallic backing nor a government pledge of redemption

One of the most effective aids to the rehabilitation of the Philippines is to create a corps of trained Filipinos here for service in the islands after the war. The Japanese are training Filipinos in their code and it is essential to have Filipinos trained in the American technique and philosophy of action.

The Filipinos have a grand opportunity to build a greater country after the present unpleasantness shall have passed away. With the removal of the Japanese military menace, the deindustrialization of Japan and the assistance of America, the country can proceed confidently to the diversification of farm production, a rational amount of industrialization and the expansion of social and economic activities. With 17,000,000 aroused people and vast national resources, the new Philippines should be able to rebuild quickly, reconstitute her policies definitely, and recapture the promise of yet greater progress.

How Our Bureaus Harass Business

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. O'KONSKI. Mr. Speaker, each day I receive complaints from business firms in my district regarding the "gestapo-like" and silly rules and regulations. With thousands on the pay roll who are not needed these bureaucrats try to earn their money by creating the impression that they are important and the impression that what they are doing is winning the war. The worst part of it is that there are so many that seemingly nobody in the bureaus knows where to get any information. Hence, there are scores of persons who harass a business firm by asking duplications of information.

They are a "gestapo" all by themselves seemingly bent on closing down all honest business in America. To give a clear picture of just what business is up against today, I ask leave to insert correspondence of Lyman Bretting of the Bretting Manufacturing Co., of Ashland, Wis. This correspondence points out what bureaucracy is doing to honest business.

And for what purpose does this go on? Merely to take materials from American businessmen and hand them over to some other country as the newspaper article at the end of these remarks points out. How long is this Congress going to stand for such gestapo tactics?

The correspondence follows:

C. G. BRETTING MANUFACTURING CO.,
Ashland, Wis., September 27, 1943.

Congressman A. O'KONSKI,
Washington, D. C.

DEAR SIR: We are enclosing a copy of a letter which we have just written to the Copper Recovery Corporation.

In all the years that we have been in business never have we been so antagonized by a lot of foolishness, and we thought that you might be interested in our bringing this to your attention.

Through so much red tape and foolishness which we encountered with the Copper Recovery Corporation we found it necessary to close down our foundry altogether and dispose of everything we had in the way of stock rather than be pestered to death with telegrams, letters, and reports.

We trust that this letter will prove of interest to you.

Yours very truly,

LYMAN BRETTING.

C. G. BRETTING MANUFACTURING CO.,
Ashland, Wis., September 27, 1943.

Mr. H. HIRSCHTHAL,
Unit Chief, Scrap Unit,
Copper Recovery Branch,
New York City.

DEAR SIR: In regard to your letters and telegrams which you have been sending to us, we are at a loss to understand just what it is all about.

We have been doing everything possible to help win this war, and as a conscientious taxpayer we certainly are disgusted with the manner in which you and your other chiefs have handled this copper situation. It certainly seems to us there must be some way in which all of you chiefs could get together and check over your files, where you will find that we have complied with all your requests up until the time you started asking for three and four duplications of information we had already furnished.

On April 22 we wrote you in detail and enclosed a copy of credit memorandum which we received from the Duluth Brass Works in payment of the brass and copper which we had in stock, other than the brass tubing and bronze bushings which we sent in to the Chase Brass Co. in accordance with instructions from your department.

We have no brass nor copper on hand as we have disposed of everything according to instructions as received from the Copper Recovery Corporation, and we feel that if you will simply check over your files you

will have the whole story. By so doing you might help the war effort and save some of the taxpayers' money instead of sending so many unnecessary telegrams and letters.

Yours very truly,

L. BRETTING.

C. G. BRETTING MANUFACTURING CO.,
Ashland, Wis., October 6, 1943.

Congressman A. O'KONSKI,
Washington, D. C.

DEAR SIR: We have received your letter and appreciate very much the attitude you have regarding the Copper Recovery Corporation. Of course, to us it is the most ridiculous thing that ever existed, and we sincerely hope that some draft law will be enacted whereby all these Government leeches can be put into the armed forces.

We are enclosing a copy of their last letter, together with a copy of our reply, as we think you might be interested in seeing what we are actually up against.

With kindest regards, we are,

Yours very truly,

L. BRETTING.

WAR PRODUCTION BOARD,
COPPER RECOVERY CORPORATION,
New York City.

C. G. BRETTING MANUFACTURING CO.,
Ashland, Wis.

GENTLEMEN: We have your letter of September 27, 1943, and the writer has made a thorough search of all the correspondence and has found a credit memorandum dated April 5, to the Duluth Brass Works, of Duluth, Minn., showing the disposition of the large amount of various scrap material.

We wish to take this opportunity to express to you our appreciation for your cooperation in the war effort and regret that the invoice in question did not come to the proper division for the deletion of the scrap inventory, since your letter dated April 22 should have been forwarded to the writer for his attention.

There is only one other question which will assist us in closing your case on this scrap material, and that refers to the authorization permitting the Duluth Brass Works to purchase such material. If, however, they have acted in the capacity of a scrap-metal dealer it is in order for them to have purchased all of your scrap inventory.

Will you kindly advise us further as to the above.

Yours very truly,

H. HIRSCHTHAL,
Unit Chief, Copper Recovery Branch,
Scrap Unit, Copper Division.

C. G. BRETTING MANUFACTURING CO.,
Ashland, Wis., October 6, 1943.

Mr. H. HIRSCHTHAL,
Unit Chief, Copper Recovery Branch,
New York City.

DEAR SIR: We are in receipt of your letter of September 29 and are both pleased and surprised to know that you have been able to check over our correspondence records and find everything in order except in the last paragraph of your letter.

We have been asked to answer a lot of foolish questions, but to us this one is without a doubt the most ridiculous request we have had as yet.

On June 20, 1943, we received a letter from the War Production Board, Copper Recovery Corporation, advising us to dispose of our scrap inventory to a scrap dealer, brass mill, or any other person who had specific authorization to purchase such material. We contacted the Duluth Brass Works in regard to disposing of our materials and they advised us that they had authority to purchase this scrap from us. We did not ask them for any special affidavits or go through any red tape in order to determine whether or not they were authorized to purchase it, but just as any other good American citizen would do we accepted their statement, as we thought that the object of the Copper Recovery Corporation was to see that all idle surplus amounts of scrap copper and copper alloy was put into use for essential purposes.

As we advised you many times exactly what our set-up is, we trust that this last explanation will close your records as far as we are concerned. Your Department has succeeded in seeing that our brass foundry has ceased to exist, and we trust that they have accomplished their purpose.

Yours very truly,

L. BRETTING.

[From the Washington Times-Herald of September 30, 1943]

LEND-LEASE OF NONWAR GOODS RAPPED

CHICAGO, ILL., September 29, 1943.—While America is being starved for supplies, huge orders are being requisitioned for lend-lease shipments to Russia for long-range, post-war use, Miss Vivien Kellems, Saugatuck, Conn., industrial management expert, charged today.

Miss Kellems, operator of a cable grip company at Saugatuck who was defeated by Representative CLARE BOOTHE LUCE in a congressional race last year, made the accusation before the Chicago Rotary Club.

CITES RUSSIAN ORDER

She declared the administration is violating the spirit of lend-lease by requisitioning vital materials for foreign countries that are not actually required to fight the war.

"Through J. W. Flatley, Chief, Contract and Purchase Branch, Treasury Department, Procurement Division," she charged, "9,842,000 feet of long-distance telephone cable, 4,264,000 feet of power cable, 52,000,000 pounds of bare copper, and huge quantities of other vital material have been ordered in this country for Russia."

OWN COMPANY REFUSED

"It comes," Miss Kellems added, "under the President's direct supervision—it is a must."

"These orders for Russia," she said, "are for long-range, post-war development."

Complaining that her own company has been turned down on priorities by the War Production Board, Miss Kellems said other American manufacturers cannot obtain vital materials for actual war work or for machinery.

Journal-American—Penicillin

EXTENSION OF REMARKS
OF
HON. WILLIAM B. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, October 11, 1943

Mr. BARRY. Mr. Speaker, much credit is due the Journal-American for bringing to the attention of Americans science's new miracle drug, penicillin. Through the efforts of the Journal-American last August this rare drug, which never before was released for civilian use, was obtained for 2-year-old Patricia Malone, who was stricken with a highly fatal type of blood poisoning. As a result of the publicity given the case of this brave child from Jackson Heights, N. Y., great public interest has been taken in this wonderful drug. It is hoped and expected that in a short time there will be enough penicillin for general civilian use.

The people of America owe a great debt to the Journal-American for the part it played in educating the public at large to the benefits of penicillin, the powerful germ killer.

American Losses by Sabotage

EXTENSION OF REMARKS
OF
HON. DANIEL K. HOCH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. HOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Christian Science Monitor of October 12, 1943:

AMERICAN LOSSES BY SABOTAGE—DOWN THE MIDDLE OF THE ROAD

(By Erwin D. Canham)

If, before Pearl Harbor, you had asked the average well-informed American if the United States would suffer materially from enemy sabotage within, if we got into the war, the answer would have been in the affirmative. Our diverse population, our vast continental area, and the astute, carefully prepared Nazi and Japanese intelligence staffs would have been cited. Indeed, official Americans were braced for sabotage worse than anything during World War No. 1.

And yet today, nearly 2 years after our entry into the war, J. Edgar Hoover, Director of the F. B. I., reports that thus far not a single sabotage crime on American soil could be traced to foreign origins. Our factories, our dams and bridges, our transportation systems, our other essential facilities, have operated undisturbed by the enemy's fire or explosion.

This remarkable state of affairs, I am told is due to the excellence of the F. B. I. and its brother organizations, which tracked down and smashed spy or saboteur rings even before Pearl Harbor, aided by national systems of registration and surveillance far better than during the last war. But however good the F. B. I. has been, this explanation is not fully satisfying. The Germans and Japanese are very shrewd and cunning. We had plenty of soft spots in our system. According to any calculation, we should have suffered losses by sabotage. Why didn't we?

The answer is that we did. We suffered severely from sabotage, and we are suffering more bitterly today than we did in the first onslaughts after Pearl Harbor. The sabotage against us is well organized, effective, and punishing. But it is not carried out with bomb and incendiary. It is mental sabotage, psychological or divisive warfare, and it is progressing exactly as planned beforehand in the strongholds of our enemy.

What are the evidences and effects of this sabotage? They are in the suspicions, confusions, and divisions in the Nation. They are the sorry fruit of seeds sown by Nazi propaganda. They are not necessarily the result of Nazi gold paid to a traitor, of a printing press bought, or a demagog bribed. It has not been necessary to do the job in that crude fashion. Instead, our Nazi and Japanese enemies have emitted lies into the world. They have sprayed forth falsehood, like poison gas. Some of it has clung.

There are powerful organs in the United States—newspapers and statesmen whose voices reach many millions daily—whose constantly repeated arguments are explicitly those of Berlin and Tokyo. I do not suggest

that these organs have been bribed or subsidized. That was not necessary. These organs have become the carriers of enemy falsehoods. The falsehoods are disseminated freely throughout our country. Our citizens are exposed to their contamination. And in many cases, their thinking is affected, their support of the war effort is weakened.

The result is less production in our vital arms plants—plants just as much a part of the war as the soldier at Salerno—less support of our war financing, less honor and honesty in upholding the standards of civic morality under domestic restrictions, less thinking about the needs of post-war planning. It adds up to a possible severe prolongation of the war, the tragic loss of American lives and resources, and actual danger not only to victory but to national survival itself.

Happily, these forces of sabotage probably cannot finally upset our hopes of military victory. But they could force us to lose the peace. By sowing suspicion and hate for our allies, Britain and Rusisa, they could pave the desperate road to a third world war.

There are men in Congress who have fought stubborn, shrewd, rear-guard actions against virtually all the essential proposals put forth for the conduct of the war by Gen. George C. Marshall and Admiral Ernest H. King, from Pearl Harbor to this day. This obstructionism has done harm. It has been sabotage. It has slowed up the war, delayed victory, sowed seeds for defeat in the peace.

There are big newspapers which have daily preached bitterness and hatred against our leaders and our allies. They have urged the immediate cessation of all war production, the withdrawal of our soldiers from some of their present battlefields. The purport of their argument, which they scarcely dare to put into words, is an early and separate peace by the United States.

Not many Americans have been fooled altogether by these attacks. But no sabotage is more effective than for a small percentage of production. And every delay, every confusion, every suspicion is a blow against us.

It is, I think, obvious that the enemy planned it this way. The absence of crude, physical sabotage is too significant. Herr Hitler and Dr. Goebbels counted on these very divisions from within. They boasted explicitly of it. They did not count in vain. And when will we wake up.

Safety in Congress

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Punxsutawney Spirit, Punxsutawney, Pa.:

SAFETY IN CONGRESS

Congressmen have recently enjoyed a long spell of getting first-hand information from the folks back home. They have found that their constituents are willing and anxious to help transfer the Nation's needs into realities—they have also found, if they have talked to Farmer Jones, Storekeeper Brown, and Manufacturer Smith, that in cases too numerous to mention these gentlemen are confused, discouraged, and restricted in their all-out production endeavors by endless and incomprehensible rules and demands of various Federal agencies with which they are confronted at every turn.

Our lawmakers have undoubtedly asked themselves: "Have our people reached a point where their every act, their every purchase, their every sale must be planned by some super bureau or bureaucrat in Washington? Is it not possible to get needed war legislation and regulation within the framework of our Government, and leave to the producer, the merchant, and the consumer some measure of self-regulation within prescribed limits? The people want to cooperate. Is it not possible to simplify the regulations under which they must operate? Are regulations which discourage production going to ward off scarcities and defeat inflation? Can subsidies ever replace prices sufficient to allow reasonable profits? Will the consumer benefit by constantly lessened supplies, as the result of restrictive policies which cut production?

"There must be a happy wage and price medium which we can help maintain to encourage the necessary functioning of American production and distribution in conjunction with wartime requirements of our armed forces and civilian population. As the duly elected Representatives of our people, we cannot shift our responsibilities to subordinates."

They Liked Not To Have God in Their Knowledge

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. KEOGH. Mr. Speaker, each year the Catholic Lawyers Guild of Brooklyn, N. Y., sponsors a traditional service known as the Mass of the Holy Ghost to mark the opening of the courts. It is an ancient tradition intending to strengthen those who are part of the administration of justice—judges, lawyers, and others. This year that service was held on September 23 and the preacher of the occasion was the distinguished educator and scholar, Joseph R. N. Maxwell, S. J., president of the College of the Holy Cross, Worcester, Mass.

I take the liberty of inserting the sermon delivered by him on that occasion. It is as follows:

Along the road that leads to ancient Athens, far removed from the lofty temples of the Acropolis and their throng of pagan deities, stands a very simple altar on which is engraved the inscription, "To the Unknown God." No statue, no flowers, no ornaments adorn this shrine. No one has ever paused before it to offer sacrifice. Lone and alone it stands, built to the honor of a god the Athenians did not know.

One day an unknown traveler stopped near this altar to rest. It was evident that he had journeyed far. His entire appearance made it clear to all that he was not a Greek. Silently and long he sat absorbed in the splendors of Athens. But as he gazed upon the magnificent panorama of that city he could not but recall all the religious errors of its people—all the moral laxity of the Athenians. Everywhere he saw manifestations of frivolity, immorality, corruption, unbridled sensuality, the degrading worship of idols. The streets, the houses, the temples were filled with sculptured lumps that in the minds of these Athenians represented their many gods. Sadly he thought of all this as he entered this god-filled but godless city. He moved into the crowded marketplace, and, mounting a platform he spoke to these people of the unknown God.

"Citizens of Athens," he said, "on my way into your city I noted the various statues of your idols, and I stopped before the altar inscribed to the unknown God. I am come to speak to you of this God whom you honor though you know Him not." With the fervid eloquence of a zealous soul this stranger, the great Saint Paul, spoke to this pagan people of the one true God. But Paul preached, you will remember, to the intelligentsia of Athens, and he received a very cold attention. The better class Athenians were a superlatively smart set, and they were notoriously eager for knowledge. Their usual greeting as they sauntered about the market place was, "What is new?" They were fond of any novelty, but Saint Paul was one novelty the Athenians did not welcome. He was too peremptory for their lounging, speculative minds. He did not speculate with them; he told them. He spoke to them of God, and of man who was created by God. He spoke of man's dependence on God, of his duty before God. He spoke of God's law, its origin, its binding force, its sanctions, but he spoke in vain. For Paul, in speaking to the Athenians, was addressing a people who were very smug in their own conceits.

They were bland skeptics, these Athenians, and in writing of them later Paul said: "They liked not to have God in their knowledge". In their lives and in their law they ignored the science, the knowledge of God, not merely for reasons of the head, but more especially for reasons of the heart. They were disaffected toward God. First He was ousted from their affection, and then He was ousted from their intellect. The thought of God and His law struck a somber note in their lives, and so they dismissed Him. They liked not to have God in their knowledge. And one day their speculative minds clashed with the might of the more practical Spartans. Might prevailed, and the lamp of freedom flickered and died out. Night settled upon Athens, and the glory of that fair city crumbled into dust. "Unless God build the house they labor in vain who would build it."

Centuries have passed and the pendulum of time has swung from the paganism of Athens to a modern neo-paganism.

Just a year or two ago the Boston Law Book Co., published a volume entitled, "My Philosophy of Law: Credos of Sixteen American Scholars". The book is a symposium in which these sixteen American philosophers of law express their views regarding the nature of law. All but one of these gentlemen seemed to agree that, in the explanation of law, there is no place for God. As far as the science of law is concerned "they liked not to have God in their knowledge".

In the neopaganism of today obstacles have been thrown across the path of those who would walk with dignity along the road that leads men back to God. An old philosophy with a new name stands like a giant colossus with one foot in ancient pagan Greece and the other foot in the new pagan Europe. It is the old philosophy of the absolute state. Its modern name is totalitarianism, and its name is its only novelty. It is a throw-back to another day when Caesar strode the stage, deifying the state he ruled upon the specious grounds of public policy, and calling for the complete annihilation of the human personality. To this public policy the state directs all its forces. It is the one thing necessary; it is the ultimate norm of truth; it is the final measure of right. Human life, its purpose, its dignity, its worth it puts in the scale with state utility. It evaluates the individual according to the manner in which he fits into the place

assigned to him by public policy, according as he conforms or fails to conform to the ideologies of the state. Might is substituted for reason, and law becomes organized lawlessness. The fire of human liberty is extinguished because man is conisdered as having no God-given rights; there are no God-given rights because there is no eternal law. Once again the old cry is raised: There is no God but Caesar. They like not, these frenzied builders of Babel, to have God in their knowledge.

Today throughout Europe bodies are broken, minds are bruised, liberties are strangled, and the land is offensive with the stench of physical and spiritual death. Another night is descending, and another ancient glory is eclipsed. A Christian culture is crushed into dust.

There is but one answer to any group of philosophers whether they are speculating about law, or government, or farming, or ships, and that answer is a very simple one.

During the past year I was working with a small group of educators for the purpose of restating the aims of a liberal education. Quite naturally the question of the place of religion came into our discussions and the president of your city college was asked: "How would you answer the question of the student who wished to know what is the end of man?" Promptly and simply the answer was given: "The end of man is God." In all its simplicity that is the answer to a host of difficulties. It is the answer to the 16 philosophers who would exclude God in their explanation of the law; it is the answer to those tyrants who would rule an absolute state; it is the answer to all social ills which are made of man.

It is certainly a very futile thing for man to discuss anything that is important to him as man until he has first determined the reason for his existence, the direction in which he is traveling, and the goal he is destined to reach. In that awful moment of creation when "God breathed and being blossomed in the barren wastes of chaos" man began his journey, and God gave him a law to show him the way, to direct him in his travels, to lead him to his goal. That law is called the natural law.

In simple language, this is merely man's participation in the eternal law of God, and its authority comes directly from God. It is not made of kings or cabinets, senates or congresses. Customs or policies, popular beliefs or fancies in no way influence it. It brooks no human sanction. It implies that we know with absolute certainty that we are the children of God, endowed with immortal souls, destined for eternal life, bound in conscience to pursue that destiny, and possessed of inalienable rights to enable us to do so. It implies that we know from our very nature that some things help while others hinder in attaining our goal. It implies that some actions are intrinsically right and that some are essentially wrong, and this regardless of the material consequences of these actions. It implies further that human laws and human governments are instituted among us, and administered by us, to safeguard our inalienable rights and to help us to attain with human dignity the divine destiny that is ours.

Surely there is no law without God. At the root of this neopagan decay there is godlessness and irreligion.

Opposed to the shriveled, frost-bitten ideologies of this neopagan cult is the wholesome philosophy of democracy. In the defense of this democracy our young men are at this moment giving their lives, and while they are doing this we know of 15 American philosophers of law who are hacking away at the foundations of the state, for in the explanation of the nature of the law they can find no place for God. What a travesty. Philosophies foreign to our democratic ideals are struggling for a foothold in the land of democracy, and there is danger that these godless mouthings may, if they are not stopped, shout down the voice of our democracy.

We speak much in this country of the personal dignity of man, but if I do not believe in God, to what avail is all my talk of the dignity of man? From where does man get this dignity? True, our Declaration of Independence tells us that all men are created equal and we speak much of this equality. But in what does it consist? Surely there is no question of an equality of mind or body, an equality of social position, but rather an equality of spirit that comes from the possession of an immortal soul which God has made in his own image and likeness Hence there is no question among us of race and creed, but rather a question of justice tempered, I trust, always with a genuine Christian charity.

We speak much of man's inalienable rights, quoting again from our Declaration of Independence. But without God how would man attain such rights? The mention of them in this document of our freedom does not confer these magic gifts upon us, nor did our Government create them. But our Government and any government has the serious obligation to recognize and respect these rights precisely because they are given to man by God.

God and His law are at the very foundation of democracy. If these foundations are destroyed or even tampered with, then democracy will cease to function, and the state will become absolute. If the state is absolute it can do no wrong, since it is responsible only to itself. It may make treaties today, and it may break them tomorrow. It may make promises today, and it may ignore them tomorrow. It may instruct its representatives to lie, and it may argue that, since this was done in the interest of the state, no fault is committed. In other words, since there is no place for God in its frame of reference, there is no place for morality.

And yet we know that, if we are to believe in democracy, we must first believe that there is a very exacting moral order. In a recent commencement speech one of our college presidents said: "If we are to believe in democracy we must first believe that there is a difference between truth and falsity, good and bad, right and wrong. Truth and goodness are objective standards, and political organization must be tested by conformity to the ideals of truth and goodness; for its basis is moral, and its end is the good for man. Only democracy has this basis. If we do not believe in this basis and this end, we do not believe in democracy. These are the principles for which we fight; these are the ideals by which we live."

Our battle against neo-pagan ideas is not confined to the theaters of Europe and Asia. Here in the land of democracy there are those who would laugh out of court the medieval notion that there is a natural law. To these fellow travelers the inalienable rights of man are so much metaphysical nonsense. The fact that anyone might feel bound in conscience to this or that line of action is quite ridiculous to men who look on morality merely as an expression of good taste. The word principles has gone out of their vocabularies, and it has been replaced by the modern shibboleth expediency. If a thing works, it is true; if it is convenient, it is justifiable; if it satisfies, it is right. Surely these philosophers are smug in their conceit.

As members of the legal profession you are trained to protect man's right in the interest of law and justice. To this task you have sworn your fealty. You respect the law because you reverence it in its origin. Man's rights you honor and defend as a gift from God. In the pursuit of your profession your course is clearly charted. It remains for you, in the face of organized opposition, to walk that way in the knowledge and love of God and man. There is no time for idle speculation. There is one fact that must be accepted. That fact is God.

In 1873, a member of the bench of the Supreme Court of the State of Wisconsin, speaking to the university law class, drew an excellent picture of the lawyer. He is a man who likes not only to have God in his knowledge, but who would bring him into his life that he might vitalize his profession. "This," he says, "is the true ambition of the lawyer: to obey God in the service of society; to fulfill his law in the order of society; to promote His order in the subordination of society to its own law adopted under His authority; to minister His justice by the nearest approach to it under the municipal law which human intelligence and conscience can accomplish."

As members of the bar, your responsibilities are as tremendous as your dignity is sublime. The alien philosophies which have devastated Europe are on the march in our own free land. Many years ago Emmanuel Kant separated the legal order from the moral order, and we know of 15 American philosophers who have rallied to his cause. These men and their doctrine rise up to challenge you, your love of country, your love of honor, your love of truth and justice, your love of God and man.

Bowed down with the humility that befits great men in high places, let your prayer rise to God that in the work of defending and administering His law He may be in your knowledge as a preceptor, in your hearts as a father, in your lives as a support and a defense.

The light of democracy is flaming white. With your hands in the hand of God hold it aloft forever.

Address of the Hon. Thomas A. Jenkins Before the Ohio Savings and Loan League on Monday, October 11, 1943, at Columbus, Ohio

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Mr. Chairman, it is good to see such a splendid representation of building and loan men here today. In times gone by it was my privilege to attend these State meetings quite regularly. I attended one meeting just after the bank and building and loan crashes in the country. I was very anxious then to see Ohio do something in a big way to relieve that situation. But the State of Ohio failed to furnish the leadership that was needed then. I think that if the present State building and loan department was operating at that time some building and loan companies might have been saved.

Before the crash Ohio was probably the best building and loan State in the Union. Of course, those were strange and stressful times, but somehow I think that the State of Ohio and the building and loan department could have managed that situation more successfully. The department closed some institutions that could have been saved by intelligent and courageous action.

I am glad that there is an air of hopefulness among you and that the building and loan business in Ohio is on the up-grade. I hope that Ohio may soon regain her position of leadership in this important and necessary business.

A building and loan company must borrow money and it must also lend money if it is to be successful and prosperous. Whether the building and loan business will again be able to establish itself as a great and necessary business in our country will depend upon whether free enterprise is to be again permitted to prosper in our land or whether we are to be a nation controlled by edicts and directives from bureaus and boards in Washington.

The building and loan business is one of the most typically American of our financial institutions. It is truly a business of and by the people. It will never prosper under a bureaucratic government. It was organized as a neighborhood financial institution where the people of the neighborhood could deposit their money to be loaned by their trusted neighbors and to their trusted neighbors. It was never intended to be a business operated by strangers or by loan sharks.

From the printed program you will see that I am expected to discuss with you two very unpopular subjects—debt and taxes. Some fellow misread the program and thought the subject was death and taxes, and he said to me, "They surely have selected an unhappy subject for you. They say that death and taxes are the only two calamities that are sure to overtake us." And I said to him: "I think taxes are worse than death because a person only dies once while he is scared to death all the time about his taxes."

While the national debt and our national taxes are obligations that cause much concern and worry, they are positive proof that our form of government is working and that we are having our important part in it. Probably the strongest and most important reservation of power contained in the Constitution is that reservation that kept the power of the purse in the hands of the people. This is the power that we, the people, must keep inviolate and uncontrolled by bureaucrats or by tyrants. The Constitution gives to Congress the full and undisputed right:

1. To borrow money, thereby incurring debts.

2. To levy taxes.

No Government agency but the Congress can incur debts. The Congress frequently delegates powers to the Executive and to the departments and it is occasionally grossly abused. Congress is at fault frequently by being too free in delegating its powers. But Congress has never surrendered its power to borrow money or to levy taxes or to control the purse strings of the Nation.

Therefore if we cherish this great power of the purse which was so positively vouchsafed to the people, we must assume the responsibility that goes with it. We must finance the Nation and pay its obligations. We owe the national debt. All of us owe all of it. And all of us must pay all of it. It was our constitutional privilege to incur it. And it is our constitutional and patriotic duty to pay it. The payment of it will be proof of our honor and our patriotism. It measures our loyalty to our country, of which we are so proud, and for which many are now giving up their lives.

There are only three methods by which we can discharge our national debt. Only one of these three is honorable. These are the methods:

1. By inflation of various kinds.

2. By repudiation.

3. By taxation.

The first two methods would not be honorable. They would not be in keeping with the traditions of our Republic and our Government then could not long endure.

Uncontrolled inflation could burn its course right through the fabric of our Government, and printing-press money would aggravate the conflagration. Devaluation by changing the gold content of the dollar would also increase the fire.

Repudiation of our honest debts would be so foreign to the very genius of our Republic that if we resorted to such a dishonorable course to discharge our just debts our once proud Republic would perish from the earth and be remembered only for the glory that once was hers.

Our only honest course is to pay our national debt by taxation.

Can we pay it? We can if we are worthy of those who planted the seeds of liberty in this new world; and of those who have kept the tree of liberty alive for these many generations. To do it we must be resolute. We must determine to save our country and its honor. To do this we must:

1. Determine to restore private enterprise. Those who provide the capital and the management, and those who provide the labor and manpower must then work as we have never done before.

2. Eliminate all unnecessary expense and waste in government and in private activities. Wilful waste of time and effort will inevitably bring woeful want.

3. Place on ourselves the greatest burden of taxation we can carry and without unduly straining our capacity to produce.

There is a powerful school of thought growing up in our country that holds contrary to the views that I have just expressed. They maintain that so long as we owe our national debt to ourselves we need not worry. They hold to the theory that the Government has borrowed this vast sum of money from the people and that it has spent the money by distributing it among the people, and that the people now have much of this same money which is represented by their savings accounts, and that the Government should take these savings through compulsory legislation and use them to carry on public works to give the people employment. Some of these are those who developed the new philosophy of government that was so laconically expressed in the words: "Tax and tax; spend and spend; elect and elect." In other words, they claim that private enterprise has failed and that private capital will never again venture itself into industry because there will be no incentive since the country has grown up and there are no new frontiers. They are at least opposed to the profit system and hold that the Government should guide all spending, and keep the money moving. Under such a system it would inevitably follow that the national debt would get greater and greater until it would burst under its own pressure. Panic and distrust would overtake us and some dictator would then assume control and then our great country would go the way of all dictatorships.

My friends, the situation is serious. Be not deceived. There are many in high places now openly advocating compulsory savings. Although as I understand it, Secretary Morgenthau is personally opposed to compulsory savings, yet in his statement before the Ways and Means Committee last Monday, he recommended post-war credits for a certain group of taxpayers. This recommendation, if carried out, will be the opening wedge for compulsory savings. If he were advocating legislation requiring every taxpayer to save a portion of his earnings and deposit them in his own name in a bank or building and loan association for his own future protection, that might have some merit, but not enough to warrant its acceptance. But the Treasury proposes that the taxpayer turn over his earnings to the Government to be returned to him after the war and under certain conditions. This will lead to Government control of savings which is socialistic and very dangerous. I indicated my opposition to this plan to Mr. Morgenthau when he proposed it to the Ways and Means Committee.

How great is our national debt? It is so great as to be beyond the comprehension of most of us. Let me trace its growth and you will see how like a snake it is stealthily threatening to smother us to death.

When the First World War broke out, we owed a National debt of only $1,000,000,000. At the end of that war, we owed $26,500,000,000. This was then considered a tremendous debt. From 1920 to 1930 we reduced that enormous debt by $1,000,000,000 per year. Congress passed 4 tax bills in that time and reduced the taxes each time, but collected more money after each reduction. In the last 10 years, Congress has passed 16 tax bills raising the taxes each time and paradoxically increasing the national debt every year. Why the difference? The difference is found in the fact that during the first 10 years referred to, private industry and individual effort were being encouraged. The people had confidence in the Government then and were not in constant fear. Under the confidence thus instilled the production of commodities was greatly increased. Wealth was increased and wages and income were also greatly increased. During the past 10 years, public spending apparently has been the accepted policy of the administration. For every year since 1933, the Government has operated on a deficit. Its expenditures exceeded the receipts. It went into the red four or five billions nearly every year. In 1940, the debt was 43 billions. The national debt now is 161 billions and it is increasing at the rate of about two hundred millions per day. We take in about one hundred million a day and spend about three hundred millions a day. There are some who stoutly maintain that a huge public debt is a national asset. I am old-fashioned and I think a nation's liabilities are measured by its debts. Take your choice.

Our national debt will be at least three hundred billion by the end of the war. When we paid a portion of the national debt off at the rate of $1,000,000,000 per year from 1920 to 1930 we thought our achievement was marvelous. If we can do as well with the prospective debt it will still take at least 300 years to liquidate it.

Let us contemplate what our fixed expenses will be when the war is over.

As I have stated, we will owe about $300,000,000,000. The interest on this amount will be at least six billion annually. We will still be required to maintain a big Army and a powerful Navy with heavy accompanying expense. The widows and dependents of our armed forces and wounded men will require attention. How heavy this will be might be best estimated by considering what the expenses were following other wars. I shall read a table for you:

	Normal expenditures before the war	Normal expenditures after war
War of 1812	$9,000,000	$19,000,000
Mexican War	26,000,000	55,000,000
Civil War	60,000,000	322,000,000
First World War	696,000,000	3,914,000,000
Second World War	6,700,000,000	Probably 30,000,000,000

Secretary Morgenthau told us when he appeared before our Ways and Means Committee last Monday that our national income would be 157 billion for the fiscal year ending June 30, 1944. The highest figure our national income reached in the prosperous days of the twenties was about 90 billion, reached in 1929.

In order for us to meet the tremendous expense necessary to carry on after the war even though we only carry the operating ex-

penses and interest on the debt, it will be necessary for us to have an annual national income of at least 100 billion. Even then it would require about 30 percent of our national income to carry our national debt and the operating expenses of the Government; while the other 70 percent would be left to feed, clothe, and maintain our whole population and to carry on business and to maintain State and local governments and many other expenses.

We cannot pay out if we are to continually be held under the fear that our system of government is going to be changed. We cannot prosper under this continuous, never ending, ever changing program of alphabetical scourges that are being inflicted upon us at the rate of two or three a month. Just last week when Assistant Secretary of War Patterson appeared before the Ways and Means Committee in an effort to defend the defenseless and tyrannical enforcement of the Renegotiation Act, against which so many businessmen are complaining, I said during my cross-examination of him that there never had been a time in the history of the Republic when the people were so much in fear of their Government as now. It is a disgrace to our once proud people that businessmen, big and little, are being persecuted beyond endurance. We can pay this enormous debt if we are free men, but we cannot pay it as slaves. We never have been slaves. We must not be slaves.

TAXES

Now let us discuss taxes. Until about 30 years ago the Government got its operating expenses largely from the sale of public lands and from tariff duties and from liquor and tobacco, etc. Now the amounts collected from these sources is less than 8 percent of the national revenues. Nearly 90 percent of our revenues now are received from personal and corporate income taxes. The increase in these income taxes has been little short of phenomenal. Let me give you some figures. First as to personal income taxes.

In the year ending June 30, 1940, the Federal Government collected less than $900,000,000 from personal incomes.

In 1941 it collected $1,300,000,000.

In 1942 it collected $3,200,000,000.

In 1943 it collected $7,000,000,000.

In 1944 it expects to collect $18,000,000,000, without regard to any increases which may be included in the new tax bill.

The amount collected in this fiscal year will be 1,800 percent of the amount collected only 4 years ago.

The facts concerning the increase in the corporate income taxes are equally striking.

For the fiscal year ending June 30, 1940, the amount collected from corporations was $950,000,000.

For the fiscal year ending June 30, 1941, the amount collected was $1,600,000,000.

For the fiscal year ending June 30, 1942, the amount collected was $3,000,000,000.

For the fiscal year ending June 30, 1943, the amount was $4,000,000,000.

For the fiscal year ending June 30, 1944, the amount to be collected is estimated at $4,000,000,000

But there should be added to this last estimate the amount of the excess profits tax which is estimated to be $10,000,000,000, which will make the total from corporations for the year 1944 amount to $14,000,000,000.

In addition there will be large sums secured this year from corporations under the Renegotiation Act which has been enforced against corporations making excessive profits from war contracts.

This year we will collect $38,000,000,000 from existing taxes. The Treasury is asking for ten and one-half billion more, which will make a total of nearly $50,000,000,000. To this must be added the $10,000,000,000 collected by State and local governments. This amounts to $60,000,000,000 or nearly 40 percent of the national income.

Without any change in the present law there will be two automatic increases next year—one of these will be the 1 percent increase in the social security tax, which means a doubling of the present rate. The other item is the payment of the 12½ percent of the 1942 tax carried over under the pay-as-you-go tax bill.

From these figures it will be seen that there is a justifiable reason for the opposition that the Ways and Means Committee members, both Republicans and Democrats, are voicing against the recent demand of the administration for an additional ten and one-half billions in taxes to be collected largely from individuals.

In the midst of all this clamor for these tremendous sums of tax money for Government spending there is not one word from the administration encouraging thrift or condemning waste. Never does the administration mention economy and never does it practice economy. It apparently believes in the philosophy of spending and is opposed to the philosophy of thrift. Many believe that the Congress should do something about waste and extravagance. Congress has spoken on this matter many times. I myself have taken much time in an effort to effect some plan that would compel economy. It must be remembered that it is the executive department that is responsible for expenditures. The Chief Executive has never shown any disposition to practice economy. Economies are not effected unless the Executive has an attitude toward economy.

Let us discuss briefly the proposed new tax bill. Before doing so in detail we surely have not forgotten that we have just been introduced to and have hardly had time to get acquainted with the pay-as-you-go plan with its 20-percent withholding and its many other innovations of forgiveness and windfalls. Likewise we have only had a brief acquaintance with the Victory tax. Both of these taxes have added tremendously to the troubles of many millions of our taxpayers and the employers and employees of the country. With these two new tax plans added to the already terrifically complex tax law, the people are not ready for another tax bill. But we are in a terrific war and the administration, in keeping with its custom, cannot forego a chance to ask for more money.

The Ways and Means Committee continues the custom of inviting the Secretary of the Treasury to come before it with such recommendations as he cares to make, but for the past 3 or 4 years the committee has not followed them to any great extent. He appeared before the committee last Monday and demanded the passing of legislation that will add ten and a half billion to the tax load of the people. His recommendations met with no warmth of reception. He attempted to strengthen his cause by calling to his aid Mr. Randolph Paul, his chief tax assistant, and Mr. Fred Vinson, the Chief Stabilizer for the Administration. His recommendations were not applauded by the people or by the press. Mr. DOUGHTON, the chairman of the Ways and Means Committee, a strong North Carolina Democrat, gave out a very strong statement of opposition. Mr. DOUGHTON was supported by several other Democratic members. The full Republican membership had already expressed its opposition. In the face of this outspoken opposition, you might consider a further discussion by me as a waste of time. But the country is talking about it, and why not we?

The statement of the Secretary of the Treasury is a smooth, political document. He argues that we are threatened with wild inflation if we do not drain off from the earnings of the people at least 10½ billions. He claims that our national income payable to individuals will soon be 152 billions and that the value of all goods and services available to be purchased will be only about 89 billions and that there will be a surplus of money over goods of 63 billions. This is what they call the "Inflation Gap." They imply that there will be $152,000,000,000 competing with each other to get the 89 billions of goods and that this competition will be so severe as to drive all these goods sky high and we will be in an inflation similar to that which Germany experienced after the First World War. Much of this claim needs to be given careful study. These figures vary widely depending on who is handing them out. The tendency is to consider the American people as a lot of children around a candy counter with pennies which are burning their hands. They forget that out of this 63 billions, which they call dangerous money, must come all the bonds that the American people are buying, regularly, and in the bond drives amounting to 17 billions or more this year. They forget that the cost of living is terribly high and much higher than Government figures indicate. They forget that the already heavy Government personal taxes of all kinds must come out of this.

These amount to twenty-one billion or more. Also all the State and local taxes, which amount to ten billion. They forget that many people owed heavy obligations that were long past due which they are now paying out of their earnings. They fail to take into account the millions paid by the people for insurance and for interest on obligations. They forget also that while there are a few spendthrifts in the country that the great bulk of the American people want to save for a rainy day through building and loan associations and savings banks. Their savings are not inflationary. Money saved is not inflationary. Only spent money is inflationary. And the Government itself is the greatest inflationist among us for it is by far the greatest spender of all. It spends as much if not more than all the people put together. And it spends more wastefully than all the people put together. Wasteful spending is the most inflationary of all spending.

While I am not one to make light of the danger of inflation, still it is neither wise nor fair for the Treasury to advance untenable arguments The best antidote for inflation is increased production, but they never talk about it. Why would it not be wise to start a program of increased production of food so that there would be plenty of food which people could secure easily instead of forcing scarcity on our people which results in high prices and much discontent? I repeat, the safest way to prevent inflation of prices is to produce more commodities.

The Secretary takes a very inconsistent position in the statement which he made before the Ways and Means Committee. He says in one place in that statement that four-fifths of all the income of the Nation is being paid to people who earn less than $5,000 per year. This being the case, four-fifths of all the money earned in the country is in the hands of these people. He says that "the weight of the money in the hands of this group * * * can completely upset our entire economic system." Then later in his statement he advocates that the Victory tax be repealed, which if done will take off of the tax rolls 9,000,000 of these low-income taxpayers In one place he insists that the main purpose of his tax plan is to prevent inflation, and he says that the income in the hands of these low-income groups is the most dangerous threat of inflation, yet he proposes to permit a great percentage of this class to escape all taxes that would have been provided under his proposed measure. Despite the fact that persons with incomes of less than $3,000 receive two-thirds of the national income, the Treasury proposes that only one-fourth of the suggested 6.5 billion increase in personal income taxes be imposed on this group.

All the tax experts will admit that the tax burden in the top brackets is about as high

as it can be. If we are to relieve 9,000,000 low-income taxpayers, how then can we raise 6.5 billions? It cannot be done.

The Secretary seeks to soften this burden by the introduction of what I called in the hearings a sly way of commencing a program of compulsory savings. He offers to give to the low-income class what he calls a post-war refund. This is what I have referred to as compulsory savings. Because of the opposition which I and other members of the committee offered to the adoption of a compulsory-savings plan, it now appears that this may be abandoned. I was right when I said it was a sly plan.

The Secretary also recommends that the exemptions for married persons be reduced from $1,200 to $1,100 and that exemptions for dependents be reduced from $350 to $300. He intends that this will result in considerable increase of taxes.

The Secretary expects to raise an additional four hundred millions by reducing the exemption applicable to inheritance taxes and by raising the gift-tax rates. The Secretary evidently expects to rely on those enforcing the Renegotiation of Contracts Act to produce many millions, for he is only asking Congress to provide an increase of one and one-tenth billions from corporations.

The Secretary recommends that Congress raise the excise taxes by two and five-tenths billions. The principal increases in excises are as follows:

	Millions
Liquors, from $6 to $10 per gallon	487
Beer, from $8 to $9 per barrel	210
Wine	61
Cigarettes, $3.50 per 1,000 to $5	371.3
Chewing gum	46.2
General admissions, 1¢ per 10¢ to 3¢ per 10¢	327.2
Transportation of persons	212.7
Jewelry	167
Candy (new taxes)	140
Soft drinks (new taxes)	177

The Secretary recommends the repeal of the tax on the transportation of property. This will amount to a reduction in taxes of $189,000,000.

Summing up the recommendations for increases, they are as follows, in round numbers:

	Billions
Tax on personal incomes	6.5
Corporation taxes	1.1
Inheritance and gift taxes	.4
Excises	2.5
Total	10.5

Will the Ways and Means Committee follow the recommendations of the Secretary of the Treasury? It is not likely, for we have not been doing so for the past few years. I am frequently asked for my opinion as to what the committee and Congress will do. It is difficult to say for nobody can safely predict the action of Congress at this time. Much will depend on whether we go to some new form of taxes—say the sales tax. It is my judgment that we will not adopt a sales tax for several reasons. The principal reason is the time-old reason that the tax applies heaviest on those least able to pay. Another reason is that it will involve the employment of thousands of extra employees. Another is that it will not produce as much revenue as people suppose it will do. A 10-percent tax (which will be a heavy one) will only produce from five to six billions with no exemptions allowed. It will only produce between three and four billions if food is exempted. Another very good reason is that the elections are imminent. There are several reasons for the adoption of a sales tax but the principal one is that the country needs the money and that a sales tax applies the same way to all alike. If we do adopt a sales tax, there will not be much increase in other taxes—probably one or two billions. But if a sales tax is not adopted the new tax bill may reach four or five billions.

The Secretary also recommends the expansion of the social-security law to include farm labor and other groups and recommends an increase in the contributing rates of both the employer and employee. It is not likely that his recommendation will be followed. As I have previously stated, there will be an automatic increase of 1 percent each for the employers and employees in connection with the old-age insurance coming January 1 unless congressional action is taken extending the present rate as was done before. Ohio industry is much interested in granting such an extension.

Now, my friends, I am afraid that my story has been uninteresting. But the finances of the Nation, like the finances of the family, are very important. Let me discuss with you briefly two important tax matters concerning which I can bring you some good news.

The people have for years rightly complained against the terrible complexity of the income-tax-return blanks. I will let you in on a little story that has gotten into the paper lately. The internal revenue office in Washington sends up a couple of men to the Capitol every year for about a month before taxpaying time to help the Congressmen and Senators make out their returns.

The Ways and Means Committee has tried repeatedly to have these returns simplified. I have tried it myself, but all to no avail. It is impossible to make them simple without amending the tax law in many ways. The law itself is too complex. We have recently instructed the ways and means experts and the Treasury experts to bring out a simplified form. We have recommended amendments to the Victory-tax law to aid in this program. The change, it is claimed, will simplify the returns greatly. It is generally believed that the Victory tax will be repealed with the end of 1943 and the amount of taxes lost thereby will be integrated into the income-tax schedules.

The renegotiation of contracts is another matter in which many businessmen are much interested. The tactics employed by Government agents in carrying on these renegotiations has in some instances been tyrannical in the extreme. The Renegotiation Act was passed hastily and for the purpose of recapturing excessive and exorbitant profits made by war contractors. The purpose was laudable but its administration has been very unwise. The Ways and Means Committee is preparing several amendments that will effectively stop the tyrannical practices of which so many complaints have been made. I shall not go further into details.

Now, my friends, I have been highly honored by being invited to speak to you and am glad to bring you an idea of what Congress is trying to do. It is my hope that our great Republic will come out of this, her most critical period, stronger than ever. With the chaos that is all about us in the world, it is more necessary than ever that we retain our position of leadership. The world needs us. God has favored us and brought us to great stature financially and spiritually. Great is our power by God's grace and great must be our efforts as God goes marching on.

Willkie's Record Does Speak

EXTENSION OF REMARKS

OF

HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. ARNOLD. Mr. Speaker, on September 23 on the floor of this House a colleague on the right side of the aisle belittled and sought to smear one of our most distinguished citizens, and to befog the minds of the voters in a lengthy tirade and speech loaded with invective and oratorical satire.

I am a freshman. I have always heard that boys were to be seen, but must keep quiet. When I was elected from the First District of the Show-Me State, and took the oath of office on January 6, it was with the understanding that I represented the taxpayers, was their hired hand, so to speak, and would look after their interests.

But no, the taxpayer, while he built this great country, is now crowded out of the picture up here, and our time is largely taken up with nondefense spending, instead of economizing. Now, in the most critical time in our Nation's history, when there is a world of work waiting to be done, we are not working at the job. We ought to go ahead and bring a tax bill of our own, as our forefathers instructed us to do, and not wait around for the Treasury Department to come over here and tell us what to do.

Out in the great State of Missouri our State treasurer is an ordinary deck hand, and does not go over to the State legislature and tell them what to do.

We spend time discussing a probable candidate who has not formally announced for the high office of President of the United States, and who has no opportunity on this floor to defend himself from scurrilous attacks.

Who is this Wendell Willkie about whose record our Democratic friends are showing so much concern? He entered World War No. 1 as a private, and when he came back from the battlefields of Europe in 1919 he was a captain in Uncle Sam's Army. Why, bless your life, he is a genuine American businessman; he has operated a public utility and did a fine job of it; he gave his customers some of the lowest rates in American history; he looked after the interests of his stockholders, as well as those of his employees. He knows something about finance, because he handled large sums of money in the operation of his business. He knows the value of a dollar because he worked for it.

Those nine questions that were propounded to him a few weeks back did not fool the American people into thinking that Mr. Willkie wants a world state. He realizes, as we all do, that the airplane and the radio have made all nations our next-door neighbors, and that appeasement, isolationism, and unpreparedness have entangled our country in two world wars wholly unprepared and against our choosing.

The people are getting wise to the fact that we have not had a common-sense foreign policy since the days of Teddy Roosevelt, and that the oceans no longer protect us. Even if they did, our commitments in Alaska, Puerto Rico, and Hawaii preclude the possibility now of any further protection.

No, Mr. Willkie does not advocate a superstate. But since we have a working agreement in war with England, Russia, and China which is getting results, he suggests that we continue that working agreement and preserve the peace after

we have won the war with the blood of our boys, our dollars, and materials. And why should not we listen to an American businessman who served in the First World War, has had experience in fighting a war, and knows what war is like?

Mr. Willkie does not have the opportunity of defending himself here against these attacks, but you can rest assured that the American people have a very fine sense of fair play, and that they will be heard in the defense of an outstanding American businessman who had 22,000,000 citizens behind him out of a total of 49,000,000 in 1940 in the last Presidential race, and that they will be joined by many millions more who are becoming thoroughly disgusted with an administration that has pushed the businesses of our Commonwealth around, and in doing so since it has come into power spent the taxpayers' funds to the tune of $80,000,000,000 before Pearl Harbor.

A More Perfect United Nations—How and When?

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, October 15 (legislative day of Tuesday, October 12), 1943

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "A More Perfect United Nations—How and When?" delivered by me in April 1943 before the forty-seventh annual meeting of the American Academy of Political and Social Science. The address appears in volume 228 of the Annals of the American Academy of Political and Social Science, issue of July 1943, under the general caption "The United Nations and the future."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A MORE PERFECT UNITED NATIONS—HOW AND WHEN?

(By CLAUDE PEPPER)

Although I have reached only the age of 42, which may be young or old as one looks at it, I have begun to derive considerable consolation and satisfaction from the sense of perspective. For example, a little while ago I became concerned about conditions in Washington in the midst of this great ordeal. But I got the book Reveille in Washington and Carl Sandburg's magnificent War Years, and from the chaos of the War between the States I obtained considerable optimism and encouragement that we are going to pull through this time.

Then a little while ago I attended a showing of that remarkable picture Fantasia by that remarkable man Walt Disney, and I saw depicted on the screen in that unique way the evolution of the earth as conceived by the creator of that film. I saw the bursting volcanoes, the flowing rivers of molten lava. One could almost sense the shaking and trembling of the convulsive earth. But after awhile the volcano became stilled. The rivers receded into their quiet channels. Grass burst forth from the earth. Trees sprang up and became alive.

Then at last came a strange monster whom the technicians call, I believe, Tyrannosaurus rex. This colossus was the master of all he surveyed, making victims of all he could reach and crush. But there came a time in the continuity of this interesting tale when this creature, who was antisocial in his time, also died. The world was safe again. That gave me much consolation that this Tyrannosaurus rex that we in the modern world call Hitler would also die. I knew that he and his evil power would be disrupted and destroyed, because he too is an antisocial creature.

Now, assured that there will come the happy day of victory, we are engaged in the consideration of events after the peace. There are some who think we should not discuss this subject: that it is too far away; that it is likely to divide our strength, to tear us apart in council and sentiment. There are others who say that it is impossible anyway ever to bring together the multitudinous human race into the friendliness of the human family or the cordial association of intimately related people. Yet again I derive encouragement as I look back through the pages of history, seeing how long and how firmly this idea of some kind of international organization that might keep the peace or promote the general welfare of mankind has persisted and what strides it has made.

HISTORIC EFFORTS TOWARD FEDERATION

For example, in the Old Testament Isaiah and Micah tell us of their dreams and aspirations of a world at peace, bound together under the fear of God.

Again, the city states of ancient Greece were formed into a league, and there was a similar organization of Latin city states under the general leadership of the city of Rome. We saw emerge the entity of the Roman Empire, and finally, upon its collapse, the next power of universal strength, the Catholic Church, which exercised temporal as well as spiritual authority.

Then the Dark Ages. In the 1300's we find a Frenchman writing of an association of nations governed by a common council.

In the 1600's, Henry IV of France, with his foreign minister, promulgated to the western world a rather remarkable proposal of a similar character—that there should be a federal association of the states of Europe governed by a common council. Of course, he envisioned only the Christian states in that concept; but there was another crusader about the same time, far advanced in his own age, who conceived that the non-Christian states also should be admitted into the association of nations.

After the Napoleonic wars came the concept of an ordered Europe out of the Congress of Vienna and succeeding congresses.

So from time to time almost every nation there has been some farseeing writer envisioning a unity of nations and people which would make possible a peaceable and prosperous world.

It may be interesting to recall at this time, when Germany has been so antisocial in her actions and concepts, that it was the philosopher Kant of Germany that was the first to suggest that the foundation of the federation of states must not be the sovereigns but the people themselves, who must associate themselves into an effective new order.

INTER-AMERICAN COOPERATION

Here in this hemisphere, late in the nineteenth century, a very significant step forward occurred. That was the calling, by James G. Blaine, a distinguished American Secretary of State, of the First Pan American Congress. As early as 1815 a great American, too little noticed and honored, Simón Bolívar, in writing a letter to the British gentleman who had given him asylum in Jamaica, envisioned a time when the nations of this hemisphere should come together on the Isthmus of Panama, and representatives of the British Empire should be included in the conference.

This first conference, called by James G. Blaine, did not succeed, but the seed was planted for a system which, it is fair to say—and I quote the substance of another's remarks—"has given peace to more people over a longer period of time than any other system in the world"; and that is what we now proudly recognize as the Pan American Congress. These different peoples, of varied backgrounds, unequal in size and strength, each with its own peculiar associations and aspirations, have come together in an indissoluble union of American states almost all of which are today relentlessly and persistently waging war against the common enemy of the Americas and the race of man.

It may be interesting to note that when discussing in the Senate a proposed Inter-American bank, we were willing to invite our good neighbor, Canada, to be a member of that bank if she cared to belong.

PRIOR TO WORLD WAR NO. 1

Then in 1899 began the Hague Conventions. There were two of them, the second of which occurred about the beginning of World War No. 1. There was almost a universal attendance at this meeting devoted to the settlement of disputes by arbitration and dedicated to the principles of national disarmament. These conventions also failed, but they were in the direction of great events of the inevitable future, not so far ahead.

We often forget that when the First World War broke upon the earth, we had achieved an international stability which lured many wise men into the belief that never again could war smite the race of man and the fair earth. I believe there were only two countries in Europe that required passports, and that artificial barriers to trade were hardly an obstruction to the natural commerce of the Continent. Still, war occurred, and with its pitiful and painful devastation shocked the whole race of man into a consciousness of the necessity for at last doing something about this social institution of war. Dr. McCormick of the University of Wisconsin recently pointed out that war has become a recognized social institution, and he believes that the only way war can be abolished is by substituting for it some other social institution which will offer a legitimate opportunity for nations to achieve, or at least to seek, their aspirations and aims.

LEAGUE OF NATIONS AND UNITED NATIONS

The climax of all this long strugg e for a better world was the League of Nations. I am willing to take the considered judgment of Dr. Shotwell, a participant at Versailles, that in the 6 months within which the Covenant of the League was produced there was done one of the most creative jobs in all the history of the world. That documen. is one of which our generation may justly be proud. We may even boast that in our time there was seen on the shores of beautiful Lake Geneva the magnificent edifice where all together 60 nations adhered to that institution and covenant. All of us who have had the thrill of seeing the members sitting in the assembly, have heard the roll call of nations, and have understood the great things said and done there, know that that institution is destined to grow to ultimate success as one of the institutions of civilization. But it has for the moment failed, and again the earth has felt the shock of that failure.

Not long ago Dr. Bruening attributed the rise of Hitler to three essential factors: (1) The failure of the governments of Europe to keep statesmen in power long enough to solve adequately the challenging post-war problems; (2) the failure of the European governments to deal properly with the question of

stabilizing the currencies of Europe; and (3) the failure of those governments to remove obstructive trade barriers.

Recently Foreign Secretary Anthony Eden allowed the members of the Foreign Relations Committees of the House and Senate to question him. I ventured to ask if he had any comment, out of his long and valued experience, about the character of the League of Nations as an institution—whether it was adequate or inadequate I preferred to ask him that question rather than what kind of international organization we should strive to achieve. He said, in his opinion, the League of Nations had been too rigid in its structure; that perhaps we had placed too much emphasis on the form of the edifice and tried to fit everyone into it, rather than gradually building a house which might finally hold the community of nations.

But in mentioning the evaluation of an international order, I do not intend to omit perhaps the greatest step of all—the United Nations, formed on January 1, 1942. I wonder if we realize the significance of that alliance. More than thirty nations have actually signed a document in which they subscribe to the principles of the Atlantic Charter, the most humane international document ever struck off in the history of the world. Even the 14 points of that beloved prophet of freedom, President Wilson, related to the removal of the yoke of oppression from the necks of nations, not individuals. The Atlantic Charter, profiting from a quarter of a century of humanitarianism, looks at human beings and proposes to lift the yoke of oppression from the necks of men, women, and children, and to lift all mankind to a new hope and dignity.

Shall we recreate the League of Nations, shall we continue the United Nations, shall we just put together some association of sovereign powers having no separate entity or what shall we do?

RESOLUTIONS PENDING

Of course, the daily papers are full of what is being suggested by private organizations and private citizens throughout the land, of the work being done by various study groups and quasi-public organizations, of the many resolutions pending in Congress, the repeated utterances by Cabinet members, by the State Department, by the President, and by the Members of Congress. One of the resolutions pending in the Senate, introduced by Senator THOMAS of Utah, proposes international collaboration in economic affairs after the war. Another resolution, by Senator WILEY, of Wisconsin, suggests that there should be set up an advisory council of the State Department, the President, and Congress. Senator GILLETTE proposes that there be a treaty executed by the several powers which would implement the Atlantic Charter. And there are others.

The resolution gaining the widest currency is that by Senators Ball, Burton, Hill, and Hatch. In brief, it provides that there should be a world convention to begin immediately to fashion the form and the content of the international organization which is envisioned by the introducers of that resolution. I do not wish to venture an opinion as to what the subcommittee of the Senate Foreign Relations Committee (which has all these resolutions before it) is going to do, or what the full committee will do when the subcommittee makes its report. I wonder, however, whether it is wise for us to assemble a formal conference to write the details of such a structure, of such momentous importance, now. There are so many things to be considered; so many details that might crop up; so many questions that might readily constitute bones of serious contention.

DEFINITE COMMITMENT DESIRABLE

Undoubtedly the Senate should do something to atone for its crime against mankind in sabotaging the League of Nations. Yet I think it is probably too soon to begin the formulation of this organization. I should hasten to say, however, that I think it will be unspeakably tragic if we fail to avail ourselves of this challenging opportunity to drive a nail at the present time into some kind of permanent structure or some kind of commitment for a permanent organization. What I mean is this:

The Atlantic Charter, to which we have already subscribed, refers to principles but not to any specific organization or to any post-war organization of the United Nations. Whatever it may have contemplated, intentionally or unintentionally, such provision was left out of the Atlantic Charter. I think what we should do is to get the United Nations to commit themselves that within a definite time after the conclusion of the war in Europe, they will become full participating parties to and in an international organization of acceptable character. I intend to introduce in the Senate the following resolution, which is designed to achieve that purpose:

Resolved, That the Senate (two-thirds of the Senators—that means of all of the Senators—concurring) advise the President to inform the several United Nations that the United States, in order to implement the Atlantic Charter, to safeguard its peace and promote its welfare by cooperating with other free peoples of the world, is ready to enter into a solemn pledge that it will, within 6 months after the conclusion of the war in Europe, become a full participating member of an acceptable form of United Nations.

Further, That the President invite the several members of the United Nations immediately to join the United States in executing such solemn covenant and pact;

Further, That the President invite the United Nations to join the United States in initiating immediately a study and exchange of ideas and suggestions as to what should be the specific form and detail of the United Nations to be formed.

I have purposefully used the words "acceptable form" because the study of the form of organization has not yet proceeded far enough for any country to commit itself to any particular form. It is to be noted, however, that I have provided for the President to initiate consultations as to what the form and character of such an organization should be.

EVOLUTION OR BLUEPRINT

It has been suggested that the building of this structure must be an evolutionary process. I realize that there are two sides to the question. Some may say that is not the way the Constitution of the United States was fashioned. But the Constitution of the United States succeeded the Continental Congress and the Articles of Confederation. It grew out of definite and known deficiencies in the Articles of Confederation, and the Delegates who framed it were confronted with the necessity for providing against those deficiencies. Four years elapsed between the formal conclusion of the Revolutionary War and the Constitutional Convention; and there were many, including the man who had made the Revolution a success by his unique character, George Washington, who feared that we might lose the liberties we had so painfully gained, and there was a necessity that drove those courageous and brilliant men to the dramatic and venturesome step of conceiving a constitution not only for a nation but for a continent.

We realize that there are two main methods of approach to these problems. One is the evolutionary process, and the other is what we refer to as the French method—the blueprint procedure—whereby the whole structure is created complete.

I am not sure that human conclusions are susceptible of such architectural methods. Therefore, I venture to suggest that if we let the people of the world know that we have put the decision to go into an international organization behind us, then our only concern should be the method, and our debate would be confined to form and content and detail. Then if that could be recognized as a forward, ascending step past the Atlantic Charter itself, we would be getting on with the question of building upon the good earth a better world than we now have. Of course the problems that lie along this path of effort are almost innumerable and immeasurable in immensity, and, to the timid, frightening in their import.

CURRENCY STABILIZATION

Yet I think it is an encouraging fact that the United States, Great Britain, and others of the United Nations are working seriously on the question of international stabilization of currency, in order to prevent another collapse of a nation's currency and economy, out of the confusion of which might come another Hitler. Many will remember seeing the scars of the fighting in Munich, from which 3,000 died in civil strife, victims of inflation after the conclusion of World War No. 1.

So we are proposing to put our gold—part of it—with the gold of other nations, our assets with their assets, and with planning and credit and cooperation to build an international institution to stabilize the currencies of the world. That, after all, is in many respects the most secure foundation for a stable world order—a sound economic base.

FALSE SECURITY

We must remember also the painful lesson of the world's failure from the failure of the League of Nations. I am one of those who pay tribute to that great citizen of the world and Ambassador of Russia, Maxim Litvinoff; for I remember reading in pre-Munich days of the warning hurled by him that if collective security were allowed to collapse, it meant isolation and war for all. Other nations of the League did not become aware of the seriousness of his prophecy; neither did we in the United States.

I remember the Senate the afternoon that France fell. All we did that afternoon, save the comment of one who ventured to mention the tragic fall of France, was to debate whether the tax on liquor should be $3 a gallon. We were neither agitated nor disturbed. Some said the oceans could not be traversed by the enemy; that airplanes could not reach to this continent; that submarines could not sink ships within sight of our shores; and some said we were safe against any danger. Now we have found out what follies these were.

We have seen an example of how nations have helped nations with such principles as lend-lease, hardly bothering to keep books about the technicalities of the transactions, because nobody ever really expected it to be paid back even as it was given. That means that we have come to the conclusion that neither boundary nor distance assures security.

APPROACH TO UNITY OF THOUGHT

Not only that, but the United Nations have come to work together in a global conflict as never before in human history. We have come to understand one another better than ever before. We have come to be more nearly of one mind in point of view. Today a speaker of international importance addresses by radio not only his own people but the world; and in various ways we have access to one another and to one another's minds.

Just a few years ago I attended the launching of the Yankee Clipper at Baltimore. That

was an event, to see an airship about to traverse the Atlantic. Now it is done in hours. We live in a new kind of world, and technical devices which are bringing us closer together physically are also molding a world opinion which did not previously exist.

I come from the South. How quickly the wounds of our tragic conflict have been healed, because of the way we have been thrown together and have come to know one another. We have an awareness of how nearly public opinion in the United States has become one state of mind. If you don't believe it, look at the similarity in the type of magazines and newspapers on every newsstand in any part of the country. Look at the Electoral College and see if the candidate who has won the Presidency since around 1900 has not won it by a very large majority, which indicates that American sentiment has become essentially one mind.

The same processes that have been going on here are now going on among nations, so that there is coming to be a body of world information and, I think I might add, a world conscience and a world aspiration. So today we of this generation have the chance to be creators of a future which may give to the human race the realization of its ancient dream of peace and cooperation.

AMERICAN EMPIRE?

I do not know what the spirit of America is going to be able to stand by way of temptation when this war is over, when we have ten or twelve or fifteen million first-class soldiers, when we have the world's largest navy, when we have a production of considerably in excess of a hundred thousand fighting airplanes a year, when we have a mighty nation of a hundred and thirty million people geared and tuned to the waging of war. If with victory in our strong hands someone should tempt and tantalize us with the exploitation of the resources and wealth of other peoples, then would come the testing time of America's spiritual strength.

I think we do not want a golden age of empire in American history. I think we might have it if we were willing to pay the price for it. If that were our national aspiration, I suppose we could achieve success in it. Yet I think we all feel that we have gone beyond a sophomoric period in American history. Our powers of appraisal are more sure and reasonable. I do not think our character will yield to that kind of temptation, nor do I believe we shall again be misled by a little group of willful men, concerned about their own or their party's political prestige and power, into betraying our dead or our allies. Nor do I believe that the people of our country will let any Senator vent his spleen upon any President by inducing the Senate to repudiate any treaty or order which ought to be participated in by the people of this country.

DECISION IS IMPERATIVE

It is well, however, nay, imperative, that we put behind us, as I have already said, the matter of a decision to go in. Let our people see the representatives of the United Nations gather around the council table and in solemn session pledge their faith and sacred honor to some form of international order within a brief period after the termination of the war in Europe. Then we shall know that the great decision is made. Thereafter we shall be concerned with the details and getting on with the task.

When once we cut loose from the moorings of isolation and turn our back upon those delusions and our faces to the new world of the future, then our destiny thereafter will be just a question of navigation, just a matter of courage, only the task of keeping on toward our noble aims. Thus our good land was founded; thus only can its preservation be assured.

Warren of California

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, October 15 (legislative day of Tuesday, October 12), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in this week's New Republic magazine, entitled "Warren of California." The article is well worth reading by every Member of this body.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WARREN OF CALIFORNIA

Unnoticed in the news, William Randolph Hearst recently nominated his candidate for President of the United States—handsome, strapping Earl Warren, Governor of California. "Everywhere in the United States," to quote from an editorial in the San Francisco Examiner, "there is a growing awareness of and rising interest in Governor Earl Warren." Timing its announcement to coincide with that of the Hearst press, the Los Angeles Times has also begun to boom, in its own thunderous style, the candidacy of Governor Warren. The Saturday Evening Post of August 7, 1943, contained a piece in praise of Warren by Frank J. Taylor.

The Warren boom should receive careful attention, for it is not an idle or merely sentimental favorite-son ballyhoo. In case of a deadlock in the Republican convention, Warren unquestionably would be a likely dark-horse candidate for President. And, upon any reckoning, he is the most plausible Republican Vice Presidential nominee. For California is an extremely important State—worth more electoral votes than most of the inter-mountain States combined—and Warren is, at this writing, a popular political figure in the State. Just who is Earl Warren and what (or who) makes him run?

Years ago Warren was singled out for future political favor by the most powerful industrial and financial cliques in California. They have always regarded him—and quite correctly—as their major ace in the hole, their principal hedge against political disaster. For this reason, they have carefully built Warren up, as a political figure, over a period of years; and have seen to it that his record, on most major social and economic issues, is an almost perfect blank. He is not the type of candidate to be embarrassed by statements made, or positions taken, earlier in his career. He has made few statements and, while invariably compliant toward these interests, has artfully avoided public commitments.

At the same time, Warren is completely the creature of the Hearst-Chandler-Knowland clique in the Republican party in California; he is the darling of the Associated Farmers of California (although he is not too enthusiastic about their public support); and he is the particular pet of the great shipping, financial, agricultural, and industrial interests of California. In California these interests have long since been synchronized into what is perhaps the smoothest functioning big-business machine in the Nation. It took a long and bitter behind-the-scenes struggle—as the files of the La Follette committee eloquently attest—to make the die-hards see the light of day. It was only after much persuasion that they were forced to give way to clever public-relations advisers, adroit industrial-relations counselors, and such astute legal minds as Gregory Harrison (of the Waterfront Employers' Association). For these die-hards were used to the ruthless methods of the open shop, the red squad, and the labor frame-up. They had grown bold and arrogant in the school of bribery, thuggery, and the crudest variety of power politics. But with the E. P. I. C. campaign of 1934, the popular-front campaign of 1938 (which elected Culbert L. Olson), the spectacular rise of the powerful pension-plan movements and the increasing strength of organized labor, the smarter elements realized that ruthlessness must be eliminated in favor of cunning, that slickness must replace brazenness, and that dizzily conducted public relations must take the place of the old knock-their-teeth-out attitude. Nowadays such bastions of reaction as the Industrial Association of San Francisco and the Merchants' and Manufacturers' Association of Los Angeles have been virtually eliminated. They have long since been replaced by the slickest streamlined front that big business has been able to create anywhere in the United States. Earl Warren is the front-man for this machine.

To groom him for this important role, the master minds of the new industrial alinement had to execute a skillful job of political face lifting. As a young lieutenant in the days of the old machine, Warren had become thoroughly enamored of the strong-arm methods that were then unquestioned. He had to be taught to smile, to beam, to be a good fellow; he had to be told the facts of life, such as, that labor baiting (old style) was passé; that the pension movement was not necessarily subversive; and that he could afford to mention the C. I. O. without sneering. He had to be taught to mouth—and it must have been a bitter tutelage for this essentially grim and hard-boiled individual—such phrases as "old-age security," "collective bargaining," and "social planning." But the advertising boys have done a pretty good job, and he can now turn in a fairly acceptable performance as the liberal statesman. But to those who know him, his performance is unconvincing. For to such people he has always been as he is today, the personification of smart reaction.

Two important episodes in his career serve to define the man behind the mask. On March 22, 1936, George W. Alberts, chief engineer of the freighter *Point Lobos*, was found stabbed to death in the cabin of the ship as it lay berthed across the bay from San Francisco. At this time the labor situation on the water front was extremely tense. Labor was insisting upon preserving the gains of the great 1934 strike; the waterfront employers were determined to smash the unions. No one paid much attention to the Alberts case, for the newspapers were full of labor news from the water front. Then, on August 27, three trade unionists—Earl King, Ernest G. Ramsay, and Frank J. Conner—were arrested on orders of Earl Warren, then district attorney of Alameda County. Conner was ship's delegate from the *Point Lobos*; Earl King was the leader of the Marine Firemen, Oilers', Watertenders', and Wipers' Association (which the Waterfront Employers' Association was trying desperately to alienate from the longshoremen); and Ramsay had organized the Fish Reduction Workers' Union. These men were charged, not with the murder of Alberts, but with having conspired to have him murdered. It was not charged that they had assaulted him or that they had so much as touched him.

Indicted with them was a strange character out of the murky water-front underworld of

the period named George Wallace. On the day Alberts was murdered, witnesses had seen Wallace on the *Point Lobos*. The King-Ramsay-Conner Defense Committee wanted to have Wallace tried separately, but their motion for a separate trial was denied. The committee then offered to provide Wallace with $5,000 for counsel fees, if he would obtain an able and independent attorney. The offer was refused and Wallace elected—the announcement was made by Earl Warren—to be represented by the Public Defender. The entire case hinged on this man's testimony and the San Francisco Chronicle observed that the district attorney, in cross-examining Wallace, did so "with the solicitous care of a policeman helping an old lady across the street."

The "jury" selected to try the case was, to say the least, remarkable. The jury commissioner who selected the panel testified that names were chosen from lists supplied by "various industrial plants," "various social organizations, business houses, the Bank of America, the American Trust Co., and the Central National Bank." He was asked if he had requested the Central Labor Council to provide a list; he had not. Had he gone to any labor organization for names? He had not One of the jurors finally selected was a Mrs. Julia Vickerson, who testified that she "scarcely knew" Deputy District Attorney Wehr (who conducted the prosecution under Warren's direction). Two months after both Wehr and Mrs. Vickerson had sworn that they scarcely knew each other, Mrs. Vickerson loaned Wehr $3,200. Other loans followed. In the course of 2 years after she sat on the jury that sent King, Ramsay, and Conner to San Quentin she had loaned Wehr the sum of $15,376, as shown by a creditor's claim that she later filed against his estate.

In a petition for writ of habeas corpus (Criminal No. 4440), pending before the Supreme Court of the State of California, it is now alleged that prior to the trial of the case Mrs. Vickerson had loaned Charles D. Wehr the sum of $8,500, held his note for this amount, and subsequently destroyed the note at his suggestion at the time of the trial. Introduced as an exhibit in the habeas corpus proceeding is a photostatic copy of a memo in the handwriting of Mrs. Vickerson, a portion of which reads as follows:

"The moneys owed me by Charles Wehr loan of $8,500, year 1936. Had note signed by Charles, but he advised me to destroy while the ship murder case was pending and then he would make a new note for me."

It is interesting to note that the Supreme Court, on July 7, 1943, appointed a referee to take testimony on the charges set forth in the petition for habeas corpus. The petition charges that the facts with respect to the Vickerson-Wehr relationship were well known to Earl Warren, then district attorney, and that he approved the concealment of these facts.

When the case came on for trial, it was assigned to the courtroom of Judge Edward J. Tyrrell. One morning, without explanation, the case was transferred to the courtroom of Judge Frank M. Ogden. Ogden was a political protégé of Earl Warren, had served for years as a deputy district attorney under Warren, and had been promoted to the superior court on Warren's recommendation. Counsel for the defense offered to stipulate that the case might be heard by any judge of Alameda County other than Frank M. Ogden. The offer was refused, and the case proceeded to trial. Judge Ogden's comments upon the evidence were enough to convict the defendants—he virtually told the jury to convict them. As to the interest of the shipowners in the case, subsequent investigation revealed that important prosecution witnesses had for months been receiving regular remittances from the shipping firm of Swayne & Hoyt, the owners of the *Point Lobos*. The pattern of the ship murder case—the King-Ramsay-Conner case—is almost identical with that of the Mooney-Billings case and the Modesto case of 1935 (which a committee of the California Legislature characterized as a frame-up). The man who engineered and supervised this prosecution (and who tried to conceal from the defense the important testimony of the witness Corrigan) and who still lovingly regards it as his major opus, is Earl Warren. (Before Governor Olson left office, the board of prison terms and paroles released King, Ramsay, and Conner on parole.)[1]

In the words of The Satevepost, this is the "serious-minded Horatio Alger character in flesh and blood" who still cherishes the membership card in the Musicians' Union which he joined when, as a youngster, he played the clarinet in a Bakersfield, Calif., band. It is a moving spectacle, this, of Warren taking out that old dog-eared trade-union card; of Warren reminiscing with the six children, without whom he is never photographed these days, about those hard-bitten days of his youth when he played the clarinet. In fact, he still plays the clarinet—in that sour-note Republican orchestra that responds to the rhythmically directed baton of William Randolph Hearst. It is, indeed, a remarkable orchestra; the aged and embittered Hearst on the podium; the aging Chandler at the base viol; with Hoover at the kettledrums and Joe Knowland (of the Oakland Tribune) and Phil Bancroft in the brass section; and Warren tooting the clarinet.

Prior to the administration of Culbert L. Olson, the Supreme Court had always been a lawyer's court. After you had served the vested interests in the State for years in fighting labor unions, defeating social legislation in the courts and squabbling over water rights, tradition dictated that your last years should be spent, in semiretirement, serving these same interests on the supreme court. Governor Olson determined to upset this tradition. One of his first nominations to the supreme court was Dr. Max Radin—an internationally famous legal scholar, for years instructor at the law school of the University of California, and a man respected throughout the State for his integrity and learning. But the appointment had to be confirmed by an advisory board of which Earl Warren, then attorney general, was a member. Shortly before his nomination to go to the court, Dr. Radin had written a letter to a district attorney in the State urging clemency for a group of liberal social workers who had been found in contempt of a "Little Dies" committee of the legislature for refusal to turn over to this committee the membership lists of the trade union of which they were officials. Seizing upon this letter, Warren, by his vote, succeeded in blocking the appointment. His unconcealed animus in this case reveals the type of person he really is.

But Warren cannot be disposed of by illustrating his mean-natured and vindictive character. For it is not Warren who is to be feared so much as the powerful coterie of interests who succeeded in palming him off on the people of California as a nonpartisan candidate for Governor. These advisers are responsible for the fact that Warren has made a popular Governor. The interests back of Warren realized that the pension movement in California had to be separated from its rather tentative alliance with labor. If this desirable end could only be accomplished at the price of increased pensions, then the price was cheap. So they permitted Warren to sign a somewhat liberalized pension measure which was obligingly approved by substantially the same legislature that had bitterly fought Olson's every attempt to obtain a more adequate old-age-pension system. The folklore of the State has it that "Warren knows how to work with the legislature," when, actually, it is a case of perhaps the most notoriously lobby-ridden legislature in America being obedient, now as always, to the interests that elected it. Warren's advisers also prompted him to declare a labor truce, since, with production booming, they wanted no collision with organized labor.

As Governor of California in these lush days, Warren has not faced a single problem of real magnitude. There has been no labor problem, no unemployment problem, no tax problem—even the ancient embarrassment of the Mooney-Billings case was obligingly removed by Governor Olson's pardon. The chief problem faced by Warren, in fact, has been the question of what to do with a disconcertingly large surplus of State funds. This problem he solved, quite in keeping with his past record, by reducing taxes instead of husbanding this windfall against the emergency demands of the post-war period. Under such circumstances, Miss Shirley Temple, aided by the same advisers and with the same newspaper support, could make a fairly popular Governor of California.

What Warren's advisers have succeeded in doing is to create the legend of an able administrator, a strong man and a good fellow. In the vocabulary of the Warren apotheosis, the word "able" is worked to death. "Able Earl" is, in fact, likely to be a campaign slogan in 1944. They have kept Warren—and this has been an easy chore—conspicuously silent on every important issue of the day. What he thinks about post-war problems, about the necessity of an international organization to preserve peace, about planning for full production, remain among the darkest mysteries of our time. "We must return to the fundamentals," he said in a recent speech (the Los Angeles Times, August 18); "we must reattach ourselves to the old moorings—the family, the home, religion, and free Government. The more I think of this war, the more I am convinced that it all reduces itself to the dream of every good man and woman—the desire to have a home and a fireside—to have happy, healthy children, taught by a good mother the virtues of mankind as she might choose to interpret them from the Good Book." Such utterances are really provocative and bold for Warren; in his usual able vein he sticks tenaciously to the Coolidge platitudes. As a member of the Water Project Authority, he never lost an opportunity to whittle away at the broad social objectives underlying the concept of the great Central Valley Project. In speaking before the recent Conference of Governors at Columbus, he selected as his topic (at this track meet of Republican candidates) the stupendously important problem of keeping the Japanese out of California. He not only wants the

[1] Since this article was written, the referee appointed by the Supreme Court has concluded the hearings on the petition of George Wallace for the issuance of a writ of habeas corpus. At these hearings Mrs. Vickerson admitted having loaned Charles D. Wehr sums in excess of $24,000. She has also admitted that she knew him when he made a contribution of $750, from funds advanced by her, to one of Earl Warren's political campaigns. She has also testified that on Thanksgiving Day, 1936, Wehr told her she would have to stay on the jury and that if she refused to do so, he would be unable to repay the moneys she had loaned. Aside from attempting to discredit her testimony under cross-examination, virtually no effort was made during the hearings to contradict her story. While it is true that direct evidence showing that Warren knew of these facts is lacking, still it will be interesting to see what, if any, effort he will now make to correct such an obvious injustice. The report of the referee, Judge Hartley Shaw, will be presented to the Supreme Court within the next few weeks. It is also interesting to note that not a single Los Angeles newspaper has carried so much as a reference to the hearings being conducted in San Francisco before Judge Shaw.

evacuees kept out of California for the duration, but he is unalterably opposed to any of them (including 70,000 American citizens) ever returning to California. This is not, however, such a bad political issue. It is one which, as a vice-presidential nominee assigned the specific task of swinging California into the Republican column in 1944, he can be relied upon to work overtime.

It is pure legend that this man is an "able administrator." He was a very mediocre attorney general of California. Despite his election pledges of an undying devotion to civil liberties, he refused to lift a hand when local law enforcement completely broke down during the Westwood lumber strike. Aside from this term of 4 years as attorney general, he has had no administrative experience. He has never practiced law (except for a few months); and his experience has been limited to that of Republican Party machine politics and his duties as perennial district attorney of Alameda County. He reveres policemen, deputy sheriffs and investigators. When confronted with a major problem, his first reaction is to propose some "tightening up of law enforcement." He has been very adroit and successful in his relations with organized groups and has shown far more political finesse than his predecessor. But even the few measures, statements, and acts for which he is rightfully entitled to credit are, in many cases, the inspiration of Robert W. Kenny, his successor as attorney general.

No one should discount the Warren candidacy because of this paltry record of achievement. For he is a possible Republican nominee for President and a better than 2-to-1 choice for Vice President. He has behind him the unified, coordinated, and powerfully articulated force of all the important industrial and financial interests of the State. He has perhaps the ablest public-relations advisers of any candidate in the field, unlimited funds, and the widest newspaper support. And at the moment he enjoys considerable prestige and popularity in California. Furthermore, by getting a delegation pledged to Warren in the field at this early date, the Old Guard hope to prevent Willkie from entering the California Republican primaries. (Willkie the other day called him "one of the great Governors"; let us hope that he spoke out of ignorance.) As a Republican Vice Presidential nominee, this "nonpartisan" Governor might well carry California for the party in 1944. President Roosevelt still retains much of his personal popularity in California, but the Democratic Party is nonexistent as a functioning political organization. It is shot through and through with feuds and torn apart by warring cliques and factions. The conservative Democrats (400,000 of whom voted for Warren in 1940) are, by and large, bitter Roosevelt haters. It also seems likely that Culbert L. Olson will attempt to reassert his leadership over the party in California by organizing a delegation pledged to the President. This effort is not likely to produce unity within the party. The one leader with sufficient ability, prestige, and popularity to accomplish this miracle is Robert W. Kenny, the present attorney general, who to date has shown no appetite for the assignment.

Republican Policy

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, October 12, 1943

Mr. BURTON. Mr. President, on October 12, I requested and received permission to have printed in the Appendix of the RECORD an address entitled "Republican Policy," delivered by Gov. Dwight Griswold, of Nebraska, at the annual banquet of the Ohio Federation of Republican Women's Organizations, at Columbus, Ohio, October 6, 1943. After submission of the address it was discovered that it would require more than two pages in the RECORD. Therefore I submitted a request for an estimate of the cost of printing. I now have that estimate from the Public Printer. It is estimated that the address will require approximately two and one-third pages of the CONGRESSIONAL RECORD at a cost of $105. I again ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We meet here as Republicans, as representatives of a great party, planning how we can do better work in those places we now control and planning likewise how we can be fitted to even greater responsibilities after the next election.

Perhaps we are too prone to spend our time criticizing the present national administration. We are well agreed on the truth of the statement made by the young man in a speech class in Nebraska a short time ago. (Story of young man in extemporaneous speech class.) But seriously, friends, while we enjoy criticizing—and most of it is entirely honest—yet what the people want today is to be told the program of the Republican Party when it assumes power in 1945.

What are we going to do? What are we going to undo?

The problem that is today worrying the largest number of people is that of employment when this war is over. Even though we keep up a large standing Army, there will be seven or eight million returning veterans and an even larger number of war workers who will be seeking other employment.

Never has man seen such a large portion of the world completely torn from its previous standards, as it has seen during the past few years. Never before has there been a war which has caused such terrible physical destruction, but at the same time allowed science and technology to advance so rapidly. Peace will bring to the world the greatest problem of physical reconstruction in history, and just as mobilization for war here in our country has caused terrific readjustment, both of men and minds, so by the same token will a readjustment from war to peace bring other monstrous problems.

And we had better be realistic in our contemplation of this post-war future and recognize that deep as is the faith of the majority of our people in the doctrine of free enterprise, that sincere as is the desire of our young men for individual achievement, they will never again permit another period of terrific unemployment without making an effort to solve the problem by changing our economic and political system. Let us not blind ourselves to the fact that a minority of our citizens already feels that socialism, or communism, or complete Government control in some form, is better than a system of private enterprise, and that its members are working to see their beliefs inaugurated. Another serious depression would recruit millions for their ranks. In short, the free enterprise system, the mighty champion of our present struggle for survival, may be pounded to pieces before it has a chance to catch its breath, may be tumbled to ruin by the shock of post-war adjustment. At least, such a danger is evident to me.

I am sure that no system of Government operation can produce goods and raise living standards as does a system of private industry, but the political situation is such that we who feel that way must see that private industry is prepared to furnish employment to people when this war is over. We must make sure that the men taking off their uniforms and coming out of war plants shall have some place to go to work.

It is likely that during the period which will be required for changing war production into peacetime production, a program of public works will be needed to take up the slack of unemployment, but we must not for one minute permit ourselves to be lulled into the feeling that Government work or any kind of a public-works program will be a permanent solution. Private industry must take over and do the job.

But if industry, following this war, is to have a chance to make good, then certainly industry must have proper laws under which it can function. It needs tax laws which are written before the taxing period starts. It needs tax laws which are intended to help, not punish, and which permit industry to make a profit and use some of it for new developments. Our statutes must be in accord with economic law if our Nation is to prosper.

I believe it is the first desire of our men in service, once this war is done, to return to a nation whose domestic life is founded upon individual effort, whose economic system is based upon the working premise that private industry is able and eager to supply men and women with the material things they need for enjoyable, constructive living. In other words, I cannot believe that our returning soldiers want a jingle-jangle-jingle existence fed by synthetic work on a governmentally glorified W. P. A. program.

But if private industry is to advance and enlarge it must have an incentive—it must be able to see a profit. Our tax system must be adjusted, therefore, so that something can be gained by venture and it is time to speak out and say that if our economic system is to survive, there must be a decrease in our tremendously high income taxes. The best jobs are available in prosperous business concerns. This is sound economics and it is sound American doctrine.

If it is not sound, we shall have a pretty hard time explaining the growth of our country. Our agricultural greatness rests upon the thousands of people who took land and developed it in the hope of making a profit, and who were free to push ahead to the limit of their capacities. Our business strength comes from those who risked their few dollars, started a store or a restaurant or a warehouse, and hoped for profit and for growth. Our industrial might has been developed by those men who, tinkering over some gadget in the back end of a shop, at last scraped up capital enough to buy a lathe and milling machine and put the gadget into production. All these people hoped for profit. They took their risks, they grew, they hired people, and at last they had a pay roll. This is the way we created the power and the might, the high living standards and the commonly shared luxuries of our country.

Why should we fear a man who grows wealthy out of a factory he created? This envy and this fear, carried to the extreme, can only mean that we at last envy the man who makes five dollars a month more than we make, and so at last we ride on down to a dead-level uniformity. On that level, with neither incentive nor ambition to venture, our system dries up and in the end nobody has anything. What we should fear above everything else is this precise drying up of incentive. We have ample laws to correct the evils that face us. What we do not have, and never can have, is a law that will make a man take a chance if he has nothing to gain by it.

Following a war, it is natural that people should seek relaxation from the strain by desiring to return to the peaceful days they knew in the past. But if there be some in

this country who expectantly look for a return to normalcy, to them I convey my condolence. The normalcy they thought they knew will not be back. Progress is a stairsteps of change, each step followed by a plane of new normalcy. The task we face is not one of return. It is rather to take from our past the things we feel certain will be most useful in the new normalcy ahead.

We should all realize that we will be living in a changed world. We are not going back to the "good old days." In my judgment we will have social-security laws, laws protecting the rights of employees—many kinds of Government regulation will be continued.

In connection with these regulatory laws, however, I call your attention to one matter—the importance of which is often overlooked. It is this—that the general attitude and desire of the person administering any law can be a tremendous influence. I have found that if a person wants to do a certain thing, he will easily find excuses why it should be done. If he wants to find excuses why it should not be done, they are just as easy to discover. My wife even says that the same rule applies when I talk about going on a hunting or fishing trip. Under certain conditions, I can always find that I am not particularly busy and that anyway I have some business in that section of the country. By the same token, the attitude of the agency administering regulatory law is tremendously important. A Republican administration will insure that these laws assist private industry to function more effectively. The nation no longer needs those who are looking for reasons why private industry must fail.

Too many now making plans for the postwar period are merely planning for the spending of wealth and there is not enough attention to the creation of new wealth for everyone to share.

By now it should be an accepted truth that you cannot have more to divide among people when less is being produced. I am told that the decade from 1930 to 1940 is the only 10-year period in our history when this nation made no net gain in wealth. Scarcity and an increase in our standard of living do not go hand in hand.

Do not believe for one moment that we have arrived at a static economy in our country. To say that we have passed our peak growth and must now turn our attention to the division of what we have, rather than to the production of more wealth, is to say that the ambition and optimism and energy which have carried us so far in the last century and a half are no longer good. The control of great fortunes and the restrictions of undue financial power is generally accepted. But the philosophy of division and restrictions, the laws which check the free venture of ambition and capital, the tax system which penalizes growth—all these are foreign to our thinking. They narrow rather than enlarge our horizons, they close the door of opportunity, they reduce us to Old World limitations. There has been too much of this Old World thinking, as it relates to freedom of action, floating around this country during the last 10 years—too much fear, too much envy, too much threat.

When this war is over, we shall have a debt of tremendous size—a debt which cannot be handled unless our country operates at full capacity over a period of years, unless we stay on a very high level of production and income. Against that debt, all pump-priming methods are pitifully small and futile. What we must do is remove restrictive legislation, lower taxes, reopen the avenues of opportunity, take the hobbles off the American and let him stretch out his pace once again.

These are things we Republicans should do when we assume power; they are in fact the only solution to that most important problem—employment. The working man wants a goob job, at American wages, management wants good salaries, capital wants a profit; all are tied up together in the success of our private industrial system, and as Republicans we must assure that it have a fair opportunity to function.

What do we Republicans propose to do relative to the growth of government, its constantly enlarging personnel, its terrifying expense?

The United States needs an administration which will release thousands—and I mean thousands of thousands—of Government employees, turning them loose to do productive labor. We cannot go on as we were even before the war. Not long ago a huge, hulking, not-too-bright man took a job in a Nebraska war plant. He could hardly be considered as brilliant, yet he still had some notions of thrift. Never before in his life had he received a salary of over $75 a month but today he is receiving $50 per week. The company desired to enlarge its facilities and needing new capital, it put on a campaign among its employees trying to induce them to purchase stock in the company. This fellow, however, told the solicitor that he did not want to buy any stock. "Why, this company is going broke," he said. The solicitor argued with him and told him of the big contracts and the profits they were making, but the other man insisted, "No, sir," he said, "if they're paying me $50 a week, they're going broke." That is about the way our Government has been running and if our Government attempts to operate in the future as it has in the past, it too, is going broke.

What is needed is the greatest mass migration out of Washington, and out of Government bureaus scattered all over the country, the greatest migration the world has ever seen. I am proud of the record we have made in Nebraska. According to the annual report made by the Department of Commerce, the per-capita State tax collections, including property tax, gasoline tax, liquor tax, license fees—all forms of State taxes, the per capita tax collections in Nebraska are the lowest of all of the 48 States. We have kept our taxes low, the surest possible brake on public spending.

What do the Republicans propose in the way of foreign policy? I am proud of what was done by them at the meeting at Mackinac Island last month. We are all today agreed that this Nation cannot live by itself alone—that it is a great foreign power and we must take our place as such in the councils of the nations. I do not say that this is necessary in order to abolish war, because that may be an impossible ideal, but I do feel that we must work with other nations in time of peace just as we are today working with them in time of war. And while it may not be possible to abolish war, we can at least hold it to a minimum. Small wars may sometimes be necessary if we are to keep away from larger ones. The early use of force in Manchukuo might have stopped a terrible war covering the entire Pacific. The use of force in the Saar Valley while Germany was still weak, might have obviated the terrible European war which is being fought today. But in any case, if we are to keep away from future world wars, it will take the honest, God-fearing cooperation of the leaders and the people of the world's great nations. Sometimes it will be necessary that they give up a little of their national desires to the end that justice and peace may be promoted throughout the world. I have sometimes thought that there is too much talk of having a permanent peace—there should be more talk of maintaining justice, with peace being incidental to this greater cause. If nations understand each other and their leaders are of good will, however, both justice and peace will be the final result.

There is another thought I would like to leave with you. If you listen today, you will perhaps think that the election of the next President of the United States will solve all problems of foreign policy on this broad earth. That thought is simply untrue, and it will be just as important that we elect a right-thinking President 20 years from now as it is in 1944. In other words, problems of foreign policy are going to be continuous in the future and never will be solved permanently by any one administration. We have found during this war that the best way to plan strategy is for the heads of the governments, together with their staffs, to meet together. The same rule should apply in keeping peace and I am convinced that future Presidents, in all time to come, should plan to meet perhaps once or twice a year with the heads of the other great governments—keeping constantly on guard to see that small but critical problems do not grow into world-wide emergencies.

I am convinced that the common, everyday American is no longer susceptible to the theory that the United States is a cloistered household, destined to live alone. I doubt that the average American is ready to admit that he has brothers all over the world, and that he is their keeper, but most certainly he is beginning to realize that a head in the sand makes a tempting target, geometrically speaking. He is determined that his Government shall keep its eyes open and sand-free, and I feel that his determination is more than passing fancy.

In my judgment, however, it will be a long time before our people will be willing to approve of any international supergovernment giving orders to our Army and Navy, telling our boys where they are to go and whom they are to shoot. We must work with other nations. We are doing that today. We are fighting alongside of them, making joint decisions, carrying out joint programs. That plan must be continued in time of peace.

What this Nation needs is an all-American foreign policy—not a Republican foreign policy—not a Democratic foreign policy—and certainly not a New Deal policy. We need an American foreign policy that will not be changed by a change of administration. Politics should, in fact, stop at the water's edge, and men of good faith, in all political parties, should work toward that end.

The Republicans should nominate a candidate for President in 1944 who will be pledged to serve for only one term. It might be better as a permanent policy if the term be changed to six years; but without making any change in the Constitution, the Republicans can handle this problem in 1944 by nominating a one-term candidate. The problems which are going to face the next President will be terrific, and he should not waste one second of his valuable time in making plans for reelection. He should enter office willing to give 4 years of his life to serve this Nation and bring it back to sanity and stability.

The present war has been made more expensive and has been lengthened because of the desire of our President in 1939 and 1940 to be reelected. Certainly he knew then many things which were not told to us—things which should have been told us and which would have been told us if he had not desired to be elected for another term. As Republicans we should make sure that we are not guilty of the same offense during the next 4 years, and in proper time we can change the Constitution.

I hate to think of the effect of a fourth-term campaign. It will bring bitterness and hatred and even if the effort receives the approval of more than 50 percent of our people, yet it is apparent that it will receive the bitter disapproval of such a large percentage that the very campaign itself will throw a terrific strain upon our war effort. Yet there is nothing any of us can do. The decision to throw the Nation into that maelstrom rests in the hands of one man. We can do something concretely, however, to pledge at least one 1944 candidate to only one term, and a

man should be nominated who sincerely believes in that policy.

If the war is yet being fought, any person taking over the Presidency in 1945 should be careful bout upsetting the war management. It might be well, indeed, to continue Secretaries Stimson and Knox, to insure continuity. It is likely that the services of Secretary Hull should also be continued in some capacity, but surely prestige would be added to the Cabinet by drafting for an important responsibility the services of that great American, Herbert Hoover.

I feel that I can say without contradiction, however, that we would in no way impede the war effort if we dispense with the services of that horny-handed daughter of toil—Madam Perkins. Likewise the country might be able to stumble along in some manner without the super-brilliant leadership of such renowned executives as Harry Hopkins, Harold Ickes, and Henry Wallace.

We are at war and we now do what we must do. We have a common purpose and we shall achieve that purpose. We surrender our individual and local rights; we uproot our old ways of living We stand in ration lines; we are inducted into the Army when our turn comes; we move over to war jobs upon Washington directive. We are now getting a taste of a regimented economy and a planned society; we do what we are told to do because we know it must be that way, because in war it can be no other way.

But when peace comes we must decide how much of this planned way of living we are willing to keep. We must decide that question because there are many enthusiasts in Washington who believe—and have believed for the past 10 years—that it would be wonderful if we could have strong Federal control over the people of this Nation on a permanent basis.

We used to talk of invisible government back in the days when we felt that great accumulations of wealth had too much influence in our public affairs. It is time to recognize the fact that we have had more invisible government during the past 10 years than at any other time in our history; the invisible government of men obscurely placed on the Government pay roll, so that they might work out their master blueprints of a changed America; the invisible government of men who hold no public office, but who feed constantly into our administration the Old World idea that equality and justice may be achieved by the method of binding all citizens to the hard wheel of the federal state. It is their idea, too, that in a democracy this may be best achieved by indirection and by evasion.

We need, above every other thing, again to place government out in the open; we need to restore the old barriers against the capricious use of public power. Changes in our Government ought to be honestly and openly proposed by men upon whom we can definitely place the responsibility of these proposals. If we, as citizens, reject those proposals, we then have the right to expect that they will not be pushed upon us by underground means of which we are not aware.

Our social planners came into power with a mandate to correct certain abuses and weaknesses in our system. They called themselves liberals struggling for the betterment of mankind. Yet we have had a curious shift of positions; for today, under the guise of man's betterment, they seek by every possible means to strengthen the control of the Federal Government over the life of the individual. They are quick to place the label of "reactionary" on those who oppose them, forgetting that liberalism implies the right to dissent.

These social planners today are in reality fighting for the vested interest of government as against the individual, precisely as some men in another day fought for the vested interest of great wealth.

Too much power is too much power, whether it be money or political office. There is no difference between a man who uses his wealth to control the life of a community and a bureaucrat who uses his power to control the life of that same community. Both are improper, both are reactionary, and against them we Republicans should protest with every power at our command.

Let us never forget that much of this Nation's greatness springs from our insistence that the hundreds of little desires of the individual have an opportunity for expression. Trivial as some of these desires seem—the urge to boo the umpire, to go fishing, to "tell off" the boss, to write the editor, to waste our money in running for office—trivial as they seem, the satisfaction of them and the hundreds like them is the ingredient that gives our American life its zest, its flavor, and its desirability.

Our need is for men who appreciate that democracy is not a mechanical vehicle to be streamlined with engineering proficiency to transport its people with the greatest possible speed to some coldly efficient, never-never land where living is done by national rote.

We can well afford now to fully grasp the plea of the poet:

"God give us men, a time like this demands
Great hearts, strong minds, true faith, and ready hands;
Men whom the lust of office cannot kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and will;
Men who love honor; men who will not lie."

We Republicans must furnish to the Nation leaders who recognize democracy as a thing of beauty, of local color, gracious and decent and understanding, for it is within democracy that can be found our firesides and our families. For it on every continent our men fight today; for its continuance we here at home have the duty to plan, and work, and pray.

Cost of Producing Milk on the Farm and the Proposed Milk Subsidy

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, October 15 (legislative day of Tuesday, October 12), 1943

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the delegates of the United Farmers Cooperative Creamery Association, Inc., assembled in annual meeting at Morrisville, Vt., on October 8, 1943. The resolution refers to conditions in the dairy industry and expresses the opinion of the association in regard to the proposed milk subsidy.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

The delegates of United Farmers Cooperative Creamery Association, Inc., assembled in annual meeting at Morrisville, Vt., on October 8, 1943, respectfully call to the attention of the War Food Administration and the Office of Price Administration the conditions prevailing within this area which we believe to be similar to those prevailing throughout the Boston milkshed. The cost of producing milk on the farm has increased steadily to the point where it is burdening the producer with losses beyond his ability to bear; the indicated supply is decreasing while the rate of sales and demands on the part of the consuming public, the armed forces, and our allies is constantly and rapidly increasing; the price received is insufficient to enable the dairy farmers of this area to compete for feeds against the western livestock and hog growers; the rates we are able to pay for labor will not permit us to compete with industries and other lines with the constant result of increasing numbers of auction and dispersal sales of dairy cows taking place throughout the milkshed.

The result of these conditions is such that threaten the future supply and indicate a totally inadequate volume to meet the increasing needs; a continuing exodus of farmers from their dairy farms to other types of less vital service in this time of war; a reduction in the standard of living to those who continue their dairy farm operations with the resulting general decline of activity and interest in life in our farm areas.

We request that your respective Administrations adjust prices fixed by them for grain and feed in such way as to make the use of these items for production of dairy products as profitable as is the use of such grain and feed in other competing lines of agriculture, especially to eliminate the present discrimination against our industry which results from the so-called corn-hog ratio. We urge you to give full and careful consideration to the testimony and arguments presented in connection with the recent hearing to amend the Federal Milk Marketing Order for the Boston market and advance the price of class I milk to $5.03 per hundredweight, with the belief that anything less than this increase will be totally inadequate to accomplish the results your Administration is asking.

As an association, we further record our membership in opposition to the plan for creation and distribution of subsidies as a means for increasing production of milk, because such procedure suggests that the farmer is in need of more money than he is actually entitled to for the production of his product; it further suggests that the consumer is unable to pay the amount equal to the cost of production and reasonable profit, and further, that our Government has no concern for the total amount of bonded indebtedness that is placed upon the citizenry of the Nation.

We claim that subsidies as recently announced are humiliating to the farmers, because they provide for money to be paid to them, whereas the benefits are actually in the interest of the consumer; the consumer is earning handsomely at the present time and is not in need of such additional subsidies; the farmer is entitled to a fair price and maintenance of his self-respect; the subsidy method contributes to inflation because it adds the equivalent of money to the pockets of the buying public from whom the Treasury Department is seeking means and methods for further draining off huge excess; the plan of subsidy entails Government obligations payable in the future, which means that a great part of the burden will be thrown upon the shoulders of our returned servicemen after the war, the majority of whom are now serving their Nation at a wage of $50 per month; the plan further depletes reserves of the Nation so that the possibility for granting subsidies if they should be needed in the event of real depression following this war would be much more difficult to realize; the plan is contrary to American traditional virtues and particularly to the self-respect of the Vermont farmer who has long been recognized for his sense of thrift, self-reliance

and freedom of individual life and enterprise, and further, because we believe the acceptance of subsidies subjects us to the possible abuse through bureaucratic domination and may lead to the control of the individual and economic life of the American farmer to the prejudice of his fundamental constitutional rights and finally, that there is no authority of law for the payment of subsidies as now proposed and such payment, if made, will be in fact a violation of the Price Control Act.

(The above is the unanimous expression of the delegate body constituting our annual meeting and copies are ordered sent to the Honorable Marvin Jones, War Food Administrator, and Honorable Prentiss M. Brown, Chief of the Office of Price Administration.)

Are Consumer Subsidies Justified?—Are Republicans Forcing Inflation by Raising the Cost of Living?—National Issue Created Between Republicans and Democrats

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 14, 1943

Mr. PATMAN. Mr. Speaker, the Committee on Banking and Currency of the House of Representatives reported out Thursday, October 14, 1943, a bill to extend the Commodity Credit Act. The bill provides that the act, which is due to expire December 31, 1943, will be extended to June 30, 1945. The committee, by a vote of 16 to 10, placed the following provisions in the bill regarding subsidies and support prices:

SEC. 3. No funds appropriated to, borrowed by, or in the custody or control of any governmental agency (including any government-owned or Government-controlled corporation) shall be directly or indirectly used by or made available to the Commodity Credit Corporation or any other governmental agency (including any Government-owned or Government-controlled corporation) to make any subsidy or other payment, or to pay or absorb losses, on any agricultural commodity or any commodity processed or manufactured in whole or substantial part therefrom, including milk and livestock and the products thereof, either to reduce or maintain, or in lieu of increasing, maximum prices established on such commodities, except as provided in section 4 hereof: *Provided*, That with respect to any such commodities for which subsidy programs or support prices have been announced on or before October 13, 1943, such programs may be carried out and such support prices may continue to be maintained to the extent only that funds are available for such purposes under existing law, but not beyond December 31, 1943: *Provided further*, That support prices shall continue to be announced for any such commodities pursuant to section 4 of Public Law No. 147, approved July 1, 1941, and section 8 of Public Law No. 729, approved October 2, 1942, but any maximum prices heretofore or hereafter established for such commodities shall not be below the support prices therefor or below the prices specified in section 3 of Public Law No. 729, approved October 2, 1942: *Provided further*, That none of the foregoing provisions shall apply to any payments or losses incurred in transactions with respect to competitive domestic vegetable oils and fats and oil seed.

The effect of this amendment is to effectively prevent all subsidies after December 31, 1943, only 2½ months from now, and will not permit any new subsidies of any kind since the deadline for announcing subsidies under this bill was October 13, 1943.

In order to find out what the Honorable Marvin Jones, Administrator of the War Food Administration, thought about this proposal, I submitted it to him and asked his opinion. This request was made before what is known as the Wolcott amendment was inserted. The Wolcott amendment provides that no funds appropriated to the Commodity Credit Corporation "or any other governmental agency or agency owned or controlled by any governmental agency, shall make any subsidy or other payment, and so forth." For that reason the statement prepared by W. F. A. does not include comments on that particular amendment which will not only prevent the Commodity Credit Corporation from giving subsidies but will prevent the R. F. C. and all other agencies as effectively as the Commodity Credit Corporation from giving subsidies or paying support prices.

The reply which was prepared by the War Food Administration at the request of Mr. Jones is as follows:

This is in response to your request for information as to the effect of the proposed amendment to the Commodity Credit Corporation Bill now pending before the Banking and Currency Committee.

Except for competitive domestic vegetable oils and fats and oilseeds, and the right of Commodity Credit Corporation to sell perishable fruits and vegetables if there is danger of substantial loss due to spoilage, the proposed amendment prohibits Commodity Credit Corporation from making any payments or absorbing any losses for the purpose of reducing or maintaining, or in lieu of increasing, ceiling prices on agricultural commodities or commodities processed in whole or substantial part therefrom. The amendment would compel ceiling prices on such commodities to reflect to the producer a price not less than the highest of the following prices: the support price, the parity or comparable price, or the highest average price for the commodity between January 1, 1942, and September 15, 1942.

The effective of this restriction upon the price stabilization program and the activities of Commodity Credit Corporation would be as follows:

1. Increases in maximum prices as follows:

(a) Such increases as might be necessary in the ceiling prices of pork products to reflect not less than $13.75 per hundredweight for good to choice butcher hogs, 200 to 270 pounds at Chicago.

(b) An increase of 5 cents per pound in the ceiling price of butter.

(c) An increase of approximately 4 cents per pound in the ceiling price for American cheese.

(d) Increases of as much as $1.20 per hundredweight on some varieties of dry edible beans.

(e) Such increases as would be necessary in the price of canned vegetables as to reflect increases in the prices of canned corn, tomatoes, green beans, string beans and peas, as to reflect increases of 25 to 50 percent in the cost of the raw materials.

(f) Increase of about $45 per ton in the ceiling price for prunes and raisins.

(g) Increase of ½ cent per pound in the ceiling price of sugar in order to reflect the present support price of sugar beets. This increase would apply to all sugar, although domestic sugar beets supply only one-fourth to one-fifth of the sugar consumed in the United States.

2. The discontinuation of the support price payment operations being carried out with respect to dry edible beans, canning crops, cheese, prunes, raisins, sugar beets, sugarcane, dairy feed, hay for feeding cattle in the drought areas of Delaware, Maryland, Virginia, West Virginia, and North Carolina, and sales of wheat for feed at less than the cost of such wheat.

The ultimate cost to the Government of stopping these programs would be several times greater than the losses now being incurred. At the same time, many price ceilings would be more difficult to enforce.

This amendment would definitely tie support prices to ceiling prices. As a practical matter at best, the Administrator of the Office of Price Administration would have to be heard and his problems considered by the War Food Administration, or on arbitration. Such a procedure would delay the announcement of price supports and possibly the announcement of any price supports except at levels too low to get necessary production.

REPUBLICANS OR DEMOCRATS

This brings up the question of subsidies as an issue between the two major parties—Democrats and Republicans. This is unfortunate. The Republicans on the committee—11—voted solidly against subsidies and they were joined by the Progressive on the committee, the Honorable MERLIN HULL, and 4 Democrats. The Democrats on the committee voted 10 to 4 in favor of supporting the President's anti-inflation program to keep down the high cost of living.

HOW SUBSIDIES WORK ON COST-OF-LIVING ITEMS

It is probable that the price of bread will soon have to be increased or a subsidy granted in order to prevent the increase. It is estimated that the Government can pay as a subsidy $70,000,000 and prevent the price of bread from increasing. If this is done it will save the consumers $350,000,000, since $1 paid in subsidies saves the consumer on an average of $5.

IS IT PAYING A PART OF GROCERY BILLS?

When a very few people paid the taxes toward the support of the Federal Government it could have been properly insisted that a subsidy to keep down consumer prices paid out of Federal funds would be causing the few people who paid the Federal taxes to help pay the grocery bills for those receiving the benefit of subsidy payments. Now, however, this cannot be consistently argued, since practically all people pay taxes in one form or another toward the support of the Federal Government. For instance, there is approximately a 100-percent sales tax on cigarettes and many other forms of tobacco; there is also approximately a 100-percent sales tax on gasoline. It would be almost impossible to find a person who did not pay taxes in some form to the Federal Government. Anyone who consumes gasoline or oils,

tobacco or soft drinks, candy, jewelry, chewing gum, or beer, liquors or wines, or attends picture shows or theaters, or who uses public transportation will necessarily pay taxes to the Federal Government. They also pay Federal taxes in other ways. Therefore, if the people of the United States can use $50,000,000 of their money to save themselves, the people of the United States, $350,000,000, it will certainly be a good trade for them. In addition to the saving to the consumer, the cost of living will be held down and demands for wage and salary increases successfully answered.

CONGRESS NOW ASKING PRESIDENT TO NOT CARRY OUT FORMER MANDATE TO KEEP DOWN COST OF LIVING

Congress in the passage of the Second Price Control Act, which became effective October 2, 1942, authorized and directed the President of the United States to stabilize wages, salaries, and all things entering into the cost of living as of September 15, 1942, insofar as practicable. At the same time authority was given the President to correct gross inequalities and inequities. The President has been trying to carry out this positive mandate of Congress and accordingly issued what is called the "hold-the-line order," and all agencies of the executive department have been trying to hold the line as of September 15, 1942, on prices, wages, and salaries. Now, if the Congress passes another law, such as proposed in the one herein discussed, that will compel the President to increase the prices of things that go into the cost of living, the President will no longer be able to hold salaries and wages down. The result will be that prices will increase, which will immediately run up the cost of living; then wages and salaries must be increased; then on account of wages and salaries being increased, prices will have to increase again. This will be a race between wages and salaries on one side and the cost of living on the other. The result will be just like putting a match under a thermometer—prices will go out the top, the sky will be the limit, and we will be faced with unbridled inflation.

CONGRESS OFFERS NO ALTERNATIVE FOR SUBSIDIES

The President has repeatedly told Congress that if Congress will suggest another way to hold down the cost of living without subsidies, and at the same time give the farmers a fair price and a sufficient price to encourage production of needed foods, he would gladly accept any alternative that would get the job done. Instead, Congress has offered no substitute and is offering no alternative, but in this bill would compel the President to immediately put into effect regulations that will cause runaway inflation.

WAR CAN BE LOST ON HOME FRONT

Our boys on the 55 battle fronts of the world are doing an excellent job. It is possible for us to lose the war here on the home front by permitting ruinous inflation.

It is contended that people are making more money than they ever made and therefore should pay increased cost for foods and other items. Probably about half the workers in the country are receiving much more than they ever received before, but the other half of the workers are not receiving any more than they received before the war; and besides there are 14,500,000 people who are dependent on old-age assistance, veterans benefits, compensation and allowances, and other fixed incomes that have not increased at all. These people will be the first to feel the increased cost of living that the Republicans are trying to force in this bill.

CORRECT STATEMENT ON PAYING ANOTHER'S GROCERY BILL

The argument is made that it is wrong for the taxpayers to pay a part of anyone's grocery bill. The correct statement would be that it is not wrong for a taxpayer to permit a part of his tax money to be used by his Government to keep down his food bill, if it will save him $5 for every $1 so paid and will at the same time prevent ruinous inflation.

OPPONENTS DO NOT OPPOSE ALL SUBSIDIES—JUST A FEW

Those who proclaim so long and loud that they are opposed to the Government paying any part of anyone's grocery bill are perfectly willing to pay certain subsidies. For instance, the Republican Members oppose taking off the subsidy on fuel oil to the New England States, which amounts to about $1 per barrel, thereby placing themselves in the position of saying it is all right for the Government to pay part of anyone's fuel bill, but wrong for the Government to pay any part of the grocery bill. Furthermore, our Republican friends are in favor of subsidized housing which results in the taxpayer's paying a part of the rent bill for each family who resides in one of these houses. So the net result is they are not against all subsidies—they are just against some subsidies.

It will be noticed that in the very provision written into this bill against subsidies, in section 3 at the end, there is a provision which recognizes subsidies for certain commodities and will permit their continuance. The exact language at the end of section 3 is:

Provided further, That none of the foregoing provisions shall apply to any payments or losses incurred in transactions with respect to competitive domestic vegetable oils and fats and oilseed.

How can we consistently contend that the farmers producing peanuts, cottonseed, soybeans, and other such fats and oils shall be benefited by subsidies, and shall continue to receive them, but our farmers who grow other things shall not be so benefited by being permitted to continue to receive them? Another thing I cannot understand is why it is all right to have subsidies for fuel oil and pay part of one's fuel bill, and housing, and pay part of one's rent bill, and for peanuts and cottonseed and soybeans and other commodities, but it is absolutely wrong to pay subsidies on bread and other items that go directly into the cost of living that would cause a spiral of inflationary prices.

The dairy farmer has found himself in a squeeze. The prices of his feed have been going up but the price of his milk has remained stationary because of the effort being made to stabilize the cost of living. The War Food Administration has recently inaugurated subsidies that will give the equivalent of about 1 cent a quart in the form of a subsidy to the producer. It was contended that this should be made in the form of an increased price of 1 cent instead. If it had been, maybe the producer would have received it and maybe he would not, as it would have necessarily gone back through several hands before reaching the producer. In the case of dairy products, if the Government can spend $100,000,000—I am just using this arbitrary amount for the purpose of illustration only—and save the consumers $500,000,000, it looks like it might be a good bargain for the consumers who are also taxpayers, and therefore a good bargain for the taxpayers. The farmer is entitled to and must receive a good price, but I am sure he will not object if a part of that price is paid in a subsidy if it will give him just as much money and at the same time protect him against ruinous inflation.

BILL UP WEEK AFTER NEXT

It is probable that this bill will come before the House of Representatives for consideration the week commencing October 25. An effort will be made at that time to strike out section 3 of the bill.

Proposed Social-Security Legislation

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, October 15 (legislative day of Tuesday, October 12), 1943

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very notable series of articles by Fred W. Perkins, of the Scripps-Howard press, on the social-security bill introduced in the Senate by the Senator from Montana [Mr. MURRAY] and myself, and in the House of Representatives by Representative DINGELL.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington News of September 27, 1943]

SOCIAL-SECURITY FIGHT

(By Fred W. Perkins)

The Social Security System was 8 years old last month. Its champions say this new link between Government and citizen has proved its worth, and that the time has come to move toward its completion and perfection, even though the Nation is busy with a war.

Here, they say, is a way to attain one of the "four freedoms" for which our men are fighting—freedom from want—by enlarging the benefits already provided by social security, by making them available to some 20,000,000 workers who now lack such protections, and by giving special consideration to the men and women who will return to civil life from the armed services.

A bill providing for a sweeping extension of the Social Security System has been introduced in Congress by Senator WAGNER (Democrat, New York), Senator MURRAY (Democrat, Montana), and Representative DINGELL (Democrat, Michigan). It is largely the product of study and recommendations by the American Federation of Labor, which is campaigning for it. The Congress of Industrial Organizations is also back of the legislation, and other labor groups are expected to help.

Support in general has been announced by the Social Security Board. Also lined up are the New Deal forces, headed by President Roosevelt, which get the credit for the original Social Security Act of 1935, sponsored by Senator WAGNER and others.

The known opposition, to the proposed changes has two principal centers: (1) A strong group of State officials expects to continue its resistance to federalization of State unemployment-compensation systems, and (2) the American Medical Association will continue to oppose "socialization" of medical and hospital care.

Other opposition, not yet highly articulate, is expected to become manifest among officials and citizens who believe that no enterprise, however worthy, should be allowed to distract attention even in slight degree from the war; and from those who still carry the banner against encouraging the individual to look more and more to the Central Government for his health, his upkeep in times of unemployment, and his security in old age.

Another target of possible opposition is the proposal that the many new proposed benefits be partly paid for by raising the social-security taxes of wage and salary earners from the present 1 percent (it would be 2 percent next year and 3 percent in 1949) immediately to 6 percent. With income withholding taxes already affecting tens of millions, this sharp increase might be expected to arouse some popular resistance, but both the A. F. of L. and C. I. O. say they are confident our people will go along willingly.

It is doubtful if the Wagner-Murray-Dingell bill will get much congressional consideration before 1944. A main reason for that is the constitutional necessity for the House to act first on such legislation, because of its taxing features. And the House Ways and Means Committee is expected to spend most of the fall and early winter on a new tax bill and other pressing matters in its domain.

Some authorities hold that social-security legislation is not the proper vehicle for proposed benefits to members of the armed forces, but the bills propose to cover at least part of the subject.

One phase of the veterans'-aid program recently broached by President Roosevelt is directly related to social security—temporary unemployment compensation to all men and women of the armed forces who may be unable to get private employment immediately after the war. There is questioning as to whether another phase—disability benefits for those physically injured in the war—belongs in a social-security bill. Hence the possibility of separate legislation, which would take jurisdiction over all kinds of public benefits for the armed forces.

The Social Security Board holds that still another part of the general subject—protection of the retirement benefits built up in private employment by men and women now in the armed services—would be an appropriate part of an over-all extension of social security.

[From the Washington News of September 28, 1943]

FIGHT FOR SECURITY

(By Fred W. Perkins)

American social-security experts do not like the cradle-to-the-grave tag that has been applied to the Beveridge plan in Great Britain. They hope it will not be stuck on the great expansion of the social-security system that is projected in this country.

The American plan, as embodied in the Wagner-Murray-Dingell bills now pending in Congress, does not cover the full territory between the cradle and the grave, but some people have that impression because it includes a new provision of maternity insurance for working women, and also a number of proposed departures in Federal provision of health and hospitalization insurance.

Expansions formally recommended by the Social Security Board (in its seventh annual report to Congress) would provide:

1. Social-insurance protection for everybody who depends on wages or salaries (and for the self-employed also so far as possible), adding about 20,000,000 to the present coverage of 40,000,000 persons. Regular insurance benefits would partly recompense the worker and his family when—

(a) He loses his job and is temporarily unemployed.

(b) He is unable to work while temporarily or permanently sick or disabled (with some provision for hospital care for the worker and his family).

(c) When he is old and no longer at work.

(d) When he dies.

2. The cost of this insurance to be met through contributions from workers and their employers into one national insurance fund in the United States Treasury.

3. Assistance to all needy people who have no means of support through the Federal-State public-assistance programs under which monthly payments are now made to the needy aged, the needy blind, and dependent children.

The Wagner-Murray-Dingell bill goes beyond these recommendations in some particulars. It is thus summarized by the American Federation of Labor, one of its principal backers:

1. It broadens coverage to include millions of agricultural and domestic workers, self-employed persons, lay employees of educational and religious bodies; also, by request, hourly employees of the Tennessee Valley Authority; also, under voluntary compacts, employees of local and State governments.

2. It grants unemployment-insurance compensation to all members of the armed forces who may be unable to find jobs in private industry after the war, and disability benefits for those physically injured in the war.

3. It would provide health and hospitalization insurance for the first time.

4. Also, for the first time, it would set up a system of temporary and permanent disability insurance.

5. It offers maternity insurance to working women.

6. It would extend health insurance and other benefits to the dependents of beneficiaries.

7. It would set up a uniform national system of unemployment insurance, to replace the present State-Federal system, and with extended benefits.

8. It would increase the maximum old-age survivors' and permanent-disability benefits from $85 under the present law to $120 a month.

9. It would provide a broad system of national employment offices to assist employers in finding workers for jobs, and to help workers find jobs.

To finance the program, the bill would levy a 12-percent tax on pay rolls, to be shared equally, 6 percent by the employer, 6 percent by the worker. The tax on employers would anticipate the 6 percent which goes into effect in 1949 under existing law. The tax on employees, which is to be 2 percent next year and 3 percent in 1949, under the present law, is sharply increased to help cover the cost of materially greater benefits.

An important recommended change, aiming at economy as well as convenience, would create a single national social-insurance system with only one contribution necessary for all the insurance provisions, thus requiring single payments by employers and workers, only one wage record for each worker, and one local office to serve all employers and workers.

[From the Washington News of September 29, 1943]

FIGHT FOR SECURITY

(By Fred W. Perkins)

If you are 1 of about 40,000,000 American earners of wages or salaries, you have a social-security card that promises you an old-age pension after you are 65 and retired—not enough to maintain you in country-club style, to be sure, but enough to avoid the drab necessity of going on the county.

But if you are 1 of about 20,000,000 other Americans, also working, you do not have such a card or promise, because when Congress enacted the Social Security Act in 1935 it excepted a number of large classes of employment.

In the present effort to extend the Social-Security System, one objective is to bring the missing 20,000,000 under the old-age insurance plan, which not only guarantees payments to the retired worker himself but provides for payments to his family after his death.

Under the present law, the old-age and survivors' insurance plan covers business and industrial jobs—that is, those in factories, shops, mines, mills, stores, offices, banks, hotels, restaurants, laundries, telephone and telegraph offices, and other places of business or industry operated by private firms, corporations, or individuals.

The broad classes at present excluded from these benefits, and which social-security advocates hope to bring in without unnecessary delay, are agricultural labor, domestic service, public employment, service for nonprofit and Government institutions, and self-employment.

Today a printer who works for a commercial publishing company is covered. Also a janitor who sweeps out a grocery store, and a stenographer employed by an industrial concern. But a printer for a religious organization is not covered. Neither is a janitor in an educational institution, nor a stenographer for a charitable group.

Agricultural and domestic workers were left out largely because the periodic and sometimes itinerant character of their employment was believed to make it too difficult to report their wages and collect taxes on them. It is now believed that this problem can be met successfully through the stamp-book plan adopted in Great Britain and other countries. The employer buys wage stamps, and when he pays off his help he deducts for the proper amount of stamps. The stamps are placed in the worker's stamp book, and when the book is full it is deposited with the social-security office and credited to his social-security account.

An apparent injustice to farm and domestic workers is that they frequently shift over for short periods into employment that is covered by the old-age insurance system. They are required to pay into the system, but in many cases they return to the noncovered occupations without having built up enough credits to entitle them to benefits.

A main reason for exclusion of employees of nonprofit institutions (including religious, charitable, educational, scientific, literary, and humane organizations, and students and student nurses) was the belief that many were already covered by private pension plans. But the Social Security Board has now found that this is true only with respect to one-third of workers in these classes.

It says that "a fourth of the regular clergy are without retirement protection; retirement plans of at least 15 religious organizations do not cover their lay employees; jani-

tors, charwomen, telephone operators, and other maintenance staffs of educational institutions seldom receive the benefits to which professional staff members are entitled."

It is pointed out also that private pension plans usually provide only retirement benefits for the employee, with no further provision of benefits for his family.

Many nonprofit institutions and their employees have changed their views on this subject, says the Board, which recommends that social-insurance protection be extended to them but with a provision against loss of other kinds of protection they now hold.

The self-employed group in the United States, estimated at 11,000,000, is made up mostly of independent farmers or businessmen, but includes also such extremes in economic status as professional men, on the one hand, and persons who make a living by renting rooms, dressmaking, selling magazine subscriptions, taking in washing, and selling newspapers at street corners. Many low incomes are included, and the Social Security Board has found other reasons why they need social insurance as much as the people attached to a regular pay roll.

As to governmental employees, the Social Security Board reports that only about half of those in the State and local agencies are covered by public retirement systems, and that in the Federal service large numbers of civilian war workers may lose the protection they earned in private employment without acquiring comparable protection in their Government jobs. The Board's recommendation is that full coverage be extended to these groups without harm to any protection they now have.

[From the Washington News of September 30, 1943]

FIGHT FOR SECURITY

(By Fred W. Perkins)

The Wagner-Murray-Dingell bill, now pending in Congress and proposing a great extension of the Social Security System, uses 19 of its 90 pages to outline legislatively what it calls "Federal medical, hospitalization, and related benefits"—an enterprise which some opponents describe as socialized medicine, and which an unfriendly organization of physicians calls totalitarian medicine.

This is probably the most controversial part of the bill. Its advocates see in it a blessing for the millions of low-income families whose members delay or neglect visits to physicians and hospitals because of the cost. Its foes say it would abolish private medical practice and set up a vast new bureaucracy under which the head of the Public Health Service, with $3,000,000,000 a year to spend, would eventually become the employer of all the physicians in the country and the controller of all hospital beds.

However, doctors are divided. Some nationally prominent physicians support the general principles of this proposed legislation, and through their Committee of Physicians for the Improvement of Medical Care, Inc., have said it "provides a framework and a basis for discussion from which it is sincerely hoped that a constructive program for improved medical and health care of the American people may be developed."

Dr. George E. Bigge, Social Security Board member, says: "There is nothing in our recommendations or, so far as I can see, in the Wagner-Murray-Dingell bill, which would in any way affect the doctor or the hospital in their relations with their patients. The purpose of the proposal is simply to make sure that patients will have the money with which to pay their bills. I can see no reason why any physician should object to that."

The American Federation of Labor description of the proposed new health-insurance program is that it would extend "medical and hospital care to all persons covered under old-age and survivors' insurance and for their dependents.

"The bill assures free choice of any regularly licensed general practitioner, arrangements for use of specialists' services, and varied methods of remunerating doctors, with emphasis on maintenance and development of the quality of medical care, and provision for grants to aid medical education and research."

The National Physicians' Committee declares: "The provisions are so sweeping that, if enacted into law, the entire system of American medical care would be destroyed."

Says the A. F. of L. committee on social security: "We have no desire to interfere in the scientific matters of the medical profession, in which doctors alone are competent, but we are concerned to make medical care available to those who need it."

As to the other end of the plan, the A. F. of L. committee says: "Voluntary hospitalization covers around 10,000,000 people, while hospitalization insurance under social security should cover something like eighty to one hundred million."

[From the Washington News of October 1, 1943]

FIGHT FOR SECURITY

(By Fred W. Perkins)

Many Americans subscribe to private insurance policies under which, if disabled temporarily or permanently, they receive regular payments from the insurance companies.

The pending Wagner-Murray-Dingell bill, for expansion of the Social Security System, calls for payments by the Federal Government to the temporarily and permanently disabled—payments out of funds collected partly from employers and partly from workers. The potential beneficiaries would be much more numerous than those who now deal with the insurance companies.

This proposal is backed by the Social Security Board, as well as by the labor and other groups that are advocating immediate extension of social security.

The Social Security Board's position is that permanent disability should be handled as if it were premature old age, while temporary disability should be handled like temporary unemployment.

Says the S. S. B.:

"With only one exception (Spain), the United States is the only country which provides insurance against old age without also providing against the risks of chronic or permanent disability * * *. There is no comprehensive system in the United States providing protection against wage losses due to temporary disability * * *. Twenty-eight nations now provide insurance protection to their workers against temporary disability."

The American Federation of Labor says:

"When a man is permanently disabled his wife and children need help as much as if he had died. No wage earner can afford to buy enough insurance from private insurance companies to give his family the help they require if he becomes permanently disabled. Only social insurance can make it possible for all of us to buy this kind of protection at a price we can afford."

Some complications in benefits for temporary disability are pointed out by the A. F. of L.:

"People who are out of work because they are sick need an income to make up for their loss of earnings just as much as well people need their unemployment benefits.

"Much of our experience with insurance against temporary disability," the A. F. of L. continues, "has come from the trade union or fraternal sickness-benefit societies and from other local sickness funds. In these small employee societies where people were acquainted with each other the trustees of the benefit funds knew when one of the members was laid up or too sick to go to work, and also when he was well again and able to go back to his job.

"When we exchange the personal relationships of the little group-sickness-benefit plans for the greater strength and security of a national social-insurance system, we have to substitute records for the members' knowledge of each other's affairs. In sickness insurance we have to know that the worker is sick, and not just taking a vacation or plain lazy. * * * For this reason a doctor's certificate of illness is needed, with periodic reports if the sickness continues."

The A. F. of L. also recommends maternity benefits for working women, a proposal on which the Social Security Board has taken no stand.

[From the Washington News of October 2, 1943]

FIGHT FOR SECURITY

(By Fred W. Perkins)

When Congress gets around to real work on the new Wagner-Murray-Dingell bill for extension of social security, it will expect a visit from State officials concerned about the bill's proposal to federalize the unemployment-compensation system, which is now a Federal-State enterprise.

The State argument will be that federalization of unemployment compensation would mean a further concentration of authority in Washington and a corresponding decrease in the States' authority.

The American Federation of Labor, backing the new bill, is lined up with the Social Security Board in advocating the shift to more Federal authority. The S. S. B., however, recommends that actual administration be "strongly decentralized, with representative advisory committees and appeals councils in all the States."

The A. F. of L. and the S. S. B. join in the view that State administration of unemployment compensation is so lacking in uniformity that a central coordinating agency is demanded.

After-war conditions are cited as probable reasons why the 48 States should not attempt to handle unemployment compensation without regard to the rest of the country; a Federal agency, it is argued, would have the broad view.

The same line of thought is back of the proposal for a national system of employment offices, about which there is less argument. Less spending of public money is involved in this case.

Numerous points of possible controversy are involved in the new social-security bill, which will come up first before the House Ways and Means Committee. Final congressional action on all phases of the measure can hardly be expected before the congressional elections in November of 1944.

Little if any opposition is expected for proposals to bring under the old-age pension system millions of agricultural and domestic workers and others not now covered.

There will be much opposition to a proposal that medical attention and hospitals be placed under Federal control. There will be congressional questioning also for proposals to set up a Federal system of payments for temporary or permanent disability of workers.

Despite the possible points of objection, A. F. of L. President William Green, declared:

"This is one of the most important legislative proposals of our times. It fortifies the American way of life against our great internal enemies—poverty, disease, and economic dislocation. Coupled with a program for vast expansion of our peacetime industries, it will constitute a guaranty that the American people will be spared from unnecessary suffering after the war is over.

"The great benefits of this bill are so manifest and so essential as to shame any petty, technical opposition into silence."

Much opposition is expected to center around the objection that social-security expansion should not be attempted in wartime.

"The answer to that," says Arthur J. Altmeyer, Social Security Board Chairman, "is that unless action is taken now there is grave danger that the post-war period will arrive before a well-rounded social-security system can be put into successful operation. It cannot be improvised overnight.

"The extension of social security now would not only not interfere with but would greatly aid in the successful prosecution of the war. The greater sense of security which would result would make the people of this great Nation more effective defenders of democracy. This has been amply demonstrated in Great Britain."

More for Everybody of Everything

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, October 15 (legislative day of Tuesday October 12), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable Edward Warren Brown, at Riverhead, Suffolk County, Long Island, N. Y., on Wednesday evening, October 13, 1943, to the Suffolk County Farm Bureau and other farm organizations. Let me add that Mr. Brown is president of the American Unity League, Inc.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We have two wars on our hands—a world-wide military war abroad and a socio-economic war at home.

Since our unpreparedness for war 2 years ago, we have rearmed heavily. We may now reasonably expect victory in the military war. All bets favor the United Nations against the Axis Powers.

The socio-economic war at home, however, has developed intense disunity and confusion, to the extent of threatening our military victory. Politics for the next year is expected to influence the official acts of Government and Congress to provide campaign material for the Presidential election in 1944.

The pressure groups of organized labor, agriculture, industry, finance, and the many interests concerned with commerce and the professions, are battling with Congress, and with each other, for selfish gains and advantages at the expense of all citizens.

It seems fitting at this time to revive the quotation by an outstanding figure in our early history, the illustrious Thomas Jefferson: "Equal rights for all, special privileges for none." Now is the time to organize a national movement which will assure unity of purpose and action.

Such action must be nonpartisan and nonsectarian, and with the aim to achieve genuine social justice and universal social security for every individual, regardless of race, color, and religion.

Otherwise, we cannot foresee the effects of disunity on the home front. Disunity at home usually is the cause of disloyalty on the fighting fronts. It might cause confusion and delays enough to favor the enemy and cause us to lose the military war, the while we battle among ourselves on the home front, in our own socio-economic war. All signs now point to a multiplicity of group demands and strikes without end.

The kind of national movement I have in mind involves every family. The purposes and objectives of the national movement must be specific and definite, so that every individual will know what he and she stands for as an active participant in the crusade for right living. The incentives must be practical and adequate.

A comprehensive and practical economic master plan is the first essential. It should serve as our guide in our crusade for social security for every income group, from the bottom to the top of our social scale.

Please permit me to summarize our objectives for you by the reading of a pro forma full-page newspaper ad, which should be inserted by patriotic citizens in every community, to arouse the desire and determination in everyone to their duty toward their families and neighbors, and, also, to take the action recommended from purely self-interest motives:

"I firmly believe you, and every American, owe to yourself and to your family the opportunity to read the message of the surplus-wages system.

"This system is a new method of creating a new national income to pay for the war and to reduce war taxes now, and after the war, thus assuring more for everybody of everything.

"As a democratic people we need this self-help method to aid our Government to win the war quickly, and to save many lives; to provide the means for continuous employment for every American; to realize the American prosperity brand of genuine social security—not the foreign poorhouse type of the dictators. The bases for my convictions are these:

"That a majority of the citizens must organize for this purpose to apply this, or any other, self-help method to our everyday ways of living, of working, and of doing business;

"That before real social security and lasting prosperity come, there must come a moderate reconstruction of our social order;

"That there must be no industrial, financial, or political revolutionary tactics used to accomplish our purposes;

"That we must hold fast to present constitutional and democratic principles of liberty and civil rights in any modification of present methods;

"That a majority of American citizens must unite and act upon a comprehensive program, which must provide reciprocal benefits between all economic groups, and at one and the same time, without sacrifice by any one group to benefit another group;

"That our action, methods, and agencies must be nonsectarian and truly patriotic;

"That otherwise we will continue to pay the penalties experienced since 1929 and the depression years. When peace is declared, no one wants to see the return of the conditions prior to the present war. Then about one-third of our families were on the poverty danger line, through no fault of their own. They were ready, willing, and able to work.

"After the war, we will come to that again unless we organize and prepare to put all to work on private pay rolls assuring wages, salaries, and incomes which safeguard the American standard of living.

"America's distress prior to the war was due to managerial incompetence and economic inadequacy—inequitable distribution of the national income—insufficient individual incomes denying 'right living' to more than two-thirds of us.

"With America's great stores of natural resources, modern farming and manufacturing methods, up-to-date factory plants and equipment, skilled manpower in the arts and sciences and ownership of more than two-thirds of the gold of the world, we lack only unity of purpose by all economic groups and a sound method of operation to eliminate involuntary poverty.

"An organized, self-regulated, self-disciplined industry within society must succeed where political governments fail.

"With such rich human assets as we possess in America, I am convinced that there is a way to assure prosperity and social security to every American family.

"There is, however, no magic-wand or sweepstake-ticket route to our goal. Government has tried this but its many billions of money magic have failed.

"If we will recognize these facts, and organize properly and effectively for the big job ahead, I am confident we will succeed with the surplus-wages system.

"So I appeal to the good people of America, whether or not they are now employed, and however confident they are of their future, to wake up to the dangers we will face when the military forces of the world demobilize and bring about another critical economic situation.

"Read the message of the surplus-wages system in the book published by your own organization, the American Unity League, Inc. By doing this today you will serve your Government in the conduct of the war to a quick victory through unity of purpose and action by Americans of all income groups.

"And in addition to our own needs, do not forget that America must be strong and produce more and more for years to come to help the nations of the world in distress. We are the only hope for a war-torn world.

"THE SURPLUS-WAGES SYSTEM—WHAT IT MEANS TO YOU

"Farmers are assured adequate net incomes and expanding markets; workers are assured steady jobs at increasing wages and salary scales; old folks, freedom from economic insecurity and ample old-age pensions; youth, opportunities and advancement in private enterprises according to ability and ambition; business, steadily expanding demand for products and services yielding reasonable profits on invested capital; investors, safe investments and regular income with profit participation possibilities."

To the farmers and related industries of the country, it should become apparent that the surplus-wages system is a practical means of guaranteeing cost of production, plus a fair return on the capital and services used.

This principle must be followed, to benefit all the other income groups. Otherwise our farm population will have to pay disproportionate prices for goods they need, which they themselves do not produce on their farms. The problem of establishing ceiling and floor prices for farm and industrial products must be coordinated and reconciled to agree with the principles of humanity and democracy, which I again repeat in the words of Thomas Jefferson, "Equal rights for all, special privileges for none."

Now, gentlemen, you may have a mental picture of America's greatest war need—unity of purpose and action—and how the objectives desired by every income group may be realized.

The specific and definite ways and means which are embodied in the surplus-wages system involve many more hours of concentrated thought than we are able to give to their consideration at this meeting.

Therefore, I suggest that every member of your organizations obtain through your secretaries copies of my brochure entitled "Wartime Edition—Surplus Wages (A New National Income)," and the sequel to same entitled "Catechism for the Surplus-Wages System."

These condensed outlines of objectives and methods will aid you to understand how your interests will be favorably affected when the system is adopted and applied.

Questions addressed to me at Blue Point, Long Island, N. Y., will be answered as rapidly as facilities permit.
